The President of India Hon'ble Shri Ram Nath Kovind receiving the first copy of the Book titled "Ram Nath Kovind : From Ranks to Raisina" from CIU President Dr. Priyaranjan Trivedi on 23rd July 2017.

Data has been collected for the Book "2022 Indian Universities Directory and Handbook" from different sources. The Confederation of Indian Universities (CIU) is thankful to them and shows gratitude to them.

PREFACE

The University fraternity will be pleased to know that the Confederation of Indian Universities (CIU) was established in 2004 at the behest of the then Prime Minister of India Shri Atal Bihari Vajpayee for giving birth to a new platform for discharging its duties not covered by UGC and AIU. This name “Confederation of Indian Universities (CIU)” was suggested by him and was inaugurated by him in absentia on 15 April 2004 and his inaugural address was read out by the then Member of Planning Commission Prof. K. Venkatasubramanian. All the Universities and Institutions listed in this Directory are welcome to join CIU without making any payment.

Education is the largest single activity in the world, involving over 700 million students and 31 million teachers at all levels, not counting millions of others in educational support activities. But its importance stems not merely from its size but also from its role as institutionalized knowledge - the principal repository, producer, disseminator and transmission belt of all forms of knowledge.

The first CIU's Indian Universities Directory was presented to the Prime Minister Shri Atal Bihari Vajpayee on 15 May 2004.

The second CIU's Indian Universities Directory was presented to the President of India Dr. APJ Abdul Kalam by Dr. Uttam Kumar Singh on 15 April 2006.

The fourteenth CIU's Indian Universities Directory was presented to the President of India Shri Ram Nath Kovind by Dr. Priya Ranjan Trivedi on 23 July 2017.

The most significant feature of education for mother earth protection in the 21st century is not so much what the French call *li explosion scolaire* (i pupil explosion), but the knowledge explosion, which has expanded the catchment areas of learning so fast that it takes only a decade now for the state of the art in any field to become obsolete. Different modes of communicating for advancement of knowledge are fast changing and becoming more sophisticated. In this technological era knowledge can be dispensed technologically and electronically. Teachers and formal school structures are becoming less important, and the conventional age limits on the learning process are becoming blurred.

If human society is to endure not for just another century but for thousands and thousands of years, we need to learn a way of life that could be sustained by the Mother Earth. Human society must learn to control population size and develop more efficient technologies that produce as little harmful waste as possible. We must learn to rely on resources that are renewable. A society based on these ideas is called a sustainable

society. We should long for having a sustainable world so profoundly different from the way we live which cannot be imagined without a strenuous exercise of mind. Like human body the Mother Earth has its organs that adjust to changes - in climate, nutrient levels and other aspects of the environment to maintain its stability. Just as the human organism is made of trillions of cells and so is the world organism; each of us is a cell of Gaia (Greek word for Mother Earth). Changing our ways will be a colossal task which may involve arduous work but as an optimist we should view the third millennium with a cleaner and greener mind and pledge to work on new pollution control technologies as the answer to our polluted waters and skies by better treating our Mother Earth by not to rival nature but to cooperate with it and live in harmony.

We must guide the human race living in a historic transitional period of burgeoning awareness of the conflict between human activities and environmental constraints, preparing to venture into a new century and a new millennium and to finally help save the fragile and endangered planet with the natural resources already overtaxed and for developing a critical path to governance through modern ideas for reducing the toll exacted in supporting daily life and the ever growing problems on the earth exerting profound pressures on the environment. As the human race has ventured to enter the third millennium, conversations and news reports are peppered with references to our fragile and endangered planet. The earth is five billion years old, and over the eons it has endured bombardment by meteors, abrupt shifts in its magnetic fields, dramatic realignment of its land masses, and the advance and retreat of massive ice mountains that reshaped its surface. Life, too, has proved resilient: In the more than three and a half billion years first forms of life emerged, biological species have come and gone, but life has persisted without interruption. In fact, no matter what we humans do, it is unlikely that we could suppress the powerful and chemical forces that drive the earth system.

The Indian Universities Directory and Handbook brought out by the Confederation of Indian Universities (CIU) is the only publication of its type in our country where all the Central, State, Deemed and Private Universities besides the Institutions of national importance has been included with brief details of their programmes and their activities.

Let this publication be acquired by the Central and the State Governments in bulk for free distribution in all the public libraries and the Information and the Documentation Centers in all the schools, colleges and universities in addition to the Indian Missions abroad for enabling the prospective foreign students to get attracted for studying in India.

We are sure that the Chancellors, Vice Chancellors, Registrars and other Policymakers in these universities will be benefitted with the ideas explained in this Book for optimizing the available resources of these universities.

We eagerly look forward to suggestions for improving the next edition of this Book.

Dr. Priyaranjan Trivedi
President, CIU

ABOUT CHANCELLOR Dr. PRIYARANJAN TRIVEDI

Dr. Priyaranjan Trivedi (73) is the world renowned environmental scientist, institution builder and a charismatic leader with more than 45 years of teaching and training experience in different areas of ecology, environment, disaster management, sustainable development, peace studies, conflict resolution, human rights, intellectual property rights, ecological tourism, geriatric care and institution building strategies.

He is the Founder Chancellor/Plenipotentiary of the State University “The Global Open University Nagaland” and Founder Chancellor of the “Indira Gandhi Technological and Medical Sciences University”, Arunachal Pradesh. He has been responsible for the establishment of many universities and professional / vocational institutions in India as well as in other countries of the world. He has authored the World Encyclopaedias on emerging subjects like environmental sciences, remote sensing, health care, global peace and security, production and operations management, materials management, geriatric care, bioinformatics, green business management, habitat and population studies etc.

As the President of the Confederation of Indian Universities (CIU) created during the NDA regime in the year 2004, Dr. Priyaranjan Trivedi has tried to unite all the 1230+ universities in the country for optimising the available resources in the country with a view to stopping the duplication of efforts in the area of higher and tertiary education. During his visits to different countries including USA, UK, Italy, Spain, France, Germany, Sri Lanka, Nepal, South Korea, Mongolia, Zambia, Uganda, Ethiopia, Maldives, Indonesia, Russia, Poland and Thailand, Dr. Priyaranjan Trivedi has been transferring the appropriate technologies of institution building from India to the rest of the world.

He has received more than 55 international and national awards and appreciations conferred upon him in many countries of the world for his outstanding contribution in the areas of alternative dispute resolution, diplomatic studies, interfaith studies, spiritual development etc.

Dr. Priyaranjan Trivedi has designed a masterplan paradigm for leading India by providing appropriate guidance to the Government of India in the areas of skill development, entrepreneurial leadership besides managerial competence among the young boys and girls by advocating the slogan “Catch Them Young” so that they could finally become didactics to educate their fathers, mothers, teachers and colleagues, rather the entire neighbourhood with no worries and miseries in the country.

Dr. Priyaranjan Trivedi is the first person in India to have thought of vocationalising the existing careers of young boys and girls by giving them employment centric education with a view to solving the problems relating to employment as well as unemployableness. He has designed more than 2100 skill based courses with self-instructional study materials

for ensuring perfect training in order to achieve the milestone of producing 550 million skilled persons in the country by the year 2025.

Dr. Priyaranjan Trivedi has envisaged that the two main problems of our country i.e. unemployment and pollution have to be tackled by creating environment friendly and sustainable jobs by designing a job creation policy which could be sustained by the mother earth of our country.

Dr. Priyaranjan Trivedi has been pioneer in introducing “CLEANLINESS, HYGIENE AND SANITATION EDUCATION (CHASE)” Project for making the students of the schools, colleges and universities aware regarding making their minds cleaner as well as greener so that they may throw themselves into a new environment with full of zeal and enthusiasm so that our country could use their knowledge to the fullest extent of their abilities.

Dr. Trivedi has been suggesting to all the Presidents and the Prime Ministers of India since 1977 with a view to modifying the existing developmental systems by providing new ideas with a neological as well as a neocratic approach to governance for dealing with problems like unemployment, insurgency, poverty, pollution, faulty educational systems, population explosion besides issues relating to environment, disaster management, total quality management, health, women’s empowerment, geriatric care etc.

Dr. Priyaranjan Trivedi has been in close touch with the State Governments also for giving them periodicals suggestions and advice regarding the educational policies at primary, secondary and tertiary education levels besides functional literacy for ensuring implementation of action programmes having social, cultural, educational, vocational, technological, environmental, economic and positive contents for optimum development of the Indian society.

Dr. Priyaranjan Trivedi is the only person in the world who has successfully been able to compile and collect information related to more than 525 drugless therapies for optimizing the health budgets of the Central and the State Governments. Under the Skill India Programme, he has been able to design courses of studies and the self-instructional training materials for more than 2100 vocational, job oriented and employment centric courses to be launched among the young boys and girls.

Dr. Priyaranjan Trivedi is proud to successfully prepare a masterplan paradigm for the establishment of virtual universities in different countries of the world and accordingly he is looking forward to receiving offers from different countries for transferring the appropriate technologies of institution building in general and of the techniques related to the establishment of employment centric tertiary education level institutions in particular.

His idea of having spiritual universities to be located in each of the States and Union Territories has been appreciated by the Hon’ble Prime Minister of India.

SRI RAMACHANDRA

INSTITUTE OF HIGHER EDUCATION AND RESEARCH

(Category - I Deemed to be University) Porur, Chennai

38
years
SRIHER

- Graded by UGC as Category-I University

- India's top Health Sciences Deemed University

- Awarded 15th rank for Medical College, 13th rank for Dental College, 31st rank for Pharmacy College and 48th rank for SRIHER by the MHRD, Govt. of India under NIRF 2022

- NAAC 3rd cycle re-accredited - with A++ Grade

- 164 Medical, Dental, Engineering and Paramedical UG, PG, Super Speciality and Ph.D programmes duly approved by statutory authorities with 8352 students on roll

- NABH accredited tertiary care 2500 bedded hospital with largest speciality ICUs in South India; over 150 surgeries and 6000 outpatients a day

- Innovative, value added courses, competency based curriculum, blended e-learning

- State of the art Central Research Facility, skills and cadaver labs and Environment Health Research Centre

- B.Sc. Clinical Research

- B.Sc. (Hons) Environmental Health Sciences

- B.Sc. Medical Laboratory Technology

- B.Sc Public Health

- M.Sc. Clinical Research

- M.P.H. Occupational and Environmental Health

- M.Sc. Applied Child Development

- M.Sc. Applied and Regulatory Toxicology

- M.Sc. Clinical Immunology

- M.Sc. Mind-Body and Life Style Science

- M.Sc. Forensic Science

- World class Centre for Sports Sciences (CSS) accredited by professional sports bodies

- B.Sc. (Hons) Sports and Exercise Sciences

- M.P.T. (Sports)

- M.Sc. Sports and Exercise Psychology

- B.Tech Programs in thrust areas in AI, IOT Cyber Security, Machine Learning, Medical Engg., & Data Analytics

- B.Tech. Computer Science and Medical Engineering

- B.Tech. Computer Science and Engineering (Cyber Security and Internet of Things)

- B.Tech. Computer Science and Engineering (Artificial Intelligence and Data Analytics)

- B.Tech. Computer Science and Engineering (Artificial Intelligence and Machine Learning)

- B.Sc. Computer Science (Artificial Intelligence)

- B.Sc. Computer Science (Artificial Intelligence and Data Analytics)

- M.Sc. Artificial Intelligence (Full-Time & Part-Time)

- M.Sc. Data Analytics (Full-Time & Part-Time)

- Academic Alliance with top ranked Universities and research centres in India and abroad

- Training centre of Royal College of Glasgow, U.K. for MRCP/MRCS and FRCS

- Placements in leading companies and hospitals

Great Strides ... Noble Mission

BLDE

(DEEMED TO BE UNIVERSITY)

Declared as Deemed to be University u/s 3 of UGC Act, 1956

Accredited with "A" Grade by NAAC (Cycle - 2)

THE CONSTITUENT COLLEGE

SHRI B. M. PATIL MEDICAL COLLEGE, HOSPITAL AND RESEARCH CENTRE

Smt. Bangaramma Sajjan Campus, Dr. B. M. Patil Road, (Sholapur Road), Vijayapura - 586103, Karnataka, India.

Accreditations

BLDE (Deemed to be University) is a single-faculty Health Sciences University established in 2008 in Northern Karnataka, with 'Shri B. M. Patil Medical College, Hospital & Research Centre' as its constituent unit (Est. 1986). The Sponsoring Society, BLDE Association, is a 112-year-old Education Society running more than 83 Institutions. The varsity came into existence with the sole objective of providing quality Medical Education and meeting the healthcare needs of the people in this backward region of North Karnataka. It has a unitary campus of 71.2 acres with 26 departments and a teaching hospital with 1338 beds, also accredited by NABH at Entry Level and the labs are NABL accredited.

The varsity has been assessed by NAAC and accredited 'A-Grade' with a CGPA of 3.09, included in the NIRF Rank Band: 101-150, for the year 2022, Atal Ranking of Institutions on Innovation Achievements (ARIIA) recognised it in the band of 'PERFORMER', and India Today Survey 2022, ranked BLDE (DU) 11th among the Medical Universities in India.

Fakir Mohan University

VYASA VIHAR

BALASORE, ODISHA-756089

Website: fmuniversity.nic.in

Fakir Mohan University, is established by the Government of Odisha. The University is recognized by UGC and accredited with NAAC B+. Named after the legendary litterateur and the maker of modern Odisha, *Vyasa Kabi Fakir Mohan Senapati*, the university has now 18 regular departments offering M.A, MSc, Ph.D. and M.Phil programs in Applied Physics and Ballistics, Bio-sciences & Biotechnology, Environmental Science, Chemistry, Population Studies, Social Science, Language and Literature, Botany, Zoology, Chemistry, Geology, Geography, History and Archaeology, Journalism & Mass Communication, Business Management, Information and Communication Technology, Education, Commerce, and Mathematics. With its locational advantage, the university hosts students from the neighboring states like West Bengal, Bihar and Jharkhand. Apart from that, being the first University in Northern Odisha, it is the epitome of knowledge and wisdom built around the three pillars of human existence as mentioned in the insignia of the university, "*Satya, Sadhana and Swabhimana*". The university follows an innovative pedagogic structure in teaching and learning emphasizing both on theory and practical aspects of various programs under study. Outreach activity of the university is one of its strength as it always emphasizes on —

reaching out to the communities and villages surrounding its campus. The university has adopted two villages adjoining the campus and organized health, agriculture and awareness programs. For the development of research and academics in the university, the university organizes annual research scholars' conclave where research scholars display their research outcome in the public. Recently, the university has organized Stakeholders' Meet constituting of students, alumni, principals of affiliated colleges civil society, teachers, staffs, and accordingly it has prepared the long term vision and action plan of the university "Vision 2040". Realizing the importance of sports for the development of human capacity, the university this year has organized East Zone interuniversity women's Volleyball as well as East Zone men and women's Kho-Kho tournament in its campus where players from 32 universities of Eastern Zone have participated in the event. The university is also actively involved in handholding its affiliated colleges for their development as well as the development of the university. Research and archival on Odia language and literature is one of its focus areas. The campus of the university is green and well organized with all the basic amenities required for research and academics.

REVA University has been established under the REVA University Act, 2012. The University is recognised by the University Grants Commission (UGC) and has the approval of the AICTE (All India Council for Technical Education), Bar Council of India (BCI) and Council of Architecture (CoA), New Delhi. It is also the member of Association of Indian Universities (AIU) apart from being a member of the Commonwealth Universities and Institution's Innovation Council (Ministry of HRD Initiative) has recognized REVA as an Innovation Cell. REVA University is also recognized by MHRD. The REVA University is having ISO 9001 Certification and memberships of ASSOCHAM, Intuition of Engineers, Scientific & Industrial Research Organizations (SIRO) and QS I Guage-QS Rating Certificate etc.,

The University is equipped with state-of-the-art infrastructure and a conducive learning environment that enables a global learning experience.

The Founders of REVA, with a visionary outlook and exemplary leadership skills, have been entrepreneurs for more than four decades and embarked on an academic journey over a decade ago. In a short span, as a result of their continuous hard work, commitment towards quality education, and vision to set up an institution that is on a par with global universities, REVA University has emerged as a brand to reckon with for higher education in the academia.

The University offers 31 PG programmes, 44 UG programmes, and several vocational training programmes in the fields of Engineering, Architecture, Applied Sciences, Arts and Humanities, Management and Commerce, Legal Studies, and Performing Arts. With a keen interest in research and innovation, the University has thrust upon an incubation centre that imparts quality mentorship for budding startups.

REVA University lays great emphasis on holistic education and the Choice Based Credit System (CBCS) and Continuous Assessment Graded Pattern of the educational method has been introduced at REVA to facilitate students to opt subjects of their choice in addition to the core subject of the study while preparing them with right job-oriented skills.

The REVA NEST is the flagship incubator programme of REVA University. More than 30 startups are being incubated at REVA NEST and 10 among these are ready for commercial launch.

In the academic year 2020-2021, the University witnessed a surge in the number of admissions and achieved more than its target percentage of new enrollments. Currently, REVA has a vibrant mix of more than 16,000 students studying at the university, while more than 4,000 students have opted for the residential facility available for students.

The academic infrastructure at REVA is envisioned in an attempt to nurture future-ready students, and the well-equipped laboratories, custom-built machinery designed specifically to emulate a working setup, a fully air-conditioned library with more than 1, 00,000 books, and a central computer centre are some of the many exceptional student facilities at REVA.

Apart from The University also offers short-term certification programmes for working professionals and those looking to upskill. The certification programmes are conducted by a panel of accomplished faculty, who are alumni of esteemed institutions like IIT/NIT.

In the year 2020, REVA University flagged off Abhivridhi, a non-profit, CSR initiative to renovate government schools and educate students in rural areas. The University has adopted 10 schools that will be remodeled and will have modern facilities like wi-fi connectivity, projectors, laptop connection, among other facilities.

REVA University is industry-driven and all its courses, programmes are introduced based on research and inputs from industry experts. The core vision of the University is to groom students who will not only be effective leaders but personalities that will drive impactful societal changes.

MANGALORE UNIVERSITY

Mangalagangothri

Mangalore University was established in 1980 to fulfil the aspirations of the people of undivided Dakshina Kannada and Kodagu districts of Karnataka. Mangalagangothri, the campus of Mangalore University is located about 20 kms to the South-East of the historic coastal town of Mangalore.

University at a Glance

- Constituent Colleges : 2
- Postgraduate programmes offered : 40
- International students (PG programmes) : 167
- Teaching staff in Postgraduate Departments : 117
- Postgraduate Departments : 28
- Affiliated Colleges : 207
- PhD programme : 31
- Non-Teaching staff in the University : 241

University Ranking

- Scopus h-index : 72
- Universitas Indonesia (UI) Green Metric World Ranking: Number 1 in India and 139th at the global.
- NIRF (MHRD) Ranking Ranked in the band 101 – 150
- Quacquarelli Symonds (QS) World University Rankings: 48th place in the Country
- Media Rankings (2020): "India Today" – 11th place "The Week" – 39th place

PROGRAMMES OFFERED

FACULTY OF ARTS

MA Economics,
MA English,
MA History,
MA Kannada,
MA Journalism and Mass Communication,
MA Political Science,
Master of Social Work (MSW),
MA Sociology

FACULTY OF SCIENCE AND TECHNOLOGY

MSc Biochemistry, MSc Biosciences, MSc Biotechnology,
MSc Botany, MSc Chemistry,
Master of Computer Applications (MCA),
MSc Computer Science, MSc Electronics,
MSc Environmental Science, MSc Food Science and Nutrition,
MSc Geography, MSc Geoinformatics,
MSc Industrial Chemistry,
Master Library and Information Science (MLISc),
MSc Marine Geology, MSc Materials Science,
MSc Mathematics, MSc Medical Physics,
MSc Microbiology, MSc Physics,
MSc Statistics, MSc Zoology,
MSc Cyber Security,
MSc Yogic Science,
PG Diploma in Yogic Science and 3 months certificate course in Yogic Science

POST GRADUATE PROGRAMMES AT FIELD MARSHAL K. M. CARIAPPA COLLEGE, MADIKERI

M.Sc. Physics, M.A. Economics/M.A. English and MBA (Tourism & Travel Management)

FACULTY OF COMMERCE

Master of Business Administration (MBA),
MBA TTM (Tourism & Travel Management),
Master of Commerce (M.Com),
M.Com (Human Resource Development),

FACULTY OF EDUCATION

Bachelor of Physical Education (B.P.Ed),
Master of Physical Education (M.P.Ed)
Master of Education (M.Ed)

PROGRAMMES IN POST GRADUATE CENTRE AT JNANA KAVERI CAMPUS, CHIKKA ALUVARA, KUSHAL NAGAR, KODAGU DISTRICT

MSc Biochemistry,
MSc Microbiology, MSc Botany,
MSc Chemistry, MSc Computer Science,
MSc Environmental Science,
MA History, MA Kannada,
MA Journalism and Mass Communication,
MA Political Science,
Master of Social Work (MSW),
Master of Commerce (M.Com).

POST GRADUATE PROGRAMMES AT UNIVERSITY COLLEGE, MANGALURU

M.Sc. Chemistry,
M.Com. (Day and Evening Programme),
M.A. in Economics, Sanskrit,
P.G. Diploma in Yogic Sciences,
Certificate Course in Yogic Science,
M.B.A. (IB) Evening Programme.

JNTUH is situated in a sprawling 89-acre campus at Kukatpally, Hyderabad. The University has four constituent Engineering colleges, one at Hyderabad, one at Kondagattu (Jagtial), one at Manthani and one at Sultanpur (Medak Dist.) and three academic units in the Main Campus, IST, SIT, SMS in addition to twelve administrative Units. JNTUH is accredited by the National Assessment and Accreditation Council (NAAC) as an 'A' Grade University.

The Constituent Engineering Colleges and Units of JNTUH are offering B.Tech. courses in 11 branches, M.Tech in 28 specializations, M.Pharmacy in 3 specializations, M.Sc. in 4 specializations, MBA and MCA, and Five-year Integrated Dual Degree Masters Programme in 10 specializations with M.Tech./MBA. Additionally, MS, M.Phil and Ph.D programmes in various disciplines of Engineering, Technology, Science, Management and Humanities & Social Sciences are offered. The University has Memoranda of Understanding (MoU) with many International and National organizations/universities/ institutions/ industries.

The University offers B.Tech in 21 branches; B.Pharmacy, M.Tech. in 55 specializations; M. Pharmacy in 10 specializations; MCA, MBA, Pharma.D and Pharma.D (PB) programmes in affiliated colleges in addition to the Constituent Units of the University. JNTUH has 282 Affiliated Colleges. They include 192 Engineering Colleges, 76 Pharmacy Colleges and 14 stand-alone MCA/MBA colleges spread over 31 Districts of Telangana State. It has over 2.50 Lakhs of students on rolls.

FACILITIES: Hostel, Sports, Medical, Library.

Odisha University of Agriculture and Technology, Bhubaneswar, Odisha

Odisha University of Agriculture and Technology, established in 1962 as the second oldest Agricultural University of the country, contributes immensely for agricultural development through triple functions of Education, Research and Extension Education programme.

Academic achievements

- Ranked 91st among All India Universities and 137th among 4200+ educational institutes of India as per National Institutional Ranking Framework (NIRF), Govt. of India.
- Ranked 15th position among all Agricultural Universities of the country as per ICAR ranking during 2018.
- In all India JRF-2017 examination, OUAT secured 2nd position in Agricultural Sciences and Engineering & Technology category.
- Reoriented Rural Agricultural/Horticultural Work Experience activities to enable the students to get familiar with the socio-economic conditions of the farmers under '*Gaoan Ku Jiba Chasi Bhetiba*' programme.
- A student from College of Agricultural Engineering & Technology topped the All India GATE-2018 examination.
- OUAT emerged as overall champion in AGRIUNIFEST-2018 held at Tirupati.

Research accomplishments

- The University has so far released 152 crop varieties with an array of technologies.
- AICRP on Palms in the University was adjudged as the best center in the country during 2017-18 for outstanding contribution to location specific coconut research.
- Farm implements like *Ragi* thresher-cum-pearler, OUAT puddler, self-propelled 8-row rice transplanter, manual *mahua* seed decorticator, power operated *mahua* stamen remover etc. have been developed.
- Sheep breed namely "Kendrapada Sheep" and poultry chicken breed "Hansli" have been registered with NBAGR, ICAR.
- University has entered into a new era of research by establishing a dedicated centre on geo-spatial technology.
- Bio-fortification of rice varieties with Zinc and Iron is in progress in collaboration with "Harvest Plus" to combat malnutrition.

Achievements in Extension Education

- Various technological modules are implemented by 31 KVKs of the University for doubling farmers' income.
- KVK, Bhadrak ranked 1st in ICAR-ATARI Kolkata Zone and received Pandit Deen Dayal Upadhyay Krishi Vigyan Protsahan Puraskar-2017.
- KVK, Bargarh received 2nd prize on *Swachhta Pakhwada* Award of ICAR 2017.
- Seven pulses seed hubs and 3 oilseed hubs are established for production of quality seeds.
- Monthly meetings are organized at 31 KVKs by involving scientists and extension personnel to strengthen Research-Extension linkage.
- Farmer FIRST project is being implemented in Khordha district to strengthen farmer participatory research.
- ARYA project is operating in Nayagarh district to develop small-scale agri-entrepreneurship for ensuring continued income of rural youth.

Enabling Governance

- Clean energy and green energy campus with installation of rooftop solar power plant and rooftop rainwater harvesting structures
- Video conferencing facility to efficiently address farmers' problem on real time basis
- The Central Library has implemented KOHA LMS for automation and open access.
- Techno-Park is established to display the frontier technologies.

ALAGAPPA UNIVERSITY

A State University Awarded Category-I by MHRD – UGC and A+ Grade (CGPA:3.64) by NAAC
2019: QS ASIA Rank – 216, QS BRICS Rank – 104, QS India Rank – 20)

KARAIKUDI - 630003

The beeline of educational institutions established during 1950 by Dr. RM. Alagappa Chettiar, who was often addressed as “Social Capitalist” by Pandit Jawaharlal Nehru, formed the core for the Alagappa University which the Government of Tamil Nadu has embarked upon in 1985. Since then the university marched steadfast and attained

- **A+ grade from NAAC (CGPA : 3.64)** and status of **Category I** University from MHRD/ / University Grants Commission, New Delhi, in 2017 and emerged as the only University to attain A+ grade among 52 Universities in Tamil Nadu and one among the 32 Category I Universities selected from over 916 Universities.
- Under QS Ranking, Alagappa University placed 20th position in QS India, 104th position in QS BRICS and 216th position in QS Asia Ranking 2019. **Alagappa University** is an ISO 9001:2015 certified university in the field of Higher Education and Research Activities.
- Under the UGC Regulations 2017, Alagappa University has been categorized as **Category I University** as it has been accredited by NAAC with a score of 3.64. Alagappa University got 23rd position among the Universities in NIRF 2018 Ranking.
- MHRD, New Delhi, has sanctioned Rs.100 Cr. to Alagappa University for the development of Research under RUSA Phase 2.0 scheme. Previously, Alagappa University got Rs.20 Cr. for Infrastructure Development under RUSA Phase 1.0 scheme.
- Alagappa University has other awards viz. **ISO-9000 : 2015** Certification Award for providing high quality research, 4th Rank in **Swachhta** Ranking (2018), **Green Environment Award (2016 & 2017)** from National Institute of Cleanliness Education and Research (**NICER**), **World Environment and Livelihood Award - 2017 (WEAL)**, **IAB Blind Empowerment Champion (2018)** from Indian Association for Blind and many a like.
- The University recognized under 2(f) and 12(B) of University Grants Commission(UGC), member of Association of Indian Universities (AIU), and Association of Commonwealth Universities (ACU), has made marks and milestones in multiple areas of academic, research, extension, infrastructure development and campus development initiatives.

ACADEMIC:

The University, which has been on the marathon of higher academics since 1985, has now, in 2018, attained stature with 4 faculties (Sciences, Arts, Education, Management) comprising 39 Departments, 9 Directorates and Centres, 3 University Constituent Colleges and 44 Affiliated Colleges sprung up in Sivagangai and Ramanathapuram Districts. Started with 12 number of academic programmes in the year 1985, now it offers 158 programmes by the University Departments, 117 by Affiliated Colleges, 58 by Directorate of Distance Education and 83 through collaborative modes with specialized institutions. Alagappa University has the faculty strength over 300 and students strength over 5000. It has well established infrastructure facilities with high-end laboratories, 95 smart class rooms, hostels with computational facilities, campus wide wi-fi and bus and GPS mounted bicycles.

RESEARCH AND DEVELOPMENT:

Research and development are the hall marks of this university with

- H index of the University – 65,
 - Sponsored research projects with the external funding of R. 39.52 Cr.,
 - Research inventions and innovations in the areas of Bioinformatics and Drug Discovery, Biotechnology / Biosciences and registration of 915 sequences in Genbank, new methods of Bio-Waste Management and Bio-Gas Generation, new application areas in biosensors, development of cost effective non-conventional energy gadgets, Green Chemistry, new inventions in Nano Technology, unfurling ancient Tamil Culture from the artifacts used by them, agricultural economics, application of Cognitive Science in Education Technology and various fields of Management.
 - Publication of 820 scientific articles in national and 2033 in international journals, 219 books and edited volumes, conduct of 150 national and 27 international conferences and 57 foreign visits and presentation of papers in 916 international conferences and 1581 national conferences in the University for knowledge sharing and propagation.
 - Signing of over 44 MoUs with institutions of eminence sprung up in over 19 countries, industry tie-up research with few industries from Singapore and India, etc.
 - University Science Instrumentation Centre (USIC) as a common facility at the cost of Rs.19.3 crores; state-of-the-art laboratories in Bioinformatics, Biotechnology, Botany, Animal Health, Industrial Chemistry, Physics and Energy, Botanical Garden with species diversity for research on various aspects of flora.
 - Unique Museum on Tamil Culture with artifacts, tools, household articles and weapons used by the ancient Tamils to show case and conduct research.
 - Increase of Research Corpus Fund from 7 crores to 10 crores to provide more research fellowships, research projects and promote inter-disciplinary projects.
- Hierarchy of measures have also been on to sensitize and attract the researchers such as Creation of Alagappa University Research Fund (AURF) to honour performing faculties with AURF award annually, AURF start-up grant to the newly appointed Faculty Members, AURF Special start-up grant for Rs.3 lakhs for each international collaborative project, Travel grant for the students and faculties for national and international conferences.

EXTENSION ACADEMIA:

The extension academia is yet another unique frontier area in the University such as;

- Establishment of first of its kind Para Sports Centre at a cost of Rs.65 lakhs, which brought 74 Gold, 53 Silver and 48 Bronze medals at national level and one Gold Medal at the 7th World Dwarf Games held in Canada through the students trained.
- Establishment of Resource School for the differently-abled students, giving special education and training to the differently-abled and counseling their students.
- Creation of Alagappa University Study Circle and imparting Capacity Building Training to the aspirants of UPSC/NET/SLET/TNPSC and other competitive examinations in which over 9642 trainees have been benefitted.
- Establishment of over 30 clubs for the various extension activities.
- Initiation of Marine Adventure Tourism at Thondi campus of the University
- SWAYAM, VISAKA, Yoga centre, various skill development programmes and hierarchy of activities through over 30 clubs.

CAMPUS DEVELOPMENT INITIATIVES:

The University has also executed various academic and campus development initiatives to accelerate the process of academic and research and some of them are

- Complete automation of examination system.
- Up-gradation of Central Library with RFID facilities, faculty-wise library
- Vallal Alagappan Museum to emulate from the Founder's life history.
- RUSA Garden and planting of 30,000 saplings under campus green initiatives.
- Regular grievance redressal mechanism to the staff, grievance redressal melas for the students, time bound promotions, press meets during the first week of every month are self-styled strategies

STEPS INITIATED UNDER RUSA PHASE 2.0 SCHEME

The University has also drawn up innovative plans for the future and some have been already initiated such as, institution of International Student Fellowship (ISF) Scheme, International Doctoral Fellowship Scheme (IDF) and International Post-Doctoral Fellowship Scheme (IPDF); week long visiting professor scheme (100-105) international and national faculties for lectures, collaborative research in a year; Conduct of two International Conferences in the University and one International Conference in a foreign country every year in collaboration with top 500 universities; Up-scaling USIC and Central Library to international standards and construction of new buildings and infrastructure such as USIC and new Science Avenue, Integrated Complex of Educational Sciences, Social Sciences Villa, Information Technology Avenue, Management Parlor, International Guest House and International Hostel, World Heritage Center are on the cards.

NATIONAL INSTITUTE OF FOOD TECHNOLOGY ENTREPRENEURSHIP AND MANAGEMENT

Deemed to be University (De-novo Category) under Section 3 of the UGC Act, 1956
Ministry of Food Processing Industries, Govt. of India

NATIONAL INSTITUTE OF FOOD TECHNOLOGY ENTREPRENEURSHIP AND MANAGEMENT (NIFTEM) is a Deemed to be University (De-Novo category) under Section 3 of the UGC Act, 1956 and an autonomous Institution under the Ministry of Food Processing Industries, Government of India. It is a world-class institute of global standards in Food Technology Entrepreneurship and Management. The Institute caters to the needs of various stakeholder entrepreneurs, industry, exporters, policy makers, the government and the existing institution.

NIFTEM offers a full time programme leading to **Bachelor's degree in Food Technology and Management, M.Tech Programme** in five disciplines; **Food Supply Chain Management, Food Safety and Quality Management, Food Process Engineering and Management, Food Technology and Management and Food Plant Operations Management**. NIFTEM also offers **Ph.D programme and MBA programme**. At NIFTEM the post-graduate students are encouraged to take up both cutting edge basic research as well as industry relevant projects.

Scholarships/Fellowships.: NIFTEM Merit Scholarship and NIFTEM Merit-Cum-Means Scholarship, AICTE, GATE scholarship, Limited NIFTEM Ph. D. Fellowship.

CAREER OPPORTUNITIES FOR NIFTEM STUDENTS IN FOOD SECTOR

Job prospects for graduates and post-graduates of NIFTEM are extremely bright and would be comparable to the best in other economic sectors of the country. Some career opportunities could be: **Food Process Engineer, Food Ingredient Manager, Food Regulatory Specialist, Food Fermentation Specialist, Retail or Supply Chain Manager, Entrepreneurship, Product Development Scientist, Sensory Scientist, etc**

STUDENT'S FOREIGN EXCHANGE PROGRAMME

Right from their first year itself, every year ten meritorious students of B. Tech and five of M. Tech programmes of NIFTEM are sent to foreign universities on student exchange programme of Academic learning with 100% support.

100 % placement of M.Tech. & B.Tech. students with MNCs and other Renowned Food Processing Industries.

ABOUT ALLIANCE UNIVERSITY

Alliance University is a Private University established in Karnataka State by Act No.34 of year 2010. The University is jointly recognized by the University Grants Commission (UGC) and the All India Council for Technical Education (AICTE), New Delhi.

Alliance University with a vibrant and picturesque campus in Bengaluru- one of the fastest growing cities in India offers more than 20 undergraduate and postgraduate majors to approximately 7,000 students of diverse backgrounds. Alliance education, defined by excellence in the areas of Business Administration; Engineering; Legal Studies and guided by the core values of the University, has shaped the lives of over 20,000 very successful alumni across the globe.

KEY FEATURES

- Scenic "green" campus located in India's Silicon Valley
- Competent environment for research, consulting and professional growth
- Courses with global perspective and contemporary curriculum aligned to current industry needs to produce world-class leaders
- Renowned full-time faculty who are industry practitioners and published academicians
- A plethora of international collaborations with institutions in the Americas, APAC and Europe

VISION

To be a globally recognized and acclaimed centre of academic excellence in youth development.

Shri Vijay Goel
Minister of State (IC) for
Youth Affairs & Sports

About RGNIYD

The Rajiv Gandhi National Institute of Youth Development (RGNIYD), Sriperumbudur, Tamil Nadu, is an Institute of National Importance by the Act of Parliament No. 35/2012 funded by the Ministry of Youth Affairs & Sports, Government of India.

RGNIYD is a national university that offers the most comprehensive and diverse post graduate programmes in one of the most progressive social science disciplines of today – Youth Studies

The RGNIYD functions as a vital resource centre with its multi-faceted functions of offering academic programmes at Undergraduate and Post-Graduate levels encompassing different dimensions of youth development, engaging in seminal research in the vital areas of youth development and coordinating Training Programmes for state agencies and the officials of youth organisation, besides the Extension and Outreach initiatives across the country.

The Institute functions as a think-tank of the Ministry and premier organization of youth-related activities in the country. As the apex institute at the national level, it works in close cooperation with the NSS, NYKS and other youth organizations in the implementation of training programmes. The Institute is a nodal agency for training youth as a facilitator of youth development activities in rural, urban as well as tribal areas.

The RGNIYD serves as a youth observatory and depository in the country thereby embarking on youth surveillance on youth-related issues. It has a wide network with various organizations working for the welfare and development of young people and serves as a mentor.

Academic Programmes offered by RGNIYD

- B.Voc. Apparel Manufacturing & Entrepreneurship
- B.Voc. Fashion Design & Retail
- M.Sc.Counselling Psychology
- M.A.Development Policy and Practice
- M.A.Gender Studies
- M.A.Local Governance and Development
- M.A.Social Innovations and Entrepreneurship
- M.A. Social Work (Youth and Community Development)
- PG Diploma in Youth Development
- Ph.D

Distinctiveness of the Academic Programmes

- Choice-Based Credit System
- Path-setting Programme Design
- Innovative Teaching Methodologies
- Career-focused Training
- State-of-the-art Learning Environment
- Internship at Reputed Organisations
- Employment Enhancement Cell
- Guidance and Counselling Centre
- Overseas Participation
- Sponsorship, Scholarships and Research Fellowships
- Insightful Real -world Exposure

TransDisciplinary University

(Established in 2013 by an Act of Karnataka Legislature)
State Private University UGC Recognised - UNCD No. 794

TransDisciplinary University (TDU) has evolved from 24 years of pioneering work of the Foundation for Revitalization of Local Health Traditions (FRLHT). TDU offers undergraduate, postgraduate and PhD programmes which are of contemporary relevance, and cutting edge. We prepare students and scholars to have an uncommon advantage compared to their peers because of our emphasis on experiential learning and competency based evaluation.

Undergraduate Program

- Bachelor of Science - Life Sciences (Conservation Science)

Integrated Program

- Integrated M. Sc. in Computer Science (4 years) with specialisation in
 - Data Science
 - Cyber Physical Systems
 - FinTech
 - Health Informatics

Certificate Programs

- Panchakarma Therapy and Yoga Basics
- Ethnobiology
- Plant Systematics and Biodiversity
- Ethno-veterinary Practice
- One Health
- *Nadi Vigyana*

Post Graduate Programs

- Master of Science-Life Sciences (Ayurveda Biology)
- Master of Science - Life Sciences (Conservation Futures)
- Master of Science - Computer Science with Specialisation in
 - Data Science
 - Cyber Physical Systems
 - FinTech
 - Health Informatics
- Master of Science - Science Communication
- Master of Science - Herbal Quality Assurance & Regulatory Affairs

Chapter 1

WHAT IS EDUCATION ?

Before discussing the background, history, philosophy, technology, the present and the future trends relating to distance, open and virtual education in India as well as in other parts of the world, it is essential to underline the salient features of education with a view to connecting the utility of the new educational tools and technologies used in the open universities as well as other centers, departments and schools of distance education.

Education is the process of facilitating learning. Knowledge, skills, values, beliefs, and habits of a group of people are transferred to other people, through storytelling, discussion, teaching, training, or research. Education frequently takes place under the guidance of educators, but learners may also educate themselves in a process called autodidactic learning. Any experience that has a formative effect on the way one thinks, feels, or acts may be considered educational.

Education is commonly and formally divided into stages such as preschool, primary school, secondary school and then college, university or apprenticeship. The methodology of teaching is called pedagogy.

School children sitting in the shade of an orchard in Bamozai, near Gardez, Paktya Province, Afghanistan Student participants in the FIRST Robotics Competition, Washington, D.C.

A right to education has been recognized by some governments. At the global level, Article 13 of the United Nations' 1966 International Covenant on Economic, Social and Cultural Rights recognizes the right of everyone to an education. Although education is compulsory in most places up to a certain age, attendance at school often isn't, and a minority of parents choose home-schooling, sometimes with the assistance of modern electronic educational technology (also called e-learning). Education can take place in formal or informal settings.

Etymologically, the word "education" is derived from the Latin *ēducātiō* ("A breeding, a bringing up, a rearing") from *ēdūcō* ("I educate, I train") which is related to the homonym *ēdūcō* ("I lead forth, I take out; I raise up, I erect") from *ē-* ("from, out of") and *dūcō* ("I lead, I conduct").

HISTORY

Nalanda, ancient center for higher learning

Plato's academy, mosaic from Pompeii

Education began in prehistory, as adults trained the young in the knowledge and skills deemed necessary in their society. In pre-literate societies this was achieved orally and through imitation. Story-telling passed knowledge, values, and skills from one generation to the next. As cultures began to extend their knowledge beyond skills that could be readily learned through imitation, formal education developed. Schools existed in Egypt at the time of the Middle Kingdom.

Matteo Ricci (left) and Xu Guangqi (right) in the Chinese edition of Euclid's Elements published in 1607

Plato founded the Academy in Athens, the first institution of higher learning in Europe. The city of Alexandria in Egypt, established in 330 BCE, became the successor to Athens as the intellectual cradle of Ancient Greece. There, mathematician Euclid and anatomist Herophilus constructed the great Library of Alexandria and translated the Hebrew Bible into Greek. European civilizations suffered a collapse of literacy and organization following the fall of Rome in AD 476.

In China, Confucius (551-479 BCE), of the State of Lu, was the country's most influential ancient philosopher, whose educational outlook continues to influence the societies of China and neighbors like Korea, Japan and Vietnam. Confucius gathered disciples and searched in vain for a ruler who would adopt his ideals for good governance, but his Analects were written down by followers and have continued to influence education in East Asia into the modern era.

After the Fall of Rome, the Catholic Church became the sole preserver of literate scholarship in Western Europe. The church established cathedral schools in the Early Middle Ages as centers of advanced education. Some of these establishments ultimately evolved into medieval universities and forebears of many of Europe's modern universities. During the High Middle Ages, Chartres Cathedral operated the famous and influential Chartres Cathedral School. The medieval universities of Western Christendom were well-integrated across all of Western Europe, encouraged freedom of inquiry, and produced a great variety of fine scholars and natural philosophers, including Thomas Aquinas of the University of Naples, Robert Grosseteste of the University of Oxford, an early expositor of a systematic method of scientific experimentation, and Saint Albert the Great, a pioneer of biological field research. The University of Bologna is considered the oldest continually operating university.

Elsewhere during the Middle Ages, Islamic science and mathematics flourished under the Islamic caliphate which was established across the Middle East, extending from the Iberian Peninsula in the west to the Indus in the east and to the Almoravid Dynasty and Mali Empire in the south.

The Renaissance in Europe ushered in a new age of scientific and intellectual inquiry and appreciation of ancient Greek and Roman civilizations. Around 1450, Johannes Gutenberg developed a printing press, which allowed works of literature to spread more quickly. The European Age of Empires saw European ideas of education in philosophy, religion, arts and sciences spread out across the globe. Missionaries and scholars also brought back new ideas from other civilisations — as with the Jesuit China missions who played a significant role in the transmission of knowledge, science, and culture between China and Europe, translating works from Europe like Euclid's *Elements* for Chinese scholars and the thoughts of Confucius for European audiences. The Enlightenment saw the emergence of a more secular educational outlook in Europe.

In most countries today, full-time education, whether at school or otherwise, is compulsory for all children up to a certain age. Due to this the proliferation of compulsory education, combined with population growth, UNESCO has calculated that in the next 30 years more people will receive formal education than in all of human history thus far.

FORMAL EDUCATION

Formal education occurs in a structured environment whose explicit purpose is teaching students. Usually, formal education takes place in a school environment with classrooms of multiple students learning together with a trained, certified teacher of the subject. Most school systems are designed around a set of values or ideals that govern all educational choices in that system. Such choices include curriculum, physical classroom design, student-teacher interactions, methods of assessment, class size, educational activities, and more.

PRESCHOOL

Young children in a kindergarten in Nagaland

Preschools provide education from ages approximately three to seven, depending on the country, when children enter primary education. These are also known as nursery schools and as kindergarten, except in the USA, where kindergarten is a term used for primary education. Kindergarten "provide[s] a child-centered, preschool curriculum for three- to seven-year-old children that aim[s] at unfolding the child's physical, intellectual, and moral nature with balanced emphasis on each of them."

PRIMARY

Primary (or elementary) education consists of the first five to seven years of formal, structured education. In general, primary education consists of six to eight years of schooling starting at the age of five or six, although this varies between, and sometimes within, countries. Globally, around 89% of children aged six to twelve are enrolled in primary education, and this proportion is rising. Under the Education For All programs driven by UNESCO, most countries have committed to achieving universal enrollment in primary education by 2015, and in many countries, it is compulsory. The division between primary and secondary education is somewhat arbitrary, but it generally occurs at about eleven or twelve years of age. Some education systems have separate middle schools, with the transition to the final stage of secondary education taking place at around the age of fourteen. Schools that provide primary education, are mostly referred to as *primary schools* or *elementary schools*. Primary schools are often subdivided into infant schools and junior school.

In India, for example, compulsory education spans over twelve years, with eight years of elementary education, five years of primary schooling and three years of upper primary schooling. Various states in the republic of India provide 12 years of compulsory school

education based on a national curriculum framework designed by the National Council of Educational Research and Training.

SECONDARY

In most contemporary educational systems of the world, secondary education comprises the formal education that occurs during adolescence. It is characterized by transition from the typically compulsory, comprehensive primary education for minors, to the optional, selective tertiary, "postsecondary", or "higher" education (e.g. university, vocational school) for adults. Depending on the system, schools for this period, or a part of it, may be called secondary or high schools, gymnasiums, lyceums, middle schools, colleges, or vocational schools. The exact meaning of any of these terms varies from one system to another. The exact boundary between primary and secondary education also varies from country to country and even within them, but is generally around the seventh to the tenth year of schooling. Secondary education occurs mainly during the teenage years. In the United States, Canada and Australia, primary and secondary education together are sometimes referred to as K-12 education, and in New Zealand Year 1–13 is used. The purpose of secondary education can be to give common knowledge, to prepare for higher education, or to train directly in a profession.

Students and the Teachers at a High School in Nagaland

Secondary education in the United States did not emerge until 1910, with the rise of large corporations and advancing technology in factories, which required skilled workers. In order to meet this new job demand, high schools were created, with a curriculum focused on practical job skills that would better prepare students for white collar or skilled blue collar work. This proved beneficial for both employers and employees, since the improved human capital lowered costs for the employer, while skilled employees received a higher wages.

Secondary education has a longer history in Europe, where grammar schools or academies date from as early as the 16th century, in the form of public schools, fee-paying schools, or charitable educational foundations, which themselves date even further back.

Community colleges offer another option at this transitional stage of education. They provide nonresidential junior college courses to people living in a particular area.

TERTIARY / HIGHER

Students at The Global Open University Nagaland

Higher education, also called tertiary, third stage, or postsecondary education, is the non-compulsory educational level that follows the completion of a school such as a high school or secondary school. Tertiary education is normally taken to include undergraduate and postgraduate education, as well as vocational education and training. Colleges and universities mainly provide tertiary education. Collectively, these are sometimes known as tertiary institutions. Individuals who complete tertiary education generally receive certificates, diplomas, or academic degrees.

Higher education typically involves work towards a degree-level or foundation degree qualification. In most developed countries a high proportion of the population (up to 50%) now enter higher education at some time in their lives. Higher education is therefore very important to national economies, both as a significant industry in its own right, and as a source of trained and educated personnel for the rest of the economy.

University education includes teaching, research, and social services activities, and it includes both the undergraduate level (sometimes referred to as tertiary education) and the graduate (or postgraduate) level (sometimes referred to as graduate school). Universities are generally composed of several colleges. In the United States, universities can be private and independent like Yale University; public and state-governed like the Pennsylvania State System of Higher Education; or independent but state-funded like the University of Virginia. A number of career specific courses are now available to students through the Internet.

One type of university education is a liberal arts education, which can be defined as a "college or university curriculum aimed at imparting broad general knowledge and developing general intellectual capacities, in contrast to a professional, vocational, or technical curriculum." Although what is known today as liberal arts education began in Europe, the term "liberal arts college" is more commonly associated with institutions in the United States.

VOCATIONAL

Fashion Technology Students and Teachers at The Global Open University Nagaland

Vocational education is a form of education focused on direct and practical training for a specific trade or craft. Vocational education may come in the form of an apprenticeship or internship as well as institutions teaching courses such as carpentry, agriculture, engineering, medicine, architecture and the arts.

SPECIAL

In the past, those who were disabled were often not eligible for public education. Children with disabilities were repeatedly denied an education by physicians or special tutors. These early physicians (people like Itard, Seguin, Howe, Gallaudet) set the foundation for special education today. They focused on individualized instruction and functional skills. In its early years, special education was only provided to people with severe disabilities, but more recently it has been opened to anyone who has experienced difficulty learning.

OTHER EDUCATIONAL FORMS

ALTERNATIVE

While considered "alternative" today, most alternative systems have existed since ancient times. After the public school system was widely developed beginning in the 19th century, some parents found reasons to be discontented with the new system. Alternative education developed in part as a reaction to perceived limitations and failings of traditional education. A broad range of educational approaches emerged, including alternative schools, self learning, homeschooling and unschooling. Example alternative schools include Montessori schools, Waldorf schools (or Steiner schools), Friends schools, Sands School, Summerhill School, The Peepal Grove School, Sudbury Valley School, Krishnamurti schools, and open classroom schools.

In time, some ideas from these experiments and paradigm challenges may be adopted as the norm in education, just as Friedrich Fröbel's approach to early childhood education in 19th century Germany has been incorporated into contemporary kindergarten classrooms.

Other influential writers and thinkers have included the Swiss humanitarian Johann Heinrich Pestalozzi; the American transcendentalists Amos Bronson Alcott, Ralph Waldo Emerson, and Henry David Thoreau; the founders of progressive education, John Dewey and Francis Parker; and educational pioneers such as Maria Montessori and Rudolf Steiner, and more recently John Caldwell Holt, Paul Goodman, Frederick Mayer, George Dennison and Ivan Illich.

INDIGENOUS

*Teaching indigenous knowledge, models, method
in Yanyuan County, Sichuan in China*

Indigenous education refers to the inclusion of indigenous knowledge, models, methods, and content within formal and non-formal educational systems. Often in a post-colonial context, the growing recognition and use of indigenous education methods can be a response to the erosion and loss of indigenous knowledge and language through the processes of colonialism. Furthermore, it can enable indigenous communities to "reclaim and revalue their languages and cultures, and in so doing, improve the educational success of indigenous students."

INFORMAL LEARNING

Informal learning is one of three forms of learning defined by the Organisation for Economic Co-operation and Development (OECD). Informal learning occurs in a variety of places, such as at home, work, and through daily interactions and shared relationships among members of society. For many learners this includes language acquisition, cultural norms and manners. Informal learning for young people is an ongoing process that also occurs in a variety of places, such as out of school time, in youth programs at community centers and media labs.

Informal learning usually takes place outside educational establishments, does not follow a specified curriculum and may originate accidentally, sporadically, in association with certain occasions, from changing practical requirements. It is not necessarily planned to be pedagogically conscious, systematic and according to subjects, but rather unconsciously incidental, holistically problem-related, and related to situation management and fitness

for life. It is experienced directly in its "natural" function of everyday life and is often spontaneous.

The concept of 'education through recreation' was applied to childhood development in the 19th century. In the early 20th century, the concept was broadened to include young adults but the emphasis was on physical activities. L.P. Jacks, also an early proponent of lifelong learning, described education through recreation: *"A master in the art of living draws no sharp distinction between his work and his play, his labour and his leisure, his mind and his body, his education and his recreation. He hardly knows which is which. He simply pursues his vision of excellence through whatever he is doing and leaves others to determine whether he is working or playing. To himself he always seems to be doing both. Enough for him that he does it well."* Education through recreation is the opportunity to learn in a seamless fashion through all of life's activities. The concept has been revived by the University of Western Ontario to teach anatomy to medical students.

SELF-DIRECTED LEARNING

Autodidacticism (also autodidactism) is a contemplative, absorbing process, of "learning on your own" or "by yourself", or as a self-teacher. Some autodidacts spend a great deal of time reviewing the resources of libraries and educational websites. One may become an autodidact at nearly any point in one's life. While some may have been informed in a conventional manner in a particular field, they may choose to inform themselves in other, often unrelated areas. Notable autodidacts include Abraham Lincoln (U.S. president), Srinivasa Ramanujan (mathematician), Michael Faraday (chemist and physicist), Charles Darwin (naturalist), Thomas Alva Edison (inventor), Tadao Ando (architect), George Bernard Shaw (playwright), Frank Zappa (composer, recording engineer, film director), and Leonardo da Vinci (engineer, scientist, mathematician).

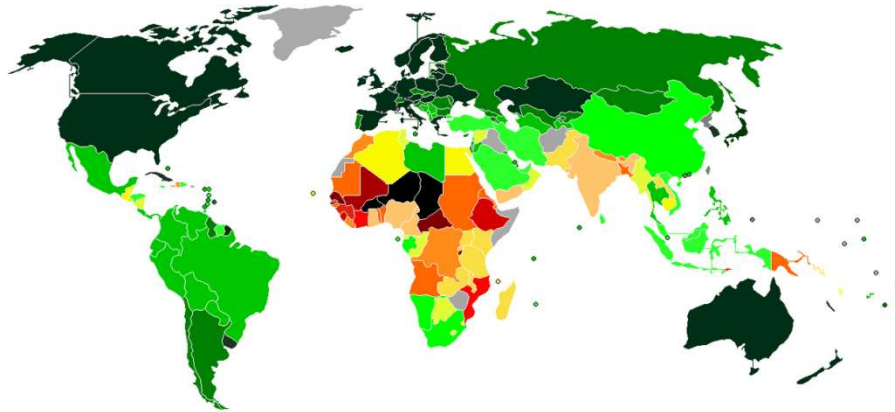

OPEN EDUCATION AND ELECTRONIC TECHNOLOGY

In 2012, the modern use of electronic educational technology (also called e-learning) had grown at 14 times the rate of traditional learning. Open education is fast growing to become the dominant form of education, for many reasons such as its efficiency and results compared to traditional methods. Cost of education has been an issue throughout history, and a major political issue in most countries today. Online courses often can be more expensive than face-to-face classes. Out of 182 colleges surveyed in 2009 nearly half said tuition for online courses was higher than for campus based ones. Many large university institutions are now starting to offer free or almost free full courses such as Harvard, MIT and Berkeley teaming up to form edX. Other universities offering open education are Stanford, Princeton, Duke, Johns Hopkins, Edinburgh, U. Penn, U. Michigan, U. Virginia, U. Washington, and Caltech. It has been called the biggest change in the way we learn since the printing press. Despite favorable studies on effectiveness, many people may still desire to choose traditional campus education for social and cultural reasons.

The conventional merit-system degree is currently not as common in open education as it is in campus universities, although some open universities do already offer conventional

degrees such as the Open University in the United Kingdom. Presently, many of the major open education sources offer their own form of certificate. Due to the popularity of open education, these new kind of academic certificates are gaining more respect and equal "academic value" to traditional degrees. Many open universities are working to have the ability to offer students standardized testing and traditional degrees and credentials. A culture is beginning to form around distance learning for people who are looking to social connections enjoyed on traditional campuses. For example, students may create study groups, meetups and movements such as UnCollege.

DEVELOPMENT GOALS

World map indicating Education Index (according to 2007/2008 Human Development Report)

*Russia has more academic graduates than any other country in Europe.
(Chart does not include population statistics.)*

Since 1909, the ratio of children in the developing world attending school has increased. Before then, a small minority of boys attended school. By the start of the 21st century, the majority of all children in most regions of the world attended school.

Universal Primary Education is one of the eight international Millennium Development Goals, towards which progress has been made in the past decade, though barriers still remain. Securing charitable funding from prospective donors is one particularly persistent problem. Researchers at the Overseas Development Institute have indicated that the main obstacles to funding for education include conflicting donor priorities, an immature aid architecture, and a lack of evidence and advocacy for the issue. Additionally, Transparency International has identified corruption in the education sector as a major stumbling block to achieving Universal Primary Education in Africa. Furthermore, demand in the developing world for improved educational access is not as high as foreigners have expected. Indigenous governments are reluctant to take on the ongoing costs involved. There is also economic pressure from some parents, who prefer their children to earn money in the short term rather than work towards the long-term benefits of education.

A study conducted by the UNESCO International Institute for Educational Planning indicates that stronger capacities in educational planning and management may have an important spill-over effect on the system as a whole. Sustainable capacity development requires complex interventions at the institutional, organizational and individual levels that could be based on some foundational principles:

- national leadership and ownership should be the touchstone of any intervention;
- strategies must be context relevant and context specific;
- plans should employ an integrated set of complementary interventions, though implementation may need to proceed in steps;
- partners should commit to a long-term investment in capacity development, while working towards some short-term achievements;
- outside intervention should be conditional on an impact assessment of national capacities at various levels;
- a certain percentage of students should be removed for improvisation of academics (usually practiced in schools, after 10th grade).

INTERNATIONALIZATION

Nearly every country now has Universal Primary Education.

Similarities — in systems or even in ideas — that schools share internationally have led to an increase in international student exchanges. The European Socrates-Erasmus Program facilitates exchanges across European universities. The Soros Foundation provides many opportunities for students from central Asia and eastern Europe. Programs such as the International Baccalaureate have contributed to the internationalization of education. The global campus online, led by American universities, allows free access to class materials and lecture files recorded during the actual classes.

Education and technology in developing countries

Technology plays an increasingly significant role in improving access to education for people living in impoverished areas and developing countries. Charities like One Laptop

per Child are dedicated to providing infrastructures through which the disadvantaged may access educational materials.

The OLPC laptop being introduced to children in Haiti

The OLPC foundation, a group out of MIT Media Lab and supported by several major corporations, has a stated mission to develop a \$100 laptop for delivering educational software. The laptops were widely available as of 2008. They are sold at cost or given away based on donations.

In Africa, the New Partnership for Africa's Development (NEPAD) has launched an "e-school program" to provide all 600,000 primary and high schools with computer equipment, learning materials and internet access within 10 years. An International Development Agency project called nabuur.com, started with the support of former American President Bill Clinton, uses the Internet to allow co-operation by individuals on issues of social development.

India is developing technologies that will bypass land-based telephone and Internet infrastructure to deliver distance learning directly to its students. In 2004, the Indian Space Research Organization launched EDUSAT, a communications satellite providing access to educational materials that can reach more of the country's population at a greatly reduced cost.

PRIVATE VS PUBLIC FUNDING IN DEVELOPING COUNTRIES

Research into LCPSs (low cost private schools) found that over 5 years to July 2013, debate around LCPSs to achieving Education for All (EFA) objectives was polarised and finding growing coverage in international policy. The polarisation was due to disputes around whether the schools are affordable for the poor, reaching disadvantaged groups, provide quality education, supporting or undermining equality, and are financially sustainable. The report examined the main challenges that development organisations which support LCPSs have encountered. Surveys suggest these types of schools are expanding across Africa and Asia and is attributed to excess demand. These surveys also found concern for:

- Equity, widely found in the literature, as the growth in low-cost private schooling may be exacerbating or perpetuating already existing inequalities in developing countries, between urban and rural populations, lower- and higher-income families, and between girls and boys. The report says findings are that LCPSs see evidence girls are underrepresented and that they are reaching some low-income families, often in small numbers compared with higher-income families.
- Quality of provision and educational outcomes: You cannot generalise about the quality of private schools. While most achieve better results than government counterparts, even after their social background is taken into account, some studies find the opposite. Quality in terms of levels of teacher absence, teaching activity and pupil to teacher ratios in some countries are better in LCPSs than in government schools.
- Choice and affordability for the poor: parents can choose private schools because of perceptions of better-quality teaching and facilities, and an English language instruction preference. Nevertheless, the concept of 'choice' does not apply in all contexts, or to all groups in society, partly because of limited affordability (which excludes most of the poorest) and other forms of exclusion, related to caste or social status.
- Cost-effectiveness and financial sustainability: Evidence is that private schools operate at low cost by keeping teacher salaries low, but their financial situation may be precarious where they are reliant on fees from low-income households.

The report said there were some cases of successful voucher and subsidy programmes; evaluations of international support to the sector are not widespread. Addressing regulatory ineffectiveness is a key challenge. Emerging approaches stress the importance of understanding the political economy of the market for LCPSs, specifically how relationships of power and accountability between users, government and private providers can produce better education outcomes for the poor.

EDUCATIONAL THEORY

A class size experiment in the United States found that attending small classes for 3 or more years in the early grades increased high school graduation rates of students from low income families.

PURPOSE OF SCHOOLS

Individual purposes for pursuing education can vary. Understanding the goals and means of educational socialization processes may also differ according to the sociological paradigm used.

The early years of schooling generally focus around developing basic interpersonal communication and literacy skills. This lays a foundation for more complex skills and subjects. Later, education usually turns toward gaining the knowledge and skills needed to create value and establish a livelihood.

People also pursue education for its own sake to satisfy innate curiosity, out of interest in a specific subject or skill, or for overall personal development.

Education is often understood as a means of overcoming handicaps, achieving greater equality, and acquiring wealth and status for all (Sargent 1994). Education is also often perceived as a place where children can develop according to their unique needs and potentials, with the purpose of developing every individual to their full potential.

EDUCATIONAL PSYCHOLOGY

Educational psychology is the study of how humans learn in educational settings, the effectiveness of educational interventions, the psychology of teaching, and the social psychology of schools as organizations. Although the terms "educational psychology" and "school psychology" are often used interchangeably, researchers and theorists are likely to be identified as educational psychologists, whereas practitioners in schools or school-related settings are identified as school psychologists. Educational psychology is concerned with the processes of educational attainment in the general population and in sub-populations such as gifted children and those with specific disabilities.

Knowledge Day in Donetsk, Ukraine, 2013

Educational psychology can in part be understood through its relationship with other disciplines. It is informed primarily by psychology, bearing a relationship to that discipline

analogous to the relationship between medicine and biology. Educational psychology in turn informs a wide range of specialties within educational studies, including instructional design, educational technology, curriculum development, organizational learning, special education and classroom management. Educational psychology both draws from and contributes to cognitive science and the learning sciences. In universities, departments of educational psychology are usually housed within faculties of education, possibly accounting for the lack of representation of educational psychology content in introductory psychology textbooks (Lucas, Blazek, & Raley, 2006).

THE INTELLIGENCE-EDUCATION RELATIONSHIP

Intelligence is an important factor in how the individual responds to education. Those who have a genetic advantage of being more intelligent than others tend to perform better at school and go on to higher levels of education. This effect is also observable in the opposite direction, in that education increases measurable intelligence. Studies have shown that while educational attainment is important in predicting intelligence in later life, intelligence at 8 years old is more predictive of intelligence at 53, than measures of educational attainment. Furthermore, it is likely that this trend arises due to genetic factors. As twin studies have shown, inherited traits are more important in predicting educational attainment than any environmental measures. Also, educational attainment and intelligence share more than one half of their genetic influences, suggesting the two are highly related.

LEARNING MODALITIES

There has been much interest in learning modalities and styles over the last two decades. The most commonly employed learning modalities are:

- Visual: learning based on observation and seeing what is being learned.
- Auditory: learning based on listening to instructions/information.
- Kinesthetic: learning based on movement, e.g. hands-on work and engaging in activities.

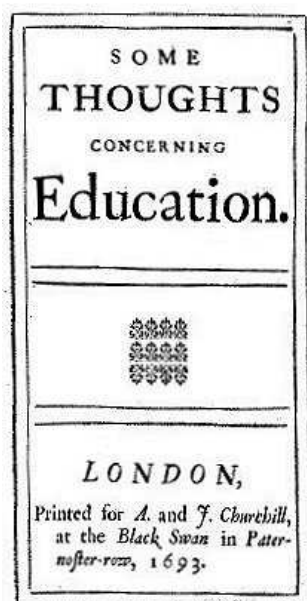

Other commonly employed modalities include musical, interpersonal, verbal, logical, and intrapersonal.

Dunn and Dunn focused on identifying relevant stimuli that may influence learning and manipulating the school environment, at about the same time as Joseph Renzulli recommended varying teaching strategies. Howard Gardner identified a wide range of modalities in his Multiple Intelligences theories. The Myers-Briggs Type Indicator and Keirsey Temperament Sorter, based on the works of Jung, focus on understanding how people's personality affects the way they interact personally, and how this affects the way individuals respond to each other within the learning environment. The work of David Kolb and Anthony Gregorc's Type Delineator follows a similar but more simplified approach.

Some theories propose that all individuals benefit from a variety of learning modalities, while others suggest that individuals may have preferred learning styles, learning more easily through visual or kinesthetic experiences. A consequence of the latter theory is that effective teaching should present a variety of teaching methods which cover all three learning modalities so that different students have equal opportunities to learn in a way that is effective for them. Guy Claxton has questioned the extent that learning styles such as Visual, Auditory and Kinesthetic(VAK) are helpful, particularly as they can have a tendency to label children and therefore restrict learning. Recent research has argued "there is no adequate evidence base to justify incorporating learning styles assessments into general educational practice."

PHILOSOPHY

As an academic field, philosophy of education is "the philosophical study of education and its problems (...) its central subject matter is education, and its methods are those of philosophy". "The philosophy of education may be either the philosophy of the process of education or the philosophy of the discipline of education. That is, it may be part of the discipline in the sense of being concerned with the aims, forms, methods, or results of the process of educating or being educated; or it may be metadisciplinary in the sense of being concerned with the concepts, aims, and methods of the discipline." As such, it is both part of the field of education and a field of applied philosophy, drawing from fields of metaphysics, epistemology, axiology and the philosophical approaches (speculative, prescriptive, and/or analytic) to address questions in and about pedagogy, education policy, and curriculum, as well as the process of learning, to name a few. For example, it might study what constitutes upbringing and education, the values and norms revealed through upbringing and educational practices, the limits and legitimization of education as an academic discipline, and the relation between education theory and practice.

John Locke's work Some Thoughts Concerning Education was written in 1693 and still reflects traditional education priorities in the Western world.

CURRICULUM

In formal education, a curriculum is the set of courses and their content offered at a school or university. As an idea, curriculum stems from the Latin word for *race course*, referring to the course of deeds and experiences through which children grow to become mature adults. A curriculum is prescriptive, and is based on a more general syllabus which merely specifies what topics must be understood and to what level to achieve a particular grade or standard.

An academic discipline is a branch of knowledge which is formally taught, either at the university—or via some other such method. Each discipline usually has several sub-disciplines or branches, and distinguishing lines are often both arbitrary and ambiguous. Examples of broad areas of academic disciplines include the natural sciences, mathematics, computer science, social sciences, humanities and applied sciences.

Educational institutions may incorporate fine arts as part of K-12 grade curricula or within majors at colleges and universities as electives. The various types of fine arts are music, dance, and theater.

INSTRUCTION

Instruction is the facilitation of another's learning. Instructors in primary and secondary institutions are often called teachers, and they direct the education of students and might draw on many subjects like reading, writing, mathematics, science and history. Instructors in post-secondary institutions might be called teachers, instructors, or professors, depending on the type of institution; and they primarily teach only their specific discipline. Studies from the United States suggest that the quality of teachers is the single most important factor affecting student performance, and that countries which score highly on international tests have multiple policies in place to ensure that the teachers they employ are as effective as possible. With the passing of NCLB in the United States (No Child Left Behind), teachers must be highly qualified. A popular way to gauge teaching performance is to use student evaluations of teachers (SETS), but these evaluations have been criticized for being counterproductive to learning and inaccurate due to student bias.

ECONOMICS OF EDUCATION

It has been argued that high rates of education are essential for countries to be able to achieve high levels of economic growth. Empirical analyses tend to support the theoretical prediction that poor countries should grow faster than rich countries because they can adopt cutting edge technologies already tried and tested by rich countries. However, technology transfer requires knowledgeable managers and engineers who are able to operate new machines or production practices borrowed from the leader in order to close the gap through imitation. Therefore, a country's ability to learn from the leader is a function of its stock of "human capital". Recent study of the determinants of aggregate

economic growth have stressed the importance of fundamental economic institutions and the role of cognitive skills.

The President of the Confederation of Indian Universities (CIU) Dr. Priya Ranjan Trivedi presenting the Book titled “Ram Nath Kovind : From Ranks to Raisina” to the President of India Hon’ble Shri Ram Nath Kovind (2017).

At the level of the individual, there is a large literature, generally related to the work of Jacob Mincer, on how earnings are related to the schooling and other human capital. This work has motivated a large number of studies, but is also controversial. The chief controversies revolve around how to interpret the impact of schooling. Some students who have indicated a high potential for learning, by testing with a high intelligence quotient, may not achieve their full academic potential, due to financial difficulties.

Economists Samuel Bowles and Herbert Gintis argued in 1976 that there was a fundamental conflict in American schooling between the egalitarian goal of democratic participation and the inequalities implied by the continued profitability of capitalist production.

Chapter 2

HISTORY OF EDUCATION

The systematic provision of learning techniques to most children, such as literacy, has been a development of the last 150 or 200 years, or even last 50 years in some countries. Schools for the young have historically been supplemented with advanced training for priests, bureaucrats and specialists.

School of Aristotle, fresco by Gustav Spangenberg.

EDUCATION IN ANCIENT CIVILIZATION

THE DEVELOPMENT OF WRITING

Starting in about 3500 B.C., various writing systems developed in ancient civilizations around the world. In Egypt fully developed hieroglyphs were in use at Abydos as early as 3400 B.C. Later, the world's oldest known alphabet was developed in central Egypt around 2000 B.C. from a hieroglyphic prototype. One hieroglyphic script was used on stone monuments, other cursive scripts were used for writing in ink on papyrus, a flexible, paper-like material, made from the stems of reeds that grow in marshes and beside rivers such as the River Nile.

The Phoenician writing system was adapted from the Proto-Canaanite script in around the 11th century BC, which in turn borrowed ideas from Egyptian hieroglyphics. This script was adapted by the Greeks. A variant of the early Greek alphabet gave rise to the Etruscan alphabet, and its own descendants, such as the Latin alphabet. Other descendants from the Greek alphabet include the Cyrillic script, used to write Russian, among others.

The Phoenician system was also adapted into the Aramaic script, from which the Hebrew script and also that of Arabic are descended.

In China, the early oracle bone script has survived on tens of thousands of oracle bones dating from around 1400-1200 B.C. in the Shang Dynasty. Out of more than 2500 written characters in use in China in about 1200 BC, as many as 1400 are identifiable as the source of later standard Chinese characters.

Of several pre-Columbian scripts in Mesoamerica, the one that appears to have been best developed, and the one to be deciphered the most, is the Maya script. The earliest inscriptions which are identifiably Maya date to the 3rd century B.C., and writing was in continuous use until shortly after the arrival of the Spanish conquistadores in the 16th century.

Other surfaces used for early writing include wax-covered writing boards (used, as well as clay tablets, by the Assyrians), sheets or strips of bark from trees (in Indonesia, Tibet and the Americas), the thick palm-like leaves of a particular tree, the leaves then punctured with a hole and stacked together like the pages of a book (these writings in India and South east Asia include Buddhist scriptures and Sanskrit literature), parchment, made of goatskin that had been soaked and scraped to remove hair, which was used from at least the 2nd century B.C., vellum, made from calfskin, and wax tablets which could be wiped clean to provide a fresh surface (in the Roman times).

THE MIDDLE EAST

In what became Mesopotamia, the early logographic system of cuneiform script took many years to master. Thus only a limited number of individuals were hired as scribes to be trained in its reading and writing. Only royal offspring and sons of the rich and professionals such as scribes, physicians, and temple administrators, were schooled. Most boys were taught their father's trade or were apprenticed to learn a trade. Girls stayed at home with their mothers to learn housekeeping and cooking, and to look after the younger children. Later, when a syllabic script became more widespread, more of the Mesopotamian population became literate. Later still in Babylonian times there were libraries in most towns and temples; an old Sumerian proverb averred that "he who would excel in the school of the scribes must rise with the dawn." There arose a whole social class of scribes, mostly employed in agriculture, but some as personal secretaries or lawyers. Women as well as men learned to read and write, and for the Semitic Babylonians, this involved knowledge of the extinct Sumerian language, and a complicated and extensive syllabary. Vocabularies, grammars, and interlinear translations were compiled for the use of students, as well as commentaries on the older texts and explanations of obscure words and phrases. Massive archives of texts were recovered from the archaeological contexts of Old Babylonian scribal schools, through which literacy was disseminated. The Epic of Gilgamesh, an epic poem from Ancient Mesopotamia is among the earliest known works of literary fiction. The earliest Sumerian versions of the epic date from as early as the Third Dynasty of Ur (2150-2000 BC) (Dalley 1989: 41-42).

Ashurbanipal (685 – c. 627 BC), a king of the Neo-Assyrian Empire, was proud of his scribal education. His youthful scholarly pursuits included oil divination, mathematics, reading and writing as well as the usual horsemanship, hunting, chariotry, soldierliness,

craftsmanship, and royal decorum. During his reign he collected cuneiform texts from all over Mesopotamia, and especially Babylonia, in the library in Nineveh, the first systematically organized library in the ancient Middle East, which survives in part today.

In ancient Egypt, literacy was concentrated among an educated elite of scribes. Only people from certain backgrounds were allowed to train to become scribes, in the service of temple, pharaonic, and military authorities. The hieroglyph system was always difficult to learn, but in later centuries was purposely made even more so, as this preserved the scribes' status. The rate of literacy in Pharaonic Egypt during most periods from the third to first millennium BC has been estimated at not more than one percent, or between one half of one percent and one percent.

In ancient Israel the Torah (the fundamental religious text) includes commands to read, learn, teach and write the Torah, thus requiring literacy and study. In 64 AD the high priest caused schools to be opened . Emphasis was placed on developing good memory skills in addition to comprehension oral repetition. For details of the subjects taught, see History of education in ancient Israel and Judah. Although girls were not provided with formal education in the yeshivah, they were required to know a large part of the subject areas to prepare them to maintain the home after marriage, and to educate the children before the age of seven. Despite this schooling system, it would seem that many children did not learn to read and write, because it has been estimated that "at least ninety percent of the Jewish population of Roman Palestine [in the first centuries AD] could merely write their own name or not write and read at all", or that the literacy rate was about 3 percent.

INDIAN SUBCONTINENT

In ancient India, during the Vedic period from about 1500 BC to 600 BC, most education was based on the Veda (hymns, formulas, and incantations, recited or chanted by priests of a pre-Hindu tradition) and later Hindu texts and scriptures.

Vedic education included: proper pronunciation and recitation of the Veda, the rules of sacrifice, grammar and derivation, composition, versification and meter, understanding of secrets of nature, reasoning including logic, the sciences, and the skills necessary for an occupation. Some medical knowledge existed and was taught. There is mention in the Veda of herbal medicines for various conditions or diseases, including fever, cough, baldness, snake bite and others.

Education, at first freely available in Vedic society, became over time more discriminatory as the caste system, originally based on occupation, evolved, with the brahman (priests) being the most privileged of the castes.

The oldest of the Upanishads - another part of Hindu scriptures - date from around 500 BC. These texts encouraged an exploratory learning process where teachers and students were co-travellers in a search for truth. The teaching methods used reasoning and questioning. Nothing was labeled as the final answer.

The Gurukul system of education supported traditional Hindu residential schools of learning; typically the teacher's house or a monastery. Education was free, but students from well-to-do families paid "Gurudakshina," a voluntary contribution after the completion of their studies. At the Gurukuls, the teacher imparted knowledge of Religion, Scriptures, Philosophy, Literature, Warfare, Statecraft, Medicine, Astrology and History. The corpus of Sanskrit literature encompasses a rich tradition of poetry and drama as well as technical scientific, philosophical and generally Hindu religious texts, though many central texts of Buddhism and Jainism have also been composed in Sanskrit.

Two epic poems formed part of ancient Indian education. The Mahabharata, part of which may date back to the 8th century BC, discusses human goals (purpose, pleasure, duty, and liberation), attempting to explain the relationship of the individual to society and the world (the nature of the 'Self') and the workings of karma. The other epic poem, Ramayana, is shorter, although it has 24,000 verses. It is thought to have been compiled between about 400 BC and 200 AD. The epic explores themes of human existence and the concept of dharma.

An early center of learning in India dating back to the 5th century BC was Taxila (also known as Takshashila), which taught the three Vedas and the eighteen accomplishments. It was an important Vedic/Hindu and Buddhist centre of learning from the 6th century BC to the 5th century AD.'

CHINA

During the Zhou Dynasty (1045 BC to 256 BC), there were five national schools in the capital city, Pi Yong (an imperial school, located in a central location) and four other schools for the aristocrats and nobility, including Shang Xiang. The schools mainly taught the Six Arts: rites, music, archery, charioteering, calligraphy, and mathematics. According to the Book of Rituals, at age twelve, boys learned arts related to ritual (i.e. music and dance) and when older, archery and chariot driving. Girls learned ritual, correct deportment, silk production and weaving.

It was during the Zhou Dynasty that the origins of native Chinese philosophy also developed. Confucius (551 BC – 479 BC) founder of Confucianism, was a Chinese philosopher who made a great impact on later generations of Chinese, and on the curriculum of the Chinese educational system for much of the following 2000 years.

Later, during the Ch'in dynasty (246-207 BC), a hierarchy of officials was set up to provide central control over the outlying areas of the empire. To enter this hierarchy, both literacy and knowledge of the increasing body of philosophy was required: "...the content of the educational process was designed not to engender functionally specific skills but rather to produce morally enlightened and cultivated generalists".

During the Han Dynasty (206 BC- 221 AD), boys were thought ready at age seven to start learning basic skills in reading, writing and calculation. In 124 BC, the Emperor Wudi established the Imperial Academy, the curriculum of which was the Five Classics of

Confucius. By the end of the Han Dynasty (220 AD) the Academy enrolled more than 30,000 students, boys between the ages of fourteen and seventeen years. However education through this period was a luxury.

The Nine rank system was a civil service nomination system during the Three Kingdoms (220-280 AD) and the Southern and Northern Dynasties (420-589 AD) in China. Theoretically, local government authorities were given the task of selecting talented candidates, then categorizing them into nine grades depending on their abilities. In practice, however, only the rich and powerful would be selected. The Nine Rank System was eventually superseded by the Imperial examination system for the civil service in the Sui Dynasty (581-618 AD)

GREECE AND ROME

In the city-states of ancient Greece, most education was private, except in Sparta. For example, in Athens, during the 5th and 4th century BC, aside from two years military training, the state played little part in schooling. Anyone could open a school and decide the curriculum. Parents could choose a school offering the subjects they wanted their children to learn, at a monthly fee they could afford. Most parents, even the poor, sent their sons to schools for at least a few years, and if they could afford it from around the age of seven until fourteen, learning gymnastics (including athletics, sport and wrestling), music (including poetry, drama and history) and literacy. Girls rarely received formal education. At writing school, the youngest students learned the alphabet by song, then later by copying the shapes of letters with a stylus on a waxed wooden tablet. After some schooling, the sons of poor or middle-class families often learnt a trade by apprenticeship, whether with their father or another tradesman. By around 350 BC, it was common for children at schools in Athens to also study various arts such as drawing, painting, and sculpture. The richest students continued their education by studying with sophists, from whom they could learn subjects such as rhetoric, mathematics, geography, natural history, politics, and logic. Some of Athens' greatest schools of higher education included the Lyceum (the so-called Peripatetic school founded by Aristotle of Stageira) and the Platonic Academy (founded by Plato of Athens). The education system of the wealthy ancient Greeks is also called Paideia. In the subsequent Roman empire, Greek was the primary language of science. Advanced scientific research and teaching was mainly carried on in the Hellenistic side of the Roman empire, in Greek.

The education system in the Greek city-state of Sparta was entirely different, designed to create warriors with complete obedience, courage, and physical perfection. At the age of seven, boys were taken away from their homes to live in school dormitories or military barracks. There they were taught sports, endurance and fighting, and little else, with harsh discipline. Most of the population was illiterate.

The first schools in Ancient Rome arose by the middle of the 4th century BC. These schools were concerned with the basic socialization and rudimentary education of young Roman children. The literacy rate in the 3rd century BC has been estimated as around one percent to two percent. There are very few primary sources or accounts of Roman

educational process until the 2nd century BC, during which there was a proliferation of private schools in Rome. At the height of the Roman Republic and later the Roman Empire, the Roman educational system gradually found its final form. Formal schools were established, which served paying students (very little in the way of free public education as we know it can be found). Normally, both boys and girls were educated, though not necessarily together. In a system much like the one that predominates in the modern world, the Roman education system that developed arranged schools in tiers. The educator Quintilian recognized the importance of starting education as early as possible, noting that “memory ... not only exists even in small children, but is specially retentive at that age”. A Roman student would progress through schools just as a student today might go from elementary school to middle school, then to high school, and finally college. Progression depended more on ability than age with great emphasis being placed upon a student’s *ingenium* or inborn “gift” for learning, and a more tacit emphasis on a student’s ability to afford high-level education. Only the Roman elite would expect a complete formal education. A tradesman or farmer would expect to pick up most of his vocational skills on the job. Higher education in Rome was more of a status symbol than a practical concern.

It has been argued that literacy rates in the Greco-Roman world were seldom more than 20 percent; averaging perhaps not much above 10 percent in the Roman empire, though with wide regional variations, probably never rising above 5 percent in the western provinces, and that the literate in classical Greece did not much exceed 5 percent of the population. The argument for these claims is that ancient governments did not invest in public education.

FORMAL EDUCATION IN THE MIDDLE AGES (500–1600 AD)

EUROPE

The Abbey of Cluny was one of the most influential

During the Early Middle Ages, the monasteries of the Roman Catholic Church were the centres of education and literacy, preserving the Church's selection from Latin learning and maintaining the art of writing. Prior to their formal establishment, many medieval universities were run for hundreds of years as Christian monastic schools (*Scholae monasticae*), in which monks taught classes, and later as cathedral schools; evidence of these immediate forerunners of the later university at many places dates back to the early 6th century.

The first medieval institutions generally considered to be universities were established in Italy, France, and England in the late 11th and the 12th centuries for the study of arts, law, medicine, and theology. These universities evolved from much older Christian cathedral schools and monastic schools, and it is difficult to define the date on which they became true universities, although the lists of studia generalia for higher education in Europe held by the Vatican are a useful guide.

Ireland became known as the island of saints and scholars. Monasteries were built all over Ireland and these became centres of great learning (see Celtic Church).

Northumbria was famed as a centre of religious learning and arts. Initially the kingdom was evangelized by monks from the Celtic Church, which led to a flowering of monastic life, and Northumbria played an important role in the formation of Insular art, a unique style combining Anglo-Saxon, Celtic, Byzantine and other elements. After the Synod of Whitby in 664 AD, Roman church practices officially replaced the Celtic ones but the influence of the Anglo-Celtic style continued, the most famous examples of this being the Lindisfarne Gospels. The Venerable Bede (673-735) wrote his *Historia ecclesiastica gentis Anglorum* (Ecclesiastical History of the English People, completed in 731) in a Northumbrian monastery, and much of it focuses on the kingdom.

During the reign of Charlemagne, King of the Franks from 768 – 814 AD, whose empire united most of Western Europe for the first time since the Romans, there was a flowering of literature, art, and architecture known as the Carolingian Renaissance. Brought into contact with the culture and learning of other countries through his vast conquests, Charlemagne greatly increased the provision of monastic schools and scriptoria (centres for book-copying) in Francia. Most of the surviving works of classical Latin were copied and preserved by Carolingian scholars.

Charlemagne took a serious interest in scholarship, promoting the liberal arts at the court, ordering that his children and grandchildren be well-educated, and even studying himself under the tutelage of Paul the Deacon, from whom he learned grammar, Alcuin, with whom he studied rhetoric, dialect and astronomy (he was particularly interested in the movements of the stars), and Einhard, who assisted him in his studies of arithmetic. The English monk Alcuin was invited to Charlemagne's court at Aachen, and brought with him the precise classical Latin education that was available in the monasteries of Northumbria. The return of this Latin proficiency to the kingdom of the Franks is regarded as an important step in the development of mediaeval Latin. Charlemagne's chancery made use of a type of script currently known as Carolingian minuscule,

providing a common writing style that allowed for communication across most of Europe. After the decline of the Carolingian dynasty, the rise of the Saxon Dynasty in Germany was accompanied by the Ottonian Renaissance.

Cambridge and many other universities were founded at this time.

Cathedral schools and monasteries remained important throughout the Middle Ages; at the Third Lateran Council of 1179 the Church mandated that priests provide the opportunity of a free education to their flocks, and the 12th and 13th century renaissance known as the Scholastic Movement was spread through the monasteries. These however ceased to be the sole sources of education in the 11th century when universities, which grew out of the monasticism began to be established in major European cities. Literacy became available to a wider class of people, and there were major advances in art, sculpture, music and architecture.

Sculpture, paintings and stained glass windows were vital educational media through which Biblical themes and the lives of the saints were taught to illiterate viewers.

ISLAMIC WORLD

During the 6th and 7th centuries, the Academy of Gundishapur, originally the intellectual center of the Sassanid empire and subsequently a Muslim centre of learning, offered training in medicine, philosophy, theology and science. The faculty were versed not only in the Zoroastrian and Persian traditions, but in Greek and Indian learning as well.

The House of Wisdom in Baghdad was a library, translation and educational centre from the 9th to 13th centuries. Works on astrology, mathematics, agriculture, medicine, and philosophy were translated. Drawing on Persian, Indian and Greek texts—including those of Pythagoras, Plato, Aristotle, Hippocrates, Euclid, Plotinus, Galen, Sushruta, Charaka,

Aryabhata and Brahmagupta—the scholars accumulated a great collection of knowledge in the world, and built on it through their own discoveries. The House was an unrivalled centre for the study of humanities and for sciences, including mathematics, astronomy, medicine, chemistry, zoology and geography. Baghdad was known as the world's richest city and centre for intellectual development of the time, and had a population of over a million, the largest in its time.

The Islamic mosque school (Madrasah) taught the Quran in Arabic and did not at all resemble the medieval European universities.

In the 9th century, Bimaristan medical schools were formed in the medieval Islamic world, where medical diplomas were issued to students of Islamic medicine who were qualified to be a practicing Doctor of Medicine. Al-Azhar University, founded in Cairo, Egypt in 975, was a *Jami'ah* ("university" in Arabic) which offered a variety of post-graduate degrees, had a Madrasah and theological seminary, and taught Islamic law, Islamic jurisprudence, Arabic grammar, Islamic astronomy, early Islamic philosophy and logic in Islamic philosophy.

Under the Ottoman Empire, the towns of Bursa and Edirne became major centers of learning.

In the 15th and 16th centuries, the town of Timbuktu in the West African nation of Mali became an Islamic centre of learning with students coming from as far away as the Middle East. The town was home to the prestigious Sankore University and other madrasas. The primary focus of these schools was the teaching of the Qur'an, although broader instruction in fields such as logic, astronomy, and history also took place. Over time, there was a great accumulation of manuscripts in the area and an estimated 100,000 or more manuscripts, some of them dated from pre-Islamic times and 12th century, are kept by the great families from the town. Their contents are didactic, especially in the subjects of astronomy, music, and botany. More than 18,000 manuscripts have been collected by the Ahmed Baba centre.

CHINA

Although there are more than 40,000 Chinese characters in written Chinese, many are rarely used. Studies have shown that full literacy in the Chinese language requires a knowledge of only between three and four thousand characters.

In China, three oral texts were used to teach children by rote memorization the written characters of their language and the basics of Confucian thought.

The Thousand Character Classic, a Chinese poem originating in the 6th century, was used for more than a millennium as a primer for teaching Chinese characters to children. The poem is composed of 250 phrases of four characters each, thus containing exactly one thousand unique characters, and was sung in the same way that children learning the Latin alphabet may use the "alphabet song".

Later, children also learn the Hundred Family Surnames, a rhyming poem in lines of eight characters composed in the early Song Dynasty (i.e. in about the 11th century) which actually listed more than four hundred of the common surnames in ancient China.

From around the 13th century until the latter part of the 19th century, the Three Character Classic, which is an embodiment of Confucian thought suitable for teaching to young children, served as a child's first formal education at home. The text is written in triplets of characters for easy memorization. With illiteracy common for most people at the time, the oral tradition of reciting the classic ensured its popularity and survival through the centuries. With the short and simple text arranged in three-character verses, children learned many common characters, grammar structures, elements of Chinese history and the basis of Confucian morality.

After learning Chinese characters, students wishing to ascend in the social hierarchy needed to study the Chinese classic texts.

The early Chinese state depended upon literate, educated officials for operation of the empire. In 605 AD, during the Sui Dynasty, for the first time, an examination system was explicitly instituted for a category of local talents. The merit-based imperial examination system for evaluating and selecting officials gave rise to schools that taught the Chinese classic texts and continued in use for 1,300 years, until the end the Qing Dynasty, being abolished in 1911 in favour of Western education methods. The core of the curriculum for the imperial civil service examinations from the mid-12th century onwards was the Four Books, representing a foundational introduction to Confucianism.

Theoretically, any male adult in China, regardless of his wealth or social status, could become a high-ranking government official by passing the imperial examination, although under some dynasties members of the merchant class were excluded. In reality, since the process of studying for the examination tended to be time-consuming and costly (if tutors were hired), most of the candidates came from the numerically small but relatively wealthy land-owning gentry. However, there are vast numbers of examples in Chinese history in which individuals moved from a low social status to political prominence through success in imperial examination. Under some dynasties the imperial examinations were abolished and official posts were simply sold, which increased corruption and reduced morale.

In the period preceding 1040–1050 AD, prefectural schools had been neglected by the state and left to the devices of wealthy patrons who provided private finances. The chancellor of China at that time, Fan Zhongyan, issued an edict that would have used a combination of government funding and private financing to restore and rebuild all prefectural schools that had fallen into disuse and abandoned. He also attempted to restore all county-level schools in the same manner, but did not designate where funds for the effort would be formally acquired and the decree was not taken seriously until a later period. Fan's trend of government funding for education set in motion the movement of public schools that eclipsed private academies, which would not be officially reversed until the mid-13th century.

INDIA

The first millennium and the few centuries preceding it saw the flourishing of higher education at Nalanda, Takshashila, Ujjain, and Vikramshila Universities. Amongst the subjects taught were Art, Architecture, Painting, Logic, mathematics, Grammar, Philosophy, Astronomy, Literature, Buddhism, Hinduism, Arthashastra (Economics and Politics), Law, and Medicine. Each university specialized in a particular field of study. Takshila specialized in the study of medicine, while Ujjain laid emphasis on astronomy. Nalanda, being the biggest centre, handled all branches of knowledge, and housed up to 10,000 students at its peak.

Vikramashila Mahavihara, another important center of Buddhist learning in India, was established by King Dharmapala (783 to 820) in response to a supposed decline in the quality of scholarship at Nālandā.

Indigenous education was widespread in India in the 18th century, with a school for every temple, mosque or village in most regions of the country. The subjects taught included Reading, Writing, Arithmetic, Theology, Law, Astronomy, Metaphysics, Ethics, Medical Science and Religion. The schools were attended by students representative of all classes of society.

JAPAN

The history of education in Japan dates back at least to the 6th century, when Chinese learning was introduced at the Yamato court. Foreign civilizations have often provided new ideas for the development of Japan's own culture.

Chinese teachings and ideas flowed into Japan from the sixth to the 9th century. Along with the introduction of Buddhism came the Chinese system of writing and its literary tradition, and Confucianism.

By the 9th century, Heian-kyo (today's Kyoto), the imperial capital, had five institutions of higher learning, and during the remainder of the Heian period, other schools were established by the nobility and the imperial court. During the medieval period (1185-1600), Zen Buddhist monasteries were especially important centers of learning, and the Ashikaga School, Ashikaga Gakko, flourished in the 15th century as a center of higher learning.

CENTRAL AND SOUTH AMERICAN CIVILIZATIONS

AZTEC

Aztec is a term used to refer to certain ethnic groups of central Mexico, particularly those groups who spoke the Nahuatl language and who achieved political and military dominance over large parts of Mesoamerica in the 14th, 15th and 16th centuries, a period referred to as the Late post-Classic period in Mesoamerican chronology.

Until the age of fourteen, the education of children was in the hands of their parents, but supervised by the authorities of their *calpōlli*. Part of this education involved learning a collection of sayings, called *huēhuetlàtolli* ("sayings of the old"), that embodied the Aztecs' ideals. Judged by their language, most of the *huēhuetlàtolli* seemed to have evolved over several centuries, predating the Aztecs and most likely adopted from other Nahua cultures.

At 15, all boys and girls went to school. The Mexica, one of the Aztec groups, were one of the first people in the world to have mandatory education for nearly all children, regardless of gender, rank, or station. There were two types of schools: the *telpochcalli*, for practical and military studies, and the *calmecac*, for advanced learning in writing, astronomy, statesmanship, theology, and other areas. The two institutions seem to be common to the Nahua people, leading some experts to suggest that they are older than the Aztec culture.

Aztec teachers (*tlatimine*) propounded a spartan regime of education with the purpose of forming a stoical people.

Girls were educated in the crafts of home and child raising. They were not taught to read or write. All women were taught to be involved in religion; there are paintings of women presiding over religious ceremonies, but there are no references to female priests.

INCA

Inca education during the time of the Inca Empire in the 15th and 16th centuries was divided into two principal spheres: education for the upper classes and education for the general population. The royal classes and a few specially chosen individuals from the provinces of the Empire were formally educated by the *Amautas* (wise men), while the general population learned knowledge and skills from their immediate forbears.

The Amautas constituted a special class of wise men similar to the bards of Great Britain. They included illustrious philosophers, poets, and priests who kept the oral histories of the Incas alive by imparting the knowledge of their culture, history, customs and traditions throughout the kingdom. Considered the most highly educated and respected men in the Empire, the Amautas were largely entrusted with educating those of royal blood, as well as other young members of conquered cultures specially chosen to administer the regions. Thus, education throughout the territories of the Incas was socially discriminatory, most people not receiving the formal education that royalty received.

The official language of the empire was Quechua, although dozens if not hundreds of local languages were spoken. The Amautas did ensure that the general population learn Quechua as the language of the Empire, much in the same way the Romans promoted Latin throughout Europe; however, this was done more for political reasons than educational ones.

AFTER THE 15th CENTURY

EUROPE

Modern systems of education in Europe derive their origins from the schools of the High Middle Ages. Most schools during this era were founded upon religious principles with the primary purpose of training the clergy. Many of the earliest universities, such as the University of Paris founded in 1160, had a Christian basis. In addition to this, a number of secular universities existed, such as the University of Bologna, founded in 1088. Free education for the poor was officially mandated by the Church in 1179 when it decreed that every cathedral must assign a master to teach boys too poor to pay the regular fee; parishes and monasteries also established free schools teaching at least basic literary skills. With few exceptions, priests and brothers taught locally, and their salaries were frequently subsidized by towns. Private, independent schools reappeared in medieval Europe during this time, but they, too, were religious in nature and mission. The curriculum was usually based around the trivium and to a lesser extent quadrivium (the seven Artes Liberales or Liberal arts) and was conducted in Latin, the lingua franca of educated Western Europe throughout the Middle Ages and Renaissance.

In northern Europe this clerical education was largely superseded by forms of elementary schooling following the Reformation. In Scotland, for instance, the national Church of Scotland set out a programme for spiritual reform in January 1561 setting the principle of a school teacher for every parish church and free education for the poor. This was provided for by an Act of the Parliament of Scotland, passed in 1633, which introduced a tax to pay for this programme. Although few countries of the period had such extensive systems of education, the period between the 16th and 18th centuries saw education become significantly more widespread.

In Central Europe, the 17th century scientist and educator John Amos Comenius promulgated a reformed system of universal education that was widely used in Europe.

This growth resulted in increased government interest in education. In the 1760s, for instance, Ivan Betskoy was appointed by the Russian Tsarina, Catherine II, as educational advisor. He proposed to educate young Russians of both sexes in state boarding schools, aimed at creating "a new race of men". Betskoy set forth a number of arguments for general education of children rather than specialized one: "in regenerating our subjects by an education founded on these principles, we will create... new citizens." Some of his ideas were implemented in the Smolny Institute that he established for noble girls in Saint Petersburg.

Betskoy's work in Russia was soon followed by the Polish establishment in 1773 of a Commission of National Education (Polish: *Komisja Edukacji Narodowej*, Lithuanian: *Nacionalinė Edukacinė Komisija*). The commission functioned as the first government Ministry of Education in a European country.

Meanwhile, there was an increasing academic interest in education and the first attempts to create what might be considered academic rationales for teaching methods. This led, in the 1770s, to the establishment of the first chair of pedagogy at the University of Halle in Germany. Contributions to the study of education elsewhere in Europe included the work of Johann Heinrich Pestalozzi in Switzerland and Joseph Lancaster in Britain.

Under the guidance of Wilhelm von Humboldt a new university was founded in Berlin in 1810 which became the model for many research universities. Herbart developed a system of pedagogy widely used in German-speaking areas.

In the late 19th century, most of West, Central, and parts of East Europe began to provide elementary education in reading, writing, and arithmetic, partly because politicians believed that education was needed for orderly political behavior. As more people became literate, they realized that most secondary education was only open to those who could afford it. Having created primary education, the major nations had to give further attention to secondary education by the time of World War I.

In 1884, a groundbreaking education conference was held in London at the International Health Exhibition, attracting specialists from all over Europe.

In the 20th century, new directions in education included, in Italy, Maria Montessori's Montessori schools; and in Germany, Rudolf Steiner's development of Waldorf education.

FRANCE

In the Ancien Régime before 1789, educational facilities and aspirations were becoming increasingly institutionalized primarily in order to supply the church and state with the functionaries to serve as their future administrators. France had many small local schools where working-class children — both boys and girls — learned to read, the better "to know, love and serve God". The sons and daughters of the noble and bourgeois elites, however, were given quite distinct educations: boys were sent to upper school, perhaps a university, while their sisters perhaps were sent for finishing at a convent. The Enlightenment challenged this old ideal, but no real alternative presented itself for female education. Only through education at home were knowledgeable women formed, usually to the sole end of dazzling their salons.

The modern era of French education begins in the 1790s. The Revolution in the 1790s abolished the traditional universities *Napoleon sought to replace them with new institutions, the Polytechnique, focused on technology. The elementary schools received little attention until 1830, when France copied the Prussian system.*

Jules Ferry, an anti-clerical politician holding the office of Minister of Public Instruction in the 1880s, created the modern Republican school (*l'école républicaine*) by requiring all children under the age of 15—boys and girls—to attend. see Jules Ferry laws Schools were free of charge and secular (*laïque*). The goal was to break the hold of the Catholic Church

and monarchism on young people. Catholic schools were still tolerated but in the early 20th century the religious orders sponsoring them were shut down.

UNITED KINGDOM

JAPAN

Japan isolated itself from the rest of the world in the year 1600 under the Tokugawa regime (1600–1867). In 1600 very few common people were literate. By the period's end, learning had become widespread. Tokugawa education left a valuable legacy: an increasingly literate populace, a meritocratic ideology, and an emphasis on discipline and competent performance.

Traditional Samurai curricula for elites stressed morality and the martial arts. Confucian classics were memorized, and reading and recitation of them were common methods of study. Arithmetic and calligraphy were also studied. Education of commoners was generally practically oriented, providing basic 3-Rs, calligraphy and use of the abacus. Much of this education was conducted in so-called temple schools (terakoya), derived from earlier Buddhist schools.

These schools were no longer religious institutions, nor were they, by 1867, predominantly located in temples. By the end of the Tokugawa period, there were more than 11,000 such schools, attended by 750,000 students. Teaching techniques included reading from various textbooks, memorizing, abacus, and repeatedly copying Chinese characters and Japanese script.

By the 1860s, 40-50% of Japanese boys, and 15% of the girls, had some schooling outside the home. These rates were comparable to major European nations at the time (apart from Germany, which had compulsory schooling).

Under subsequent Meiji leadership, this foundation would facilitate Japan's rapid transition from feudal society to modern nation which paid very close attention to Western science, technology and educational methods.

MEIJI REFORMS

After 1868 reformers set Japan on a rapid course of modernization, with a public education system like that of Western Europe. Missions like the Iwakura mission were sent abroad to study the education systems of leading Western countries. They returned with the ideas of decentralization, local school boards, and teacher autonomy. Elementary school enrollments climbed from about 40 or 50 percent of the school-age population in the 1870s to more than 90 percent by 1900, despite strong public protest, especially against school fees.

A modern concept of childhood emerged in Japan after 1850 as part of its engagement with the West. Meiji era leaders decided the nation-state had the primary role in

mobilizing individuals - and children - in service of the state. The Western-style school became the agent to reach that goal. By the 1890s, schools were generating new sensibilities regarding childhood. After 1890 Japan had numerous reformers, child experts, magazine editors, and well-educated mothers who bought into the new sensibility. They taught the upper middle class a model of childhood that included children having their own space where they read children's books, played with educational toys and, especially, devoted enormous time to school homework. These ideas rapidly disseminated through all social classes

After 1870 school textbooks based on Confucianism were replaced by westernized texts. However, by the 1890s, a reaction set in and a more authoritarian approach was imposed. Traditional Confucian and Shinto precepts were again stressed, especially those concerning the hierarchical nature of human relations, service to the new state, the pursuit of learning, and morality. These ideals, embodied in the 1890 Imperial Rescript on Education, along with highly centralized government control over education, largely guided Japanese education until 1945, when they were massively repudiated.

INDIA

Education was widespread for elite young men in the 18th century, with schools in most regions of the country. The subjects taught included Reading, Writing, Arithmetic, Theology, Law, Astronomy, Metaphysics, Ethics, Medical Science and Religion.

The current system of education, with its western style and content, was introduced and founded by the British during the British Raj, following recommendations by Lord Macaulay. Traditional structures were not recognized by the British government and have been on the decline since.

Students with the Teacher / Educator in Ancient India.

Public education expenditures in the late 19th and early 20th centuries varied dramatically across regions with the western and southern provinces spending three to four times as much as the eastern provinces. Much of the inter-regional differential was due to historical differences in land taxes, the major source of revenue.

Lord Curzon, the Viceroy 1899-1905, made mass education a high priority after finding that no more than 20% of India's children attended school. His reforms centered on literacy training and on restructuring of the university systems. They stressed ungraded curricula, modern textbooks, and new examination systems. Curzon's plans for technical education laid the foundations which were acted upon by later governments.

NORWAY

Organized education in Norway dates as far back as medieval times. Shortly after Norway became an archdiocese in 1152, cathedral schools were constructed to educate priests in Trondheim, Oslo, Bergen and Hamar.

After the reformation of Norway in 1537, (Norway entered a personal union with Denmark in 1536) the cathedral schools were turned into Latin schools, and it was made mandatory for all market towns to have such a school.

In 1736 training in reading was made compulsory for all children, but was not effective until some years later. In 1827, Norway introduced the *folkeskole*, a primary school which became mandatory for 7 years in 1889 and 9 years in 1969. In the 1970s and 1980s, the *folkeskole* was abolished, and the *grunnskole* was introduced.

NEW ZEALAND

Education began with provision made by the provincial government, the missionary Christian churches and private education. The first act of parliament for education was passed in 1877, and sought to establish a standard for primary education. It was compulsory for children to attend school until the age of 14 years.

IMPERIAL RUSSIA AND THE SOVIET UNION

In Imperial Russia, according to the 1897 Population Census, literate people made up 28.4 percent of the population. There was a strong network of universities but weak systems for schools.

Vladimir Lenin, in 1919 proclaimed the major aim of the Soviet government was the abolition of illiteracy. A system of universal compulsory education was established. Millions of illiterate adults were enrolled in special literacy schools. Youth groups (Komsomol members and Young Pioneer) were utilized to teach. In 1926, the literacy rate

was 56.6 percent of the population. By 1937, according to census data, the literacy rate was 86% for men and 65% for women, making a total literacy rate of 75%.

*Mental Calculations. In the school of S.Rachinsky
by Nikolay Bogdanov-Belsky. 1895.*

An important aspect of the early campaign for literacy and education was the policy of "indigenization" (korenizatsiya). This policy, which lasted essentially from the mid-1920s to the late 1930s, promoted the development and use of non-Russian languages in the government, the media, and education. Intended to counter the historical practices of Russification, it had as another practical goal assuring native-language education as the quickest way to increase educational levels of future generations. A huge network of so-called "national schools" was established by the 1930s, and this network continued to grow in enrollments throughout the Soviet era. Language policy changed over time, perhaps marked first of all in the government's mandating in 1938 the teaching of Russian as a required *subject* of study in every non-Russian school, and then especially beginning in the latter 1950s a growing conversion of non-Russian schools to Russian as the main medium of instruction.

AFRICA

Until at least 1900 AD, in most African countries south of the Sahara, children received traditional informal education on matters such as artistic performances, ceremonies, rituals, games, festivals, dancing, singing, and drawing. Boys and girls were taught separately to help prepare each sex for their adult roles. Every member of the community had a hand in contributing to the educational upbringing of the child. The high point of the African educational experience was the ritual passage ceremony from childhood to adulthood.

Nowadays, many sub-Saharan African countries have low rates of participation in formal education. Schools often lack basic facilities, and African universities may suffer from

overcrowding and the difficulties of retaining staff attracted overseas by higher pay and better conditions.

Africa has more than 40 million children. According to UNESCO's *Regional overview on sub-Saharan Africa*, in 2000 only 58% of children were enrolled in primary schools, the lowest enrollment rate of any region. The USAID Center reports as of 2005, forty percent of school-aged children in Africa do not attend primary school.

RECENT WORLD-WIDE TRENDS

World map indicating Education Index (2007/2008 Human Development Report)

0.950 and over	0.700–0.749	0.450–0.499
0.900–0.949	0.650–0.699	0.400–0.449
0.850–0.899	0.600–0.649	0.350–0.399
0.800–0.849	0.550–0.599	under 0.350
0.750–0.799	0.500–0.549	not available

Today, there is some form of compulsory education in most countries. Due to population growth and the proliferation of compulsory education, UNESCO has calculated that in the next 30 years more people will receive formal education than in all of human history thus far.

Illiteracy and the percentage of populations without any schooling have decreased in the past several decades. For example, the percentage of population without any schooling decreased from 36% in 1960 to 25% in 2000.

Among developing countries, illiteracy and percentages without schooling in 2000 stood at about half the 1970 figures. Among developed countries, figures about illiteracy rates differ widely. Often it is said that they decreased from 6% to 1%. Illiteracy rates in less economically developed countries (LEDCs) surpassed those of more economically developed countries (MEDCs) by a factor of 10 in 1970, and by a factor of about 20 in 2000. Illiteracy decreased greatly in LEDCs, and virtually disappeared in MEDCs. Percentages without any schooling showed similar patterns.

Percentages of the population with no schooling varied greatly among LEDCs in 2000, from less than 10% to over 65%. MEDCs had much less variation, ranging from less than 2% to 17%.

Chapter 3

HIGHER AND TERTIARY EDUCATION

Higher Education, post-secondary education, tertiary education or third level education is an optional final stage of formal learning that occurs after secondary education. Often delivered at universities, academies, colleges, seminaries, and institutes of technology, higher education is also available through certain college-level institutions, including vocational schools, trade schools, and other career colleges that award academic degrees or professional certifications. Tertiary education at non-degree level is sometimes referred to as further education or continuing education as distinct from higher education.

The right of access to higher education is mentioned in a number of international human rights instruments. The UN International Covenant on Economic, Social and Cultural Rights of 1966 declares, in Article 13, that "higher education shall be made equally accessible to all, on the basis of capacity, by every appropriate means, and in particular by the progressive introduction of free education". In Europe, Article 2 of the First Protocol to the European Convention on Human Rights, adopted in 1950, obliges all signatory parties to guarantee the right to education.

In the days when few pupils progressed beyond primary education, the term "higher education" was often used to refer to secondary education, which can create some confusion.

The University of al-Qarawiyyin in Fes, Morocco is the world's oldest existing, continually operating and the first degree awarding institution of higher learning in the world according to UNESCO and Guinness World Records.

University of Bologna, located in Bologna, Italy, is the oldest institution of higher education in the Western world.

The University of Pennsylvania considers itself the first institution to use the term "university" in its name.

The University of Cambridge is an institution of higher learning in Cambridge, United Kingdom.

McGill University is an institution of higher learning in Montreal, Canada.

Moscow State University is an institution of higher learning in Moscow, Russia.

The University of Tokyo is an institution of higher learning in Tokyo, Japan.

The University of São Paulo is an institution of higher learning in São Paulo, Brazil.

The University of Cape Town is an institution of higher learning in Cape Town, South Africa.

OVERVIEW

Higher education is an educational level that follows a completion of a school providing a secondary education, such as a high school, secondary school, or gymnasium. Tertiary education is normally taken to include undergraduate and postgraduate education, as well as vocational education and training. Colleges, universities, and institutes of technology are the main institutions that provide tertiary education (sometimes known collectively as tertiary institutions). Examples of institutions that provide post-secondary education are vocational schools, community colleges, independent colleges (e.g. institutes of technology), and universities in the United States, the institutes of technical and further education in Australia, pre-university colleges in Quebec, and the IEKs in Greece. They are sometimes known collectively as tertiary institutions. Completion of a tertiary education program of study generally results in the awarding of certificates, diplomas, or academic degrees.

Higher education includes teaching, research, exacting applied work (e.g. in medical schools and dental schools), and social services activities of universities. Within the realm of teaching, it includes both the *undergraduate* level, and beyond that, *graduate-level* (or *postgraduate* level). The latter level of education is often referred to as graduate school, especially in North America.

Rupert I founded the University of Heidelberg in 1386

Since World War II, developed and many developing countries have increased the participation of the age group who mostly studies higher education from the elite rate, of up to 15 per cent, to the mass rate of 16 to 50 per cent. In many developed countries, participation in higher education has continued to increase towards universal or, what Trow later called, open access, where over half of the relevant age group participate in higher education. Higher education is important to national economies, both as an industry, in its own right, and as a source of trained and educated personnel for the rest of the economy. College educated workers have commanded a measurable wage premium and are much less likely to become unemployed than less educated workers.

Higher education in some countries, including the United States, Canada, the United Kingdom, and Ireland, specifically refers to post-secondary institutions that offer Associate's degrees, Bachelor's degrees, Master's degrees, Education Specialist (Ed.S.) degrees or Doctor of Philosophy (Ph.D.) degrees, or their equivalents, and also higher professional degrees in areas such as dentistry, law, medicine, optometry, pharmacology and veterinary medicine.

Such institutions may also offer non-degree certificates, which indicate completion of a set of courses comprising a body of knowledge on a particular topic, but the granting of such certificates is not the primary purpose of the institutions. Tertiary education is not a term used in reference to post-secondary institutions in the United States or Canada.

ENTRANCE STANDARDS: READING, MATHEMATICS, AND WRITING

Demonstrated ability in reading, mathematics, and writing, as typically measured in the United States by the SAT or similar tests such as the ACT, have often replaced colleges' individual entrance exams, and is often required for admission to higher education. There is some question as to whether advanced mathematical skills or talent are in fact necessary for fields such as history, English, philosophy, or art.

TYPES OF HIGHER / TERTIARY EDUCATION

GENERAL

The general higher education and training that takes place in a university, college, or Institute of Technology usually includes significant theoretical and abstract elements, as well as applied aspects (although limited offerings of internships or SURF programs attempt to provide practical applications). In contrast, the vocational higher education and training that takes place at vocational universities and schools usually concentrates on practical applications, with very little theory.

In addition, professional-level education is always included within Higher Education, and usually in graduate schools, since many postgraduate academic disciplines are both vocationally, professionally, and theoretically/research oriented, such as in the law, medicine, pharmacy, dentistry, and veterinary medicine. A basic requirement for entry into these graduate-level programs is almost always a bachelor's degree, although

alternative means of obtaining entry into such programmes may be available at some universities. Requirements for admission to such high-level graduate programs is extremely competitive, and admitted students are expected to perform well.

Mean financial wealth of U.S. families by education of the head of household, 1989-2010

Mean income of U.S. families by education of the head of household, 1989-2010

In the United States, there are large differences in wages and employment associated with different degrees. Medical doctors and lawyers are generally the highest paid workers, and have among the lowest unemployment rates. Among undergraduate fields of study, science, technology, engineering, math, and business generally offer the highest wages and best chances of employment, while education, communication, and liberal arts degrees generally offer lower wages and a lower likelihood of employment.

LIBERAL ARTS

Academic areas that are included within the Liberal arts include Environmental Science, Great Books, History, Languages including English, Linguistics, Literature, Mathematics, Music, Philosophy, Political Science, Psychology, Religious studies, Science, Sociology and Theater.

ENGINEERING

Teaching engineering is teaching the application of scientific, economic, social, and practical knowledge in order to design, build, maintain, and improve structures, machines, devices, systems, materials and processes. It may encompass using insights to conceive, model and scale an appropriate solution to a problem or objective. The discipline of engineering is extremely broad, and encompasses a range of more specialized fields of engineering, each with a more specific emphasis on particular areas of technology and types of application. Engineering disciplines include: aerospace, biological, civil, chemical, computer, electrical, industrial, and mechanical.

PERFORMING ARTS

The performing arts differ from the plastic arts or visual arts, insofar as the former uses the artist's own body, face and presence as a medium; the latter uses materials such as clay, metal or paint, which can be molded or transformed to create a work of art.

Performing arts institutions include Circus schools, Dance schools, Drama schools and Music schools

PLASTIC OR VISUAL ARTS

The plastic arts or visual arts are a class of art forms, that involve the use of materials, that can be moulded or modulated in some way, often in three dimensions. Examples are painting, sculpture, and drawing, etc.

Higher educational institutions in these arts include Film schools and Art schools.

VOCATIONAL

Higher vocational education and training takes place at the non-university tertiary level. Such education combines teaching of both practical skills and theoretical expertise. Higher

education differs from other forms of post-secondary education such as that offered by institutions of vocational education, which are more colloquially known as trade schools. Higher vocational education might be contrasted with education in a usually broader scientific field, which might concentrate on theory and abstract conceptual knowledge.

PROFESSIONAL HIGHER EDUCATION

This describes a distinct form of Higher Education that offers a particularly intense integration with the world of work in all its aspects (including teaching, learning, research and governance) and at all levels of the overarching Qualifications Framework of the European Higher Education Area. Its function is to diversify learning opportunities, enhance employability, offer qualifications and stimulate innovation, for the benefit of learners and society.

The intensity of integration with the world of work (which includes enterprise, civil society and the public sector) is manifested by a strong focus on application of learning. This approach involves combining phases of work and study, a concern for employability, cooperation with employers, the use of practice-relevant knowledge and use-inspired research.

Examples of providers of Professional Higher Education may include, Graduate Colleges of Architecture, Business, Journalism, Law, Library Science, Optometry, Pharmacy, Public Policy, Human Medicine, Professional Engineering, Podiatric Medicine, Scientific Dentistry, K-12 Education, and Veterinary Medicine.

STATISTICS

A report titled 'Education at a Glance 2014' published by the Organisation for Economic Co-operation and Development on 9 September 2014, revealed that by 2014, 84 percent of young people were completing upper secondary education over their lifetimes, in high-income countries. Tertiary-educated individuals were earning twice as much as median workers. In contrast to historical trends in education, young women were more likely to complete upper secondary education than young men. Additionally, access to education was expanding and growth in the number of people receiving university education was rising sharply. By 2014, close to 40 percent of people aged 25–34 (and around 25 percent of those aged 55–64), were being educated at university.

RECOGNITION OF STUDIES

The Lisbon Recognition Convention stipulates that degrees and periods of study must be recognised in all Signatory Parties of the Convention.

AS EMPLOYERS

Universities may employ a number of people. Depending on the funding, a university typically hires one teacher per 3–25 students. According to the ideal of research-

university, the university teaching staff is actively involved in the research of the institution. In addition, the university usually also has dedicated research staff and a considerable support staff. Typically to work in higher education as a member of the academic faculty, a candidate must first obtain a doctorate in an academic field, although some lower teaching positions require only a master's degree.

The President of the Confederation of Indian Universities (CIU) Chancellor Dr. P R Trivedi discussing university governance with the President of India Hon'ble Pranab Mukherjee (2012)

Most of the administrative staff works in different administrative sections, such as Student Affairs. In addition, there may be central support units, such as a university library which have a dedicated staff.

The professional field involving the collection, analysis, and reporting of higher education data is called institutional research. Professionals in this field can be found at locations in addition to universities, e.g. state educational departments.

Post secondary institutions also employ graduate students in various assistantship roles. In the US, close to 50% of graduate students are employed as graduate assistants at some point. These apprenticeship-like positions provide opportunities for students to gain experience in, and exposure to, professional roles in exchange for funding of their academic programs.

Chapter 4

ADULT EDUCATION

Adult Education is a practice in which adults engage in systematic and sustained self educating activities in order to gain new forms of knowledge, skills, attitudes, or values. It can mean any form of learning adults engage in beyond traditional schooling, encompassing basic literacy to personal fulfillment as a lifelong learner. In particular, adult education reflects a specific philosophy about learning and teaching based on the assumption that adults can and want to learn, that they are able and willing to take responsibility for that learning, and that the learning itself should respond to their needs. Driven by what one needs or wants to learn, the available opportunities, and the manner in which one learns, adult learning is affected by demographics, globalization and technology. The learning happens in many ways and in many contexts just as all adults' lives differ. Adult learning can be in any of the three contexts i.e.

- Formal – Structured learning that typically takes place in an education or training institution, usually with a set curriculum and carries credentials,
- Non-formal- Learning that is organized by educational institutions but non credential. Non-formal learning opportunities may be provided in the workplace and through the activities of civil society organizations and groups
- Informal education-Learning that goes on all the time, resulting from daily life activities related to work, family, community or leisure (e.g. community baking class)

An Adult Education Class in a rural setting in India

CHARACTERISTICS

Defined as the science and art of helping adults learn, the practice of adult education is referred to as andragogy, to distinguish it from the traditional school-based education for children pedagogy. Unlike children, adults are seen as:

- More self-directed, rather than relying on others for help
- Mature and therefore experienced with the experience providing a rich source for learning
- An Adult's readiness to learn is linked to what one needs to know
- Adult orientation to learn is problem centred rather than subject centered
- Adult motivation to learn is internal.

Educating adults differs from educating children in several ways given that adults have accumulated knowledge and work experience which can add to the learning experience. Another difference is that most adult education is voluntary, therefore, the participants are generally self-motivated, unless required to participate, by an employer, for example. Adults frequently apply their knowledge in a practical fashion to learn effectively. They must have a reasonable expectation that the knowledge they gain will help them further their goals. For example, during the 1990s, many adults, including mostly office workers, enrolled in computer training courses. These courses would teach basic use of the operating system or specific application software. Because the abstractions governing the user's interactions with a PC were so new, many people who had been working white-collar jobs for ten years or more eventually took such training courses, either at their own whim (to gain computer skills and thus earn higher pay) or at the behest of their managers.

In the United States and many areas in Canada, a more general example is when adults who dropped out of high school return to school to complete general education requirements. Most upwardly mobile positions require at the very least a high school diploma or equivalent. A working adult is unlikely to have the freedom to simply quit his or her job and go "back to school" full-time. Public school systems and community colleges usually offer evening or weekend classes for this reason. In Europe this is often referred to as "second-chance", and many schools offer tailor-made courses and learning programs for these returning learners. Furthermore, adults with poor reading skills can obtain help from volunteer literacy programs. These national organizations provide training, tutor certification, and accreditation for local volunteer programs. States often have organizations which provide field services for volunteer literacy programs.

Purposes of adult education may vary, the general purposes of which are summarized as:

- Vocational
- Social
- Recreational
- Self-development

One of its goals may be to help adult learners satisfy their personal needs and achieve their professional goals. Therefore, its ultimate goal might be to achieve human fulfillment. The goal might also be to achieve an institution's needs. For example, this might include improving its operational effectiveness and productivity. A larger scale goal of adult education may be the growth of society by enabling its citizens to keep up with societal change and maintain good social order.

The purpose of adult education in the form of college or university is distinct. In these institutions, the aim is typically related to personal growth and development as well as occupation and career preparedness. Another goal might be to not only sustain the democratic society, but to even challenge and improve its social structure.

Another fast-growing sector of adult education is English for Speakers of Other Languages (ESOL), also referred to as English as a Second Language (ESL) or English Language Learners (ELL). These courses are key in assisting immigrants with not only the acquisition of the English language, but the acclimation process to the culture of the United States as well as other English speaking countries like Canada, Australia, and New Zealand.

A common problem in adult education in the US is the lack of professional development opportunities for adult educators. Most adult educators come from other professions and are not well trained to deal with adult learning issues. Most of the positions available in this field are only part-time without any benefits or stability since they are usually funded by government grants that might last for only a couple of years. However, in Canada, professional development is available in all provinces and territories through postsecondary institutions and most Provinces also provide professional development through their ministry of education or school boards and through nongovernmental organizations. In addition, there are programs about adult education for existing and aspiring practitioners offered, at various academic levels, by universities, colleges, and professional organizations.

PRINCIPLES

The principles of andragogy flow directly from an understanding of the characteristics of adults as learners and can be recognized when we understand the characteristics of adults, and see the way those characteristics influence how adults learn best. Teachers who follow the principles of andragogy when choosing materials for training and when designing program delivery, find that their learners progress more quickly, and are more successful in reaching their goals. The Canadian Literacy and Learning Network outlines the 7 key principles of adult learning. In other words, these 7 principles distinguish adult learners from children and youth.

1. Adults cannot be made to learn. They will only learn when they are internally motivated to do so.
2. Adults will only learn what they feel they need to learn. In other words, they are practical.
3. Adults learn by doing. Active participation is especially important to adult learners in comparison to children.
4. Adult learning is problem-based and these problems must be realistic. Adult learners like finding solutions to problems.
5. Adult learning is affected by the experience each adult brings.
6. Adults learn best informally. Adults learn what they feel they need to know whereas children learn from a curriculum.

7. Children want guidance. Adults want information that will help them improve their situation or that of their children.

CHALLENGES AND MOTIVATING FACTORS

Adults have many responsibilities that they must balance against the demands of learning. Because of these responsibilities, adults have barriers and challenges against participating in learning and continuing their education. The barriers can be classified into three groups:

- Institutional
- Situational
- Dispositional

Some of these barriers include the lack of time balancing career and family demands, finances, transportation, confidence, or interest, lack of information about opportunities to learn, scheduling problems, entrance requirements and problems with child care. Other obstacles that prevent adults from pursuing further education are fear, shyness, ego, and stigma. Daily wagers are reluctant to join schools as by joining these schools they lose their only source of income. Distance learning can address some of the institutional barriers such as class scheduling and entrance requirements. Fear, shyness, ego, or stigma can also prevent adults from pursuing further education.

Keeping adults motivated, instilling in them confidence, reinforcing positive self-esteem allows for them to develop into lifelong learners. Typical motivations include a requirement for competence or licensing, an expected (or realized) promotion, job enrichment, a need to maintain old skills or learn new ones, a need to adapt to job changes, or the need to learn in order to comply with company directives. The best way to motivate adult learners is simply to enhance their reasons for enrolling and decrease the barriers. Instructors must learn why their students are enrolled (the motivators); they have to discover what is keeping them from learning. Then the instructors must plan their motivating strategies. A successful strategy includes showing adult learners the relationship between training and an expected promotion, they can be shown that the course benefits them pragmatically, they will perform better, and the benefits will be longer lasting. It is crucial for teachers to be aware of the characteristics of their learners and that they develop lessons that address both the strengths and the needs of their individual students.

Chapter 5

VOCATIONAL EDUCATION

Vocational Education is education within vocational schools that prepares people for a specific trade. It directly develops expertise in techniques related to technology, skill and scientific technique to span all aspects of the trade. Vocational education is classified as using procedural knowledge.

Generally known as Career and Technical Education (CTE) or Technical and Vocational Education and Training (TVET) it prepares people for specific trades, crafts and careers at various levels from a trade, a craft, technician, or a high professional practitioner position in careers such as engineering, accountancy, nursing, medicine, architecture, law etc. Craft vocations are usually based on manual or practical activities and are traditionally non-academic but related to a specific trade, occupation . It is sometimes referred to as *technical education* as the trainee directly develops expertise in a particular group of techniques.

Vocational Education in Ancient India

Vocational education can be at the secondary, post-secondary level, further education, and higher education level and can interact with the apprenticeship system. Increasingly, vocational education can be recognized in terms of recognition of prior learning and partial academic credit towards tertiary education (e.g., at a university) as credit.

Vocational education is related to the apprenticeship system of learning.

As the labour market becomes more specialized and require higher levels of skill, governments and businesses are increasingly investing in the future of vocational education through publicly funded training organizations and subsidized apprenticeship or traineeship initiatives for businesses. At the post-secondary level vocational education

is typically provided by an institute of technology/polytechnic, university, or by a local community college.

VOCATIONAL EDUCATION INTERNATIONALLY

AUSTRALIA

In Australia vocational education and training is mostly post-secondary and provided through the vocational education and training (VET) system by registered training organisations. However some senior schools do offer school-based apprenticeships and traineeships for students in years 10, 11 and 12. There were 24 Technical Colleges in Australia but now only 4 independent Trade Colleges remain with two in Queensland; one in Brisbane (Australian Trade College) and one on the Gold Coast (Australian Industry Trade College) and one in Adelaide and Perth. This system encompasses both public, TAFE, and private providers in a national training framework consisting of the Australian Quality Training Framework, Australian Qualifications Framework and Industry Training Packages which define the assessment standards for the different vocational qualifications.

Australia's apprenticeship system includes both traditional apprenticeships in traditional trades and "traineeships" in other more service-oriented occupations. Both involve a legal contract between the employer and the apprentice and provide a combination of school-based and workplace training. Apprenticeships typically last three to four years, traineeships only one to two years. Apprentices and trainees receive a wage which increases as they progress.

Since the states and territories are responsible for most public delivery and all regulation of providers, a central concept of the system is "national recognition" whereby the assessments and awards of any one registered training organisation must be recognised by all others and the decisions of any state or territory training authority must be recognised by the other states and territories. This allows national portability of qualifications and units of competency.

A crucial feature of the training package (which accounts for about 60% of publicly funded training and almost all apprenticeship training) is that the content of the vocational qualifications is theoretically defined by industry and not by government or training providers. A Training Package is "owned" by one of 11 Industry Skills Councils which are responsible for developing and reviewing the qualifications.

The National Centre for Vocational Education Research or NCVER is a not-for-profit company owned by the federal, state and territory ministers responsible for training. It is responsible for collecting, managing, analysing, evaluating and communicating research and statistics about vocational education and training (VET).

The boundaries between Vocational education and tertiary education are becoming more blurred. A number of vocational training providers such as NMIT, BHI and WAI are now

offering specialised bachelor's degrees in specific areas not being adequately provided by Universities. Such Applied Courses include in the areas of Equine studies, Winemaking and viticulture, aquaculture, Information Technology, Music, Illustration, Culinary Management and many more.

Vocational education in Australia is sometimes mistaken for skills assessment or recognised prior learning (RPL). It is not uncommon for universities to offer RPL for some of their vocational education, however it is now the same. Get Qualified Australia have been offering RPL for several years now, however they do not offer vocational education.

COMMONWEALTH OF INDEPENDENT STATES

The largest and the most unified system of vocational education was created in the Soviet Union with the Professional'no-tehnicheskoye uchilische and Tehnikum. But it became less effective with the transition of the economies of post-Soviet countries to a market economy.

EUROPEAN UNION

Education and training is the responsibility of Member States, but the single European labour market makes some cooperation on education imperative, including on vocational education and training. The 'Copenhagen process', based on the open method of cooperation between Member States, was launched in 2002 in order to help make vocational education and training better and more attractive to learners throughout Europe. The process is based on mutually agreed priorities that are reviewed periodically. Much of the activity is monitored by Cedefop, the European Centre for the Development of Vocational Training.

FINLAND

In Finland, vocational education belongs to secondary education. After the nine-year comprehensive school, almost all students choose to go to either a *lukio* (high school), which is an institution preparing students for tertiary education, or to a vocational school. Both forms of secondary education last three years, and give a formal qualification to enter university or *ammattikorkeakoulu*, i.e. Finnish polytechnics. In certain fields (e.g. the police school, air traffic control personnel training), the entrance requirements of vocational schools include completion of the *lukio*, thus causing the students to complete their secondary education twice.

The education in vocational school is free, and the students from low-income families are eligible for a state student grant. The curriculum is primarily vocational, and the academic part of the curriculum is adapted to the needs of a given course. The vocational schools are mostly maintained by municipalities.

After completing secondary education, one can enter higher vocational schools (*ammattikorkeakoulu*, or *AMK*) or universities.

It is also possible for a student to choose both lukio and vocational schooling. The education in such cases last usually from 3 to 4 years.

GERMAN-LANGUAGE AREAS

Vocational education is an important part of the education systems in Austria, Germany, Liechtenstein and Switzerland (including the French and the Italian speaking parts of the country) and one element of the German model.

For example, in Germany a law (the *Berufsausbildungsgesetz*) was passed in 1969 which regulated and unified the vocational training system and codified the shared responsibility of the state, the unions, associations and chambers of trade and industry. The system is very popular in modern Germany: in 2001, two thirds of young people aged under 22 began an apprenticeship, and 78% of them completed it, meaning that approximately 51% of all young people under 22 have completed an apprenticeship. One in three companies offered apprenticeships in 2003; in 2004 the government signed a pledge with industrial unions that all companies except very small ones must take on apprentices.

The vocational education systems in the other German speaking countries are very similar to the German system and a vocational qualification from one country is generally also recognized in the other states within this area.

HONG KONG

In Hong Kong, vocational education is usually for post-secondary 6 students. The Hong Kong Institute of Vocational Education (IVE) provides training in nine different vocational fields, namely: Applied Science; Business Administration; Child Education and Community Services; Construction; Design; Printing, Textiles and Clothing; Hotel, Service and Tourism Studies; Information Technology; Electrical and Electronic Engineering; and Mechanical, Manufacturing and Industrial Engineering.

HUNGARY

Normally at the end of elementary school (at age 14) students are directed to one of three types of upper secondary education: one academic track (gymnasium) and two vocational tracks. Vocational secondary schools provide four years of general education and also prepare students for the maturata. These schools combine general education with some specific subjects, referred to as pre-vocational education and career orientation. At that point many students enrol in a post-secondary VET programme often at the same institution, to obtain a vocational qualification, although they may also seek entry to tertiary education.

Vocational training schools (szakiskola) initially provide two years of general education, combined with some pre-vocational education and career orientation, they then choose an occupation, and then receive two or three years of vocational education and training focusing on that occupation – such as bricklayer. Students do not obtain the maturata but

a vocational qualification at the end of a successfully completed programme. Demand for vocational training schools, both from the labour market and among students, has declined while it has increased for upper secondary schools delivering the maturata.

INDIA

Vocational training in India is provided on a full-time as well as part-time basis. Full-time programs are generally offered through I.T.I.s Industrial training institutes. The nodal agency for granting the recognition to the I.T.I.s is NCVT, which is under the Min. of labour, Govt. of India. Part-time programs are offered through state technical education boards or universities who also offer full-time courses. Vocational training has been successful in India only in industrial training institutes and that too in engineering trades. There are many private institutes in India which offer courses in vocational training and finishing, but most of them have not been recognized by the Government. India is a pioneer in vocational training in Film & Television, and Information Technology. AAFT, Audio Production & Recording ILM Academy. Maharashtra State Government also offers vocational Diplomas in various Trades.

Vocational Education in Modern India

Vocational Higher Secondary schools are under MHRD in India. All the state governments runs vocational schools. In Kerala, 389 vocational schools are there with 42 different courses. Commerce & Business, Tourism, Agriculture, Automobile, Air conditioning, Live stock management, Lab Technician, Agriculture are some prominent courses. The students get reservation and preference in PSC appointments

JAPAN

Japanese vocational schools are known as *senmon gakkō*. They are part of Japan's higher education system. They are two-year schools that many students study at after finishing high school (although it is not always required that students graduate from high school). Some have a wide range of majors, others only a few majors. Some examples are computer technology, fashion, and English.

SOUTH KOREA

Vocational high schools offer programmes in five fields: agriculture, technology/engineering, commerce/business, maritime/fishery, and home economics. In principle, all students in the first year of high school (10th grade) follow a common national curriculum. In the second and third years (11th and 12th grades) students are offered courses relevant to their specialisation. In some programmes, students may participate in workplace training through co-operation between schools and local employers. The government is now piloting Vocational Meister Schools in which workplace training is an important part of the programme. Around half of all vocational high schools are private. Private and public schools operate according to similar rules; for example, they charge the same fees for high school education, with an exemption for poorer families.

The number of students in vocational high schools has decreased, from about half of students in 1995 down to about one-quarter today. To make vocational high schools more attractive, in April 2007 the Korean government changed the name of vocational high schools into professional high schools. With the change of the name the government also facilitated the entry of vocational high school graduates to colleges and universities.

Most vocational high school students continue into tertiary education; in 2007 43% transferred to junior colleges and 25% to university. At tertiary level, vocational education and training is provided in junior colleges (two- and three-year programmes) and at polytechnic colleges. Education at junior colleges and in two-year programmes in polytechnic colleges leads to an Industrial associate degree. Polytechnics also provide one-year programmes for craftsmen and master craftsmen and short programmes for employed workers. The requirements for admission to these institutions are in principle the same as those in the rest of tertiary sector (on the basis of the College Scholastic Aptitude Test) but candidates with vocational qualifications are given priority in the admission process. Junior colleges have expanded rapidly in response to demand and in 2006 enrolled around 27% of all tertiary students.

95% of junior college students are in private institutions. Fees charged by private colleges are approximately twice those of public institutions. Polytechnic colleges are state-run institutions under the responsibility of the Ministry of Labour; government funding keeps student fees much lower than those charged by other tertiary institutions. Around 5% of students are enrolled in polytechnic colleges.

MALAYSIA

Skills training are no longer depicted as second-class education in Malaysia. There are numerous vocational education centres here including vocational schools (high schools to train skilled students), technic schools (high schools to train future engineers) and vocational colleges all of them under the Ministry of Education. Then there are 33 polytechnics and 86 community colleges under the Ministry of Higher Education; 10 MARA Advanced Skills Colleges, 13 MARA Skills Institutes, 286 GIATMARAs under Majlis Amanah Rakyat (MARA) and 15 National Youth Skills Institutes under Ministry of

Youth and Sports. The first vocational institute in Malaysia is the Industrial Training Institute of Kuala Lumpur established in 1964 under the Manpower Department. Other institutes under the same department including 8 Advanced Technology Training Centres, one Centre for Instructor and Advanced Skill Training, one Japan-Malaysia Technical Institute and the other 21 ITIs.

MEXICO

In Mexico, both federal and state governments are responsible for the administration of vocational education. Federal schools are funded by the federal budget, in addition to their own funding sources. The state governments are responsible for the management of decentralised institutions, such as the State Centres for Scientific and Technological Studies (CECyTE) and Institutes of Training for Work (ICAT). These institutions are funded 50% from the federal budget and 50% from the state budget. The state governments also manage and fund "decentralised institutions of the federation", such as CONALEP schools.

Compulsory education (including primary and lower secondary education) finishes at the age of 15 and about half of those aged 15-to-19 are enrolled full-time or part-time in education. All programmes at upper secondary level require the payment of a tuition fee.

The upper secondary vocational education system in Mexico includes over a dozen subsystems (administrative units within the Upper Secondary Education Undersecretariat of the Ministry of Public Education, responsible for vocational programmes) which differ from each other to varying degrees in content, administration, and target group. The large number of school types and corresponding administrative units within the Ministry of Public Education makes the institutional landscape of vocational education and training complex by international standards.

Vocational education and training provided under the Upper Secondary Education Undersecretariat includes three main types of programme:

- "Training for work" (formación para el trabajo) courses at ISCED 2 level are short training programmes, taking typically 3 to 6 months to complete. The curriculum includes 50% theory and 50% practice. After completing the programme, students may enter the labour market. This programme does not provide direct access to tertiary education. Those who complete lower secondary education may choose between two broad options of vocational upper secondary education at ISCED 3 level. Both programmes normally take three years to complete and offer a vocational degree as well as the baccalaureate, which is required for entry into tertiary education.
- The title "technical professional – baccalaureate" (profesional técnico — bachiller) is offered by various subsystems though one subsystem (CONALEP) includes two thirds of the students. The programme involves 35% general subjects and 65% vocational subjects. Students are required to complete 360 hours of practical training.

- The programme awarding the "technological baccalaureate" (bachillerato tecnológico) and the title "professional technician" (técnico profesional) is offered by various subsystems. It includes more general and less vocational education: 60% general subjects and 40% vocational subjects.

THE NETHERLANDS

Nearly all of those leaving lower secondary school enter upper secondary education, and around 50% of them follow one of four vocational programmes; technology, economics, agricultural, personal/social services & health care. These programmes vary from 1 to 4 years (by level; only level 2, 3 and 4 diplomas are considered formal 'start qualifications' for successfully entering the labour market). The programmes can be attended in either of two pathways. One either involving a minimum of 20% of school time (apprenticeship pathway; BBL-BeroepsBegeleidende Leerweg) or the other, involving a maximum of 80% schooltime (BOL -BeroepsOpleidende Leerweg). The remaining time in both cases is apprenticeship/work in a company. So in effect, students have a choice out of 32 trajectories, leading to over 600 professional qualifications. BBL-Apprentices usually receive a wage negotiated in collective agreements. Employers taking on these apprentices receive a subsidy in the form of a tax reduction on the wages of the apprentice. (WVA-Wet vermindering afdracht). Level 4 graduates of senior secondary VET may go directly to institutes for Higher Profession Education and Training (HBO-Hoger beroepsonderwijs), after which entering university is a possibility. The social partners participate actively in the development of policy. As of January 1, 2012 they formed a foundation for Co operation Vocational Education and Entrepreneurship (St. SBB – stichting Samenwerking Beroepsonderwijs Bedrijfsleven; www.s-bb.nl). Its responsibility is to advise the Minister on the development of the national vocational education and training system, based on the full consensus of the constituent members (the representative organisations of schools and of entrepreneurship and their centres of expertise). Special topics are Qualification & Examination, Apprenticeships (BPV-Beroepspraktijkvorming) and (labourmarket) Efficiency of VET. The Centres of Expertices are linked to the four vocational education programmes provided in senior secondary VET on the content of VET programmes and on trends and future skill needs. The Local County Vocational Training (MBO Raad www.mбораad.nl) represents the VET schools in this foundation and advise on the quality, operations and provision of VET.

NEW ZEALAND

New Zealand is served by 39 Industry Training Organisations (ITO). The unique element is that ITOs purchase training as well as set standards and aggregate industry opinion about skills in the labour market. Industry Training, as organised by ITOs, has expanded from apprenticeships to a more true lifelong learning situation with, for example, over 10% of trainees aged 50 or over. Moreover, much of the training is generic. This challenges the prevailing idea of vocational education and the standard layperson view that it focuses on apprenticeships.

One source for information in New Zealand is the Industry Training Federation.. Another is the Ministry of Education ..

Polytechnics, Private Training Establishments, Wananga and others also deliver vocational training, amongst other areas.

NORWAY

Nearly all those leaving lower secondary school enter upper secondary education, and around half follow one of 9 vocational programmes. These programmes typically involve two years in school followed by two years of apprenticeship in a company. The first year provides general education alongside introductory knowledge of the vocational area. During the second year, courses become more trade-specific.

Apprentices receive a wage negotiated in collective agreements ranging between 30% and 80% of the wage of a qualified worker; the percentage increasing over the apprenticeship period. Employers taking on apprentices receive a subsidy, equivalent to the cost of one year in school. After the two years vocational school programme some students opt for a third year in the 'general' programme as an alternative to an apprenticeship. Both apprenticeship and a third year of practical training in school lead to the same vocational qualifications. Upper secondary VET graduates may go directly to Vocational Technical Colleges, while those who wish to enter university need to take a supplementary year of education.

The social partners participate actively in the development of policy. The National Council for Vocational Education and Training advises the Minister on the development of the national vocational education and training system. The Advisory Councils for Vocational Education and Training are linked to the nine vocational education programmes provided in upper secondary education and advise on the content of VET programmes and on trends and future skill needs. The National Curriculum groups assist in deciding the contents of the vocational training within the specific occupations. The Local County Vocational Training Committees advise on the quality, provision of VET and career guidance.

PARAGUAY

In Paraguay, vocational education is known as *Bachillerato Técnico* and is part of the secondary education system. These schools combine general education with some specific subjects, referred to as pre-vocational education and career orientation. After nine years of *Educación Escolar Básica* (Primary School), the student can choose to go to either a *Bachillerato Técnico* (Vocational School) or a *Bachillerato Científico* (High School). Both forms of secondary education last three years, and are usually located in the same campus called *Colegio*.

After completing secondary education, one can enter to the universities. It is also possible for a student to choose both Técnico and Científico schooling.

RUSSIA

SRI LANKA

Vocational training from Agricultural subjects to ICT related subjects are available in Sri Lanka. In 2005 the Ministry of Vocational and Technical Training (MVTT) introduced the National Vocational Qualifications (NVQ) framework which was an important milestone for the education, economic and social development of Sri Lanka. The NVQ framework consists of seven levels of instruction. NVQ levels 1 to 4 are for craftsmen designation and successful candidates are issued with National certificates. NVQ levels 5 and 6 are Diploma level, whereas Level 7 is for degree equivalent qualification.

Training courses are provided by many institutions island wide. All training providers (public and private) must obtain institutional registration and course accreditation from the Tertiary and Vocational Education Commission (TVEC). In order to obtain registration institutions must satisfy specific criteria: infrastructure, basic services, tools and equipment, quality of instruction and staff, based on curriculum and syllabus, and quality of management and monitoring systems.

Government Ministries and Agencies involved in Vocational Training are The Ministry of Vocational and Technical Training (MVTT), The Tertiary and Vocational Education Commission (TVEC), The National Apprentice and Industrial Training Authority (NAITA), The Department of Technical Education and Training (DTET), The Vocational Training Authority (VTA) and the National Youth Services Council (NYSC).

SWEDEN

Nearly all of those leaving compulsory schooling immediately enter upper secondary schools, and most complete their upper secondary education in three years. Upper secondary education is divided into 13 vocationally oriented and 4 academic national programmes. Slightly more than half of all students follow vocational programmes. All programmes offer broad general education and basic eligibility to continue studies at the post-secondary level. In addition, there are local programmes specially designed to meet local needs and 'individual' programmes.

A 1992 school reform extended vocational upper secondary programmes by one year, aligning them with three years of general upper secondary education, increasing their general education content, and making core subjects compulsory in all programmes. The core subjects (which occupy around one-third of total teaching time in both vocational and academic programmes) include English, artistic activities, physical education and health, mathematics, natural science, social studies, Swedish or Swedish as a second language, and religious studies. In addition to the core subjects, students pursue optional courses, subjects which are specific to each programme and a special project.

Vocational programmes include 15 weeks of workplace training (Arbetsplatsförlagd utbildning – APU) over the three-year period. Schools are responsible for arranging

workplace training and verifying its quality. Most municipalities have advisory bodies: programme councils (programmråd) and vocational councils (yrkesråd) composed of employers' and employees' representatives from the locality. The councils advise schools on matters such as provision of workplace training courses, equipment purchase and training of supervisors in APU.

SWITZERLAND

Nearly two thirds of those entering upper secondary education enter the vocational education and training system. At this level, vocational education and training is mainly provided through the 'dual system'. Students spend some of their time in a vocational school; some of their time doing an apprenticeship at a host company; and for most programmes, students attend industry courses at an industry training centre to develop complementary practical skills relating to the occupation at hand.

Common patterns are for students to spend one- two days per week at the vocational school and three-four days doing the apprenticeship at the host company; alternatively they alternate between some weeks attending classes at the vocational school and some weeks attending industry courses at an industry training centre.

A different pattern is to begin the programme with most of the time devoted to in-school education and gradually diminishing the amount of in-school education in favour of more in-company training.

Switzerland draws a distinction between vocational education and training (VET) programmes at upper-secondary level, and professional education and training (PET) programmes, which take place at tertiary B level. In 2007, more than half of the population aged 25–64 had a VET or PET qualification as their highest level of education. In addition, universities of applied sciences (Fachhochschulen) offer vocational education at tertiary A level. Pathways enable people to shift from one part of the education system to another.

TURKEY

Students in Turkey may choose vocational high schools after completing the 8-year-long compulsory primary education. Vocational high school graduates may pursue 2 year-long polytechnics or may continue with a related tertiary degree. Municipalities in Turkey also offer vocational training. The metropolitan municipality of Istanbul, the most populous city in Turkey, offers year long free vocational programs in a wide range of topics through ISMEK, an umbrella organization formed under the municipality.

UNITED KINGDOM

The first "Trades School" in the UK was *Stanley Technical Trades School* (now Harris Academy South Norwood) which was designed, built and set up by William Stanley. The initial idea was thought of in 1901, and the school opened in 1907.

The system of vocational education in the UK initially developed independently of the state, with bodies such as the RSA and City & Guilds setting examinations for technical subjects. The Education Act 1944 made provision for a Tripartite System of grammar schools, secondary technical schools and secondary modern schools, but by 1975 only 0.5% of British senior pupils were in technical schools, compared to two-thirds of the equivalent German age group.

Successive recent British Governments have made attempts to promote and expand vocational education. In the 1970s, the Business And Technology Education Council was founded to confer further and higher education awards, particularly to further education colleges in the United Kingdom. In the 1980s and 1990s, the Conservative Government promoted the Youth Training Scheme, National Vocational Qualifications and General National Vocational Qualifications. However, youth training was marginalised as the proportion of young people staying on in full-time education increased. In 1994, publicly funded Modern Apprenticeships were introduced to provide "quality training on a work-based (educational) route". Numbers of apprentices have grown in recent years and the Department for Children, Schools and Families has stated its intention to make apprenticeships a "mainstream" part of England's education system.

In the UK some higher technician engineering positions that require 4-5 year apprenticeship require academic study to HNC / HND or higher City & Guilds level. Apprenticeships are increasingly recognised as the gold standard for work-based training. There are three levels of Apprenticeship available for those aged 16 and over:

- **1 - Intermediate Level Apprenticeships**

Apprentices work towards work-based learning qualifications such as a Level 2 Competence Qualification, Functional Skills and, in most cases, a relevant knowledge-based qualification.

- **2 - Advanced Level Apprenticeships**

Apprentices work towards work-based learning such as a Level 3 Competence Qualification, Functional Skills and, in most cases, a relevant knowledgebased qualification.

- **3 - Higher Apprenticeships**

Apprentices work towards work-based learning qualifications such as a Level 4 and 5 Competence Qualification, Functional Skills and, in some cases, a knowledge-based qualification such as a Foundation Degree.

Chapter 6

SPECIAL EDUCATION

Special Education (also known as Special needs education, Aided education, Vocational education, Limb care authority education) is the practice of educating students with special needs in a way that addresses their individual differences and needs. Ideally, this process involves the individually planned and systematically monitored arrangement of teaching procedures, adapted equipment and materials, and accessible settings. These interventions are designed to help learners with special needs achieve a higher level of personal self-sufficiency and success in school and their community, than may be available if the student were only given access to a typical classroom education.

Common special needs include learning disabilities, communication disorders, emotional and behavioral disorders, physical disabilities, and developmental disabilities. Students with these kinds of special needs are likely to benefit from additional educational services such as different approaches to teaching, the use of technology, a specifically adapted teaching area, or a resource room.

Special Education being provided to the needy child in India

Intellectual giftedness is a difference in learning and can also benefit from specialized teaching techniques or different educational programs, but the term "special education" is generally used to specifically indicate instruction of students with disabilities. Gifted education is handled separately.

Whereas special education is designed specifically for students with special needs, remedial education can be designed for any students, with or without special needs; the defining trait is simply that they have reached a point of underpreparedness, regardless of why. For example, even people of high intelligence can be underprepared if their education was disrupted, for example, by internal displacement during civil disorder or a war.

In most developed countries, educators modify teaching methods and environments so that the maximum number of students are served in general education environments. Therefore, special education in developed countries is often regarded as a service rather than a place. Integration can reduce social stigmas and improve academic achievement for many students.

The opposite of special education is *general education*. General education is the standard curriculum presented without special teaching methods or supports.

IDENTIFYING STUDENTS OR LEARNERS WITH SPECIAL NEEDS

Some children are easily identified as candidates for special needs due to their medical history. They may have been diagnosed with a genetic condition that is associated with intellectual disability, may have various forms of brain damage, may have a developmental disorder, may have visual or hearing disabilities, or other disabilities.

For students with less obvious disabilities, such as those who have learning difficulties, two primary methods have been used for identifying them: the *discrepancy model* and the *response to intervention model*. The discrepancy model depends on the teacher noticing that the students' achievements are noticeably below what is expected. The response to intervention model advocates earlier intervention.

Children with Down syndrome ready for going to special school

In the discrepancy model, a student receives special education services for a specific learning difficulty (SLD) if the student has at least normal intelligence and the student's academic achievement is below what is expected of a student with his or her IQ. Although the discrepancy model has dominated the school system for many years, there has been substantial criticism of this approach (e.g., Aaron, 1995, Flanagan and Mascolo, 2005) among researchers. One reason for criticism is that diagnosing SLDs on the basis of the discrepancy between achievement and IQ does not predict the effectiveness of treatment. Low academic achievers who also have low IQ appear to benefit from treatment just as much as low academic achievers who have normal or high intelligence.

The alternative approach, response to intervention, identifies children who are having difficulties in school in their first or second year after starting school. They then receive additional assistance such as participating in a reading remediation program. The response of the children to this intervention then determines whether they are designated as having a learning disability. Those few who still have trouble may then receive designation and further assistance. Sternberg (1999) has argued that early remediation can greatly reduce the number of children meeting diagnostic criteria for learning disabilities. He has also suggested that the focus on learning disabilities and the provision of accommodations in school fails to acknowledge that people have a range of strengths and weaknesses and places undue emphasis on academics by insisting that students should be supported in this arena and not in music or sports.

INDIVIDUAL NEEDS

A special education program should be customized to address each individual student's unique needs. Special educators provide a continuum of services, in which students with special needs receives varying degrees of support based on their individual needs. Special education programs need to be individualized so that they address the unique combination of needs in a given student.

In the United States, Canada, and the UK, educational professionals use the initialism IEP when referring to a student's individualized education plan. For children who are not yet 3, an IFSP. (Individual Family Service Plan) It contains 1) information on the child's present level of development in all areas; 2) outcomes for the child and family; and 3) services the child and family will receive to help them achieve the outcomes.

Students with special needs are assessed to determine their specific strengths and weaknesses. Placement, resources, and goals are determined on the basis of the student's needs. Accommodations and Modifications to the regular program may include changes in the curriculum, supplementary aides or equipment, and the provision of specialized physical adaptations that allow students to participate in the educational environment as much as possible. Students may need this help to access subject matter, physically gain access to the school, or meet their emotional needs. For example, if the assessment determines that the student cannot write by hand because of a physical disability, then the school might provide a computer for typing assignments, or allow the student to answer questions verbally instead. If the school determines that the student is severely distracted by the normal activities in a large, busy classroom, then the student might be placed in a smaller classroom such as a resource room.

METHODS OF PROVISION

Schools use different approaches to providing special education services to students. These approaches can be broadly grouped into four categories, according to how much contact the student with special needs has with non-disabled students (using North American terminology):

- *Inclusion:* In this approach, students with special needs spend all, or most of the school day with students who do not have special needs. Because inclusion can require substantial modification of the general curriculum, most schools use it only for selected students with mild to moderate special needs, which is accepted as a best practice. Specialized services may be provided inside or outside the regular classroom, depending on the type of service. Students may occasionally leave the regular classroom to attend smaller, more intensive instructional sessions in a resource room, or to receive other related services that might require specialized equipment or might be disruptive to the rest of the class, such as speech and language therapy, occupational therapy, physical therapy, rehabilitation counseling. They might also leave the regular classroom for services that require privacy, such as counseling sessions with a social worker.
- **Mainstreaming** refers to the practice of educating students with special needs in classes with non-disabled students during specific time periods based on their skills. Students with special needs are segregated in separate classes exclusively for students with special needs for the rest of the school day.
- **Segregation** in a separate classroom or special school for students with special needs: In this model, students with special needs do not attend classes with non-disabled students. Segregated students may attend the same school where regular classes are provided, but spend all instructional time exclusively in a separate classroom for students with special needs. If their special class is located in an ordinary school, they may be provided opportunities for social integration outside the classroom, such as by eating meals with non-disabled students. Alternatively, these students may attend a special school.
- **Exclusion:** A student who does not receive instruction in any school is excluded from school. In the past, most students with special needs have been excluded from school. Such exclusion still affects about 23 million disabled children worldwide, particularly in poor, rural areas of developing countries. It may also occur when a student is in hospital, housebound, or detained by the criminal justice system. These students may receive one-on-one instruction or group instruction. Students who have been suspended or expelled are not considered excluded in this sense.

EFFECTIVE INSTRUCTION FOR STUDENTS WITH DISABILITIES

- *Goal Directed:* Each child must have an Individualized Education Program (IEP) that distinguishes his/her particular needs. The child must get the services that are designed for him/her. These services will allow him/her to reach his/her annual goals which will be assessed at the end of each term along with short-term goals that will be assessed every few months.
- *Research-Based Methods-* There has been a lot of research done about students with disabilities and the best way to teach them. Testing, IQs, interviews, the discrepancy model, etc. should all be used to determine where to place the child. Once that is determined, the next step is the best way for the child to learn. There are plenty of different programs such as the Wilson Reading Program and Direct Instruction

- *Guided by student performance*- While the IEP goals may be assessed every few months to a year, constant informal assessments must take place. These assessments will guide instruction for the teacher. The teacher will be able to determine if the material is too difficult or too easy.

SPECIAL SCHOOLS

A *special school* is a school catering for students who have special educational needs due to severe learning difficulties, physical disabilities or behavioural problems. Special schools may be specifically designed, staffed and resourced to provide appropriate special education for children with additional needs. Students attending special schools generally do not attend any classes in mainstream schools.

Special schools provide individualised education, addressing specific needs. Student to teacher ratios are kept low, often 6:1 or lower depending upon the needs of the children. Special schools will also have other facilities for children with special needs, such as soft play areas, sensory rooms, or swimming pools, which are necessary for treating students with certain conditions.

In recent times, places available in special schools are declining as more children with special needs are educated in mainstream schools. However, there will always be some children, whose learning needs cannot be appropriately met in a regular classroom setting and will require specialised education and resources to provide the level of support they require. An example of a disability that may require a student to attend a special school is intellectual disability. However, this practice is often frowned upon by school districts in the USA in the light of Least Restrictive Environment as mandated in the Individuals with Disabilities Education Act.

An alternative is a special unit or special classroom, also called a self-contained classroom, which is a separate room or rooms dedicated solely to the education of students with special needs within a larger school that also provides general education.

These classrooms are typically staffed by specially trained teachers, who provide specific, individualized instruction to individuals and small groups of students with special needs. Self-contained classrooms, because they are located in a general education school, may have students who remain in the self-contained classroom full-time, or students who are included in certain general education classes. In the United States a part-time alternative that is appropriate for some students is sometimes called a resource room.

HISTORY OF SPECIAL SCHOOLS

One of the first special schools in the world was the Institut National des Jeunes Aveugles in Paris, which was founded in 1784. It was the first school in the world to teach blind students. The first school in U.K, for the Deaf was established 1760 in Edinburgh by Thomas Braidwood, with education for visually impaired people beginning in the Edinburgh and Bristol in 1765.

In the 19th Century, people with disabilities and the inhumane conditions where they were supposedly housed and educated were addressed in the literature of Charles Dickens. Dickens characterized people with severe disabilities as having the same, if not more, compassion and insight in *Bleak House* and *Little Dorrit*.

Such attention to the downtrodden conditions of people with disabilities brought resulted in reforms in Europe including the re-evaluation of special schools. In the United States reform came more slowly. Throughout the mid half of the 20th century, special schools, termed institutions, were not only accepted, but encouraged. Students with disabilities were housed with people with mental illnesses, and they were not educated much, if at all.

Deinstitutionalization proceeded in the US beginning in the 1970s following the exposes of the institutions, and it has taken sometime before the Education for All Handicapped Children's Act of 1974, to the Individuals with Disabilities Education Act (IDEA) and then Individuals with Disabilities Educational Improvement Act (IDEIA) have come into fruition. School integration was supported as early as the 1970s, and teacher preparation programs in higher education have carefully taught and instructed graduates on inclusion at the classroom, individual, school, and district levels for decades resulting in dual certification of "regular teachers".

With the Amendments to the Individuals with Disabilities Act of 1997, school districts in the United States began to slowly integrate students with moderate and severe special needs into regular school systems. This changed the form and function of special education services in many school districts and special schools subsequently saw a steady decrease in enrollment as districts weighed the cost per student. It also posed general funding dilemmas to certain local schools and districts, changed how schools view assessments, and formally introduced the concept of inclusion to many educators, students and parents.

INSTRUCTIONAL STRATEGIES

Different instructional techniques are used for some students with special educational needs. Instructional strategies are classified as being either *accommodations* or *modifications*.

An *accommodation* is a reasonable adjustment to teaching practices so that the student learns the same material, but in a format that is more accessible to the student. Accommodations may be classified by whether they change the presentation, response, setting, or scheduling of lessons. For example, the school may accommodate a student with visual impairments by providing a large-print textbook. This is a presentation accommodation.

A *modification* changes or adapts the material to make it simpler. Modifications may change what is learned, how difficult the material is, what level of mastery the student is expected to achieve, whether and how the student is assessed, or any another aspect of the curriculum. For example, the school may modify a reading assignment for a student with

reading difficulties by substituting a shorter, easier book. A student may receive both accommodations and modifications.

EXAMPLES OF MODIFICATIONS

- **Skipping subjects:** Students may be taught less information than typical students, skipping over material that the school deems inappropriate for the student's abilities or less important than other subjects. For example, students with poor fine motor skills may be taught to print block letters, but not cursive handwriting.
- **Simplified assignments:** Students may read the same literature as their peers but have a simpler version, such as Shakespeare with both the original text and a modern paraphrase available.
- **Shorter assignments:** Students may do shorter homework assignments or take shorter, more concentrated tests.
- **Extra aids:** If students have deficiencies in working memory, a list of vocabulary words, called a *word bank*, can be provided during tests, to reduce lack of recall and increase chances of comprehension. Students might use a calculator when other students do not.
- **Extended time:** Students with a slower processing speed may benefit from extended time for assignments and/or tests in order to have more time to comprehend questions, recall information, and synthesize knowledge.

EXAMPLES OF ACCOMMODATIONS

- **Response accommodations:** Typing homework assignments rather than handwriting them (considered a modification if the subject is learning to write by hand). Having someone else write down answers given verbally.
- **Presentation accommodations:** Examples include listening to audiobooks rather than reading printed books. These may be used as substitutes for the text, or as supplements intended to improve the students' reading fluency and phonetic skills. Similar options include designating a person to read to the student, or providing text to speech software. This is considered a modification if the purpose of the assignment is reading skills acquisition. Other presentation accommodations may include designating a person to take notes during lectures or using a talking calculator rather than one with only a visual display.
- **Setting accommodations:** Taking a test in a quieter room. Moving the class to a room that is physically accessible, e.g., on the first floor of a building or near an elevator. Arranging seating assignments to benefit the student, e.g., by sitting at the front of the classroom.
- **Scheduling accommodations:** Students may be given rest breaks or extended time on tests (may be considered a modification, if speed is a factor in the test). Use a timer to help with time management.

All developed countries permit or require some degree of accommodation for students with special needs, and special provisions are usually made in examinations which take place at the end of formal schooling.

In addition to how the student is taught the academic curriculum, schools may provide non-academic services to the student. These are intended ultimately to increase the student's personal and academic abilities. Related services include developmental, corrective, and other supportive services as are required to assist a student with special needs and includes speech and language pathology, audiology, psychological services, physical therapy, occupational therapy, counseling services, including rehabilitation counseling, orientation and mobility services, medical services as defined by regulations, parent counseling and training, school health services, school social work, assistive technology services, other appropriate developmental or corrective support services, appropriate access to recreation and other appropriate support services. In some countries, most related services are provided by the schools; in others, they are provided by the normal healthcare and social services systems.

As an example, students who have autistic spectrum disorders, poor impulse control, or other behavioral challenges may learn self-management techniques, be kept closely on a comfortably predictable schedule, or given extra cues to signal activities.

A university field, termed *severe disabilities*, also is taught throughout the US university sector in schools of education. Advanced instruction is based upon community-referenced instruction, and alignment with transition to adulthood and progressive community practices.

Rehabilitation counseling personnel are often association with supported employment services, and typically with "transition to adulthood" in which multi-decade recommendations for better coordination between the school and the community service sectors have been made at the federal and university levels.

ISSUES

At-risk students (those with educational needs that are not associated with a disability) are often placed in classes with students who have disabilities. Critics assert that placing at-risk students in the same classes as students with disabilities may impede the educational progress of people with disabilities. Some special education classes have been criticized for a watered-down curriculum.

The practice of inclusion (in mainstream classrooms) has been criticized by advocates and some parents of children with special needs because some of these students require instructional methods that differ dramatically from typical classroom methods. Critics assert that it is not possible to deliver effectively two or more very different instructional methods in the same classroom. As a result, the educational progress of students who depend on different instructional methods to learn often fall even further behind their peers.

Parents of typically developing children sometimes fear that the special needs of a single "fully included" student will take critical levels of attention and energy away from the rest of the class and thereby impair the academic achievements of all students.

Linked to this, there is debate about the extent to which students with special needs, whether in mainstream or special settings, should have a specific pedagogy, based on the scientific study of particular diagnostic categories, or whether general instructional techniques are relevant to all students including those with special needs.

Some parents, advocates, and students have concerns about the eligibility criteria and their application. In some cases, parents and students protest the students' placement into special education programs. For example, a student may be placed into the special education programs due to a mental health condition such as obsessive compulsive disorder, depression, anxiety, panic attacks or ADHD, while the student and his parents believe that the condition is adequately managed through medication and outside therapy. In other cases, students whose parents believe they require the additional support of special education services are denied participation in the program based on the eligibility criteria.

Whether it is useful and appropriate to attempt to educate the most severely disabled children, such as children who are in a persistent vegetative state, is debated. While many severely disabled children can learn simple tasks, such as pushing a buzzer when they want attention, some children may be incapable of learning. Some parents and advocates say that these children would be better served by substituting improved physical care for any academic program. In other cases, they question whether teaching such non-academic subjects, such as pushing a buzzer, is properly the job of the school system, rather than the health care system.

Another large issue is the lack of resources enabling individuals with special needs to receive an education in the developing world. As a consequence, 98 percent of children with special needs in developing countries do not have access to education.

ISSUES IN MATH

1.) Cognitive Development

- **Declarative Knowledge-** This means remembering math facts that children build off of for each new lesson taught by the teacher
- **Procedural Knowledge-** This is the difficulties that students have remembering the procedures or steps for various operations. An example of this would be the Order of Operations. Most students remember that the order is parentheses, exponents, multiplication, division, addition, and then subtraction. Children remember this through various chants and rhymes. However, children with disabilities have difficulty grasping procedural knowledge.
- **Conceptual Knowledge-** This is the overall picture. Some students with disabilities have difficulties understanding how various math concepts relate and what mathematics means to our society.

2.) Problems in performance

- **Writing numbers and different math symbols correctly**- Some children with various disorders such as dyslexia and dysgraphia will greatly struggle with this.
- **Recalling the meanings of symbols and answers to basic facts** – This goes along closely with cognitive issues. Some of these children may recognize the math symbol or the basic problem; however, they cannot recall the meaning of the symbol or answer to the math fact.
- **Counting** – Some children may forget which numbers come first, last, etc.
- **Following the steps of a strategy** – Word problems can sometimes cause an issue of a step-by-step process. Children with disabilities may forget the order, how to use context clues, etc.

3.) Performance on basic arithmetic

- **Errors in computation** -The child may be able to actually understand the problem and how to solve it. However, there may be various mistakes throughout the multi-step problem.
- **Difficulty with the fact retrieval** – Every child must know their basic facts and be able to retrieve them. If the child cannot, he will struggle in math.

4.) Difficulty with word problems

- **Excluding irrelevant information** – Students with disabilities have a difficult time picking out information that is irrelevant.
- **Complex sentence structures** – These children may have difficulty reading the actual problem itself due to the complex wording.

NATIONAL APPROACHES

AFRICA

SOUTH AFRICA

White Papers in 1995 and 2001 discuss special education in the country. Local schools are given some independent authority. Both modifications and accommodations are recommended, depending on the student's individual needs.

ASIA

INDIA

There are many special schools in India providing special education with a view to taking care of the needy children with mental / physical disabilities. The Global Open University Nagaland has also decided to help the State Government in providing special education in different Districts of Nagaland with the sponsorship of national / international bodies.

JAPAN

Japanese students with special needs are placed in one of four different school arrangements: special schools, special classrooms with another school, in resource rooms (which are called *tsukyu*), or in regular classrooms.

Special schools are reserved for students whose severe disabilities cannot be accommodated in the local school. They do not use the same grading or marking systems as mainstream schools, but instead assess students according to their individualized plans.

Special classes are similar, and may vary the national curriculum as the teachers see fit. *Tsukyu* are resource rooms that students with milder problems use part-time for specialized instruction individually in small groups. These students spend the rest of the day in the mainstream classroom. Some students with special needs are fully included in the mainstream classroom, with accommodations or modifications as needed.

Training of disabled students, particularly at the upper-secondary level, emphasizes vocational education to enable students to be as independent as possible within society. Vocational training varies considerably depending on the student's disability, but the options are limited for some. It is clear that the government is aware of the necessity of broadening the range of possibilities for these students. Advancement to higher education is also a goal of the government, and it struggles to have institutions of higher learning accept more disabled students.

SINGAPORE

Special education is regulated centrally by the Singapore Ministry of Education. Both special schools and integration into mainstream schools are options for students with special educational needs, but most students with disabilities are placed in special schools.

Students with special education who wish accommodations on national exams must provide appropriate documentation to prove that they are disabled. Accommodations, but not modifications (e.g., simpler questions) are normally approved if they are similar to the accommodations already being used in everyday schoolwork, with the goal of maintaining the exam's integrity while not having students unfairly disadvantaged by factors that are unrelated to what is being tested. The accommodations are listed on the Primary School Leaving Exam.

AUSTRALIA

Australian Association of Special Education Inc (AASE)'s position is informed by the Disability Standards for Education 2005 which require that students with disabilities are treated on the same basis as other students in regards to enrollment and participation in education.

With respect to standardized tests, special consideration procedures are in place in all states for students who are disabled. Students must provide documentation. Not all desired forms of accommodations are available. For example, students who cannot read, even if the inability to read is due to a disability, cannot have the exam read to them, because the exam results should accurately show that the student is unable to read. Reports on matriculation exams do not mention whether the student received any accommodations in taking the test.

EUROPE

Each country in Europe has its own special education support structures.

CZECH REPUBLIC

Schools must take students' special education needs into account when assessing their achievements.

DENMARK

In Denmark, 99% of students with specific learning difficulties like dyslexia are educated alongside students without any learning challenges.

FINLAND

Schools adapt the national guidelines to the needs of individual students. Students with special educational needs are given an individualized plan.

They may be exempted from some parts of school examinations, such as students with hearing impairments not taking listening comprehension tests. If the student receives modifications to the school-leaving exams, this is noted on the certificate of achievement. If they are not following the national core curriculum, then they are tested according to the goals of their individual educational program.

FRANCE

French students with disabilities are normally included in their neighborhood school, although children may be placed in special schools if their personalized plan calls for it. Each student's personalized school plan describes teaching methods, psychological, medical and paramedical services that the school will provide to the student.

GERMANY

Most students with special needs in Germany attend a special school that serves only children with special needs. These include:

- *Förderschule für Lernbehinderte* (special school for learning disabilities): for children who have challenges that impair learning
- *Förderschule mit dem Förderschwerpunkt Geistige Entwicklung* (school for cognitive development): for children with very severe learning challenges
- *Förderschule Schwerpunkt emotionale und soziale Entwicklung* (school for emotional and social development): for children who have special emotional needs
- *Förderschule für Blinde* (school for the blind): for blind children
- *Förderschule für Sehbehinderte* (school for the visually impaired): for children who are visually challenged
- *Förderschule für Gehörlose* (school for the deaf): for deaf children
- *Förderschule für Schwerhörige* (school for the hearing impaired): for children who are hearing impaired
- *Förderschule für Körperbehinderte* (school for children with physical disabilities): for children with physical disabilities
- *Förderschule für Sprachbehinderte* (school for children with language disorders): for children with language disorders
- *Förderschule für Taubblinde* (school for the deafblind): for children who are deafblind
- *Schule für Kranke* (school for ill children): for children who are too ill to attend school or are hospitalized for a longer
- *Förderschule für schwer mehrfach Behinderte* (school for children with severe and multiple disabilities): for children with severe and multiple disabilities who need very special care and attention. Sometimes these children are only susceptible for very basic emotional and sensory stimulation. Thus teachers at these school (as well as at schools for the deafblind) are highly specialized professionals.

A special school for children with special emotional needs in Kötitz, Germany

One in 21 German students attends a special school. Teachers at those schools are specially trained professionals who have specialized in special needs education while in university. Special schools often have a very favorable student-teacher ratio and facilities other schools do not have.

Some special needs children in Germany do not attend a special school, but are educated in a mainstream school such as a Hauptschule or Gesamtschule (comprehensive school).

Students with special educational needs may be exempted from standardized tests or given modified tests.

GREECE

Greek students with special needs may attend either mainstream schools or special schools.

Students whose disabilities have been certified may be exempted from some standardized tests or given alternative tests.

Accommodations are responsive to students' needs; for example, students with visual impairments may take oral tests, and students with hearing impairments take written tests. Accommodations and modifications are noted on the certificate of achievement.

HUNGARY

Special education is regulated centrally.

According to the 1993 Act on Public Education, students with special educational needs may be exempted from standardized tests or given modified tests. They have a right to extra time, a choice of formats for the tests (e.g., oral rather than written), and any equipment that they normally use during the school day.

As of 2006, students with disabilities received a significant bonus (eight points) on the university entrance examination, which has been criticized as unfair.

THE NETHERLANDS

As a general rule, students with special educational needs are integrated into their regular, mainstream schools with appropriate support, under the "Going to School Together" policy (*Weer Samen Naar School*). Four types of disability-specific special schools exist. The national policy is moving towards "suitable education" (*passend onderwijs*), based on the individual's strengths and weaknesses.

A strong emphasis is placed on the specific needs and positive capabilities of the individual, rather than on limitations. Disabilities are normally documented by experts.

NORWAY

The National Support System for Special Needs Education (Statped) is managed by the Norwegian Directorate for Education and Training. The general objective for Statped is to give guidance and support to those in charge of the education in municipalities and county

administrations to ensure that children, young people and adults with major and special educational needs are secured well-advised educational and developmental provisions. The institutions affiliated with Statped offer a broad spectrum of services. Statped consists of 13 resource centres owned by the State, and 4 units for special education, where Statped buys services. These centres offer special educational guidance and support for local authorities and county administrations.

PORTUGAL

Students with disabilities have a "guaranteed right" to appropriate accommodations on assessments. Schools are generally considered autonomous.

SLOVENIA

On national tests, the National Examination Center normally grants most requests for accommodations that are supported by the local school's examination committee. Legislation opposes the use of modifications that would be unfair to non-disabled students.

SPAIN

Schools are required to provide services and resources to students with special educational needs so that they make progress and participate in school. If the local school is unable to provide appropriately for an individual student, then the student may be transferred to a special school.

Spanish non-governmental organizations like ONCE have traditionally provided significant services to students with disabilities.

SWEDEN

Local schools have significant autonomy, based on national guidelines. Schools are expected to help students meet the goals that are set for them.

There are special schools (Swedish:Särskola) for students with low abilities to attend normal education. There has in 2012-2013 been media criticism on the fact that students with light problems such as dyslexia have been placed in special schools, seriously hampering their chances on the labour market.

SWITZERLAND

Education is controlled by the 26 cantons, and so special education programs vary from place to place. However, integration is typical. Students are assessed according to their individual learning goals.

UNITED KINGDOM

In England and Wales the acronym *SEN* for Special Educational Needs denotes the condition of having special educational needs, the services which provide the support and the programmes and staff which implement the education. In England *SEN PPS* refers to the Special Educational Needs Parent Partnership Service. *SENAS* is the special educational needs assessment service, which is part of the Local Authority. *SENCO* refers to a special educational needs coordinator, who usually works with schools and the children within schools who have special educational needs. The Special Educational Needs Parent Partnership Services help parents with the planning and delivery of their child's educational provision. The Department for Education oversees special education in England.

Most students have an individual educational plan, but students may have a group plan in addition to, or instead of, an individual plan. Groups plans are used when a group of students all have similar goals.

In Scotland the Additional Support Needs Act places an obligation on education authorities to meet the needs of all students in consultation with other agencies and parents. In Scotland the term Special Educational Needs (SEN), and its variants are not official terminology although the very recent implementation of the Additional Support for Learning Act means that both *SEN* and *ASN* (Additional Support Needs) are used interchangeably in current common practice.

TURKEY

All special-needs students receive an Individualized Education Program (BEP) that outlines how the school will meet the student's individual needs. The Özel Eğitim Kurumları Yönetmeliği (ÖEKY) requires that students with special needs be provided with a Free Appropriate Public Education in the Least Restrictive Environment that is appropriate to the student's needs. Government-run schools provide special education in varying degrees from the least restrictive settings, such as full inclusion, to the most restrictive settings, such as segregation in a special school.

The education offered by the school must be appropriate to the student's individual needs. Schools are not required to maximize the student's potential or to provide the best possible services. Unlike most of the developed world, American schools are also required to provide many medical services, such as speech therapy, if the student needs these services.

According to the Department of Education, approximately 10 percent of all school-aged children) currently receive some type of special education services.

As with most countries in the world, students who are poor, ethnic minorities, or do not speak the dominant language fluently are disproportionately identified as needing special education services.

Poor, refugees are more likely to have limited resources and to employ inexperienced teachers that do not cope well with student behavior problems, "thereby increasing the number of students they referred to special education." Teacher efficacy, tolerance, gender, and years of experience and special education referrals.

NORTH AMERICA

In North America, special education is commonly abbreviated as *special ed*, *SpecEd*, *SPED*, or *SpEd* in a professional context.

CANADA

Education in Canada is the responsibility of the individual provinces and territories. As such, rules vary somewhat from place to place. However, inclusion is the dominant model.

For major exams, Canadian schools commonly use accommodations, such as specially printed examinations for students with visual impairments, when assessing the achievements of students with special needs. In other instances, alternative assessments or modifications that simplify tests are permitted, or students with disabilities may be exempted from the tests entirely.

UNITED STATES

All special-needs students receive an Individualized Education Program (IEP) that outlines how the school will meet the student's individual needs. The Individuals with Disabilities Education Act (IDEA) requires that students with special needs be provided with a Free Appropriate Public Education in the Least Restrictive Environment that is appropriate to the student's needs. Government-run schools provide special education in varying degrees from the least restrictive settings, such as full inclusion, to the most restrictive settings, such as segregation in a special school. The education offered by the school must be appropriate to the student's individual needs. Schools are not required to maximize the student's potential or to provide the best possible services. Unlike most of the developed world, American schools are also required to provide many medical services, such as speech therapy, if the student needs these services.

According to the Department of Education, approximately 6 million children (roughly 10 percent of all school-aged children) currently receive some type of special education services. As with most countries in the world, students who are poor, ethnic minorities, or do not speak the dominant language fluently are disproportionately identified as needing special education services. Poor, black and Latino urban schools are more likely to have limited resources and to employ inexperienced teachers that do not cope well with student behavior problems, "thereby increasing the number of students they referred to special education."

During the 1960s, in some part due to the civil rights movement, some researchers began to study the disparity of education amongst people with disabilities. The landmark Brown

v. Board of Education decision, which declared unconstitutional the "separate but equal" arrangements in public schools for students of different races, paved the way for *PARC v. Commonwealth of Pennsylvania* and *Mills vs. Board of Education of District of Columbia*, which challenged the segregation of students with special needs. Courts ruled that unnecessary and inappropriate segregation of students with disabilities was unconstitutional. Congress responded to these court rulings with the federal Education for All Handicapped Children Act in 1975 (since renamed the Individuals with Disabilities Education Act (IDEA)). This law required schools to provide services to students previously denied access to an appropriate education.

The CIU Team Members : Dr. Priya Ranjan Trivedi, Dr. Avinash Chiranjeev, Dr. Kamlesh Kumar, Ms. Neelam Joshi, Dr. Tanuja Trivedi and Dr. Utkarsh Sharma with the then President of India Hon'ble Shri Pranab Mukherjee at New Delhi (2017).

In US Government-run schools, the dominant model is inclusion. In the United States, three out of five students with academic learning challenges spend the overwhelming majority of their time in the regular classroom.

Chapter 7

ALTERNATIVE EDUCATION

Alternative Education, also known as non-traditional education or educational alternative, includes a number of approaches to teaching and learning separate from that offered by mainstream or traditional education. Educational alternatives are rooted in a number of philosophies differing from those of mainstream education. Although some alternatives have political, scholarly or philosophical orientations, others were begun by informal associations of teachers and students dissatisfied with some aspects of mainstream education. Educational alternatives (which include charter, alternative and independent schools and home-based learning) vary, but usually emphasize small class sizes, close relationships between students and teachers and a sense of community.

TERMINOLOGY

Alternative education refers to education which does not conform to a conventional standard. In the United States the public-school system may set this standard, although public schools adopt an alternative approach as well. Synonyms for "alternative" in this context include "non-traditional," "non-conventional" and "non-standardized". Alternative educators use terms such as "authentic", "holistic" and "progressive". The U.S. Department of Education describes an alternative school as “a public elementary/secondary school that: 1) addresses needs of students that typically cannot be met in a regular school; 2) provides nontraditional education; 3) serves as an adjunct to a regular school; or 4) falls outside the categories of regular, special education, or vocational education”

Poor children attending an Alternative School in India

ORIGINS

Alternative education presupposes a tradition to which the "alternative" is opposed. This limits the term to the last two or three centuries and the growth of standardized, compulsory primary and secondary education. Nineteenth-century educators, including Swiss humanitarian Johann Heinrich Pestalozzi; the American transcendentalists Amos Bronson Alcott, Ralph Waldo Emerson, and Henry David Thoreau; founders of progressive education John Dewey and Francis Parker, and educational pioneers such as Friedrich Fröbel, Maria Montessori and Rudolf Steiner (founder of the Waldorf schools) believed that education should cultivate the moral, emotional, physical, psychological, and spiritual aspects of the developing child. Anarchists such as Leo Tolstoy and Francisco Ferrer Guardia emphasized education as a force for political liberation, secularism and the elimination of class distinctions. After World War II an alternative Reggio Emilia approach to early-childhood education was developed in Italy, introduced by Loris Malaguzzi.

Cultural critics such as John Caldwell Holt, Paul Goodman, Frederick Mayer and George Dennison have examined education from individualist, anarchist, and libertarian perspectives. Other writers, from Paulo Freire to American educators Herbert Kohl and Jonathan Kozol, have criticized mainstream Western education from the viewpoint of liberal and radical politics.

The argument for an approach catering to the interests and learning style of an individual is supported by research suggesting that a learner-responsible model is more effective than a teacher-responsible one. Ron Miller has identified five elements common to educational alternatives:

1. Respect for the person
2. Balance
3. Decentralization of authority
4. Noninterference among the political, economic, and cultural spheres of society
5. A holistic worldview

IN THE UNITED STATES

A variety of educational alternatives exist at the elementary, secondary and tertiary level in four categories: school choice, alternative schools, independent schools and home-based education.

SCHOOL CHOICE

Public-school alternatives in the U.S. include separate schools, classes, programs and semi-autonomous "schools within schools". Public school-choice options are open to all students, although some have waiting lists. Among these are charter schools, combining private initiatives and state funding, and magnet schools, which attract students to a particular program (such as the performing arts).

ALTERNATIVE SCHOOL

"Alternative school" describes a number of educational approaches employing nontraditional philosophies, curricula and methods. Some alternative schools have a strong philosophical, political or practical orientations; others are *ad hoc* assemblies of teachers and students seeking to explore possibilities unavailable in traditional education.

DROPOUT PREVENTION

Advocates of programs designed to prevent (or discourage) students from leaving secondary school before graduation believe that leaving school without a diploma negatively impacts an individual's professional and personal life and society at large. Individual schools have tried to address the problem; three programs have been used in the U.S.:

- *Check and Connect*: A dropout-prevention model developed in Minnesota in a partnership with the University of Minnesota, local public schools and community service organizations and focusing in on students with learning, emotional and behavioral disabilities. Students are paired with a mentor, who assesses attendance, academics and overall performance with discussions twice a month. This individual attention connects the student with school personnel and family- and community-service providers if intervention is needed.

A 1998 study by Sinclair and colleagues shows overall positive effects on 94 high school students from Minneapolis public schools in the program. The study found that students enrolled in the program were somewhat less likely to drop out of school after the end of freshman year (nine percent, compared with 30 percent). The positive outcome remained after the final checkup at the end of senior year: 39 percent of students in the program dropped out of high school, compared to 58 percent of those not enrolled. Program students also earned more course credits in their ninth-grade year than non-program students. According to the Dakota County schools in Minnesota, the cost of implementing the program was about \$1,400 per student in 2001 and 2002.

- *Career Academies*: Targeting the most at-risk students, Career Academies are a school-within-a-school model with a career-themed approach to learning. About 2,500 academies are operated nationwide. Found in larger high schools, it creates a smaller community by keeping students with the same teachers for three or four years. The program requires students to take career-related courses in subjects such as finance and technology, partnering with local employers to offer internships.

A 2000 study by Kemple and Snipes shows overall positive effects for 1,700 high school students in nine Career Academies. The study found that the most at-risk students participating in the program produced fewer dropouts (21 percent, compared with 32 percent). Forty percent of Academy students had earned enough

credits by their senior year to graduate, compared with 25 percent of non-Academy students. According to the California Partnership Academies, Career Academies intervention cost \$600 more per pupil than for a non-Academy student in 2004.

- *Talent Development High School*: Developed in 1994 by the Center for Research on the Education of Students Placed at Risk, the program was initiated at Patterson High School in Baltimore, Maryland. The TDHS approach is a holistic intervention, with dropout prevention as one component. It divides a large high school into smaller learning communities (like Career Academies), with a more-extensive program. There is a ninth-grade academy, a career academy for the upper grades and a "Twilight" after-school program for students with discipline and attendance problems. The program reforms students' low expectations and schools' poor academic preparation through a college-preparatory curriculum in ninth and tenth grades and increased emphasis on English and mathematics.

A 2005 study by Kemple, Herlihy, and Smith, following 30 groups of participants for four years in Philadelphia, Pennsylvania, found that students in the program earned slightly more course credits over the first two years of high school than those not in the program (9.5 credits, compared with 8.6 credits), and were somewhat more likely to progress to tenth grade (68 percent, compared with 60 percent). According to Johns Hopkins University's Center for the Social Organization of Schools (CSOS) (developer of the initiative), average costs for a student participating in the Talent Development High School model are an additional \$350 a year per student.

On March 1, 2010, President Barack Obama called on the states to identify and focus on schools with graduation rates below 60 percent. Those districts may be eligible for federal aid, since his budget proposal included \$900 million in "school turnaround grants" in addition to \$3.5 billion in federal aid the administration committed to persistently low-performing schools. The president committed \$50 million to the Graduation Promise Fund.

INDEPENDENT SCHOOLS

Independent, or private, schools have flexibility in staff selection and educational approach. Many are Montessori and Waldorf schools (the latter also known as Steiner schools, after their founder Rudolf Steiner). Other independent schools include democratic or free schools, such as Clonlara School, which is the oldest, continually operating K-12 alternative school in the country, the Sudbury schools, open classroom schools, those based on experiential education and schools using an international curriculum such as the International Baccalaureate and Round Square schools.

HOMESCHOOLING

Families seeking alternatives for educational, philosophical or religious reasons, or if there is no nearby educational alternative may opt for home-based education. A minor branch is unschooling, an approach based on interest rather than a curriculum. Others enroll in

umbrella schools which provide a curriculum. Homeschool courses give students in-depth, personal attention in any subject with which they struggle or excel. Some homeschool families form a cooperative, where parents with expertise in a subject may teach a children from a number of families while their children are taught by other parents.

SELF-EDUCATION

Self-directed inquiry is recognized at all levels of education, from the "unschooling" of children to the autodidacticism of adults, and may occur separately from (or with) traditional forms of education.

IN OTHER COUNTRIES

CANADA

To add a historical context, in Canada education falls under the jurisdiction of the provincial government. The term "alternative school" first became more familiar in educational vocabulary in the early 1970s with several small elementary and secondary schools being introduced into public school boards of education.

ORIGINS

In Canada alternative education stems from two philosophical educational points of view, Progressive and Libertarian. According to Levin, 2006 the term "alternative" was adopted partly to distinguish these schools from the independent, parent-student-teacher-run "free" schools that preceded them (and from which some of the schools actually evolved) and to emphasize the boards' commitment to options within the public school system. Progressive educational tradition places emphasis on both the need to incorporate curriculum and teaching to match the stages of child development and the gradual integration of the child into adult society through planned experiential learning. The sources of stimulus would be from the philosopher John Dewey in the United States, from post WW1 New Schools in Great Britain and the Steiner/Waldorf schools in Europe. The Libertarian tradition focuses on the rights of the parents and children to make their own educational and life choices. As noted by Levin "It is rooted in the belief to uphold the individual freedom and the innate goodness of the child against institutional and social conformity and the corrupting influences of modern society."

SCHOOL TYPES

The 1980s saw a shift to special schools and/or programs for those students that excelled in academia, were artistically talented, or through programs linking schooling with the workplace in a co-operative venture. It might be considered as a natural evolution of education to offer options and not a regimented one size fits all approach. Most alternative high schools falling under public jurisdiction offered independent study programs, basic-skills programs, and were mini-high schools with a mixture of conventional and nonconventional courses, and schools with an arts focus. They also offered smaller classes,

closer and more informal relations with teachers, and greater flexibility in course selection and timetabling. The most recent development within alternative education in Canada may be to follow the United States in their "Charter School" movement. In the US specific states have passed legislation permitting their departments of education or local school boards to issue "charters" directly to individual schools wishing to operate autonomously. Alberta is the first province that has already embraced this model.

INDIA

Since the early 20th century, educators have discussed and implemented alternative forms of education, such as Rabindranath Tagore's Visva-Bharati University, Sri Aurobindo's Sri Aurobindo International Centre of Education, Krishnamurti schools and The Peepal Grove School. Traditional learning in India involved students living in gurukulas, where they received free food, shelter and education from a guru ("teacher" in Sanskrit). Progress was based on tests given by the gurus, and the system aimed to nurture students' creativity and personality development. Although mainstream education in India is based on the system introduced by Lord Macaulay, a few projects aim to rejuvenate the earlier method. Some students in these (and similar) projects conduct research in Sanskrit studies, Vedic studies, Vedic science, yoga and ayurveda. Others, after completing their education in a gurukula, enter mainstream higher education. The Global Open University Nagaland in association with the Commonwealth of Virtual Education and Research (COVER) is working on a master plan for designing and implementing alternative forms of vocational and skill based education for the adult learners who may or may not have any formal qualification.

JAPAN

Japanese education is a nationwide, standardized system under the Ministry of Education. The only alternative options have been accredited, private schools with more freedom of curricula (including textbook choice; public schools are limited to government-approved textbooks), teaching methods and hiring guidelines. Nearly all private schools require a competitive entrance examination and charge tuition, with few scholarships available. Interest in alternative education was sparked during the 1980s by student violence and bullying, school refusal, social anxiety disorder and, in the worst cases, suicide; the desire to enable young people to keep up with a globalized economy is an additional impetus.

"Free school" is a term used to describe a non-profit group (or independent school) which specializes in the care and education of children who refuse to attend standard schools. The first democratic school was founded in 1985 as a shelter for children avoiding the school environment, and a number of other such schools have been established. In 1987 the first of seven Waldorf schools in Japan was founded, and other alternatives include a growing homeschooling movement.

In 2003 Japan introduced Special Zones for Structural Reform (構造改革特別区域), based on China's Special Economic Zone policy, which enable the opening of government-

accredited schools providing alternative education. Two years later, the first such school was founded.

Despite the schools' high tuition, some parents send their children to international schools to acquire fluency in a foreign language (usually English). Although international schools are not certified by the Japanese government, many are approved by their native country (the U.S., Canada, Germany, France, Korea and China) and some offer an International Baccalaureate program.

UNITED KINGDOM

In 2003, there were about 70 alternative schools in the United Kingdom. Summerhill School was established by A.S. Neill in 1921, as the first of a number of democratic schools; most have since closed, except for Summerhill, Sands School, Park School and Small Acres School. There are 34 Steiner-Waldorf schools in the UK, and homeschooling is another alternative. Though alternative schools were until recently all fee-paying, the introduction of state-funded Free Schools since 2011 has been changing the educational landscape. So far only one of the free schools funded has been an alternative (Steiner) school.

Confusingly the mainstream state-funded sector sometimes uses the term 'alternative education' to refer to pupil referral units and other provision for children whose behavioural issues mean they cannot continue in mainstream primary or secondary schools.

Chapter 8

EXPERIENTIAL EDUCATION

Experiential Education is a philosophy of education that describes the process that occurs between a teacher and student that infuses direct experience with the learning environment and content. The term is not interchangeable with experiential learning; however experiential learning is a sub-field and operates under the methodologies of experiential education. The Association for Experiential Education regards experiential education as "a philosophy that informs many methodologies in which educators purposefully engage with learners in direct experience and focused reflection in order to increase knowledge, develop skills, clarify values, and develop people's capacity to contribute to their communities." Experiential education is the term for the philosophy and educational progressivism is the movement which it informed.

A view of the Experiential Education Conclave at Bangalore (2014)

ABOUT

John Dewey was the most famous proponent of experiential education, writing *Experience and Education* (1938). It expressed his ideas about curriculum theory in the context of historical debates about school organization and the need to have experience as central in the educational process; hence, experiential education is referred to as a philosophy. Dewey's fame during that period rested on relentlessly critiquing public education and pointing out that the authoritarian, strict, pre-ordained knowledge approach of modern traditional education was too concerned with delivering knowledge, and not enough with understanding students' experiences.

Dewey's work influenced dozens of other prominent experiential models and advocates in the later 20th century, including Foxfire, service learning, Kurt Hahn and Outward Bound, and Paulo Freire. Freire is often cited in works on experiential education. He

focused on the participation by students in experience and radical democracy, and the creation of *praxis* among learners.

John Dewey was an educator, but he was foremost a philosopher. His interests included political philosophy, metaphysics, epistemology, aesthetics, logic, and philosophy of education. Political philosophy was one of his many philosophical interests. He saw weaknesses in both the traditional and progressive styles of education. He explains in length his criticisms of both forms of education in his book, *Experience & Education* (1938). In essence, he did not believe that they met the goals of education, which he defined as obtaining freedom of thought. Dewey did not believe in freedom of thought in any kind of absolute sense.

Dewey advocated that education be based upon the quality of experience. For an experience to be educational, Dewey believed that certain parameters had to be met, the most important of which is that the experience has continuity and interaction. Continuity is the idea that the experience comes from and leads to other experiences, in essence propelling the person to learn more. Interaction is when the experience meets the internal needs or goals of a person. Dewey also categorizes experiences as possibly being mis-educative and non-educative. A mis-educative experience is one that stops or distorts growth for future experiences. A non-educative experience is one in which a person has not done any reflection and so has obtained nothing for mental growth that is lasting (*Experience & Education*, Dewey).

In addition to the notions raised by Dewey, recent research has shown that experiential learning does not replace traditional methods of learning. Instead, experiential learning is designed to improve one's understanding by giving one the freedom to explore and find the learning path that is most suitable for him or her.

PRACTICE

The methodologies reflected in experiential education have evolved since the time of Hahn and Dewey. For experiential education to become efficient pedagogy, physical experience must be combined with reflection. Adding reflective practice, allows for personal introspection of challenges and key learnings. That is, physical challenges provide a gateway in which we can observe qualities about ourselves, and those whom we are working with. Further, for the efficacy of experiential education, experiences must be separated, giving the learner sufficient time to process the information.

Experiential education informs many educational practices underway in schools (formal education) and out-of-school (informal education) programs. Many teaching methods rely on experiential education to provide context and frameworks for learning through action and reflection.

- Outdoor education uses organized learning activities that occur in the outdoors, and uses environmental experiences as a learning tool.

- Service learning is a combination of community service with stated learning goals, relying on experience as the foundation for meaning.
- Cooperative learning alters homogeneous groupings in order to support diverse learning styles and needs within a group.
- Active learning, a term popular in US education circles in the 1980s, encourages learners to take responsibility for their learning, requiring their experience in education to inform their process of learning.
- Environmental education is based in educating learners about relationships within the natural environment and how those relationships are interdependent. Students participate in outdoor activities as part of their learning experience.

Experiential education serves as an umbrella for linking many diverse practices into a coherent whole. Its philosophy is closely linked to numerous other educational theories, but it should not be conflated with progressive education, critical pedagogy, youth empowerment, feminist-based education, and constructivism. The development of experiential education as a philosophy has been intertwined with the development of these other educational theories; their contrasts have clarified differences.

Fellowships and other training programs are available for experiential educators; but, formal training in experiential methods is lacking for K-12 undergraduate teaching programs (see Wendel, A. and Mantil, A., (2008) and the National Society for Experiential Education).

EXAMPLES

Examples of experiential education abound in all disciplines. The educator Lucy Calkins writes,

If we asked our students for the highlight of their school careers, most would choose a time when they dedicated themselves to an endeavor of great importance...I am thinking of youngsters from P.S. 321, who have launched a save-the-tree campaign to prevent the oaks outside their school from being cut down. I am thinking of children who write the school newspaper, act in the school play, organize the playground building committee.... On projects such as these, youngsters will work before school, after school, during lunch. Our youngsters want to work hard on endeavors they deem significant.

Writing journals proves to be quite effective as part of English classes. Specifically, by writing "personal" and "text-related" journals, students find meaning in their own thoughts as well as in concepts learned in class. Personal journaling is the recording of past and present personal thoughts and events in the student's life to enhance self-awareness, student interest, and learning. Text-related journaling is writing about concepts learned in class in relation to students' personal experiences, to promote understanding.

Online Life Experience Degree is another type of experiential education where professionals who have good experience in their field which proves their devotion, efforts and hard work towards their domain are awarded with accredited education testimonials.

OTHER PROGRAMS

High school English classes in Rabun Gap-Nacoochee School, Georgia earned national attention for using their research and writing to publish the *Foxfire* journal. (Wigginton, 1985). Students researched the culture of the Appalachian Mountains through taped interviews with local people. They wrote and edited articles based upon their interviews. *Foxfire* has inspired hundreds of similar cultural journalism projects around the country.

Christchurch School, in the tidewater area of Virginia, has an experiential program called *Great Journeys Begin at the River*. The hands-on, skill-based, inside/outside curriculum is based on using the school's location on the Rappahannock River, in the Chesapeake Bay watershed. Students recycle aluminum to raise money for the school's oyster farm, which they tend in an effort to help save the Bay.

The Nicodemus Wilderness Project provides an environmental experiential education program with a global reach called the "Apprentice Ecologist Initiative". This scholarship-based opportunity is targeted for youth volunteers who want to help protect the environment. The initiative seeks to develop young people for leadership roles by engaging them in environmental cleanup and conservation projects, empower volunteers to rebuild the environmental and social well-being of our communities, and improve local living conditions for both citizens and wildlife.

Project OASES (Occupational and Academic Skills for the Employment of Students) emphasizes experiential education in the Pittsburgh public schools. Eighth graders, identified as potential dropouts, spend three periods a day involved in renovating a homeless shelter as part of a service project carried out within their industrial arts class. Students in such programs learn enduring skills, such as planning, communicating with a variety of age groups and types of people, and group decisionmaking. In their activities and in reflection, they come to new insights and integrate diverse knowledge from fields such as English, political science, mathematics, and sociology.

Presidential Classroom, a non-profit civic education organization in Washington D.C., is open to high school students from across the country and abroad. They meet and interact with government officials, media correspondents, congressman, and key players on the world stage to learn how public policy shapes many aspects of citizens' lives. Students travel to Washington and spend a week hearing from prominent speakers, meet with interest group spokesmen and tour the national capital.

Students participate in a group project directed by experienced instructors; they have mediated debates on current issues facing the country. The focus of the week is to give students a hands-on introduction to how "real world" politics take place.

The Advantage Foundation, a not-for-profit education organization in Western Australia, helps bridge the gap between university and employment via the Australian Business Icon program. The program engages young and emerging entrepreneurs in direct experience and focused reflection to increase knowledge, develop skills and clarify values. It requires students with innovative, strategic thinking, and analytical skills, to take on four (4) pre-organized innovative and entrepreneurial business-related tasks. The goal is to develop the communication, ethics, innovation and enterprise of students.

Global College, a four-year international study program offered by Long Island University, is based on self-guided, experiential learning while a student is immersed in foreign cultures. Regional centers employ mostly advisors rather than teaching faculty; these advisors guide the individual students in preparing a "portfolio of learning" each semester to display the results of their experiences and projects.

The New England Literature Program in the English Department at the University of Michigan is a 45-day program, in which University instructors live and work together with 40 UM students in the woods of Maine in early spring. They intensively study 19th and 20th-century New England literature, in a program that includes creative writing in the form of academic journaling, as well as a deep physical engagement with the landscape of New England. NELP students and staff take hiking trips into the White Mountains and other parts of the New England natural areas each week, integrating their experience of the landscape with writing and discussion of texts.

The Chicago Center for Urban Life and Culture is the only nonprofit and independent experiential educational program for college students in the United States. The Chicago Center is distinguished by unique seminars characterized by a 'First Voice' pedagogy, its location in the multi-ethnic Hyde Park neighborhood of Chicago, and development of several hundred internship sites in Chicago. While many of the students who attend Chicago Center grew up in cities, the majority are from suburban, rural and farming communities. Students participate individually in its Semester, May Term and Summer Session. The Chicago Center also designs and staffs programs for groups, what it calls "LearnChicago!", which promise non-tourist experiences in the city.

The Philadelphia Center is an off-campus program based on a model of experiential education. Recognized by The Great Lakes Colleges Association, The Philadelphia Center is currently the only undergraduate level program that supports independent living and encourages the use of the city as a classroom.

Several Australian high schools have established experiential education programmes, including Caulfield Grammar School's five-week internationalism programme in Nanjing, China and Geelong Grammar School's Timbertop outdoor education programme.

Other projects and "capstone" programs have included student teams writing their own international development plans and presenting them to presidents and foreign media and publishing their studies as textbooks in development studies, to running their own businesses, NGOs, or community development banks.

At the professional school level, experiential education is often integrated into curricula in "clinical" courses following the medical school model of "See one, Do one, Teach one", in which students learn by practicing medicine. This approach is being introduced in other professions in which skills are directly worked into courses to teach every concept (starting with interviewing, listening skills, negotiation, contract writing and advocacy, for example) to larger-scale projects in which students run legal aid clinics or community loan programs, or write legislation or community development plans.

The Boys and Girls Club of America provides a framework for youth development professionals to employ experiential learning methods.

Lifeworks International offers experiential, service-learning programs for high school students. Trips combine adventure travel, cultural immersion, community service, and global education during expeditions in China, Thailand, India, Costa Rica, Peru, the British Virgin Islands, and Ecuador and the Galapagos Islands.

Youth development programs have used experiential education methods to reach at-risk youth. An example is "Circus Harmony", based in St. Louis, Missouri. Their mission is to "teach the art of life through circus education". By learning circus arts skills, students come together from diverse backgrounds and experiences and learn from each other as well.

In Legal Education, critical pedagogy is associated with devising more equitable methods of teaching, helping students develop consciousness of freedom, and helping them connect knowledge to power.

CHANGE IN ROLES AND STRUCTURES

Whether teachers employ experiential education in cultural journalism, service learning, environmental education, or more traditional school subjects, its key idea involves engaging student voice in active roles for the purpose of learning. Armstrong (2012) claims that students should be responsible of learning not the teachers. Students participate in a real activity with real consequences for the purpose of meeting learning objectives.

Some experts in the field make the distinction between "democratic experiential education" in which students help design curricula and run their own projects and even do their own grading (through objective contracted standards) and other forms of "experiential education" that put students in existing organizations in inferior roles (such as service learning and internships) or in which faculty design the field work.

Experiential education uses various tools like games, simulations, role plays, stories in classrooms. The experiential education mindset changes the way the teachers and students view knowledge. Knowledge is no longer just some letters on a page. It becomes active, something that is transacted with in life or lifelike situations. It starts to make teachers experience providers, and not just transmitters of the written word.

Besides changing student roles, experiential education requires a change in the role of teachers. When students are active learners, their endeavors often take them outside the classroom walls. Because action precedes attempts to synthesize knowledge, teachers generally cannot plan a curriculum unit as a neat, predictable package. Teachers become active learners, too, experimenting together with their students, reflecting upon the learning activities they have designed, and responding to their students' reactions to the activities. In this way, teachers themselves become more active; they come to view themselves as more than just recipients of school district policy and curriculum decisions.

It is also important to point out that not all learners learn the same. As a result, there are diverse learners that have unique learning styles pertinent to their success as students. Studies have shown that cooperative learning is strongly suggested in a diverse learning atmosphere. "Contemporary views of learning and their pedagogical applications have begun to change traditional classroom interaction patterns, shaping the communicative roles of the teacher and students as participants in a classroom learning community," writes David Wray & Kristiina Kumpulainen. This paradigm shift in education gives both the student and teacher shared responsibility of the learning process. The teacher's participation in discussion sessions is to act as a facilitator, maintain classroom decorum, provide individual and group feedback, and alleviate concerns or issues in the lesson.

Critical thinking strategies are pertinent to the success of student oriented learning. When students are engaged in active discussions, high level thinking skills are put into practice to the point where students are synthesizing the information at a deeper level of understanding. According to Elliot Eisner, "We need to provide opportunities for youngsters and adolescents to engage in challenging kinds of conversation, and we need to help them know how to do so. Such conversation is all too rare in schools. I use 'conversation' seriously, for challenging conversation is an intellectual affair. It has to do with thinking about what people have said and responding reflectively, analytically, and imaginatively to that process. The practice of conversation is almost a lost art. The most significant intellectual achievement is not so much in problem solving, but in question posing." Through experimental education, students are capable of finding their voice through peer-to-peer interaction. Students are now seen as active participants in the learning process. Vygotsky's social development theory requires students to play untraditional roles as they collaborate with one another through critical thinking and conversational skills. According to Ann Ketch, author of *Conversation: The comprehension connection* writes, "The oral process helps students clarify and solidify their thoughts. The thinking changes from what it was before the conversation took place. Through conversation, the student is in charge of his or her own mental processing. The teacher acts as a facilitator, pushing the student to rely upon and monitor his or her own comprehension, which fosters critical thinking." This is very vital because student conversation can elicit new ideas that may not have been mentioned or even thought of by another student. Therefore, student dialogue is very important because it helps individuals make sense of what is being learned. It also helps build respect for other's opinions while taking ownership of his or her learning process.

In experimental education, students are given the opportunity to apply their knowledge and skills by making connections to the real world. Therefore, effective learning entails active experimentation with a hands-on approach to learning. It is perceived that students learn more by being active. Students are interdependent in establishing group goals and decision-making skills. As a result, students are also capable of developing leadership skills, which can also enhance student motivation and confidence.

When students are given a choice in terms of content to be learned, it ensures the teacher that his or her learners are interactive in the learning process. According to Ernie Stringer, "Action learners move through continuous cycles of this inquiry process to improve their understanding, extend their knowledge, or refine their skills." When given a preference, students may feel motivated to take control of his or her learning experience. Student incentives are tied to progress in academic achievement. "Research indicates that intrinsic motivation stems from one's interests and capacities to surmount challenges when presented or pursued," says Fenice B. Boyd. Many schools are encouraging teachers to tap into student interests with the hope that they transfer that motivation into the classroom.

Through the continuous cycle of learning, teachers often work with students to develop a framework of knowledge, which is to be evaluated based on student input to the lessons content. Therefore, the teacher should establish criteria of what is to be learned as related to the student(s) choice in learning material. Ernie Stringer draws on the importance that "action research provides a process for developing a rich, engaging curriculum relevant to the lives and purposes of students, engaging their interests and abilities, and serving the broad human needs of community, society, and the planet. Creative construction of curricula or syllabi provides the means whereby the needs, perspectives, and/or interests of diverse stakeholders can be incorporated into vital, creative, effective programs of learning." In essence, a well-planned curriculum is designed for learning that encompasses a broad range of goals and individual needs that ensures the active learning process.

As students and teachers take on new roles, the traditional organizational structures of the school also may meet challenges. For example, at the Challenger Middle School in Colorado Springs, Colorado, service activities are an integral part of the academic program. Such nontraditional activities require teachers and administrators to look at traditional practices in new ways. For instance, they may consider reorganizing time blocks. They may also teach research methods by involving students in investigations of the community, rather than restricting research activities to the library (Rolzinski, 1990).

At the University Heights Alternative School in the Bronx, the Project Adventure experiential learning program has led the faculty to adopt an all-day time block as an alternative to the traditional 45-minute periods. The faculty now organizes the curriculum by project instead of by separate disciplines. Schools that promote meaningful student involvement actively engage students as partners in education improvement activities. These young people learn while planning, researching, teaching, and making decisions that affect the entire education system.

At the university level, including universities like Stanford and the University of California Berkeley, students are often the initiators of courses and demand more role in changing the curriculum and making it truly responsive to their needs. In some cases, universities have offered alternatives for student-designed faculty approved courses. In other cases, students have formed movements or even their own NGOs like Unseen America Projects, Inc., to promote democratic experiential learning and to design and accredit their own alternative curricula.

Other university level programs are entirely field-taught on outdoor expeditions. These courses combine traditional academic readings and written assignments with field observations, service projects, open discussions of course material, and meetings with local speakers who are involved with the course subjects. These "hybrid" experiential / traditional programs aim to provide the academic rigor of a classroom course with the breadth and personal connections of experiential education.

TRANSITIONS FROM TRADITIONAL TO EXPERIENTIAL

At first, these new roles and structures may seem unfamiliar and uncomfortable to both students and adults in the school. Traditionally, students have most often been rewarded for competing rather than cooperating with one another. Teachers are not often called upon for collaborative work either. Teaching has traditionally been an activity carried out in isolation from one's peers, behind closed doors. Principals, accustomed to the traditional hierarchical structure of schools, often do not know how to help their teachers constitute self-managed work teams or how to help teachers coach students to work in cooperative teams. The techniques of experiential education can help students and staff adjust to teamwork, an important part of the process of reforming schools.

Adventure education may use the philosophy of experiential education in developing team and group skills in both students and adults (Rohnke, 1989). Initially, groups work to solve problems that are unrelated to the problems in their actual school environment. For example, in a ropes course designed to build the skills required by teamwork, a faculty or student team might work together to get the entire group over a 12-foot wall or through an intricate web of rope. After each challenge in a series of this kind, the group looks at how it functioned as a team:

- Who took the leadership roles?
- Did the planning process help or hinder progress?
- Did people listen to one another in the group and use the strengths of all group members?
- Did everyone feel that the group was a supportive environment in which they felt comfortable making a contribution and taking risks?

The wall or web of rope can then become a metaphor for the classroom or school environment. While the problems and challenges of the classroom or school are different from the physical challenges of the adventure activity, many skills needed to respond successfully as a team are the same in both settings.

These skills — listening, recognizing each other's strengths, and supporting each other through difficulties — can apply equally well to an academic Socratic Method of questioning or problem-solving toward schoolwide improvement efforts.

For example, the Kane School in Lawrence, Massachusetts has been using adventure as a tool for school restructuring. The entire faculty — particularly the Faculty Advisory Council, which shares the decisionmaking responsibilities with the principal — has honed group skills through experiential education activities developed by Project Adventure. These skills include open communication, methods of conflict resolution, and mechanisms for decision making (High Strides, 1990).

THE DEVELOPMENT OF EXPERIENTIAL EDUCATION IN ASIAN COUNTRIES

Since the year 1985, Dr. Sarvepalli Radhakrishnan National Academy of Educational Planning and Administration, New Delhi with the active support and guidance from the Educational Consultancy Organisation of India (EDUCOIN), has been engaged in research related to experiential education for the benefit of the schools, colleges and universities conducting studies and training in the area of experiential education.

Established in 1973, *Breakthrough* in Hong Kong was the first non-profit organization that applied the concepts of Experiential Education (though primarily conceptualized in terms of outdoor adventure education) in youth works. Since then, development in Experiential Education has proceeded in Singapore, Taiwan, Macao, and some big cities in mainland China.

Experiential methods in education have existed in China for thousands of years. However, it should be noted that John Dewey was in China in the early 1900s and his ideas were extremely popular. The interest in Dewey's experience in China and contribution are a growing interest.

Experiential education has started in Qatar at 2010 through AL-Bairaq which is an outreach, non-traditional educational program that targets high school students and focuses on a curriculum based on STEM fields. The idea behind AL-Bairaq is to offer high school students the opportunity to connect with the research environment in the Center for Advanced Materials (CAM) at Qatar University.

Faculty members train and mentor the students and help develop and enhance their critical thinking, problem-solving, and teamwork skills and consider the hands-on-activities approach.

AL-Bairaq students during activities

METHODS

There are many ways in which experiential education is practiced. Six of them include: Simulation Based Learning, Active Based Learning, Problem Based Learning, Project Based Learning, Service Learning and Place Based Learning. All of these use the pattern of problem, plan, test and reflect as their foundation for the educative experience. This is by no means an exhaustive list of methods used reflecting the philosophy of experiential education.

Simulation Based Learning—A combination of Active, Problem, Project, and Place Based Learning; Participants are placed in a simulated environment and given objectives requiring constant attention and care.

Active Based Learning—All participants in the group must engage actively in working together toward the stated objectives.

Problem Based Learning—Provides a structure for discovery that helps students internalize learning and leads to greater comprehension.

Project Based Learning—An instructional method that uses projects as the central focus of instruction in a variety of disciplines.

Service Learning—Providing meaningful service to a community agency or organization while simultaneously gaining new skills, knowledge and understanding as an integrated aspect of an academic program.

Place Based Learning—The process of using local community and environment as a starting point to teach concepts in language arts, mathematics, social studies, science, and other subjects across the curriculum.

Chapter 9

INDIGENOUS EDUCATION

Indigenous Education specifically focuses on teaching indigenous knowledge, models, methods, and content within formal or non-formal educational systems. The growing recognition and use of indigenous education methods can be a response to the erosion and loss of indigenous knowledge through the processes of colonialism, globalization, and modernity. Indigenous communities are able to “reclaim and revalue their languages and [traditions], and in so doing, improve the educational success of indigenous students,” thus ensuring their survival as a culture.

Principal Sha (also 6th grade teacher) of the Yangjuan Primary School in Yanyuan County, Sichuan looks over his student's essays about the schoolyard.

Increasingly, there has been a global shift toward recognizing and understanding indigenous models of education as a viable and legitimate form of education. There are many different educational systems throughout the world, some that are more predominant and widely accepted. However, members of indigenous communities celebrate diversity in learning and see this global support for teaching traditional forms of knowledge as a success. Indigenous ways of knowing, learning, instructing, teaching, and training have been viewed by many postmodern scholars as important for ensuring that students and teachers, whether indigenous or non-indigenous, are able to benefit from education in a culturally sensitive manner that draws upon, utilizes, promotes, and enhances awareness of indigenous traditions, beyond the standard Western curriculum of reading, writing, and arithmetic.

CULTURAL CONTEXT OF INDIGENOUS LEARNING IN THE AMERICAS

The learning styles that children use in their indigenous schooling are the same ones that occur in their community context. These indigenous learning styles often include:

observation, imitation, use of narrative/storytelling, collaboration, and cooperation, as seen among American Indian, Alaska Native and Latin American communities. This is a hands on approach that emphasizes direct experience and learning through inclusion. The child feels that he/she is a vital member of the community, and he/she is encouraged to participate in a meaningful way by community members. Children often effectively learn skills through this system, without being taught explicitly or in a formal manner. This differs from Western learning styles, which tend to include methods such as explicit instruction and testing/quizzing. Creating an educational environment for indigenous children that is consistent with upbringing, rather than an education that follows a traditionally Western format, allows for a child to retain knowledge more easily, because they are learning in a way that was successful for them in the past in their community.

Indigenous Knowledge being provided in a classroom setting

CLASSROOM STRUCTURE

The structure of indigenous American classrooms that reflect the organization of indigenous communities eliminates the distinction between the community and classroom and makes it easier for the students to relate to the material. Effective classrooms modeled off of the social structure of indigenous communities are typically focused on group or cooperative learning that provide an inclusive environment. A key factor for successful indigenous education practices is the student-teacher relationship. Classrooms are socially constructed in a way that the teacher shares the control of the classroom with the students. Rather than taking an authoritative role, the teacher is viewed as a co-learner to the students, and they maintain a balance between personal warmth and demand for academic achievement. For example, in an indigenous Mazahua community in Mexico, teachers have been observed to let their students move freely about the classroom while working in order to consult with other students.

Teachers in indigenous classrooms in a Yup'ik community in Alaska rely on group work, encourage the students to watch each other as a way to learn, and avoid singling out students for praise, criticism, or recitation. Praise, by Western standards, is minimal in indigenous classrooms, and when it is given it is for effort, not for providing a correct answer to a question. Classroom discourse in indigenous classrooms is an example of how the teacher shares control with the students. Observations in the Yup'ik and Mazahua communities show that indigenous teachers are less likely to solicit an answer from an individual student, but rather encourage all of the students to participate in classroom discourse. In the Yup'ik classroom direct questions are posed to the group as whole, and the control of talk is not the sole responsibility of the teacher. Classrooms in indigenous communities that incorporate indigenous ways of learning utilize open-ended questioning, inductive/analytical reasoning, and student participation and verbalization, in group settings.

ESCUELA UNITARIA (ONE-ROOM ONE-TEACHER)

Escuela Unitaria is a one-room one-teacher style of schooling that is used in some rural communities, which utilizes ways of learning common in some indigenous or indigenous-heritage communities in the Americas. The school serves up to six grades in a single classroom setting with smaller groups (divided by grade level) in the classroom. Community involvement is strongly implemented in the management of the school. Learning activities are not just inside the classroom but also outside in the agricultural environment. Children are self-instructed and the content involves the students' rural community and family participation. The school is structured to meet cultural needs and match available resources. This classroom setting allows for a collaborative learning environment that includes the teacher, the students, and the community. Integration of cultural knowledge within the curriculum allows students to participate actively and to have a say in the responsibilities for classroom activities.

CRITICISMS OF THE WESTERN EDUCATIONAL MODEL

As mentioned above, there has been a modern day global shift towards recognizing the importance of indigenous education. One reason for this current awareness is the rapid spread of Western educational models throughout the world. Starting in the 19th century when Native Americans were forced into U.S. government boarding schools up until today when volunteers build schools in various remote villages, there is a strong, and some might say blind, belief that a Western education or schooling is the only way to provide a "better life" for indigenous children. The film "Schooling the World: The White Man's Last Burden" addresses this issue of modern education and its destruction of unique, indigenous cultures and individuals' identities. Shot in the Buddhist culture of Ladakh in the northern Indian Himalayas, the film fuses the voices of the Ladakhi people and commentary from an anthropologist/ethnobotanist, a National Geographical Explorer-in-Residence, and an architect of education programs. In essence, the film examines the definitions of wealth and poverty, in other words, knowledge and ignorance. Furthermore, it reveals the effects of trying to institute a global education system or central learning authority, which can ultimately demolish "traditional sustainable agricultural and

ecological knowledge, in the breakup of extended families and communities, and in the devaluation of ancient spiritual traditions.” Finally, the film promotes a deeper dialogue between cultures, suggesting that there is no single way to learn. No two human beings are alike because they develop under different circumstances, learning, and education.

The director and editor of the film Carol Black writes, “One of the most profound changes that occurs when modern schooling is introduced into traditional societies around the world is a radical shift in the locus of power and control over learning from children, families, and communities to ever more centralized systems of authority.” Black continues by explaining that in many non-modernized societies, children learn in a variety of ways, including free play or interaction with multiple children, immersion in nature, and directly helping adults with work and communal activities. “They learn by experience, experimentation, trial and error, by independent observation of nature and human behavior, and through voluntary community sharing of information, story, song, and ritual.” Most importantly, local elders and traditional knowledge systems are autonomous in comparison to a strict Western education model. Adults have little control over children’s “moment-to-moment movements and choices.” Once learning is institutionalized, both the freedom of the individual and his/her respect for the elder’s wisdom are ruined. “Family and community are sidelined...The teacher has control over the child, the school district has control over the teacher, the state has control over the district, and increasingly, systems of national standards and funding create national control over states.” When indigenous knowledge is seen as inferior to a standard school curriculum, an emphasis is placed on an individual’s success in a broader consumer culture instead of on an ability to survive in his/her own environment. Black concludes with a comment, “We assume that this central authority, because it is associated with something that seems like an unequivocal good – ‘education’ – must itself be fundamentally good, a sort of benevolent dictatorship of the intellect.” From a Western perspective, centralized control over learning is natural and consistent with the principles of freedom and democracy; and yet, it is this same centralized system or method of discipline that does not take into account the individual, which in the end stamps out local cultures.

BENEFITS OF INDIGENOUS EDUCATION

For indigenous learners and instructors, the inclusion of these methods into schools often enhances educational effectiveness by providing an education that adheres to an indigenous person’s own inherent perspectives, experiences, language, and customs, thereby making it easier for children to transition into the realm of adulthood. For non-indigenous students and teachers, such an education often has the effect of raising awareness of individual and collective traditions surrounding indigenous communities and peoples, thereby promoting greater respect for and appreciation of various cultural realities.

In terms of educational content, the inclusion of indigenous knowledge within curricula, instructional materials, and textbooks has largely the same effect on preparing students for the greater world as other educational systems, such as the Western model.

There is value in including Indigenous knowledge and education in the public school system. Students of all backgrounds can benefit from being exposed to Indigenous education, as it can contribute to reducing racism in the classroom and increase the sense of community in a diverse group of students. There are a number of sensitive issues about what can be taught (and by whom) that require responsible consideration by non-Indigenous teachers who appreciate the importance of interjecting Indigenous perspectives into standard mainstream schools. Concerns about misappropriation of Indigenous ways of knowing without recognizing the plight of Indigenous Peoples and "giving back" to them are legitimate. Since most educators are non-Indigenous, and because Indigenous perspectives may offer solutions for current and future social and ecological problems, it is important to refer to Indigenous educators and agencies to develop curriculum and teaching strategies while at the same time encouraging activism on behalf of Indigenous Peoples. One way to bring authentic Indigenous experiences into the classroom is to work with community elders. They can help facilitate the incorporation of authentic knowledge and experiences into the classroom. Teachers must not shy away from bringing controversial subjects into the classroom. The history of Indigenous people should be delved into and developed fully. There are many age appropriate ways to do this, including the use of children's literature, media, and discussion. Individuals are recommended to reflect regularly on their teaching practice to become aware of areas of instruction in need of Indigenous perspectives.

EDUCATIONAL GAP

Some indigenous people view education as an important tool to improve their situation by pursuing economic, social and cultural development; it provides them with individual empowerment and self-determination. Education is also a means for employment; it's a way for socially marginalized people to raise themselves out of poverty. However, some education systems and curricula lack knowledge about indigenous peoples ways of learning, causing an Educational Gap for indigenous people. Factors for the Education Gap include lower school enrollments, poor school performance, low literacy rates, and higher dropout rates. Some schools teach indigenous children to be "socialized" and to be a national asset to society by assimilating, "Schooling has been explicitly and implicitly a site of rejection of indigenous knowledge and language, it has been used as a means of assimilating and integrating indigenous peoples into a 'national' society and identity at the cost of their indigenous identity and social practices". Intercultural learning is an example of how to build a bridge for the educational gap.

IMPORTANCE

Indigenous knowledge is particularly important to modern environmental management in today's world. Environmental and land management strategies traditionally used by indigenous peoples have continued relevance. Indigenous cultures usually live in a particular bioregion for many generations and have learned how to live there sustainably. In modern times, this ability often puts truly indigenous cultures in a unique position of understanding the interrelationships, needs, resources, and dangers of their bioregion.

This is not true of indigenous cultures that have been eroded through colonialism or genocide or that have been displaced.

The promotion of indigenous methods of education and the inclusion of traditional knowledge also enables those in Western and post-colonial societies to re-evaluate the inherent hierarchy of knowledge systems. Indigenous knowledge systems were historically denigrated by Western educators; however, there is a current shift towards recognizing the value of these traditions. The inclusion of aspects of indigenous education requires us to acknowledge the existence of multiple forms of knowledge rather than one, standard, benchmark system.

A prime example of how indigenous methods and content can be used to promote the above outcomes is demonstrated within higher education in Canada. Due to certain jurisdictions' focus on enhancing academic success for Aboriginal learners and promoting the values of multiculturalism in society, the inclusion of indigenous methods and content in education is often seen as an important obligation and duty of both governmental and educational authorities.

Many scholars in the field assert that indigenous education and knowledge has a “transformative power” for indigenous communities that can be used to foster “empowerment and justice.” The shift to recognizing indigenous models of education as legitimate forms is therefore important in the ongoing effort for indigenous rights, on a global scale.

CHALLENGES (AS SEEN WITH THE NA)

There are numerous practical challenges to the implementation of indigenous education. Incorporating indigenous knowledge into formal Western education models can prove difficult. However, the discourse surrounding indigenous education and knowledge suggests that integrating indigenous methods into traditional modes of schooling is an “ongoing process of ‘cultural negotiation.’”

Indigenous education often takes different forms than a typical Western model, as the practices of the Na ethnic group of southwest China illustrate. Because Na children learn through example, traditional Na education is less formal than the standard Western model. In contrast to structured hours and a classroom setting, learning takes place throughout the day, both in the home and in adults’ workplaces. Based on the belief that children are “fragile, soulless beings,” Na education focuses on nurturing children rather than on punishing them. Children develop an understanding of cultural values, such as speech taboos and the “reflection” of individual actions “on the entire household.” Playing games teaches children about their natural surroundings and builds physical and mental acuity. Forms of indigenous knowledge, including weaving, hunting, carpentry, and the use of medicinal plants, are passed on from adult to child in the workplace, where children assist their relatives or serve as apprentices for several years.

However, increasing modernity is a challenge to such modes of instruction. Some types of indigenous knowledge are dying out because of decreased need for them and lack of interest from youth, who increasingly leave the village for jobs in the cities. Furthermore, formal Chinese state schooling “interferes with informal traditional learning.” Children must travel a distance from their villages to attend state schools, removing them from traditional learning opportunities in the home and workplace.

The curriculum in state schools is standardized across China and holds little relevance to the lives of the Na. Na children are required to learn Mandarin Chinese, Chinese and global history, and Han values, as opposed to their native language, local history, and indigenous values. Methods of instruction rely on rote learning rather than experiential learning, as employed in Na villages.

Several individuals and organizations pay for children's school fees and build new schools in an attempt to increase village children's access to education. Yet such well-intended actions do not affect the schools' curriculum, which means there is no improvement in the sustainability of the children's native cultures. As a result, such actions may actually “be contributing to the demise of the very culture” they are trying to preserve.

ASSOCIATED ORGANIZATIONS

Many organizations work to promote indigenous methods of education. The United Nations Declaration of the Rights of Indigenous Peoples makes particular reference to the educational rights of indigenous peoples in Article 14. It emphasizes the responsibility of states to adequately provide access to education for indigenous people, particularly children, and when possible, for education to take place within their own culture and to be delivered in their own language.

Indigenous peoples have founded and actively run several of these organizations. On a global scale, many of these organizations engage in active knowledge transfer in an effort to protect and promote indigenous knowledge and education modes. One such organization, the Indigenous Education Institute (IEI), aims to apply indigenous knowledge and tradition to a contemporary context, with a particular focus on astronomy and other science disciplines. Another such organization is the World Indigenous Nations Higher Education Consortium (WINHEC), which was launched during the World Indigenous Peoples Conference on Education (WIPCE) at Delta Lodge, Kananakis Calgary in Alberta, Canada in August 2002. The founding members were Australia, Hawai'i, Alaska, the American Indian Higher Education Consortium of the United States, Canada, the Wānanga of Aotearoa (New Zealand), and Saamiland (North Norway). The stated aims of WINHEC include the provision of an international forum for indigenous peoples to pursue common goals through higher education.

Chapter 10

INFORMAL LEARNING

Informal Learning is, by default, any learning that is not formal learning or non-formal learning. Informal learning is organized differently than formal and non-formal learning because it has no set objective in terms of learning outcomes and is never intentional from the learner's standpoint. Often it is referred to as learning by experience or just as experience. For all learners this includes heuristic language building, socialization, inculturation, and play. Informal learning is a pervasive ongoing phenomenon of learning via participation or learning via knowledge creation, in contrast with the traditional view of teacher-centered learning via knowledge acquisition.

Lao villagers assemble jigsaw maps of Southeast Asia. These maps were made by Big Brother Mouse, a literacy project in Laos. It was the first time any of them had seen a jigsaw puzzle of any sort.

The term is often conflated, however, with non-formal learning, and self-directed learning. It is widely used in the context of corporate training and education in relation to return on investment (ROI), or return on learning (ROL). It is also widely used when referring to science education, in relation to citizen science, or informal science education. The conflated meaning of informal and non-formal learning explicates mechanisms of learning that organically occur outside the realm of traditional instructor-led programs, e.g., reading self-selected books, participating in self-study programs, Kitchen Table science, navigating performance support materials and systems, incidental skills practice, receptivity of coaching or mentoring, seeking advice from peers, or participation in communities of practice, to name a few. Informal learning occurs in community, where individuals have opportunities to observe and participate in social activities.

CHARACTERIZATIONS

Open House Day at ESO's Headquarters.

Informal learning can be characterized as follows:

- It usually takes place outside educational establishments;
- It does not follow a specified curriculum and is not often professionally organized but rather originates accidentally, sporadically, in association with certain occasions, from changing practical requirements;
- It is not necessarily planned pedagogically, systematically according to fixed subjects, test and qualification-oriented, but rather, either unconsciously incidental or consciously intended intuition, holistically problem-related, and related to actual situations and fitness for life;
- It is experienced directly in its "natural" function of everyday life.
- It is often spontaneous and creative.
- It is a key component to an alternative learning system coined, Learning by Observing and Pitching-In (LOPI), which is highly used by the indigenous of the Americas, but not by all.

HISTORY

In international discussions, the concept of informal learning, already used by John Dewey at an early stage and later on by Malcolm Knowles, experienced a renaissance, especially in the context of development policy. At first, informal learning was only delimited from formal school learning and nonformal learning in courses (Coombs/Achmed 1974).

Marsick and Watkins take up this approach and go one step further in their definition. They, too, begin with the organizational form of learning and call those learning processes informal which are non-formal or not formally organized and are not financed by institutions.

An example for a wider approach is Livingstone's definition which is oriented towards autodidactic and self-directed learning and places special emphasis on the self-definition of the learning process by the learner (Livingstone 1999, p. 68 et seq.).

OTHER PERSPECTIVES ON INFORMAL LEARNING

Merriam and others (2007) state: "Informal learning, Schugurensky (2000) suggests, has its own internal forms that are important to distinguish in studying the phenomenon. He proposes three forms: self-directed learning, incidental learning, and socialization, or tacit learning. These differ among themselves in terms of intentionality and awareness at the time of the learning experience. Self-directed learning, for example, is intentional and conscious; incidental learning, which Marsick and Watkins (1990) describe as an accidental by-product of doing something else, is unintentional but after the experience she or he becomes aware that some learning has taken place; and finally, socialization or tacit learning is neither intentional nor conscious (although we can become aware of this learning later through 'retrospective recognition') (Marsick & Watkins, 1990, p. 6)" (p. 36). More recently, Bennett (2012) extended Schugurenksky's (2000) conceptualization of informal by recommending four modes of informal learning: a) self-directed, which is conscious and intentional, b) incidental, which is conscious and unintentional, c) tacit, which replaces socialization and is both nonconscious and unintentional, and d) integrative, which is nonconscious and intentional. Drawing upon implicit processing literature, she further defined integrative learning as "a learning process that combines intentional nonconscious processing of tacit knowledge with conscious access to learning products and mental images" (Bennett, 2012, p. 4) and she theorized two possible sub-processes: knowledge shifting and knowledge sublimation, which describe limited access learners have to tacit knowledge.

INFORMAL LEARNING IN AMERICAN INDIGENOUS COMMUNITIES

People in many Indigenous communities of the Americas often learn through observation and participation in everyday life of their respective communities and families. Barbara Rogoff and her colleagues describe the ways in which children in Indigenous communities can learn by observing and participating in community endeavors, having an eagerness to contribute, fulfilling valuable roles, and finding a sense of belonging in their community. These learning experiences are mutually involved among each other and are illustrated by children's incorporation in the community and the child's attentiveness. This form of informal learning allows the children to collaborate in social organization, which grants the child the opportunity to learn by pitching in.

Learning occurs through socialization processes relative to one's culture and community. Learning by observing and pitching in is an Informal learning model often seen in many Indigenous communities of the Americas. Children can be seen participating alongside adults in many daily activities within the community. An example is the process where children learn slash-and-burn agriculture by being present in the situation and contributing when possible. Both children and adults are actively involved in shared endeavors. Their roles as learner and expert are flexible while the observer participates in active concentration. Indigenous ways of learning include practices such as observation, experiential learning, and apprenticeship.

Child work, alongside and combined with play, occupies an important place in American Indigenous children's time and development. The interaction of a Navajo girl assisting her mother weaving and who eventually becomes a master weaver herself illustrates how the child's presence and the availability of these activities allow the child to learn through observation. Children start at the periphery, observing and imitating those around them, before moving into the center of activities under supervision and guidance. Work is part of a child's development from an early age, starting with simple tasks that merge with play and develop to various kinds of useful work. The circumstances of everyday routine create opportunities for the culturally meaningful activities and sensitive interactions on which a child's development depends.

Children in Nicaragua will often learn to work the land or learn to become street vendors by watching other individuals in their community perform it. These activities provide opportunities for children to learn and develop through forms of social learning which are made up of everyday experiences rather than a deliberate curriculum, and contain ordinary setting in which children's social interaction and behavior occur. Informal learning for children in American Indigenous communities can take place at work where children are expected to contribute.

NONVERBAL COMMUNICATION AS A LEARNING TOOL

In terms of the cultural variation between traditional Indigenous American and European-American middle class, the prevalence of nonverbal communication can be viewed as being dependent on each culture's definition of achievement. Often in mainstream middle-class culture, success in school and work settings is gained through practicing competitiveness and working for personal gain. The learning and teaching practices of traditional Indigenous Americans generally prioritize harmony and cooperation over personal gain. In order to achieve mutual respect in teachings, what is often relied on in Indigenous American culture is nonverbal communication.

Nonverbal communication in Indigenous communities creates pathways of knowledge by watching and then doing. An example where nonverbal behavior can be used as a learning tool can be seen in Chillihuani culture. Children in this community learn about growing crops by observing the actions and respect adults have for the land. They learn that caring for their crops is vital for them to grow and in turn for the community to thrive. Similarly, when children participate in rituals, they learn the importance of being part of the community by watching how everyone interacts. This again needs no explicit verbal communication, it relies solely on observing the world around. Chillihuani culture does not explicitly verbalize expectations. Their knowledge is experienced rather than explained through modeled behavior for community benefit.

In the indigenous culture of the Matsigenka, infants are kept in close proximity to their mother and members of the community. The infant does not go far from the mother at any time. In this way, the child is encouraged to explore away from the mother and other family members who will still keep watch. As the child wanders he may come to a place that is unknown and potentially dangerous but the mother will not stop him, she will just

watch as he explores. The lack of verbal reprimand or warning from an adult or elder enable the child to assimilate his surroundings more carefully.

FORMAL AND NONFORMAL EDUCATION

To fully understand informal learning it is useful to define the terms "formal" and "non-formal" education. Merriam, Caffarella, and Baumgartner (2007), state: "Formal education is highly institutionalized, bureaucratic, curriculum driven, and formally recognized with grades, diplomas, or certificates" (p. 29). Merriam and others (2007), also state: "The term non-formal has been used most often to describe organized learning outside of the formal education system. These offerings tend to be short-term, voluntary, and have few if any prerequisites. However they typically have a curriculum and often a facilitator" (p. 30). Non-formal learning can also include learning in the formal arena when concepts are adapted to the unique needs of individual students (Burlin, 2009).

RESEARCH AND DATA

Merriam and others (2007) state: "studies of informal learning, especially those asking about adults' self-directed learning projects, reveal that upwards of 90 percent of adults are engaged in hundreds of hours of informal learning. It has also been estimated that the great majority (upwards of 70 percent) of learning in the workplace is informal (Kim, Collins, Hagedorn, Williamson, & Chapman, 2004), although billions of dollars each year are spent by business and industry on formal training programs" (p. 35–36). Both formal and informal learning are considered integral processes for Virtual Human Resource Development (Bennett, 2009), with informal learning the stronger form.

INFORMAL LEARNING EXPERIENCES AND EXAMPLES

Informal knowledge is information that has not been externalized or captured and the primary locus of the knowledge may be inside someone's head. (Grebrow, David, "At the Water Cooler of Learning" in Cross, J., & Quinn, C. "Transforming Culture: An Executive Briefing on the Power of Learning", Charlottesville: University of Virginia, 2002). For example, in the cause of language acquisition, a mother may teach a child basic concepts of grammar and language at home, prior to the child entering a formal education system (Eaton, Sarah (2011). "Family Literacy and the New Canadian: Formal, Non-Formal and Informal Learning: The Case of Literacy, Essential Skills and Language Learning in Canada"). In such a case, the mother has a tacit understanding of language structures, syntax and morphology, but she may not be explicitly aware of what these are. She understands the language and passes her knowledge on to her offspring.

Other examples of informal knowledge transfer include instant messaging, a spontaneous meeting on the Internet, a phone call to someone who has information you need, a live one-time-only sales meeting introducing a new product, a chat-room in real time, a chance meeting by the water cooler, a scheduled Web-based meeting with a real-time agenda, a tech walking you through a repair process, or a meeting with your assigned mentor or manager.

Experience indicates that much of the learning for performance is informal (The Institute for Research on Learning, 2000, Menlo Park). Those who transfer their knowledge to a learner are usually present in real time. Such learning can take place over the telephone or through the Internet, as well as in person.

A study of time-to-performance done by Sally Anne Moore at Digital Equipment Corporation in the late 1990s, (Moore, Sally-Ann, "Time-to-Learning", Digital Equipment Corporation, 1998) graphically shows this disparity between formal and informal learning.

In the UK, the government formally recognized the benefits of informal learning in "The Learning Revolution" White Paper published on March 23, 2009 (Department for Business, Innovation and Skills, 2009). The Learning Revolution Festival ran in October 2009 and funding has been used by libraries—which offer a host of informal learning opportunities such as book groups, "meet the author" events and family history sessions—to run activities such as The North East Festival of Learning.

BUSINESS PERSPECTIVE

The majority of companies that provide training are currently involved only with the formal side of the continuum. Most of today's investments are on the formal side. The net result is that companies spend the most money on the smallest part—25%—of the learning equation. The other 75% of learning happens as the learner creatively "adopts and adapts to ever changing circumstances". The informal piece of the equation is not only larger, it's crucial to learning how to do anything.

SUMMARY

Lifelong learning, as defined by the OECD, includes a combination of formal, non-formal and informal learning. Of these three, informal learning may be the most difficult to quantify or prove, but it remains critical to an individual's overall cognitive and social development throughout the lifespan.

Chapter 11

NETWORKED LEARNING

Networked Learning is a process of developing and maintaining connections with people and information, and communicating in such a way so as to support one another's learning. The central term in this definition is connections. It takes a relational stance in which learning takes place both in relation to others and in relation to learning resources.

It has been suggested that networked learning offers educational institutions more functional efficiency, in that the curriculum can be more tightly managed centrally, or in the case of vocational learning, it can reduce costs to employers and tax payers. However, it is also argued that networked learning is too often considered within the presumption of institutionalised or educationalised learning, thereby omitting awareness of the benefits that networked learning has to informal or situated learning.

HISTORY

Network and networked learning theories can be traced back into the 19th Century, when commentators were considering the social implications of networked infrastructure such as the railways and the telegraph. More recently, networked learning has its roots in the 1970s, with the likes of Ivan Illich's book, *Deschooling Society*, through to more recent commentary in the early 2000s, largely inspired by the Internet and social media.

1970s

In 1971, Ivan Illich envisioned 'learning webs' as a model for people to network the learning they needed:

I will use the words "opportunity web" for "network" to designate specific ways to provide access to each of four sets of resources. "Network" is often used, unfortunately, to designate the channels reserved to material selected by others for indoctrination, instruction, and entertainment. But it can also be used for the telephone or the postal service, which are primarily accessible to individuals who want to send messages to one another. I wish we had another word to designate such reticular structures for mutual access, a word less evocative of entrapment, less degraded by current usage and more suggestive of the fact that any such arrangement includes legal, organizational, and technical aspects. Not having found such a term, I will try to redeem the one which is available, using it as a synonym of "educational web." Ivan Illich, 1971.

In 1977 Christopher Alexander, Sara Ishikawa, Murray Silverstein, Max Jacobson, Ingrid Fiksdahl-King and Shlomo Angel wrote and published *A Pattern Language: Towns, Buildings, Construction*. In this seminal text, mostly referred to by architects, lists a "Network of Learning" as the 18th pattern, and cites Illich's earlier book as "the most

penetrating analysis and proposal for an alternative framework for education.." Alexander *et al.* go on to advise builders and town planners interested in establishing learning networks with:

"...work in piecemeal ways to decentralize the process of learning and enrich it through contact with many places and people all over the city: workshops, teachers at home or walking through the city, professionals willing to take on the young as helpers, older children teaching younger children, museums, youth groups travelling, scholarly seminars, industrial workshops, old people, and so on. Conceive of all these situations as forming the backbone of the learning process; survey all these situations, describe them, and publish them as the city's "curriculum"; then let students, children, their families and neighborhoods weave together for themselves the situations that comprise their "school" paying as they go with standard vouchers, raised by community tax. Build new educational facilities in a way which extends and enriches this network."

In the 1970s, The Institute For The Future at Menlo Park in California experimented with networked learning practices based on the Internet and computer conferencing. Soon after their reports were published two educational pioneers in the use of Internet technologies, Hiltz and Turoff, linked education directly with this pioneering work

1980s

In the late 1980s Dr. Charles A. Findley headed the Collaborative Networked Learning project at Digital Equipment Corporation on the East Coast of the United States. Findley's project conducted trend analysis and developed prototypes of collaborative learning environments, which became the basis for their further research and development of what they called Collaborative Networked Learning (CNL), and Collaborative Learning-Work (CLW).

1990s

Since the development of the Internet as a significant medium for access to information and communication, the practice of networked learning has tended to focus on its use. In the first phase of the Internet its use for networked learning was restricted by low bandwidth and the emphasis was largely on written and text based interactions between people and the text based resources they referred to. This textual form of interaction was a familiar academic medium, even though there was recognition of the unique qualities hypertext emerging in the online form.

In 1991, Jean Lave and Etienne Wenger published *Situated Learning: Legitimate Peripheral Participation*, in which they cited numerous examples of networked learning within a wide range of settings for informal learning and within communities of practice.

In the later half of the 1990s, open, interactive, situated and networked views of learning were marginalised by educational institutions as they tended to develop or deploy content and practice through proprietary learning management systems (e.g. Blackboard Inc,

WebCT), and collaborative work tools such as IBM Lotus Notes/Learning Space and Quick Place), generally following concepts around "e-learning". These systems enabled the restriction of access and the management of students for the administrative concerns of educational institutions.

Since 1998, an international Networked Learning Conference has been held biannually. The conference proceedings from all the conferences since 2002 are available via the conference web site.

CSALT, a research group at Lancaster University, UK, associated with the Networked Learning Conference series and several edited collections, defined networked learning as "learning in which information and communication technology is used to promote connections: between one learner and other learners, between learners and tutors; between a learning community and its learning resources.". This definition seems to ignore historical use of the term however, where computing was not of central importance.

2000s

Salmon (2001) wrote *"learning is built around learning communities & interaction, extending access beyond the bounds of time and space, but offering the promise of efficiency and widening access. Think of individuals as nodes on a network!"*

From around 2004, the idea of networked learning had a popular resurgence, corresponding with the emergence of social media and concepts of open source, such as is covered in Yochai Benkler's 2006 book, *The Wealth of Networks*.

In 2005, George Siemens published a paper in the *International Journal for Instructional Technology and Distance Learning*, called *Connectivism: A Learning Theory for the Digital Age* in which he argued the need for a new learning theory, one that captured the essence and represented the process of networked knowledge creation and learning.

In 2011, the *International Review of Research in Open and Distance Learning* published the first peer reviewed collection of scholarly articles on Connectivism. This special issue was edited by George Siemens (Athabasca University) and Grainne Conole (Open University, UK).

In 2007, Starke-Meyerring, Duin, & Palvetzian first described Globally Networked Learning Environments (GNLE), a term that refers to networked learning environments which are specifically designed to connect students from different parts of the world. GNLEs are designed to facilitate dialogue and collaboration across and within groups of students, to develop greater understanding and competencies for global work and citizenship. GNLEs take many different shapes and forms. In 2010, *E-Learning and Digital Media* published a special issue on globally networked learning titled *Globally networked learning environments: Re-shaping the intersections of globalization and e-learning in higher education*, and in 2011, COIL launched the first ever Institute for Globally Networked Learning in the Humanities.

MODELS

MOOC

A Massive Open Online Course (MOOC) engages networked learning methods within the typical structure of a course. The first such course so named was Connectivism and Connective Knowledge 2008, hosted by Stephen Downes and George Siemens. More like an online event, MOOCs invite open online participation around a schedule or agenda, facilitated by people with reputation or expertise in the topics, relying on successful formations of learning networks to assist people studying the topics.

Earlier examples of online courses using networked learning methods:

- CyberOne: Law in the Court of Public Opinion - A 2006 course by Rebecca Nesson and co at Harvard Law School
- Introduction to Open Education - 2007 course by David Wiley.
- Composing free and open education resources - Run in 2008 by the The School of Art Education, University of Art and Design Helsinki.
- Facilitating Online - 2008 course established by Leigh Blackall and Bronwyn Hegarty for Otago Polytechnic, and has since run in 2009, 2010, and 2011.
- Connectivism - 2008 course run by George Siemens and Stephen Downes.
- EC&I 831: Social Media & Open Education, 2008, 2009, 2010 By Alec Couros
- CCK09: Connectivism and Connective Knowledge - 2009 by George Siemens and Stephen Downes
- DS106: Digital Storytelling - 2010/2011 by Jim Groom, took the MOOC concepts into new dimensions with people creating celebratory media for the course, and the course itself breaking course like structure.
- Globaloria - Started in 2006 by Idit Harel Caperton and World Wide Workshop as the first and largest social learning network where students develop digital literacy, STEM and Computing knowledge and global citizenship through game design.

OPEN AND NETWORKED RESEARCH

Some researchers have used networked learning methods to collaborate and support each other's research. The Wikiversity page for Doctor of Philosophy is supporting a small group interested in pursuing a PhD title informally. They name their practice OpenPhD or Open and Networked PhD.

STUDIES

ARCHITECTURE OF PRODUCTIVE LEARNING NETWORKS

Academics at the CoCo Research Centre, University of Sydney, have been carrying out an extensive analysis of examples of networked learning, in collaboration with the developers and organisers of learning networks in various parts of the world. Their work has focussed on the *architecture* of learning networks - aiming to identify arrangements of tasks, tools

and people that contribute to successful learning networks. Some conclusions from this work have been published in *The architecture of productive learning networks*, which also includes a chapter on the history of networked learning.

SITUATED LEARNING

Some have argued that using formal education as a setting for researching networked learning misses most if not all of the value proposition of networked learning. Instead, Fox proposes situated learning and Actor-network theory as the better approach for research.

Chapter 12

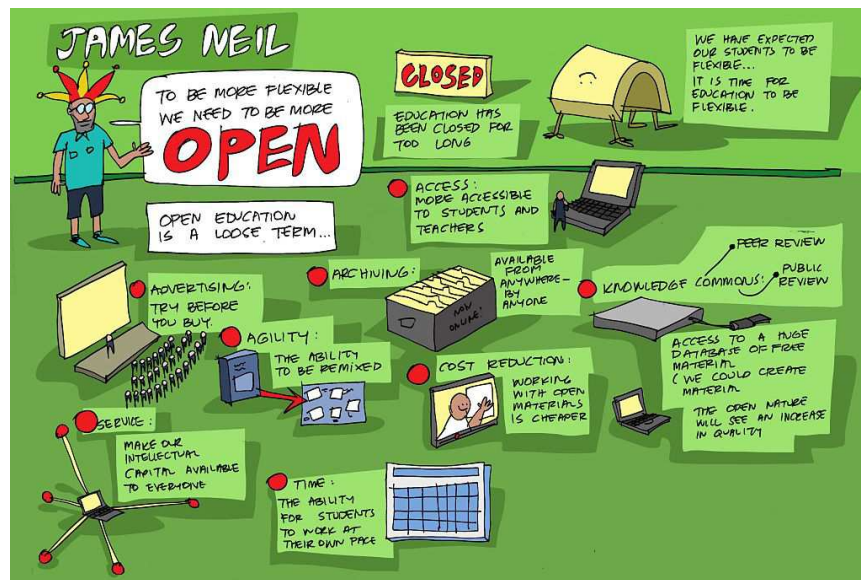

OPEN EDUCATION

Open Education is a collective term to describe institutional practices and programmatic initiatives that broaden access to the learning and training traditionally offered through formal education systems. The qualifier "open" of open education refers to the elimination of barriers that can preclude both opportunities and recognition for participation in institution-based learning. One aspect of openness in or "opening up" education is the development and adoption of open educational resources.

The Governor of Nagaland Hon'ble Padmanabha Balakrishna Acharya after completing his discussions with The Global Open University Nagaland Vice Chancellor Dr. H.N. Dutta and Registrar Dr. Imotemsu Ao regarding the need for strengthening the cause of Open Education in India (2015)

Institutional practices that seek to eliminate barriers to entry, for example, would not have academic admission requirements. Such universities include The Open University in Britain and Athabasca University in Canada. Such programs are commonly distance learning programs like e-learning, mooc and opencourseware, but not necessarily. Where many e-learning programs are free to follow, the costs of acquiring a certification may be a barrier, many open education institutes offer free certification schemes accredited by organisations like UKAS in the UK and ANAB in the USA where others offer a badge.

Open education and flexible learning

HISTORY

Even before the computer was developed, researchers at public universities were working at educating citizens through informal education programs. In the early 1900s, 4-H clubs were formed which taught youth the latest in technological advances in agriculture and home economics. The success that the youth had in utilizing 'new' methods of farming and home economics, caused their parents to adopt the same practices. As the 4-H club idea was spreading across the country, Congress passed the Smith-Lever Act which created the Cooperative Extension Service in the United States Department of Agriculture. The Cooperative Extension Service is a partnership between the USDA, land grant universities in each state, and counties throughout the United States. Through the work of the Cooperative Extension Services and 4-H, people throughout the United States have easy and inexpensive (most often free) access to the latest research done at the land-grant universities without having to visit a college campus or attend college courses. The educational programs and resources offered by 4-H and the Cooperative Extension Service meet people where they are at and offer them the opportunity to learn what they want to know when they want to know it. In order to meet the changing needs of citizens and the use of new technology, the Cooperative Extension Service has created eXtension. eXtension provides research based, non-biased information on a wide variety of topics to people through the use of the internet.

The ability to share resources on the web at little cost compared to the distribution of hard copy means that it can be used to facilitate Open Education. An early example of this is the opencourseware program, which was established in 2002 by Massachusetts Institute of Technology (MIT) which was followed by more than 200 Universities and organizations. Similar to the Berlin Declaration on Open Access to Knowledge in the Sciences and Humanities from the Open Access movement, are the goals and intentions from Open Education specified in the Cape Town Open Education Declaration. MOOC is a more recent form of online course development getting more attention since the fall of 2011

which was followed by a number of non-certificate-granting programs, including edX, Coursera and Udacity.

LEARNING PHILOSOPHIES

Open education and flexible learning

Open Education is motivated by a belief that learners desire to exercise agency in their studies. Specifically, people engaged in the learning process want: to conduct inquiries about potential topics of study; to have a hands-on educational experience instead of a strictly textbook-focused education; to take responsibility for their educational decisions; to experience the emotional and physical side of education; to understand how education and community are related; and, to have personal choice in the focus of their classroom studies.

These learners do a great deal for one another in promoting learning. Learning in a group environment or contributing to a group is beneficial to the learner. Collaborative group work has substantial benefits, such as increased participation by all of the group members, better understanding and retention of material, mastery of skills essential to success, and increased enthusiasm that can spur the participant on to independent learning. The philosophy of an open education centers on student learning and sees the teacher become the learning assistant. Teachers are to observe, guide, and provide materials for the learners. The teachers should facilitate not dominate the learning process. Open education is optimistic in the belief that the freedom of choice and student direction will promote a better quality of learning.

The basis for the learning philosophies of open education can be traced back to the work of educational reformer John Dewey and developmental psychologist Jean Piaget.

TECHNOLOGY UTILIZED

Available technologies for Open Education are important in the overall efficiency of the program. After available technologies have been found, there needs to be appropriate applications on the technologies for the specific online education program.

Since Open Education is usually a different time and different place for most individuals across the world, certain technologies need to be utilized to enhance the program. Technologies that can be used are primarily online and serve a variety of purposes. Web Pages and other computer based trainings may be used to provide lecture notes, assessments, and other course materials. Videos are provided and feature speakers, class events, topic discussions, and faculty interviews. YouTube and iTunesU are often used for this purpose. Students may interact through computer conferencing with Skype or Google+, e-mail, online study groups, or annotations on social bookmarking sites. Other course content may be provided through tapes, print, and CD's.

DRAWBACKS

There are a number of concerns regarding the implementation of open education systems, specifically for use in developing countries. These include: a potential lack of administrative oversight and quality assurance systems for educators/materials in some programs; infrastructure limitations in developing countries; a lack of equal access to technologies required for students' full participation in online education initiatives; and questions regarding the use of copyrighted materials.

Chapter 13

EDUCATIONAL TECHNOLOGY

Educational Technology is the effective use of technological tools in learning. As a concept, it concerns an array of tools, such as media, machines and networking hardware, as well as considering underlying theoretical perspectives for their effective application.

Educational Technology is not restricted to high technology. Nonetheless, electronic educational technology, also called e-learning, has become an important part of society today, comprising an extensive array of digitization approaches, components and delivery methods. For example, m-learning *emphasizes* mobility, but is otherwise indistinguishable *in principle* from educational technology.

Educational Technology includes numerous types of media that deliver text, audio, images, animation, and streaming video, and includes technology applications and processes such as audio or video tape, satellite TV, CD-ROM, and computer-based learning, as well as local intranet/extranet and web-based learning. Information and communication systems, whether free-standing or based on either local networks or the Internet in networked learning, underlie many e-learning processes.

Theoretical perspectives and scientific testing influence instructional design. The application of theories of human behavior to educational technology derives input from instructional theory, learning theory, educational psychology, media psychology and human performance technology.

Educational Technology and e-learning can occur in or out of the classroom. It can be self-paced, asynchronous learning or may be instructor-led, synchronous learning. It is suited to distance learning and in conjunction with face-to-face teaching, which is termed blended learning. Educational technology is used by learners and educators in homes, schools (both K-12 and higher education), businesses, and other settings.

DEFINITION

Richey defined educational technology as "the study and ethical practice of facilitating learning and improving performance by creating, using and managing appropriate technological processes and resources". The Association for Educational Communications and Technology (AECT) denoted instructional technology as "the theory and practice of design, development, utilization, management, and evaluation of processes and resources for learning." As such, educational technology refers to all valid and reliable applied education sciences, such as equipment, as well as processes and procedures that are derived from scientific research, and in a given context may refer to theoretical, algorithmic or heuristic processes: it does not necessarily imply physical technology.

SCOPE

Educational technology refers to the use of both physical hardware and educational theoretics. It encompasses several domains, including learning theory, computer-based training, online learning and, where mobile technologies are used, m-learning. Accordingly, there are several discrete aspects to describing the intellectual and technical development of educational technology:

- educational technology as the **theory and practice of educational approaches** to learning
- educational technology as **technological tools and media** that assist in the communication of knowledge, and its development and exchange
- educational technology for **learning management systems** (LMS), such as tools for student and curriculum management, and education management information systems (EMIS)
- educational technology itself as an **educational subject**; such courses may be called "Computer Studies" or "Information and Communication Technology (ICT)"

RELATED TERMS

Early 20th century abacus used in a Danish elementary school.

Educational technology is an inclusive term for the tools and the theoretical foundations for supporting learning and teaching. Educational technology is not restricted to high technology.

However, modern electronic educational technology is an important part of society today. Educational technology encompasses e-learning, instructional technology, information and communication technology (ICT) in education, EdTech, learning technology, multimedia learning, technology-enhanced learning (TEL), computer-based instruction (CBI), computer managed instruction, computer-based training (CBT), computer-assisted instruction or computer-aided instruction (CAI), internet-based training (IBT), flexible learning, web-based training (WBT), online education, digital educational collaboration, distributed learning, computer-mediated communication, cyber-learning, and multi-modal instruction, virtual education, personal learning environments, networked learning, virtual learning environments (VLE) (which are also called learning platforms), m-learning, and digital education.

Each of these numerous terms has had its advocates, who point up particular potential distinctions. However, these descriptive terms individually emphasize a particular digitization approach, component or delivery method. For example, m-learning *emphasizes* mobility, but is otherwise indistinguishable *in principle* from educational technology. In practice, as technology has advanced, the particular "narrowly defined" aspect that was initially emphasized by name has blended into the general field of educational technology. For example, "virtual learning" in a narrowly defined semantic sense implies entering the environmental simulation within a virtual world, for example in treating posttraumatic stress disorder (PTSD). In practice, a "virtual education course" refers to any instructional course in which all, or at least a significant portion, is delivered by the Internet. "Virtual" is used in that broader way to describe a course that is not taught in a classroom face-to-face but through a substitute mode that can conceptually be associated "virtually" with classroom teaching, which means that people do not have to go to the physical classroom to learn. Accordingly, virtual education refers to a form of distance learning in which course content is delivered by various methods such as course management applications, multimedia resources, and videoconferencing.

Bernard Luskin, an educational technology pioneer, advocated that the "e" of e-learning should be interpreted to mean "exciting, energetic, enthusiastic, emotional, extended, excellent, and educational" in addition to "electronic." Parks suggested that the "e" should refer to "everything, everyone, engaging, easy". These broad interpretations focus on new applications and developments, as well as learning theory and media psychology.

HISTORY

Helping people learn in ways that are easier, faster, surer, or less expensive can be traced back to the emergence of very early tools, such as paintings on cave walls. Various types of abacus have been used. Writing slates and blackboards have been used for at least a millennium. From their introduction, books and pamphlets have held a prominent role in education. From the early twentieth century, duplicating machines such as the

mimeograph and Gestetner stencil devices were used to produce short copy runs (typically 10–50 copies) for classroom or home use. The use of media for instructional purposes is generally traced back to the first decade of the 20th century with the introduction of educational films (1900s) and Sidney Pressey's mechanical teaching machines (1920s).

19th century classroom, Auckland

The first all multiple choice, large scale assessment was the Army Alpha, used to assess the intelligence and more specifically the aptitudes of World War I military recruits. Further large-scale use of technologies was employed in training soldiers during and after WWII using films and other mediated materials, such as overhead projectors. The concept of hypertext is traced to Bush's description of memex in 1945.

Cuisenaire rods

Slide projectors were widely used during the 1950s in educational institutional settings. Cuisenaire rods were devised in the 1920s and saw widespread use from the late 1950s.

In 1960, the University of Illinois initiated a classroom system based in linked computer terminals where students could access informational resources on a particular course while listening to the lectures that were recorded via some form of remotely linked device like a television or audio device.

In the mid 1960s Stanford University psychology professors Patrick Suppes and Richard C. Atkinson experimented with using computers to teach arithmetic and spelling via Teletypes to elementary school students in the Palo Alto Unified School District in California. Stanford's Education Program for Gifted Youth is descended from those early experiments. In 1963, Bernard Luskin installed the first computer in a community college for instruction. Working with Stanford and others he helped develop computer-assisted instruction. Working with the Rand Corporation, Luskin's landmark UCLA dissertation in 1970 analyzed obstacles to computer-assisted instruction.

Artistic portrait of Ivan Illich by Amano1.

In 1971, Ivan Illich published a hugely influential book called, *Deschooling Society*, in which he envisioned "learning webs" as a model for people to network the learning they needed. The 1970s and 1980s saw notable contributions in computer-based learning by Murray Turoff and Starr Roxanne Hiltz at the New Jersey Institute of Technology as well as developments at the University of Guelph in Canada. In 1976, Bernard Luskin launched Coastline Community College as a "college without walls" using television station KOCE-TV as a vehicle. In the UK the Council for Educational Technology supported the use of educational technology, in particular administering the government's National Development Programme in Computer Aided Learning (1973–77) and the Microelectronics Education Programme (1980–86).

By the mid-1980s, accessing course content become possible at many college libraries. In computer-based training (CBT) or computer-based learning (CBL), the learning interaction was between the student and computer drills or micro-world simulations.

Digitized communication and networking in education started in the mid-1980s. Educational institutions began to take advantage of the new medium by offering distance learning courses using computer networking for information. Early e-learning systems, based on computer-based learning/training often replicated autocratic teaching styles whereby the role of the e-learning system was assumed to be for transferring knowledge, as opposed to systems developed later based on computer supported collaborative learning (CSCL), which encouraged the shared development of knowledge.

Videoconferencing was an important forerunner to the educational technologies known today. This work was especially popular with Museum Education. Even in recent years, videoconferencing has risen in popularity to reach over 20,000 students across the United States and Canada in 2008-2009. Disadvantages of this form of educational technology are readily apparent: image and sound quality is often grainy or pixilated; videoconferencing requires setting up a type of mini-television studio within the museum for broadcast, space becomes an issue; and specialised equipment is required for both the provider and the participant.

The Open University in Britain and the University of British Columbia (where Web CT, now incorporated into Blackboard Inc., was first developed) began a revolution of using the Internet to deliver learning, making heavy use of web-based training, online distance learning and online discussion between students. Practitioners such as Harasim (1995) put heavy emphasis on the use of learning networks.

With the advent of World Wide Web in the 1990s, teachers embarked on the method using emerging technologies to employ multi-object oriented sites, which are text-based online virtual reality systems, to create course websites along with simple sets of instructions for its students.

By 1994, the first online high school had been founded. In 1997, Graziadei described criteria for evaluating products and developing technology-based courses include being portable, replicable, scalable, affordable, and having a high probability of long-term cost-effectiveness.

Improved Internet functionality enabled new schemes of communication with multimedia or webcams. The National Center for Education Statistics estimate the number of K-12 students enrolled in online distance learning programs increased by 65 percent from 2002 to 2005, with greater flexibility, ease of communication between teacher and student, and quick lecture and assignment feedback.

According to a 2008 study conducted by the U.S Department of Education, during the 2006-2007 academic year about 66% of postsecondary public and private schools participating in student financial aid programs offered some distance learning courses; records show 77% of enrollment in for-credit courses with an online component. In 2008, the Council of Europe passed a statement endorsing e-learning's potential to drive equality and education improvements across the EU.

Today, the prevailing paradigm is computer-mediated communication (CMC), where the primary interaction is between learners and instructors, mediated by the computer. CBT/CBL usually means individualized (self-study) learning, while CMC involves educator/tutor facilitation and requires scenarization of flexible learning activities. In addition, modern ICT provides education with tools for sustaining learning communities and associated knowledge management tasks.

Students growing up in this digital age have extensive exposure to a variety of media. Major high-tech companies such as Google, Verizon, Microsoft are funding schools to provide them the ability to teach their students through technology, which may lead to improved student performance.

THEORY

Various pedagogical perspectives or learning theories may be considered in designing and interacting with educational technology. E-learning theory examines these approaches. These theoretical perspectives are grouped into three main theoretical schools or philosophical frameworks: behaviorism, cognitivism and constructivism.

BEHAVIORISM

This theoretical framework was developed in the early 20th century based on animal learning experiments by Ivan Pavlov, Edward Thorndike, Edward C. Tolman, Clark L. Hull, and B.F. Skinner. Many psychologists used these results to develop theories of human learning, but modern educators generally see behaviorism as one aspect of a holistic synthesis.

B.F. Skinner wrote extensively on improvements of teaching based on his functional analysis of verbal behavior and wrote "The Technology of Teaching", an attempt to dispel the myths underlying contemporary education as well as promote his system he called programmed instruction. Ogden Lindsley developed a learning system, named Celeration, that was based on behavior analysis but that substantially differed from Keller's and Skinner's models.

COGNITIVISM

Cognitive science underwent significant change in the 1960s and 1970s. While retaining the empirical framework of behaviorism, cognitive psychology theories look beyond behavior to explain brain-based learning by considering how human memory works to promote learning. The Atkinson-Shiffrin memory model and Baddeley's working memory model were established as theoretical frameworks. Computer Science and Information Technology have had a major influence on Cognitive Science theory. The Cognitive concepts of working memory (formerly known as short term memory) and long term memory have been facilitated by research and technology from the field of Computer Science. Another major influence on the field of Cognitive Science is Noam Chomsky.

Today researchers are concentrating on topics like cognitive load, information processing and media psychology. These theoretical perspectives influence instructional design.

CONSTRUCTIVISM

Educational psychologists distinguish between several types of constructivism: individual (or psychological) constructivism, such as Piaget's theory of cognitive development, and social constructivism. This form of constructivism has a primary focus on how learners construct their own meaning from new information, as they interact with reality and with other learners who bring different perspectives. Constructivist learning environments require students to use their prior knowledge and experiences to formulate new, related, and/or adaptive concepts in learning (Termos, 2012). Under this framework the role of the teacher becomes that of a facilitator, providing guidance so that learners can construct their own knowledge. Constructivist educators must make sure that the prior learning experiences are appropriate and related to the concepts being taught. Jonassen (1997) suggests "well-structured" learning environments are useful for novice learners and that "ill-structured" environments are only useful for more advanced learners. Educators utilizing a constructivist perspective may emphasize an active learning environment that may incorporate learner centered problem based learning, project-based learning, and inquiry-based learning, ideally involving real-world scenarios, in which students are actively engaged in critical thinking activities.

PRACTICE

The extent to which e-learning assists or replaces other learning and teaching approaches is variable, ranging on a continuum from none to fully online distance learning. A variety of descriptive terms have been employed (somewhat inconsistently) to categorize the extent to which technology is used. For example, 'hybrid learning' or 'blended learning' may refer to classroom aids and laptops, or may refer to approaches in which traditional classroom time is reduced but not eliminated, and is replaced with some online learning. 'Distributed learning' may describe either the e-learning component of a hybrid approach, or fully online distance learning environments.

SYNCHRONOUS AND ASYNCHRONOUS

E-learning may either be synchronous or asynchronous. Synchronous learning occurs in real-time, with all participants interacting at the same time, while asynchronous learning is self-paced and allows participants to engage in the exchange of ideas or information without the dependency of other participants' involvement at the same time.

Synchronous learning refers to the exchange of ideas and information with one or more participants during the same period. Examples are face-to-face discussion, online real-time live teacher instruction and feedback, Skype conversations, and chat rooms or virtual classrooms where everyone is online and working collaboratively at the same time. Since students are working collaboratively, synchronized learning helps students create an open

mind because they have to listen and learn from their peers. Synchronized learning fosters online awareness and improves many students' writing skills.

Asynchronous learning may use technologies such as email, blogs, wikis, and discussion boards, as well as web-supported textbooks, hypertext documents, audio video courses, and social networking using web 2.0. At the professional educational level, training may include virtual operating rooms. Asynchronous learning is beneficial for students who have health problems or who have child care responsibilities. They have the opportunity to complete their work in a low stress environment and within a more flexible time frame. In *asynchronous* online courses, students proceed at their own pace. If they need to listen to a lecture a second time, or think about a question for a while, they may do so without fearing that they will hold back the rest of the class. Through online courses, students can earn their diplomas more quickly, or repeat failed courses without the embarrassment of being in a class with younger students. Students have access to an incredible variety of enrichment courses in online learning, and can participate in college courses, internships, sports, or work and still graduate with their class.

LINEAR LEARNING

Computer-Based Training (CBT) refers to self-paced learning activities delivered on a computer or handheld device such as a tablet or smartphone. CBT initially delivered content via CD-ROM, and typically presented content linearly, much like reading an online book or manual. For this reason, CBT is often used to teach static processes, such as using software or completing mathematical equations. Computer-based training is conceptually similar to web-based training (WBT) which are delivered via Internet using a web browser.

Assessing learning in a CBT is often by assessments that can be easily scored by a computer such as multiple choice questions, drag-and-drop, radio button, simulation or other interactive means. Assessments are easily scored and recorded via online software, providing immediate end-user feedback and completion status. Users are often able to print completion records in the form of certificates.

CBTs provide learning stimulus beyond traditional learning methodology from textbook, manual, or classroom-based instruction. CBTs can be a good alternative to printed learning materials since rich media, including videos or animations, can be embedded to enhance the learning.

However, CBTs pose some learning challenges. Typically, the creation of effective CBTs requires enormous resources. The software for developing CBTs (such as Flash or Adobe Director) is often more complex than a subject matter expert or teacher is able to use. The lack of human interaction can limit both the type of content that can be presented and the type of assessment that can be performed, and may need supplementation with online discussion or other interactive elements.

COLLABORATIVE LEARNING

Computer-supported Collaborative Learning (CSCL) uses instructional methods designed to encourage or require students to work together on learning tasks. CSCL is similar in concept to the terminology, "e-learning 2.0" and "networked collaborative learning" (NCL).

Collaborative learning is distinguishable from the traditional approach to instruction in which the instructor is the principal source of knowledge and skills. For example, the neologism "e-learning 1.0" refers to the direct transfer method in computer-based learning and training systems (CBL). In contrast to the linear delivery of content, often directly from the instructor's material, CSCL uses blogs, wikis, and cloud-based document portals (such as Google Docs and Dropbox). With technological Web 2.0 advances, sharing information between multiple people in a network has become much easier and use has increased.¹ One of the main reasons for its usage states that it is "a breeding ground for creative and engaging educational endeavors."²

Using Web 2.0 social tools in the classroom allows for students and teachers to work collaboratively, discuss ideas, and promote information. According to Sendall (2008), blogs, wikis, and social networking skills are found to be significantly useful in the classroom. After initial instruction on using the tools, students reported an increase in knowledge and comfort level for using Web 2.0 tools. The collaborative tools prepare students with technology skills necessary in today's workforce.

Locus of control remains an important consideration in successful engagement of e-learners. According to the work of Cassandra B. Whyte, the continuing attention to aspects of motivation and success in regard to e-learning should be kept in context and concert with other educational efforts. Information about motivational tendencies can help educators, psychologists, and technologists develop insights to help students perform better academically.

CLASSROOM 2.0

Classroom 2.0 refers to online multi-user virtual environments (MUVEs) that connect schools across geographical frontiers. Known as "eTwinning", computer-supported collaborative learning (CSCL) allows learners in one school to communicate with learners in another that they would not get to know otherwise, enhancing educational outcomes and cultural integration. Examples of classroom 2.0 applications are Blogger and Skype.

E-LEARNING 2.0

E-learning 2.0 is a type of Computer-Supported Collaborative Learning (CSCL) system that developed with the emergence of Web 2.0. From an e-learning 2.0 perspective, conventional e-learning systems were based on instructional packets, which were delivered to students using assignments. Assignments were evaluated by the teacher. In contrast, the new e-learning places increased emphasis on social learning and use of social

software such as blogs, wikis, podcasts and virtual worlds such as *Second Life*. This phenomenon has been referred to as Long Tail Learning

E-learning 2.0, in contrast to e-learning systems not based on CSCL, assumes that knowledge (as meaning and understanding) is socially constructed. Learning takes place through conversations about content and grounded interaction about problems and actions. Advocates of social learning claim that one of the best ways to learn something is to teach it to others.

In addition to virtual classroom environments, social networks have become an important part of E-learning 2.0. Social networks have been used to foster online learning communities around subjects as diverse as test preparation and language education. Mobile Assisted Language Learning (MALL) is the use of handheld computers or cell phones to assist in language learning. Traditional educators may not promote social networking unless they are communicating with their own colleagues.

Virtual Learning Environments (VLEs) and Personal Learning Environments (PLEs) provide an easy to use system for flexibly delivering learning materials, activities and support to students across an institution. For the administrator, a VLE provides a set of tools which allows course content and students to be managed efficiently and provide a single point of integration with student record systems.

MEDIA

A 2.5m teaching slide rule compared to a normal sized model

Educational media and tools can be used for:

- task structuring support: help with how to do a task (procedures and processes),
- access to knowledge bases (help user find information needed)

- alternate forms of knowledge representation (multiple representations of knowledge, e.g. video, audio, text, image, data)

Numerous types of physical technology are currently used: digital cameras, video cameras, interactive whiteboard tools, document cameras, electronic media, and LCD projectors. Combinations of these techniques include blogs, collaborative software, ePortfolios, and virtual classrooms.

AUDIO AND VIDEO

Radio offers a synchronous educational vehicle, while streaming audio over the internet with webcasts and podcasts can be asynchronous. Classroom microphones, often wireless, can enable learners and educators to interact more clearly.

Video technology has included VHS tapes and DVDs, as well as on-demand and synchronous methods with digital video via server or web-based options such as streamed video from YouTube, Teacher Tube, Skype, Adobe Connect, and webcams. Telecommuting can connect with speakers and other experts. Interactive digital video games are being used at K-12 and higher education institutions.

COMPUTERS, TABLETS AND MOBILE DEVICES

Teaching and learning online

Computers and tablets enable learners and educators to access websites as well as programs such as Microsoft Word, PowerPoint, PDF files, and images. Many mobile devices support m-learning.

Mobile devices such as clickers and smartphones can be used for interactive audience response feedback. Mobile learning can provide performance support for checking the time, setting reminders, retrieving worksheets, and instruction manuals.

OpenCourseWare (OCW) gives free public access to information used in undergraduate and graduate programs. Participating institutions are MIT and Harvard, Princeton, Stanford, University of Pennsylvania, and University of Michigan.

SOCIAL NETWORKS

Group webpages, blogs, wikis, and Twitter allow learners and educators to post thoughts, ideas, and comments on a website in an interactive learning environment. Social networking sites are virtual communities for people interested in a particular subject to communicate by voice, chat, instant message, video conference, or blogs. The National School Boards Association found that 96% of students with online access have used social networking technologies, and more than 50% talk online about schoolwork. Social networking encourages collaboration and engagement and can be a motivational tool for self-efficacy amongst students. Every student has his or her own learning requirements, and a Web 2.0 educational framework provides enough resources, learning styles, communication tools and flexibility to accommodate this diversity.

WEBCAMS

Webcams and webcasting have enabled creation of virtual classrooms and virtual learning environment.

WHITEBOARDS

Whiteboards predate tablets and other technological tools, but current interactive whiteboards and smartboards allow learners and instructors to write on the touch screen. The screen markup can be on either a blank whiteboard or any computer screen content. Depending on permission settings, this visual learning can be interactive and participatory, including writing and manipulating images on the interactive whiteboard.

SCREENCASTING

Screencasting allows users to share their screens directly from their browser and make the video available online so that other viewers can stream the video directly. The presenter thus has the ability to show their ideas and flow of thoughts rather than simply explain them as simple text content. In combination with audio and video, the educator can mimic the one-on-one experience of the classroom and deliver clear, complete instructions. Learners have an ability to pause and rewind, to review at their own pace, something a classroom cannot always offer.

VIRTUAL CLASSROOM

A Virtual Learning Environment (VLE), also known as a learning platform, simulates a virtual classroom or meetings by simultaneously mixing several communication technologies. For example, web conferencing software such as GoToTraining, WebEx Training or Adobe Connect enables students and instructors to communicate with each other via webcam, microphone, and real-time chatting in a group setting. Participants can raise hands, answer polls or take tests. Students are able to whiteboard and screencast when given rights by the instructor, who sets permission levels for text notes, microphone rights and mouse control. Also in Adobe Connect the teacher can use sermonettes, this is a

lecture where the professor uses a green screen that shows what he/she is teaching, with notes or PowerPoint.

A virtual classroom provides the opportunity for students to receive direct instruction from a qualified teacher in an interactive environment. Learners can have direct and immediate access to their instructor for instant feedback and direction. The virtual classroom provides a structured schedule of classes, which can be helpful for students who may find the freedom of asynchronous learning to be overwhelming. In addition, the virtual classroom provides a social learning environment that replicates the traditional "brick and mortar" classroom. Most virtual classroom applications provide a recording feature. Each class is recorded and stored on a server, which allows for instant playback of any class over the course of the school year. This can be extremely useful for students to retrieve missed material or review concepts for an upcoming exam. Parents and auditors have the conceptual ability to monitor any classroom to ensure that they are satisfied with the education the learner is receiving.

In higher education especially, a virtual learning environment (VLE) is sometimes combined with a management information system (MIS) to create a managed learning environment) in which all aspects of a course are handled through a consistent user interface throughout the institution. Physical universities and newer online-only colleges offer select academic degrees and certificate programs via the Internet. Some programs require students to attend some campus classes or orientations, but many are delivered completely online. Several universities offer online student support services, such as online advising and registration, e-counseling, online textbook purchases, student governments and student newspapers. Augmented reality (AR) provides students and teachers the opportunity to create layers of digital information, that includes both virtual world and real world elements, to interact with in real time. There are already a variety of apps which offer a lot of variations and possibilities.

LEARNING MANAGEMENT SYSTEM

A Learning Management System (LMS) is software used for delivering, tracking and managing training and education. For example, an LMS tracks attendance, time on task, and student progress. Educators can post announcements, grade assignments, check on course activity, and participate in class discussions. Students can submit their work, read and respond to discussion questions, and take quizzes. An LMS may allow teachers, administrators, students, and permitted additional parties (such as parents if appropriate) to track various metrics. LMSs range from systems for managing training/educational records to software for distributing courses over the Internet and offering features for online collaboration. The creation and maintenance of comprehensive learning content requires substantial initial and ongoing investments of human labor. Effective translation into other languages and cultural contexts requires even more investment by knowledgeable personnel.

Internet-based learning management systems include Canvas, Blackboard Inc. and Moodle. These types of LMS allow educators to run a learning system partially or fully

online, asynchronously or synchronously. Blackboard can be used for K-12 education, Higher Education, Business, and Government collaboration. Moodle is a free-to-download Open Source Course Management System that provides blended learning opportunities as well as platforms for distance learning courses. Eliademy is a free cloud based Course Management System that provides blended learning opportunities as well as platforms for distance learning courses.

LEARNING CONTENT MANAGEMENT SYSTEM

A Learning Content Management System (LCMS) is software for author content (courses, reusable content objects). An LCMS may be solely dedicated to producing and publishing content that is hosted on an LMS, or it can host the content itself. The Aviation Industry Computer-Based Training Committee (AICC) specification provides support for content that is hosted separately from the LMS.

A recent trend in LCMSs is to address this issue through crowdsourcing (cf.SlideWiki).

COMPUTER-AIDED ASSESSMENT

Computer-aided assessment (e-assessment) ranges from automated multiple-choice tests to more sophisticated systems. With some systems, feedback can be geared towards a student's specific mistakes or the computer can navigate the student through a series of questions adapting to what the student appears to have learned or not learned. Formative assessment sifts out the incorrect answers, and these questions are then explained by the teacher. The learner then practices with slight variations of the sifted out questions. The process is completed by summative assessment using a new set of questions that only cover the topics previously taught.

ELECTRONIC PERFORMANCE SUPPORT SYSTEM

An Electronic Performance Support System (EPSS) is, according to Barry Raybould, "a computer-based system that improves worker productivity by providing on-the-job access to integrated information, advice, and learning experiences". Gloria Gery defines it as "an integrated electronic environment that is available to and easily accessible by each employee and is structured to provide immediate, individualized on-line access to the full range of information, software, guidance, advice and assistance, data, images, tools, and assessment and monitoring systems to permit job performance with minimal support and intervention by others."

LEARNING OBJECTS

CONTENT

Content and design architecture issues include pedagogy and learning object re-use. One approach looks at five aspects:

- Fact - unique data (e.g. symbols for Excel formula, or the parts that make up a learning objective)
- Concept - a category that includes multiple examples (e.g. Excel formulas, or the various types/theories of Instructional Design)
- Process - a flow of events or activities (e.g. how a spreadsheet works, or the five phases in ADDIE)
- Procedure - step-by-step task (e.g. entering a formula into a spreadsheet, or the steps that should be followed within a phase in ADDIE)
- Strategic principle - task performed by adapting guidelines (e.g. doing a financial projection in a spreadsheet, or using a framework for designing learning environments)

PEDAGOGICAL ELEMENTS

Pedagogical elements are defined as structures or units of educational material. They are the educational content that is to be delivered. These units are independent of format, meaning that although the unit may be delivered in various ways, the pedagogical structures themselves are not the textbook, web page, video conference, Podcast, lesson, assignment, multiple choice question, quiz, discussion group or a case study, all of which are possible methods of delivery.

LEARNING OBJECTS STANDARDS

Much effort has been put into the technical reuse of electronically based teaching materials and in particular creating or re-using learning objects. These are self-contained units that are properly tagged with keywords, or other metadata, and often stored in an XML file format. Creating a course requires putting together a sequence of learning objects. There are both proprietary and open, non-commercial and commercial, peer-reviewed repositories of learning objects such as the Merlot repository. Sharable Content Object Reference Model (SCORM) is a collection of standards and specifications that applies to certain web-based e-learning. Other specifications such as Schools Framework allow for the transporting of learning objects, or for categorizing metadata (LOM).

SETTINGS

PRESCHOOL

Various forms of electronic media are a feature of preschool life. Although parents report a positive experience, the impact of such use has not been systematically assessed.

The age when a given child might start using a particular technology such as a cellphone or computer might depend on matching a technological resource to the recipient's developmental capabilities, such as the age-anticipated stages labeled by Swiss psychologist, Jean Piaget. Parameters, such as age-appropriateness, coherence with sought-after values, and concurrent entertainment and educational aspects, have been suggested for choosing media.

K-12

Teacher showing primary school students how to work a program at a primary school in Santa Fe, Mexico City.

E-learning is utilized by public K–12 schools in the United States as well as private schools. Some e-learning environments take place in a traditional classroom, others allow students to attend classes from home or other locations. There are several states that are utilizing virtual school platforms for e-learning across the country that continue to increase. Virtual school enables students to log into synchronous learning or asynchronous learning courses anywhere there is an internet connection.

E-learning is increasingly being utilized by students who may not want to go to traditional brick and mortar schools due to severe allergies or other medical issues, fear of school violence and school bullying and students whose parents would like to homeschool but do not feel qualified. Online schools create a haven for students to receive a quality education while almost completely avoiding these common problems. Online charter schools also often are not limited by location, income level or class size in the way brick and mortar charter schools are.

E-learning also has been rising as a supplement to the traditional classroom. Students with special talents or interests outside of the available curricula use e-learning to advance their skills or exceed grade restrictions. Some online institutions connect students with instructors via web conference technology to form a digital classroom. National private schools are also available online. These provide the benefits of e-learning to students in states where charter online schools are not available. They also may allow students greater flexibility and exemption from state testing. Virtual education in K-12 schooling often refers to virtual schools, and in higher education to virtual universities. Virtual schools are “cybercharter schools” with innovative administrative models and course delivery technology.

HIGHER EDUCATION

Online college course enrollment has seen a 29% increase in enrollment with nearly one third of all college students, or an estimated 6.7 million students are currently enrolled in

online classes. In 2009, 44 percent of post-secondary students in the USA were taking some or all of their courses online, which was projected to rise to 81 percent by 2014.

Although a large proportion of for-profit higher education institutions now offer online classes, only about half of private, non-profit schools do so. Private institutions may become more involved with on-line presentations as the costs decrease. Properly trained staff must also be hired to work with students online. These staff members need to understand the content area, and also be highly trained in the use of the computer and Internet. Online education is rapidly increasing, and online doctoral programs have even developed at leading research universities.

Although Massive Open Online Courses (MOOCs) may have limitations that preclude them from fully replacing college education, such programs have significantly expanded. MIT, Stanford and Princeton University offer classes to a global audience, but not for college credit. University-level programs, like edX founded by Massachusetts Institute of Technology and Harvard University, offer wide range of disciplines at no charge. MOOCs have not had a significant impact on higher education and declined after the initial expansion, but are expected to remain in some form.

Private organizations also offer classes, such as Udacity, with free computer science classes, and Khan Academy, with over 3,900 free micro-lectures available via YouTube. Distributed open collaborative course (DOCC) sees itself as a counter-movement to MOOC, emphasizing decentralized teaching. University of the People is a non-profit accredited online university. Coursera offers online courses. According to *Fortune* magazine, over a million people worldwide have enrolled in free online courses.

CORPORATE AND PROFESSIONAL

Companies with large and spread out distribution chains use e-learning to educate sales staff and customers about the latest product developments. Continuing Professional Development (CPD) can deliver regulatory compliance updates and staff development of valuable workplace skills.

PUBLIC HEALTH

There is an important need for recent, reliable, and high-quality health information to be made available to the public as well as in summarized form for public health providers. Providers have indicated the need for automatic notification of the latest research, a single searchable portal of information, and access to Grey literature. The Maternal and Child Health (MCH) Library is funded by the U.S. Maternal and Child Health Bureau to screen the latest research and develop automatic notifications to providers through the MCH Alert. Another application in public health is the development of MHealth (use of mobile telecommunication and multimedia into global public health). MHealth has been used to promote prenatal and newborn services, with positive outcomes. In addition, "Health systems have implemented mHealth programs to facilitate emergency medical responses, point-of-care support, health promotion and data collection." In low and middle income

countries, MHealth is most frequently used as one-way text messages or phone reminders to promote treatment adherence and gather data.

ADHD

There has also been a growing interest in e-learning as a beneficial educational method for students with Attention Deficit Hyperactivity Disorder (ADHD). With the growing popularity in e-learning among K-12 and higher education, the opportunity to take online classes is becoming increasingly important for students of all ages. However, students with ADHD and special needs face different learning demands compared to the typical developing learner. This is especially significant considering the dramatic rise in ADHD diagnoses in the last decade among both children and adults. Compared to the traditional face-to-face classroom, e-learning and virtual classrooms require a higher level of executive functions, which is the primary deficit associated with ADHD.

Lorraine Wolf lists 12 executive function skills necessary for students to succeed in postsecondary education: plan, set goals, organize, initiate, sustain attention/effort, flexibility, monitor, use feedback, structure, manage time, manage materials, and follow through. These skills, along with strong independent and self-regulated learning, are especially pronounced in the online environment and as many ADHD students suffer from a deficit in one or more of these executive functions, this presents a significant challenge and accessibility barrier to the current e-learning approach.

Some have noted that current e-learning models are moving towards applying a constructivism learning theory that emphasizes a learner-centered environment and postulates that everyone has the ability to construct their own knowledge and meaning through a process of problem solving and discovery. However, some principles of constructivism may not be appropriate for ADHD learners; these principles include active learning, self-monitoring, motivation, and strong focus.

Despite the limitations, students with special needs, including ADHD, have expressed an overall enthusiasm for e-learning and have identified a number e-learning benefits, including: availability of online course notes, materials and additional resources; the ability to work at an independent pace and spend extra time spent formulating thoughtful responses in class discussions; help in understanding course lecture/content; ability to review lectures multiple times; and enhanced access to and communication with the course instructor.

DISABILITIES

Design of e-learning platforms to enable access has received attention from several directions, including the World Wide Web Consortium's Web Accessibility Initiative (WAI). WAI provides universal formatting standards for websites so they can remain accessible to people with disabilities. For example, developing or adopting e-learning material can enable accessibility for people with visual impairment. The Perkins School for the Blind offers learning resources tailored for the visually impaired, including webcasts, webinars,

downloadable science activities, and an online library that has access to over 40,000 resource materials on blindness and deaf blindness.

ANONYMITY, PSEUDONYMITY, OR REAL IDENTITY

Educational technology, particularly in online learning environments, can allow students to use a pseudonym or anonymous identity during classroom communication. Advantages in anonymizing race, age, and gender are increased student participation and increased cross-cultural communication. Risks include increased cyberbullying, and aggressive or hostile language.

BENEFITS

Effective technology use deploys multiple evidence-based strategies concurrently (e.g. adaptive content, frequent testing, immediate feedback, etc.), as do effective teachers. Using computers or other forms of technology can give students practice on core content and skills while the teacher can work with others, conduct assessments, or perform other tasks.

Modern educational technology can improve access to education, including full degree programs. It enables better integration for non-full-time students, particularly in continuing education, and improved interactions between students and instructors. Learning material can be used for long distance learning and are accessible to a wider audience. Course materials are easy to access. In 2010, 70.3% of American family households had access to the internet. In 2013, according to Canadian Radio Television and Telecommunications Commission Canada, 79% of homes have access to the internet. Students can access and engage with numerous online resources at home. Using online resources such as Khan Academy or TED Talks can help students spend more time on specific aspects of what they may be learning in school, but at home. Schools like MIT have made certain course materials free online. Although some aspects of a classroom setting are missed by using these resources, they are helpful tools to add additional support to the educational system. The necessity to pay for transport to the educational facility is removed.

According to James Kulik, who studies the effectiveness of computers used for instruction, students usually learn more in less time when receiving computer-based instruction and they like classes more and develop more positive attitudes toward computers in computer-based classes. Students can independently solve problems. There are no intrinsic age-based restrictions on difficulty level, i.e. students can go at their own pace. Students editing their written work on word processors improve the quality of their writing. According to some studies, the students are better at critiquing and editing written work that is exchanged over a computer network with students they know. Studies completed in "computer intensive" settings found increases in student-centric, cooperative and higher order learning, writing skills, problem solving, and using technology. In addition, attitudes toward technology as a learning tool by parents, students and teachers are also improved.

Employers' acceptance of online education has risen over time. More than 50% of human resource managers SHRM surveyed for an August 2010 report said that if two candidates with the same level of experience were applying for a job, it would not have any kind of effect whether the candidate's obtained degree was acquired through an online or a traditional school. Seventy-nine percent said they had employed a candidate with an online degree in the past 12 months. However 66% said candidates who get degrees online were not seen as positively as a job applicant with traditional degrees.

DISADVANTAGES

Many States spend large sums of money on technology. However, no state looks at technology Return On Investment (ROI) to connect expenditures on technology with improved student outcomes.

New technologies are frequently accompanied by unrealistic hype and promise regarding their transformative power to change education for the better or in allowing better educational opportunities to reach the masses. Examples include silent film, broadcast radio, and television, none of which have maintained much of a foothold in the daily practices of mainstream, formal education. Technology, in and of itself, does not necessarily result in fundamental improvements to educational practice. The focus needs to be on the learner's interaction with technology—not the technology itself. It needs to be recognized as “ecological” rather than “additive” or “subtractive”. In this ecological change, one significant change will create total change.

According to Branford *et al*, “technology does not guarantee effective learning” and inappropriate use of technology can even hinder it. A University of Washington study of infant vocabulary shows that it is slipping due to educational baby DVDs. Published in the *Journal of Pediatrics*, a 2007 University of Washington study on the vocabulary of babies surveyed over 1,000 parents in Washington and Minnesota. The study found that for every one hour that babies 8–16 months of age watched DVDs and Videos they knew 6-8 fewer of 90 common baby words than the babies that did not watch them. Andrew Meltzoff, a surveyor in this study states that the result makes sense, that if the baby's 'alert time' is spent in front of DVDs and TV, instead of with people speaking, the babies are not going to get the same linguistic experience. Dr. Dimitri Chistakis, another surveyor reported that the evidence is mounting that baby DVDs are of no value and may be harmful.

Adaptive instructional materials tailor questions to each student's ability and calculate their scores, but this encourages students to work individually rather than socially or collaboratively (Kruse, 2013). Social relationships are important but high-tech environments may compromise the balance of trust, care and respect between teacher and student

Massively Open Online Courses (MOOCs), although quite popular in discussions of technology and education in developed countries (more so in US), are not a major concern in most developing or low-income countries. One of the stated goals of MOOCs is to provide less fortunate populations (i.e., in developing countries) an opportunity to

experience courses with US-style content and structure. However, research shows only 3% of the registrants are from low-income countries and although many courses have thousands of registered students only 5-10% of them complete the course. MOOCs also implies that certain curriculum and teaching methods are superior and this could eventually wash over (or possibly washing out) local educational institutions, cultural norms and educational traditions

OVER-STIMULATION

Electronic devices such as cellphones and computers facilitate rapid access to a stream of sources, each of which may receive cursory attention. Michel Rich, an associate professor at Harvard Medical School and executive director of the center on Media and Child Health in Boston, said of the digital generation, "Their brains are rewarded not for staying on task, but for jumping to the next thing. The worry is we're raising a generation of kids in front of screens whose brains are going to be wired differently." Students have always faced distractions; computers and cellphones are a particular challenge because the stream of data can interfere with focusing and learning. Although these technologies affect adults too, young people may be more influenced by it as their developing brains can easily become habituated to switching tasks and become unaccustomed to sustaining attention. Too much information, coming too rapidly, can overwhelm thinking.

Technology is "rapidly and profoundly altering our brains." High exposure levels stimulate brain cell alteration and release neurotransmitters, which causes the strengthening of some neural pathways and weakening of others. This leads to heightened stress levels on the brain that, at first, boost energy levels, but, over time, actually augment memory, impair cognition, lead to depression, alter the neural circuitry of the hippocampus, amygdala and prefrontal cortex. These are the brain regions that control mood and thought. If unchecked, the underlying structure of the brain could be altered. Overstimulation due to technology may begin too young. When children are exposed before the age of seven, important developmental tasks may be delayed, and bad learning habits might develop, which "deprives children of the exploration and play that they need to develop."

SOCIOCULTURAL CRITICISM

According to Lai, "the learning environment is a complex system where the interplay and interactions of many things impact the outcome of learning." When technology is brought into an educational setting, the pedagogical setting changes in that technology-driven teaching can change the entire meaning of an activity without adequate research validation. If technology monopolizes an activity, students can begin to develop the sense that "life would scarcely be thinkable without technology."

Leo Marx considered the word "technology" itself as problematic, susceptible to reification and "phantom objectivity", which conceals its fundamental nature as something that is only valuable insofar as it benefits the human condition. Technology ultimately comes down to affecting the relations between people, but this notion is obfuscated when

technology is treated as an abstract notion devoid of good and evil. Langdon Winner makes a similar point by arguing that the underdevelopment of the philosophy of technology leaves us with an overly simplistic reduction in our discourse to the supposedly dichotomous notions of the “making” versus the “uses” of new technologies, and that a narrow focus on “use” leads us to believe that all technologies are neutral in moral standing. These critiques would have us ask not, “How do we maximize the role or advancement of technology in education?”, but, rather, “What are the social and human consequences of adopting any particular technology?”

Winner viewed technology as a “form of life” that not only aids human activity, but that also represents a powerful force in reshaping that activity and its meaning. For example, the use of robots in the industrial workplace may increase productivity, but they also radically change the process of production itself, thereby redefining what is meant by “work” in such a setting. In education, standardized testing has arguably redefined the notions of learning and assessment. We rarely explicitly reflect on how strange a notion it is that a number between, say, 0 and 100 could accurately reflect a person’s knowledge about the world. According to Winner, the recurring patterns in everyday life tend to become an unconscious process that we learn to take for granted. Winner writes, By far the greatest latitude of choice exists the very first time a particular instrument, system, or technique is introduced. Because choices tend to become strongly fixed in material equipment, economic investment, and social habit, the original flexibility vanishes for all practical purposes once the initial commitments are made. In that sense technological innovations are similar to legislative acts or political foundations that establish a framework for public order that will endure over many generations. (*p. 29*)

When adopting new technologies, there may be one best chance to “get it right.” Seymour Papert (*p. 32*) points out a good example of a (bad) choice that has become strongly fixed in social habit and material equipment: our “choice” to use the QWERTY keyboard. The QWERTY arrangement of letters on the keyboard was originally chosen, not because it was the most efficient for typing, but because early typewriters were prone to jam when adjacent keys were struck in quick succession. Now that typing has become a digital process, this is no longer an issue, but the QWERTY arrangement lives on as a social habit, one that is very difficult to change. Neil Postman endorsed the notion that technology impacts human cultures, including the culture of classrooms, and that this is a consideration even more important than considering the efficiency of a new technology as a tool for teaching. Regarding the computer’s impact on education, Postman writes (*p. 19*): What we need to consider about the computer has nothing to do with its efficiency as a teaching tool. We need to know in what ways it is altering our conception of learning, and how in conjunction with television, it undermines the old idea of school.

DIGITAL DIVIDE

The concept of the digital divide is a gap between those who have access to digital technologies and those who do not. Access may be associated with age, gender, socio-economic status, education, income, ethnicity, and geography.

TEACHER TRAINING

Teacher training ensures effective integration of classroom technology. The current school curriculum tends to guide teachers in training students to be autonomous problem solvers. This has become a significant barrier to effective training because the traditional methods of teaching have clashed with what is now expected in the present workplace. Today's students in the workplace are increasingly being asked to work in teams, drawing on different sets of expertise, and collaborating to solve problem. These experiences are not highly centered on in the traditional classroom, but are twenty-first century skills that can be attained through the incorporation and engagement with technology. Changes in instruction and use of technology can also promote a higher level of learning among students with different types of intelligence. Technology is not the end goal of education, but rather a means by which it can be accomplished, educators must have a good grasp of the technology being used and its advantages over more traditional methods. If there is a lack in either of these areas, technology be a hindrance rather than benefit to teaching.

The evolving nature of technology may unsettle teachers who may experience themselves as perpetual novices. The ways in which teachers are taught to use technology is also outdated because the primary focus of training is on computer literacy, rather than the deeper, more essential understanding and mastery of technology for information processing, communication, and problem solving. New resources have to be designed and distributed whenever the technological platform has been changed. However, finding quality materials to support classroom objectives after such changes is often difficult. Random professional development days are inadequate.

Teachers may not feel the need to change the traditional education system because it has been successful in the past. This does not necessarily mean it is the right way to teach for the current and future generations. However, learning styles and the methods of collecting information have evolved, and "students often feel locked out of the worlds described in their textbooks through the depersonalized and abstract prose used to describe them".

ASSESSMENT

There are two distinct issues of assessment: the assessment *of* educational technology and assessment *with* technology.

EXPENDITURE

The five key sectors of the e-learning industry are consulting, content, technologies, services and support. Worldwide, e-learning was estimated in 2000 to be over \$48 billion according to conservative estimates. Commercial growth has been brisk. In 2014, the worldwide commercial market activity was estimated at \$6 billion venture capital over the past five years,³⁸ with self-paced learning generating \$35.6 billion in 2011.⁴ North American e-learning generated \$23.3 billion in revenue in 2013, with a 9% growth rate in cloud based authoring tools and learning platforms.

CAREERS

Educational technologists and psychologists apply basic educational and psychological research into an evidence-based applied science (or a technology) of learning or instruction. In research, these professions typically require a graduate degree (Master's, Doctorate, Ph.D., or D.Phil.) in a field related to educational psychology, educational media, experimental psychology, cognitive psychology or, more purely, in the fields of Educational, Instructional or Human Performance Technology or Instructional design. In industry, educational technology is utilized to train students and employees by a wide range of learning and communication practitioners, including instructional designers, technical trainers, technical communication and professional communication specialists, technical writers, and of course primary school and college teachers of all levels. The transformation of educational technology from a cottage industry to a profession is discussed by Shurville et al.

Chapter 14

EDUCATION THEORY

Education Theory seeks to know, understand and prescribe educational policy and practice. Education theory includes many topics, such as pedagogy, andragogy, curriculum, learning, and education policy, organization and leadership; and educational thought is informed by many disciplines, such as history, philosophy, sociology, and psychology.

For example, a cultural theory of education considers how education occurs through the totality of culture, including prisons, households, and religious institutions as well as schools. Other examples are the behaviorist theory of education that comes from educational psychology and the functionalist theory of education that comes from sociology of education.

The earliest known attempts to understand education in Europe were by classical Greek philosophers and sophists, but there is also evidence of contemporary (or even preceding) discussions among Arabic, Indian, and Chinese scholars.

EDUCATIONAL THOUGHT

Educational thought is not necessarily concerned with the construction of theories as much as it is the "reflective examination of educational issues and problems from the perspective of diverse disciplines."

NORMATIVE THEORIES OF EDUCATION

Normative theories of education provide the norms, goals, and standards of education.

EDUCATIONAL PHILOSOPHIES

"Normative philosophies or theories of education may make use of the results of [philosophical thought] and of factual inquiries about human beings and the psychology of learning, but in any case they propound views about what education should be, what dispositions it should cultivate, why it ought to cultivate them, how and in whom it should do so, and what forms it should take. In a full-fledged philosophical normative theory of education, besides analysis of the sorts described, there will normally be propositions of the following kinds: 1. Basic normative premises about what is good or right; 2. Basic factual premises about humanity and the world; 3. Conclusions, based on these two kinds of premises, about the dispositions education should foster; 4. Further factual premises about such things as the psychology of learning and methods of teaching; and 5. Further conclusions about such things as the methods that education should use."

Examples of the purpose of schools include: develop reasoning about perennial questions, master the methods of scientific inquiry, cultivate the intellect, create change agents, develop spirituality, and model a democratic society :

Common educational philosophies include: educational perennialism, educational progressivism, educational essentialism, critical pedagogy, Montessori education, Waldorf education, and democratic education.

CURRICULUM THEORY

Normative theories of curriculum aim to "describe, or set norms, for conditions surrounding many of the concepts and constructs" that define curriculum. These normative propositions differ from those above in that normative curriculum theory is not necessarily untestable. A central question asked by normative curriculum theory is: given a particular educational philosophy, what is worth knowing and why? Some examples are: a deep understanding of the Great Books, direct experiences driven by student interest, a superficial understanding of a wide range knowledge (e.g., Core knowledge), social and community problems and issues, knowledge and understanding specific to cultures and their achievements (e.g., African-Centered Education)

FEMINIST EDUCATIONAL THEORY

BACKGROUND

Some scholars, such as Robyn Wiegman, argue that, "academic feminism is perhaps the most successful institutionalizing project of its generation, with more full-time faculty positions and new doctoral degree programs emerging each year in the field it inaugurated, Women's Studies". Feminist educational theory stems from four key tenets, supported by empirical data based on surveys of feminist educators. The first tenet of feminist educational theory is, "Creation of participatory classroom communities". Participatory classroom communities often are smaller classes built around discussion and student involvement. The second tenet is, "Validation of personal experience". Classrooms in which validation of personal experience occur often are focused around students providing their own insights and experiences in group discussion, rather than relying exclusively on the insight of the educator. The third tenet is, "Encouragement of social understanding and activism". This tenet is generally actualized by classrooms discussing and reading about social and societal aspects that students may not be aware of, along with breeding student self-efficacy. The fourth and final tenet of feminist education is, "Development of critical thinking skills/open-mindedness". Classrooms actively engaging in this tenet encourage students to think for themselves and prompt them to move beyond their comfort zones, working outside the bounds of the traditional lecture-based classroom. Though these tenets at times overlap, they combine to provide the basis for modern feminist educational theory, and are supported by a majority of feminist educators.

Feminist educational theory derives from the feminist movement, particularly that of the early 1970s, which prominent feminist bell hooks describes as, “a movement to end sexism, sexist exploitation, and oppression”. Academic feminist Robyn Wiegman recalls that, “In the early seventies, feminism in the U.S. academy was less an organized entity than a set of practices: an ensemble of courses listed on bulletin boards often taught for free by faculty and community leaders”. While feminism traditionally existed outside of the institutionalization of schools (particularly universities), feminist education has gradually taken hold in the last few decades and has gained a foothold in institutionalized educational bodies. “Once fledgling programs have become departments, and faculty have been hired and tenured with full-time commitments”.

OPPOSITION

Opposition to feminist educational theory comes from both those who oppose feminism in general and feminist who oppose feminist educational theory in particular. Critics of feminist educational theory argue against the four basic tenants of the theory, “[contesting] both their legitimacy and their implementation”. Lewis Lehrman particularly describes feminist educational ideology as, “... ‘therapeutic pedagogy’ that substitutes an ‘overriding’ (and detrimental) value on participatory interaction for the expertise of the faculty” (Hoffman). Lehrman argues that the feminist educational tenants of participatory experience and validation of person experience hinder education by limiting and inhibiting the educator’s ability to share his or her knowledge, learned through years of education and experience.

Others challenge the legitimacy of feminist educational theory, arguing that it is not unique and is instead a sect of liberatory education. Even feminist educational scholars such as Frances Hoffmann and Jayne Stake are forced to concede that, “Feminist pedagogy shared intellectual and political roots with the movements comprising the liberatory education agenda of the past 30 years”. These liberatory attempts at the democratization of classrooms demonstrate a growth in liberatory education philosophy that some argue feminist educational theory simply piggybacks off of.

The harshest critiques of feminist educational theory often come from feminists themselves. Feminist scholar Robyn Wiegman argues against feminist education in her article “Academic Feminism against Itself,” arguing that feminist educational ideology has abandoned the intersectionality of feminism in many cases, and has also focused exclusively on present content with a singular perspective. Wiegman refers to feminist scholar James Newman’s arguments, centered around the idea that, “When we fail... to challenge both students and ourselves to theorize alterity as an issue of change over time as well as of geographic distance, ethnic difference, and sexual choice, we repress... not only the ‘thickness’ of historical difference itself, but also... our (self) implication in a narrative of progress whose hero(in)es inhabit only the present”. Newman (and Wiegman) believe that this presentist ideology imbued within modern academic feminism creates an environment breeding antifeminist ideologies, most importantly an abandonment of the study of difference, integral to feminist ideology. Wiegman believes that feminist

educational theory does a great disservice to the feminist movement, while failing to instill the critical thinking and social awareness that feminist educational theory is intended to.

SUPPORT

There are countless supporters of feminist education as well, many of whom are educators or students. Student-turned-professor Becky Ropers-Huilman recounts one of her positive experiences with feminist education from the student perspective, explaining that she, "... felt very 'in charge' of [her] own learning experiences," and, "... was not being graded-or degraded" while "... [completing] the majority of the assigned work for the class (and additional work that [she] thought would add to class discussion)," all while, "... [regarding] the teacher's feedback on [her] participation as one perspective, rather than the perspective". Ropers experienced a working feminist classroom that successfully motivated students to go above and beyond, succeeding in generating self-efficacy and caring in the classroom. When Ropers became a teacher herself, she embraced feminist educational theory, noting that, "[Teachers] have an obligation as the ones who are vested with an assumed power, even if that power is easily and regularly disrupted, to assess and address the effects that it is having in our classrooms". Ropers firmly believes that educators have a duty to address feminist concepts such as the use and flow of power within the classroom, and strongly believes in the potential of feminist educational theory to create positive learning experiences for students and teachers as she has personally experienced.

Professor Becky Ropers-Huilman also celebrates the feminist classroom's inclusivity, noting that in a feminist classroom, "in which power is used to care about, for, and with others... educational participants can shape practices aimed at creating an inclusive society that discovers and utilizes the potential of its actors". Ropers believes that a feminist classroom carries the ability to greatly influence the society as a whole, promoting understanding, caring, and inclusivity. Ropers actively engages in feminist education in her classes, focusing on concepts such as active learning and critical thinking while attempting to demonstrate and engage in caring behavior and atypical classroom settings, similar to many other feminist educators.

Leading feminist scholar bell hooks argues for the incorporation of feminism into all aspects of society, including education, in her book *Feminism is for Everybody*. hooks notes that, "Everything [people] know about feminism has come into their lives thirdhand". hooks believes that education offers a counter to the, "... wongminded notion of feminist movement which implied it was anti-male". hooks cites feminism's negative connotations as major inhibitors to the spread and adoption of feminist ideologies. However, feminist education has seen tremendous growth in adoption in the past few decades, despite the negative connotations of its parent movement.

DESCRIPTIVE THEORIES OF EDUCATION

Descriptive theories of education provide descriptions or explanations of the processes of education.

CURRICULUM THEORY

Descriptive theories of curriculum explain how curricula "benefit or harm all publics it touches".

The term hidden curriculum describes that which is learned simply by being in a learning environment. For example, a student in a teacher-led classroom is learning submission. The hidden curriculum is not necessarily intentional.

INSTRUCTIONAL THEORY

Instructional theories focus on the methods of instruction for teaching curricula. Theories include the methods of: autonomous learning, coyote teaching, inquiry-based instruction, lecture, maturationism, socratic method, outcome-based education, taking children seriously, transformative learning

THE NATURE OF THE LEARNER AND OF LEARNING

PHILOSOPHICAL ANTHROPOLOGY

Philosophical anthropology is the philosophical study of human nature. In terms of learning, examples of descriptive theories of the learner are: a mind, soul, and spirit capable of emulating the Absolute Mind (Idealism); an orderly, sensing, and rational being capable of understanding the world of things (Realism), a rational being with a soul modeled after God and who comes to know God through reason and revelation (Neo-Thomism), an evolving and active being capable of interacting with the environment (Pragmatism), a fundamentally free and individual being who is capable of being authentic through the making of and taking responsibility for choices (Existentialism). Philosophical concepts for the process of education include *Bildung* and *paideia*.

EDUCATIONAL PSYCHOLOGY

Educational psychology is an empirical science that provides descriptive theories of how people learn. Examples of theories of education in psychology are: constructivism, behaviorism, cognitivism, and motivational theory

EDUCATIONAL NEUROSCIENCE

Educational neuroscience is an emerging field that brings together researchers in diverse disciplines to explore the interactions between biological processes and education.

SOCIOLOGY OF EDUCATION

The sociology of education is the study of how public institutions and individual experiences affect education and its outcomes. It is most concerned with the public schooling systems of modern industrial societies, including the expansion of higher,

further, adult, and continuing education. Examples of theories of education from sociology include: functionalism, conflict theory, social efficiency, and social mobility.

EDUCATIONAL ANTHROPOLOGY

Educational anthropology is a sub-field of anthropology and is widely associated with the pioneering work of George Spindler. As the name would suggest, the focus of educational anthropology is obviously on education, although an anthropological approach to education tends to focus on the cultural aspects of education, including informal as well as formal education. As education involves understandings of who we are, it is not surprising that the single most recognized dictum of educational anthropology is that the field is centrally concerned with cultural transmission. Cultural transmission involves the transfer of a sense of identity between generations, sometimes known as enculturation and also transfer of identity between cultures, sometimes known as acculturation. Accordingly, thus it is also not surprising that educational anthropology has become increasingly focussed on ethnic identity and ethnic change.

Chapter 15

BLENDING LEARNING

Blended Learning is a formal education program in which a student learns at least in part through delivery of content and instruction via digital and online media with some element of student control over time, place, path, or pace. While still attending a “brick-and-mortar” school structure, face-to-face classroom methods are combined with computer-mediated activities. A lack of consensus on a definition of blended learning has led to difficulties in research about its effectiveness in the classroom.

Blended Learning is a technique where a student learns at least in part through delivery of content and instruction via digital and online media

Proponents of blended learning cite the opportunity for data collection and customization of instruction and assessment as two major benefits of this approach. Schools with blended learning programs may also choose to reallocate resources to boost student achievement outcomes.

TERMINOLOGY

The terms "blended," "hybrid," "technology-mediated instruction," "web-enhanced instruction," and "mixed-mode instruction" are often used interchangeably in research literature. The concept of blended learning has been around for a long time, but its terminology was not firmly established until about the start of 21st century. One of the earliest references to the term appears in a press release in 1999, when the Interactive Learning Centers, an Atlanta-based education business, announced its change of name to EPIC learning. The article mentions that “The Company currently operates 220 on-line courses, but will begin offering its Internet courseware using the company's Blended

Learning methodology.” The meaning of blended learning widely diverged to encompass a wide variety of synthesis in learning methods until 2006, when the first *Handbook of Blended Learning* by Bonk and Graham was published. Graham challenged the breadth and ambiguity of the term's definition, and defined 'blended learning systems' as learning systems that "combine face-to-face instruction with computer mediated instruction." Currently, use of the term *blended learning* mostly involves "combining Internet and digital media with established classroom forms that require the physical co-presence of teacher and students."

HISTORY

Technology-based training emerged as an alternative to instructor-led training in the 1960s on mainframes and mini-computers. The major advantage that blended learning offers is scale, whereas one instructor can only teach so many people. One example is PLATO (Programmed Logic for Automatic Teaching Operations), a system developed by the University of Illinois and Control Data. PLATO in particular had a long history of innovations and offered coursework from elementary to the college level. Mainframe-based training had a number of interface limitations that gave way to satellite-based live video in the 1970s. The advantage here was serving people who were not as computer literate. The major challenge was the expense required to make this work. In the early 1990s, CD-ROMs emerged as a dominant form of providing technology-based learning as bandwidth through 56k modems weren't able to support very high quality sound and video. The limitation to CD-ROMs was tracking completion of coursework, so learning management systems emerged as a way to facilitate progress tracking. The aviation industry used this heavily to track how well one did on courses, how much time was spent, and where someone left off. AICC, Aviation Industry Computer-Based Training Committee, was formed in 1988 and companies such as Boeing used CD-ROMs to provide training for personnel. Modern blended learning is delivered online, although CD-ROMs could feasibly still be used if a learning management system meets an institution's standards. Some examples of channels through which online blending learning can be delivered include webcasting (synchronous and asynchronous) and online video (live and recorded). Solutions such as Khan Academy have been used in classrooms to serve as platforms for blended learning.

MODELS

Although there is little consensus on the definition of blended learning and some academic studies have suggested it is a redundant term, there are distinct blended learning models that have been suggested by some researchers and educational think tanks.

Blended Learning can generally be classified into six models:

- Face to face driver – where the teacher drives the instruction and augments with digital tools.
- Rotation – students cycle through a schedule of independent online study and face-to-face classroom time.

- Flex – Most of the curriculum is delivered via a digital platform and teachers are available for face-to-face consultation and support.
- Labs – All of the curriculum is delivered via a digital platform but in a consistent physical location. Students usually take traditional classes in this model as well.
- Self-Blend – Students choose to augment their traditional learning with online course work.
- Online Driver – All curriculum and teaching is delivered via a digital platform and face-to-face meetings are scheduled or made available if necessary.

ADVANTAGES

Blended instruction is reportedly more effective than purely face-to-face or purely online classes. Proponents of blended learning argue that incorporating the "asynchronous Internet communication technology" into higher education courses serves to "facilitate a simultaneous independent and collaborative learning experience." This incorporation is a major contributor to student satisfaction and success in such courses. The use of information and communication technologies have been found to improve student attitudes towards learning. By incorporating information technology into class projects, communication between lecturers and part-time students has improved, and students were able to better evaluate their understanding of course material via the use of "computer-based qualitative and quantitative assessment modules." Students with special talents or interests outside of the available curricula use educational technology to advance their skills or exceed grade restrictions. Some online institutions connect students with instructors via web conference technology to form a digital classroom. These institutions borrow many of the technologies that have popularized online courses at the university level. Some advantages of blended learning, particularly at a Kindergarten to grade 12 level of education, can be found under the general concept of educational technology . It is also one of the most effective ways for Personalized learning at scale.

DISADVANTAGES

Blended learning has a strong dependence on the technical resources or tools with which the blended learning experience is delivered. These tools need to be reliable, easy to use, and up to date, for them to have a meaningful impact on the learning experience. IT literacy can serve as a significant barrier for students attempting to get access to the course materials, making the availability of high-quality technical support paramount. Reportedly the use of lecture recording technologies can result in students falling behind on the materials. In a study performed across four different universities, it was found that only half of the students watched the lecture videos on a regular basis, and nearly 40% of students watched several weeks' worth of videos in one sitting.

COMMUNITY

A learning management system helps develop a better feel for an online community where discussions can be held to better aid students. This Virtual Learning Environment helps connect professors with students without physically being present, thus making this a

'Virtual Cafe'. Many schools use this online tool for online classes, classwork, question & answer forums, and other school related work. Blended learning yielded positive results from the online community. Such results were compared and showed similar results from that of Alcoholics Anonymous and Weight Watchers.

DIGITAL NATIVES

Students who were born in the last twenty years in first world countries are usually known as Digital Natives. Because of the integration of technology into their lives, Digital Natives are thought to be adept users of technology. Use of mobile technologies including tablets and cellphones allow digital natives to access information quickly, so that it is feasible for blended learning to become part of the digital native's learning process.

21st CENTURY LITERACIES

The term "21st Century Literacies" was coined by The National Council of Teachers of English to describe the social nature of learning that is supported by the ability to collaborate using digital technologies in learning. Tools that support collaborative and blended learning include Facebook, Twitter and Wikis.

Chapter 16

E-LEARNING THEORY

E-learning Theory describes the cognitive science principles of effective multimedia learning using electronic educational technology. Cognitive research and theory suggest that selection of appropriate concurrent multimedia modalities may enhance learning, as may application of several other principles.

MULTIMEDIA INSTRUCTIONAL DESIGN PRINCIPLES

Beginning with Cognitive Load Theory as their motivating scientific premise, researchers such as Richard E. Mayer, John Sweller, and Roxana Moreno established within the scientific literature a set of multimedia instructional design principles that promote effective learning. Many of these principles have been "field tested" in everyday learning settings and found to be effective there as well. The majority of this body of research has been performed using university students given relatively short lessons on technical concepts with which they held low prior knowledge. However, a number of studies have shown these principles to be effective with learners of other ages and with non-technical learning content. Research using learners who have greater prior knowledge in the lesson material sometimes finds results that contradict these design principles. This has led some researchers to put forward the "expertise effect" as an instructional design principle unto itself.

The underlying theoretical premise, Cognitive Load Theory, describes the amount of mental effort that is related to performing a task as falling into one of three categories: germane, intrinsic, and extraneous. Germane cognitive load is the mental effort required to process the task's information, make sense of it, and access and/or store it in long-term memory (for example, seeing a math problem, identifying the values and operations involved, and understanding that your task is to solve the math problem). Intrinsic cognitive load is the mental effort required to perform the task itself (for example, actually solving the math problem). Extraneous cognitive load is the mental effort imposed by the way that the task is delivered, which may or may not be efficient (for example, finding the math problem you are supposed to solve on a page that also contains advertisements for books about math).

The multimedia instructional design principles identified by Mayer, Sweller, Moreno, and their colleagues are largely focused on minimizing extraneous cognitive load, and managing intrinsic and germane loads at levels that are appropriate for the learner. Examples of these principles in practice include

- Reducing extraneous load by eliminating visual and auditory effects and elements that are not central to the lesson, such as seductive details (the coherence principle)

- Reducing germane load by delivering verbal information through audio presentation (narration) while delivering relevant visual information through static images or animations (the modality principle)
- Controlling intrinsic load by breaking the lesson into smaller segments and giving learners control over the pace at which they move forward through the lesson material (the segmenting principle).

Cognitive load theory (and by extension many of the multimedia instructional design principles) is based in part on a model of working memory by Alan Baddeley and Graham Hitch who proposed that working memory has two largely independent, limited capacity sub-components that tend to work in parallel - one visual and one verbal/acoustic. This gave rise to dual-coding theory, first proposed by Allan Paivio and later applied to multimedia learning by Richard Mayer. According to Mayer, separate channels of working memory process auditory and visual information during any lesson. Consequently, a learner can use more cognitive processing capacities to study materials that combine auditory verbal information with visual graphical information than to process materials that combine printed (visual) text with visual graphical information. In other words, the multi-modal materials reduce the cognitive load imposed on working memory.

In a series of studies Mayer and his colleagues tested Paivio's dual-coding theory, with multimedia lesson materials. They repeatedly found that students given multimedia with animation and narration consistently did better on transfer questions than those who learn from animation and text-based materials. That is, they were significantly better when it came to applying what they had learned after receiving multimedia rather than mono-media (visual only) instruction. These results were then later confirmed by other groups of researchers.

The initial studies of multimedia learning were limited to logical scientific processes that centered on cause-and-effect systems like automobile braking systems, how a bicycle pump works, or cloud formation. However, subsequent investigations found that the modality effect extended to other areas of learning.

EMPIRICALLY ESTABLISHED PRINCIPLES

- **Multimedia principle:** Deeper learning is observed when words and relevant graphics are both presented than when words are presented alone (also called the multimedia effect). Simply put, the three most common elements in multimedia presentations are relevant graphics, audio narration, and explanatory text. Combining any two of these three elements works better than using just one or all three.
- **Modality principle:** Deeper learning occurs when graphics are explained by audio narration instead of onscreen text. Exceptions have been observed when learners are familiar with the content, are not native speakers of the narration language, or when only printed words appear on the screen. Generally speaking, audio narration leads to better learning than the same words presented as text on the screen. This

is especially true for walking someone through graphics on the screen, and when the material to be learned is complex or the terminology being used is already understood by the student (otherwise see "pre-training"). One exception to this is when the learner will be using the information as a reference and will need to look back to it again and again.

- **Coherence principle:** Avoid using unnecessary content (irrelevant video, graphics, music, stories, narration, etc.) in order to minimize cognitive load imposed on memory during learning by irrelevant and possibly distracting content. Basically, the less learners know about the lesson content, the easier it is for them to get distracted by anything shown that is not directly relevant to the lesson. For learners with greater prior knowledge, however, some motivational imagery may increase their interest and learning effectiveness just a bit.
- **Contiguity principle:** Keep related pieces of information together. Deeper learning occurs when relevant text (for example, a label) is placed close to graphics or when spoken words and graphics are presented at the same time, or when feedback is presented next to the answer given by the learner.
- **Segmenting principle:** Deeper learning occurs when content is broken into small chunks. Break down long lessons into several shorter lessons. Break down long text passages into multiple shorter ones.
- **Signalling principle:** The use of visual, auditory, or temporal cues to draw attention to critical elements of the lesson. Common techniques include arrows, circles, highlighting or bolding text, and pausing or vocal emphasis in narration. Ending lesson segments after critical information has been given may also serve as a signalling cue.
- **Learner control principle:** Deeper learning occurs when learners can control the rate at which they move forward through segmented content. Learners tend to do best when the narration stops after a short, meaningful segment of content is given and the learner has to click a "continue" button in order to start the next segment. Some research suggests not overwhelming the learner with too many control options, however. Giving just pause and play buttons may work better than giving pause, play, fast forward, reverse buttons. Also, high prior-knowledge learners may learn better when the lesson moves forward automatically, but they have a pause button that allows them to stop when they choose to do so.
- **Personalization principle:** Deeper learning in multimedia lessons occur when learners experience a stronger social presence, as when a conversational script or learning agents are used. The effect is best seen when the tone of voice is casual, informal, and in a 1st person ("I" or "we") or 2nd person ("you") voice. For example, of the following two sentences, the second version conveys more of a casual, informal, conversational tone:

A. The learner should have the sense that someone is talking directly to them when they hear the narration.

B. Your learner should feel like someone is talking directly to them when they hear your narration.

Also, research suggests that using a polite tone of voice ("You may want to try multiplying both sides of the equation by 10.") leads to deeper learning for low prior knowledge learners than does a less polite, more directive tone of voice ("Multiply both sides of the equation by 10."), but may impair deeper learning in high prior knowledge learners. Finally, adding pedagogical agents (computer characters) can help if used to reinforce important content. For example, have the character narrate the lesson, point out critical features in on-screen graphics, or visually demonstrate concepts to the learner.

- **Pre-training principle:** Deeper learning occurs when lessons present key concepts or vocabulary prior to presenting the processes or procedures related to those concepts. According to Mayer, Mathias, and Wetzal, "Before presenting a multimedia explanation, make sure learners visually recognize each major component, can name each component, and can describe the major state changes of each component. In short, make sure learners build component models before presenting a cause-and-effect explanation of how a system works." However, others have noted that including pre-training content appears to be more important for low prior knowledge learners than for high prior knowledge learners.
- **Redundancy principle:** Deeper learning occurs when lesson graphics are explained by audio narration alone rather than audio narration and on-screen text. This effect is stronger when the lesson is fast-paced and the words are familiar to the learners. Exceptions to this principle include: screens with no visuals, learners who are not native speakers of the course language, and placement of only a few key words on the screen (i.e., labeling critical elements of the graphic image).
- **Expertise effect:** Instructional methods, such as those described above, that are helpful to domain novices or low prior knowledge learners may have no effect or may even depress learning in high prior knowledge learners.

Such principles may not apply outside of laboratory conditions. For example, Muller found that adding approximately 50% additional extraneous but interesting material did not result in any significant difference in learner performance. There is ongoing debate concerning the mechanisms underlying these beneficial principles, and on what boundary conditions may apply.

LEARNING THEORIES

Good pedagogical practice has a theory of learning at its core. However, no single best-practice e-learning standard has emerged, and may be unlikely given the range of learning and teaching styles, the potential ways technology can be implemented and the ways in which educational technology itself is changing. Various pedagogical approaches or

learning theories may be considered in designing and interacting with e-learning programs.

Social-constructivist – this pedagogy is particularly well afforded by the use of discussion forums, blogs, wiki and on-line collaborative activities. It is a collaborative approach that opens educational content creation to a wider group including the students themselves. The One Laptop Per Child Foundation attempted to use a constructivist approach in its project.

Laurillard's conversational model is also particularly relevant to eLearning, and Gilly Salmon's Five-Stage Model is a pedagogical approach to the use of discussion boards.

Cognitive perspective focuses on the cognitive processes involved in learning as well as how the brain works.

Emotional perspective focuses on the emotional aspects of learning, like motivation, engagement, fun, etc.

Behavioural perspective focuses on the skills and behavioural outcomes of the learning process. Role-playing and application to on-the-job settings.

Contextual perspective focuses on the environmental and social aspects which can stimulate learning. Interaction with other people, collaborative discovery and the importance of peer support as well as pressure.

Mode neutral Convergence or promotion of 'transmodal' learning where online and classroom learners can coexist within one learning environment thus encouraging interconnectivity and the harnessing of collective intelligence.

For many theorists it's the interaction between student and teacher and student and student in the online environment that enhances learning (Mayes and de Freitas 2004). Pask's theory that learning occurs through conversations about a subject which in turn helps to make knowledge explicit has an obvious application to learning within a VLE.

Salmon developed a five-stage model of e-learning and e-moderating that for some time has had a major influence where online courses and online discussion forums have been used. In her five-stage model individual access and the ability of students to use the technology are the first step to involvement and achievement. The second step involves students creating an identity online and finding others with whom to interact; online socialisation is a critical element of the e-learning process in this model. In step 3 students are giving and sharing information relevant to the course to each other. Collaborative interaction amongst students is central to step 4. The fifth step in Salmon's model involves students looking for benefits from the system and using resources from outside of it to deepen their learning. Throughout all of this the tutor/teacher/lecturer fulfills the role of moderator or e-moderator, acting as a facilitator of student learning.

Some criticism is now beginning to emerge. Her model does not easily transfer to other contexts (she developed it with experience from an Open University distance learning course). It ignores the variety of learning approaches that are possible within computer mediated communication (CMC) and the range of learning theories that are available (Moule 2007).

SELF-REGULATION

Self-regulated learning refers to several concepts that play major roles in learning, and which have significant relevance in e-learning. Zimmerman (1998) explains that in order to develop self-regulation, learning courses should offer opportunities for students to practice strategies and skills by themselves. Self-regulation is also strongly related to a student's social sources such as parents and teachers. Moreover, Steinberg (1996) found that high-achieving students usually have high-expectation parents who monitor their children closely.

With the academic environment, self-regulated learners usually set their academic goals and monitor and react themselves in process in order to achieve their goals. Schunk argues, "students must regulate not only their actions but also their underlying achievement-related cognitions, beliefs, intentions and affects" (p. 359). Moreover, academic self-regulation also helps students develop confidence in their ability to perform well in e-learning courses.

TEACHER USE OF TECHNOLOGY

Computing technology was not created by teachers. There has been little consultation between those who promote its use in schools and those who teach with it. Decisions to purchase technology for education are very often political decisions. Most staff using these technologies did not grow up with them. Training teachers to use computer technology did improve their confidence in its use, but there was considerable dissatisfaction with training content and style of delivery. The communication element in particular was highlighted as the least satisfactory part of the training, by which many teachers meant the use of a VLE and discussion forums to deliver online training (Leask 2002). Technical support for online learning, lack of access to hardware, poor monitoring of teacher progress and a lack of support by online tutors were just some of the issues raised by the asynchronous online delivery of training (Davies 2004).

Newer generation web 2.0 services provide customizable, inexpensive platforms for authoring and disseminating multimedia-rich e-learning courses, and do not need specialised information technology (IT) support.

Pedagogical theory may have application in encouraging and assessing on-line participation. Assessment methods for on-line participation have reviewed.

Chapter 17

EDUCATION ECONOMICS

Education Economics or the economics of education is the study of economic issues relating to education, including the demand for education and the financing and provision of education. From early works on the relationship between schooling and labor market outcomes for individuals, the field of the economics of education has grown rapidly to cover virtually all areas with linkages to education.

EDUCATION AS AN INVESTMENT

Economics distinguishes in addition to physical capital another form of capital that is no less critical as a means of production – human capital. With investments in human capital, such as education, three major economic effects can be expected:

- *increased expenses* as the accumulation of human capital requires investments just as physical capital does,
- *increased productivity* as people gain characteristics that enable them to produce more output and hence
- *return on investment* in the form of higher incomes.

INVESTMENT COSTS

Investments in human capital entail an investment cost, just as any investment does. Typically in European countries most education expenditure takes the form of government consumption, although some costs are also borne by individuals. These investments can be rather costly. EU governments spent between 3% and 8% of GDP on education in 2005, the average being 5%. However, measuring the spending this way alone greatly underestimates the costs because a more subtle form of costs is completely overlooked: the opportunity cost of forgone wages as students cannot work while they study. It has been estimated that the total costs, including opportunity costs, of education are as much as double the direct costs. Including opportunity costs investments in education can be estimated to have been around 10% of GDP in the EU countries in 2005. In comparison investments in physical capital were 20% of GDP. Thus the two are of similar magnitude.

Average years of schooling versus GDP per capita (USD 2005).

RETURNS ON INVESTMENT

Human capital in the form of education shares many characteristics with physical capital. Both require an investment to create and, once created, both have economic value. Physical capital earns a return because people are willing to pay to use a piece of physical capital in work as it allows them to produce more output. To measure the productive value of physical capital, we can simply measure how much of a return it commands in the market. In the case of human capital calculating returns is more complicated – after all, we cannot separate education from the person to see how much it rents for. To get around this problem the returns to human capital are generally inferred from differences in wages among people with different levels of education. Hall and Jones have calculated from international data that on average that the returns on education are 13.4% per year for first four years of schooling (grades 1–4), 10.1% per year for the next four years (grades 5–8) and 6.8% for each year beyond eight years. Thus someone with 12 years of schooling can be expected to earn, on average, $1.134^4 \times 1.101^4 \times 1.068^4 = 3.161$ times as much as someone with no schooling at all.

Predicted versus actual GDP per worker. The figure shows how much one would expect each country's GDP to be higher based on the data on average years of schooling

EFFECTS ON PRODUCTIVITY

Economy-wide, the effect of human capital on incomes has been estimated to be rather significant: 65% of wages paid in developed countries is payments to human capital and only 35% to raw labor. The higher productivity of well-educated workers is one of the factors that explain higher GDPs and, therefore, higher incomes in developed countries. A strong correlation between GDP and education is clearly visible among the countries of the world, as is shown by the upper left figure. It is less clear, however, how much of a high GDP is explained by education. After all, it is also possible that rich countries can simply afford more education.

To distinguish the part of GDP explained with education from other causes, Weil has calculated how much one would expect each country's GDP to be higher based on the data on average schooling. This was based on the above-mentioned calculations of Hall and Jones on the returns on education. GDPs predicted by Weil's calculations can be plotted against actual GDPs, as is done in the figure on the left, demonstrating that the variation in education explains some, but not all, of the variation in GDP.

Finally, the matter of externalities should be considered. Usually when speaking of externalities one thinks of the negative effects of economic activities that are not included in market prices, such as pollution. These are negative externalities. However, there are also positive externalities – that is, positive effects of which someone can benefit without having to pay for it. Education bears with it major positive externalities: giving one person more education raises not only his or her output but also the output of those around him or her. Educated workers can bring new technologies, methods and information to the consideration of others. They can teach things to others and act as an example.

Positive externalities from human capital are one explanation for why governments are involved in education. If people were left on their own, they would not take into account the full social benefit of education – in other words the rise in the output and wages of others – so the amount they would choose to obtain would be lower than the social optimum.

DEMAND FOR EDUCATION

LIBERAL APPROACHES

The dominant model of the demand for education is based on human capital theory. The central idea is that undertaking education is investment in the acquisition of skills and knowledge which will increase earnings, or provide long-term benefits such as an appreciation of literature (sometimes referred to as cultural capital). An increase in human capital can follow technological progress as knowledgeable employees are in demand due to the need for their skills, whether it be in understanding the production process or in operating machines. Studies from 1958 attempted to calculate the returns from additional schooling (the percent increase in income acquired through an additional year of schooling). Later results attempted to allow for different returns across persons or by level of education.

Statistics have shown that countries with high enrollment/graduation rates have grown faster than countries without. The United States has been the world leader in educational advances, beginning with the high school movement (1910–1950). There also seems to be a correlation between gender differences in education with the level of growth; more development is observed in countries which have an equal distribution of the percentage of women versus men who graduated from high school. When looking at correlations in the data, education seems to generate economic growth; however, it could be that we have this causality relationship backwards. For example, if education is seen as a luxury good, it

may be that richer households are seeking out educational attainment as a symbol of status, rather than the relationship of education leading to wealth.

Educational advance is not the only variable for economic growth, though, as it only explains about 14% of the average annual increase in labor productivity over the period 1915-2005. From lack of a more significant correlation between formal educational achievement and productivity growth, some economists see reason to believe that in today's world many skills and capabilities come by way of learning outside of tradition education, or outside of schooling altogether.

An alternative model of the demand for education, commonly referred to as screening, is based on the economic theory of signalling. The central idea is that the successful completion of education is a signal of ability.

MARXIST CRITIQUE

Although Marx and Engels did not write widely about the social functions of education, their concepts and methods are theorized and criticized by the influence of Marx as education being used in reproduction of capitalist societies. Marx and Engels approached scholarship as "revolutionary scholarship" where education should serve as a propaganda for the struggle of the working class. The classical Marxian paradigm sees education as serving the interest of capital and is seeking alternative modes of education that would prepare students and citizens for more progressive socialist mode of social organizations. Marx and Engels understood education and free time as essential to developing free individuals and creating many-sided human beings, thus for them education should become a more essential part of the life of people unlike capitalist society which is organized mainly around work and the production of commodities.

FINANCING AND PROVISION

In most countries school education is predominantly financed and provided by governments. Public funding and provision also plays a major role in higher education. Although there is wide agreement on the principle that education, at least at school level, should be financed mainly by governments, there is considerable debate over the desirable extent of public provision of education. Supporters of public education argue that universal public provision promotes equality of opportunity and social cohesion. Opponents of public provision advocate alternatives such as vouchers.

EDUCATION PRODUCTION FUNCTION

An *education production function* is an application of the economic concept of a production function to the field of education. It relates various inputs affecting a student's learning (schools, families, peers, neighborhoods, etc.) to measured outputs including subsequent labor market success, college attendance, graduation rates, and, most frequently, standardized test scores. The original study that eventually prompted interest in the idea of education production functions was by a sociologist, James S. Coleman. The Coleman

Report, published in 1966, concluded that the marginal effect of various school inputs on student achievement was small compared to the impact of families and friends. Later work, by Eric A. Hanushek, Richard Murnane, and other economists introduced the structure of "production" to the consideration of student learning outcomes.

A large number of successive studies, increasingly involving economists, produced inconsistent results about the impact of school resources on student performance, leading to considerable controversy in policy discussions. The interpretation of the various studies has been very controversial, in part because the findings have directly influenced policy debates. Two separate lines of study have been particularly widely debated. The overall question of whether added funds to schools are likely to produce higher achievement (the "money doesn't matter" debate) has entered into legislative debates and court consideration of school finance systems. Additionally, policy discussions about class size reduction heightened academic study of the relationship of class size and achievement.

Chapter 18

OPEN CLASSROOM

An Open Classroom is a student-centered classroom design format which became popular in the United States in the 1970s. The idea of the open classroom was that a large group of students of varying skill levels would be in a single, large classroom with several teachers overseeing them. It is ultimately derived from the one-room schoolhouse, but sometimes expanded to include more than two hundred students in a single multi-age and multi-grade classroom. Rather than having one teacher lecture to the entire group at once, students are typically divided into different groups for each subject according to their skill level for that subject. The students then work in small groups to achieve their assigned goal. Teachers serve as both facilitators and instructors.

Certain education professionals, including Professor Gerald Unks at the University of North Carolina at Chapel Hill, strongly support this system particularly with young children. If poorly planned or laid out, open classrooms can sometimes lead to problems with noise and poor ventilation. Classrooms that are physically open are increasingly rare, as many schools that were built "without walls" have long since put up permanent partitions of varying heights. However, in many places, the open philosophy as an instructional technique continues. Larry Cuban states "To call it a fad would miss the deeper meaning of "open classrooms" as another skirmish in the ideological wars that have split educational progressives from conservatives since the first tax-supported schools opened their doors in the early 1800s."

An open classroom environment at Shantiniketan

Piedmont Open/IB Middle School in Charlotte, North Carolina, for example, was started as one of the original two magnet middle schools in Charlotte in the 1970s. While the other magnet (a "traditional" school) has closed, Piedmont is still functioning as a modified open school thirty years later, all the time housed in a traditional physical plant.

OPEN-SPACE SCHOOL

The open-space school concept was introduced into the United States in the 1970s as an experimental elementary school architecture where the physical walls separating classrooms were removed to promote movement across class areas by teachers. However, in practice this is not typical since teachers, following social conventions, tend to teach in a traditional manner as if the walls were still present. Further, modern open-space schools tend to use modular furniture to separate class rooms in a manner similar to "Cubicle farms" used in many corporate environment.

Advocates of open plan schools argue that students 'should be allowed to learn in ways suited to their individual differences' and that the most effective teaching and learning strategies allow teachers to work collaboratively with each other and team teach. The traditional classroom boxes with desks lined up in rows impede teachers' efforts to work in teams and have students 'in the flexible and varied groupings necessary' (Mark, J 2001:5).

Bunting agrees, saying that 'traditional classrooms must change' and proposes a model of a generic space for students to be co-located with teachers, which are decorated by the students to give them ownership, and teachers and students only move when necessary to access specialised space (Bunting, A 2004:11–12).

Klein found in a 1975 study that third graders with low levels of anxiety were more creative in open schools than in traditional school. Children with high levels of anxiety showed no differences between open-space and traditional school models. Students in open-spaced schools scored higher on preference for novelty and change.

Chapter 19

OPEN EDUCATIONAL RESOURCES

Open Educational Resources (OER) are freely accessible, openly licensed documents and media that are useful for teaching, learning, and assessing as well as for research purposes. Although some people consider the use of an open file format to be an essential characteristic of OER, this is not a universally acknowledged requirement.

The development and promotion of open educational resources is often motivated by a desire to curb the *commodification of knowledge* and provide an alternate or enhanced *educational paradigm*.

DEFINING THE SCOPE AND NATURE OF OPEN EDUCATIONAL RESOURCES

The idea of open educational resources (OER) has numerous working definitions. The term was firstly coined at UNESCO's 2002 Forum on Open Courseware and designates "teaching, learning and research materials in any medium, digital or otherwise, that reside in the public domain or have been released under an open license that permits no-cost access, use, adaptation and redistribution by others with no or limited restrictions. Open licensing is built within the existing framework of intellectual property rights as defined by relevant international conventions and respects the authorship of the work". Often cited is the William and Flora Hewlett Foundation term which defines OER as:

"teaching, learning, and research resources that reside in the public domain or have been released under an intellectual property license that permits their free use and repurposing by others. Open educational resources include full courses, course materials, modules, textbooks, streaming videos, tests, software, and any other tools, materials, or techniques used to support access to knowledge".

The Organization for Economic Co-operation and Development (OECD) defines OER as: "digitised materials offered freely and openly for educators, students, and self-learners to use and reuse for teaching, learning, and research. OER includes learning content, software tools to develop, use, and distribute content, and implementation resources such as open licences". (This is the definition cited by Wikipedia's sister project, Wikiversity.) By way of comparison, the Commonwealth of Learning "has adopted the widest definition of Open Educational Resources (OER) as 'materials offered freely and openly to use and adapt for teaching, learning, development and research'".

The WikiEducator project suggests that OER refers "to educational resources (lesson plans, quizzes, syllabi, instructional modules, simulations, etc.) that are freely available for use, reuse, adaptation, and sharing'".

The above definitions expose some of the tensions that exist with OER:

- **Nature of the resource:** Several of the definitions above limit the definition of OER to digital resources, while others consider that any educational resource can be included in the definition.
- **Source of the resource:** While some of the definitions require a resource to be produced with an explicit educational aim in mind, others broaden this to include any resource which may potentially be used for learning
- **Level of openness:** Most definitions require that a resource be placed in the public domain. Others require for use to be granted merely for educational purposes, or exclude commercial uses.

At the same time, these definitions also share some universal commonalities, namely they all:

- cover both use and reuse, repurposing, and modification of the resources;
- include free use for educational purposes by teachers and learners
- encompass all types of digital media.

Given the diversity of users, creators and sponsors of open educational resources, it is not surprising to find a variety of use cases and requirements. For this reason, it may be as helpful to consider the differences between descriptions of open educational resources as it is to consider the descriptions themselves. One of several tensions in reaching a consensus description of OER (as found in the above definitions) is whether there should be explicit emphasis placed on specific technologies. For example, a video can be openly licensed and freely used without being a *streaming* video. A book can be openly licensed and freely used without being an *electronic* document. This technologically driven tension is deeply bound up with the discourse of open-source licensing. For more, see Licensing and Types of OER later in this article.

There is also a tension between entities which find value in quantifying usage of OER and those which see such metrics as themselves being irrelevant to free and open resources. Those requiring metrics associated with OER are often those with economic investment in the technologies needed to access or provide electronic OER, those with economic interests potentially threatened by OER, or those requiring justification for the costs of implementing and maintaining the infrastructure or access to the freely available OER. While a semantic distinction can be made delineating the technologies used to access and host learning content from the content itself, these technologies are generally accepted as part of the collective of open educational resources.

Since OER are intended to be available for a variety of educational purposes, *most* organizations using OER neither award degrees nor provide academic or administrative support to students seeking college credits towards a diploma from a degree granting accredited institution. In open education, there is an emerging effort by some accredited institutions to offer free certifications, or achievement badges, to document and acknowledge the accomplishments of participants.

HISTORY

The term learning object was coined in 1994 by Wayne Hodgins and quickly gained currency among educators and instructional designers, popularizing the idea that digital materials can be designed to allow easy reuse in a wide range of teaching and learning situations.

The OER movement originated from developments in open and distance learning (ODL) and in the wider context of a culture of open knowledge, open source, free sharing and peer collaboration, which emerged in the late 20th century. OER and Free/Libre Open Source Software (FLOSS), for instance, have many aspects in common, a connection first established in 1998 by David Wiley who coined the term open content and introduced the concept by analogy with open source. Richard Baraniuk made the same connection independently in 1999.

The MIT OpenCourseWare project is credited for having sparked a Global Open Educational Resources Movement after announcing in 2001 that it was going to put MIT's entire course catalog online and launching this project in 2002. In a first manifestation of this movement, MIT entered a partnership with Utah State University, where assistant professor of instructional technology David Wiley set up a distributed peer support network for the OCW's content through voluntary, self-organizing communities of interest.

The term "open educational resources" was first adopted at UNESCO's 2002 Forum on the Impact of Open Courseware for Higher Education in Developing Countries.

In 2005 OECD's Centre for Educational Research and Innovation (CERI) launched a 20-month study to analyse and map the scale and scope of initiatives regarding "open educational resources" in terms of their purpose, content, and funding. The report "Giving Knowledge for Free: The Emergence of Open Educational Resources", published in May 2007, is the main output of the project, which involved a number of expert meetings in 2006.

In September 2007, the Open Society Institute and the Shuttleworth Foundation convened a meeting in Cape Town to which thirty leading proponents of open education were invited to collaborate on the text of a manifesto. The Cape Town Open Education Declaration was released on 22 January 2008, urging governments and publishers to make publicly funded educational materials available at no charge via the internet.

An historical antecedent to consider is the pedagogy of artist Joseph Beuys and the founding of the Free International University for Creativity and Interdisciplinary Research in 1973. After co-creating with his students, in 1967, the German Student Party, Beuys was dismissed from his teaching post in 1972 at the Staatliche Kunstakademie Düsseldorf. The institution did not approve of the fact that he permitted 50 students who had been rejected from admission to study with him. The Free University became increasingly involved in political and radical actions calling for a revitalization and restructuring of educational systems.

LICENSING AND TYPES OF OER

Open educational resources often involve issues relating to intellectual property rights. Traditional educational materials, such as textbooks, are protected under conventional copyright terms. However, alternative and more flexible licensing options have become available as a result of the work of Creative Commons, an organization that provides ready-made licensing agreements that are less restrictive than the "all rights reserved" terms of standard international copyright. These new options have become a "critical infrastructure service for the OER movement." Another license, typically used by developers of OER software, is the GNU General Public License from the free and open-source software (FOSS) community. Open licensing allows uses of the materials that would not be easily permitted under copyright alone.

Types of open educational resources include: full courses, course materials, modules, learning objects, open textbooks, openly licensed (often streamed) videos, tests, software, and other tools, materials, or techniques used to support access to knowledge.

OER may be freely and openly available static resources, dynamic resources which change over time in the course of having knowledge seekers interacting with and updating them (such as this Wikipedia article), or a course or module with a combination of these resources.

OER POLICY

Open educational resources policies are principles or tenets adopted by governing bodies in support of the use of open content and practices in educational institutions. Many of these policies require publicly funded resources be openly licensed. Such policies are emerging increasingly at the country, state/province and more local level.

Creative Commons hosts an open educational resources policy registry lists 95 current and proposed open education policies from around the world.

Creative Commons and multiple other open organizations launched the Open Policy Network to foster the creation, adoption and implementation of open policies and practices that advance the public good by supporting open policy advocates, organizations and policy makers, connecting open policy opportunities with assistance, and sharing open policy information.

INSTITUTIONAL SUPPORT

A large part of the early work on open educational resources was funded by universities and foundations such as the William and Flora Hewlett Foundation, which was the main financial supporter of open educational resources in the early years and has spent more than \$110 million in the 2002 to 2010 period, of which more than \$14 million went to MIT. The Shuttleworth Foundation, which focuses on projects concerning collaborative content

creation, has contributed as well. With the British government contributing £5.7m, institutional support has also been provided by the UK funding bodies JISC and HEFCE.

UNESCO is taking a leading role in "making countries aware of the potential of OER." The organisation has instigated debate on how to apply OERs in practice and chaired vivid discussions on this matter through its International Institute of Educational Planning (IIEP). Believing that OERs can widen access to quality education, particularly when shared by many countries and higher education institutions, UNESCO also champions OERs as a means of promoting access, equity and quality in the spirit of the Universal Declaration of Human Rights. Recently, the 2012 Paris OER Declaration was approved during the 2012 OER World Congress held in UNESCO HQ.

INITIATIVES

A parallel initiative Connexions, came out of Rice University starting in 1999. In contrast to the OCW projects, content licenses are required to be open under a Creative Commons Attribution only license. The hallmark of Connexions is the use of a custom XML format CNXML, designed to aid and enable mixing and reuse of the content.

Other initiatives derived from MIT OpenCourseWare are China Open Resources for Education and OpenCourseWare in Japan. The OpenCourseWare Consortium, founded in 2005 to extend the reach and impact of open course materials and foster new open course materials, counted more than 200 member institutions from around the world in 2009.

OER Africa, an initiative established by the South African Institute for Distance Education (Saide) to play a leading role in driving the development and use of OER across all education sectors on the African continent. The OER4Schools project focusses on the use of Open Educational Resources in teacher education in sub-Saharan Africa.

Wikiwijs (the Netherlands), a program intended to promote the use of open educational resources (OER) in the Dutch education sector;

The Open educational resources programme (phases one and two) (United Kingdom), funded by HEFCE, the UK Higher Education Academy and Jisc, which has supported pilot projects and activities around the open release of learning resources, for free use and repurposing worldwide.

In 2003, the ownership of Wikipedia and Wiktionary projects was transferred to the Wikimedia Foundation, a non-profit charitable organization whose goal is to collecting and developing free educational content and to disseminate it effectively and globally. Wikipedia ranks in the top-ten most visited websites worldwide since 2007.

OER Commons was spearheaded in 2007 by ISKME, a nonprofit education research institute dedicated to innovation in open education content and practices, as a way to aggregate, share, and promote open educational resources to educators, administrators, parents, and students. OER Commons also provides educators tools to align OER to the

Common Core State Standards; to evaluate the quality of OER to OER Rubrics; and to contribute and share OERs with other teachers and learners worldwide. To further promote the sharing of these resources among educators, in 2008 ISKME launched the OER Commons Teacher Training Initiative, which focuses on advancing open educational practices and on building opportunities for systemic change in teaching and learning.

One of the first OER resources for K-20 education is Curriki. A nonprofit organization, Curriki provides an Internet site for open source curriculum (OSC) development, to provide universal access to free curricula and instructional materials for students up to the age of 18 (K-12). By applying the open source process to education, Curriki empowers educational professionals to become an active community in the creation of good curricula. Kim Jones serves as Curriki's Executive Director.

In August 2006 WikiEducator was launched to provide a venue for planning education projects built on OER, creating and promoting open education resources (OERs), and networking towards funding proposals. Its Wikieducator's Learning4Content project builds skills in the use of MediaWiki and related free software technologies for mass-collaboration in the authoring of free content and claims to be the world's largest wiki training project for education. By 30 June 2009 the project facilitated 86 workshops training 3,001 educators from 113 different countries.

Peer production has also been utilized in producing collaborative open education resources (OERs). Writing Commons, an international open textbook spearheaded by Joe Moxley at the University of South Florida, has evolved from a print textbook into a crowd-sourced resource for college writers around the world. Massive open online course (MOOC) platforms have also generated interest in building online eBooks. The Cultivating Change Community (CCMOOC) at the University of Minnesota is one such project founded entirely on a grassroots model to generate content. In 10 weeks, 150 authors contributed more than 50 chapters to the CCMOOC eBook and companion site.

In 2011-12, academicians from the University of Mumbai, India created an OER Portal with free resources on Micro Economics, Macro Economics, and Soft Skills – available for global learners.

Another project is the Free Education Initiative from the Saylor Foundation, which is currently more than 80% of the way towards its initial goal of providing 241 college-level courses across 13 subject areas. The Saylor Foundation makes use of university and college faculty members and subject experts to assist in this process, as well as to provide peer review of each course to ensure its quality. The foundation also supports the creation of new openly licensed materials where they are not already available as well as through its Open Textbook Challenge.

In 2010 the University of Birmingham and the London School of Economics worked together on the HEA and JISC funded DELILA project, the main aim of the project was to release a small sample of open educational resources to support embedding digital and information literacy education into institutional teacher training courses accredited by the

HEA including PGCerts and other CPD courses. One of the main barriers that the project found to sharing resources in information literacy was copyright that belonged to commercial database providers

In 2006, the African Virtual University (AVU) released 73 modules of its Teacher Education Programs as open education resources to make the courses freely available for all. In 2010, the AVU developed the OER Repository which has contributed to increase the number of Africans that use, contextualize, share and disseminate the existing as well as future academic content. The online portal serves as a platform where the 219 modules of Mathematics, Physics, Chemistry, Biology, ICT in education, and teacher education professional courses are published. The modules are available in three different languages – English, French, and Portuguese, making the AVU the leading African institution in providing and using open education resources

In August 2013, Tidewater Community College become the first college in the U.S. to create an Associate of Science degree based entirely on openly licensed content – the "Z-Degree". The combined efforts of a 13-member faculty team, college staff and administration culminated when students enrolled in the first "z-courses" which are based solely on OER. The goals of this initiative were twofold: 1) to improve student success, and 2) to increase instructor effectiveness. Courses were stripped down to the Learning Outcomes and rebuilt using openly licensed content, reviewed and selected by the faculty developer based on its ability to facilitate student achievement of the objectives. The 21 z-courses that make up an associate of science degree in business administration were launched simultaneously across four campus locations. TCC is the 11th largest public two-year college in the nation, enrolling nearly 47,000 students annually.

Nordic OER is a Nordic network to promote open education and collaboration amongst stakeholders in all educational sectors. The network has members from all Nordic countries and facilitates discourse and dialogue on open education but also participates in projects and development programs. The network is supported by the Nordic OER project co-funded by Nordplus.

In Norway the Norwegian Digital Learning Arena (NDLA) is a joint county enterprise offering open digital learning resources for upper secondary education. In addition to being a compilation of open educational resources, NDLA provides a range of other online tools for sharing and cooperation. At project startup in 2006, increased volume and diversity were seen as significant conditions for the introduction of free learning material in upper secondary education. The incentive was an amendment imposing the counties to provide free educational material, in print as well as digital, including digital hardware.

In Sweden there is a growing interest in open publication and the sharing of educational resources but the pace of development is still slow. There are many questions to be dealt with in this area; for universities, academic management and teaching staff. Teachers in all educational sectors require support and guidance to be able to use OER pedagogically and with quality in focus. To realize the full potential of OER for students' learning it is not enough to make patchwork use of OER – resources have to be put into context.

Valuable teacher time should be used for contextual work and not simply for the creation of content. The aim of the project OER for learning OERSweden, is to stimulate an open discussion about collaboration in infrastructural questions regarding open online knowledge sharing. A network of ten universities lead by Karlstad University will arrange a series of open webinars during the project period focusing on the use and production of open educational resources. A virtual platform for Swedish OER initiatives and resources will also be developed. The project intends to focus in particular on how OER affects teacher trainers and decision makers. The objectives of the project are: To increase the level of national collaboration between universities and educational organisations in the use and production of OER, To find effective online methods to support teachers and students, in terms of quality, technology and retrievability of OER, To raise awareness for the potential of webinars as a tool for open online learning, To increase the level of collaboration between universities' support functions and foster national resource sharing, with a base in modern library and educational technology units, and To contribute to the creation of a national university structure for tagging, distribution and storage of OER.

Founded in 2007, the CK-12 Foundation is a California-based non-profit organization whose stated mission is to reduce the cost of, and increase access to, K-12 education in the United States and worldwide. CK-12 provides free and fully customizable K-12 open educational resources aligned to state curriculum standards and tailored to meet student and teacher needs. The foundation's tools are used by 38,000 schools in the US, and additional international schools.

LATIn Project brings a Collaborative Open Textbook Initiative for Higher Education tailored specifically for Latin America. This initiative encourages and supports local professors and authors to contribute with individual sections or chapters that could be assembled into customized books by the whole community. The created books are freely available to the students in an electronic format or could be legally printed at low cost because there is no license or fees to be paid for their distribution, since all they are released as OER with a Creative Commons CC-BY-SA license. This solution also contributes to the creation of customized textbooks where each professor could select the sections appropriate for their courses or could freely adapt existing sections to their needs. Also, the local professors will be the sink and source of the knowledge, contextualized to the Latin American Higher Education system.

In March 2015, Eliademy.com launched the crowdsourcing of OER courses under CC licence. The platform expects to collect 5000 courses during the first year that can be reused by teachers worldwide.

In 2015, the University of Idaho Doceo Center launched open course content for K-12 schools, with the purpose of improving awareness of OER among K-12 educators. This was shortly followed by an Open Textbook Crash Course, which provides K-12 educators with basic knowledge about copyright, open licensing, and attribution. Results of these projects have been used to inform research into how to support K-12 educator OER adoption literacies and the diffusion of open practices.

INTERNATIONAL PROGRAMS

High hopes have been voiced for OERs to alleviate the digital divide between the global North and the global South, and to make a contribution to the development of less advanced economies.

- Europe – Learning Resource Exchange for schools (LRE) is a service launched by European Schoolnet in 2004 enabling educators to find multilingual open educational resources from many different countries and providers. Currently, more than 200,000 learning resources are searchable in one portal based on language, subject, resource type and age range.
- India – National Council Of Educational Research and Training digitized all its textbooks from 1st standard to 12th standard. The textbooks are available online for free. Central Institute of Educational Technology, a constituent Unit of NCERT, digitized more than thousand audio and video programmes. All the educational AV material developed by CIET is presently available at Sakshat Portal an initiative of Ministry of Human Resources and Development. In addition, NROER (National Repository for Open Educational Resources) houses variety of e-content.
- US – Washington State's Open Course Library Project is a collection of expertly developed educational materials – including textbooks, syllabi, course activities, readings, and assessments – for 81 high-enrolling college courses. All course have now been released and are providing faculty with a high-quality option that will cost students no more than \$30 per course.
- Bangladesh is the first country to digitize a complete set of textbooks for grades 1-12. Distribution is free to all.
- Uruguay sought up to 1,000 digital learning resources in a Request For Proposals (RFP) in June 2011.
- South Korea has announced a plan to digitize all of its textbooks and to provide all students with computers and digitized textbooks.
- The California Learning Resources Network Free Digital Textbook Initiative at high school level, initiated by former Gov. Arnold Schwarzenegger.
- The Shuttleworth Foundation's Free high school science texts for South Africa
- Saudi Arabia had a comprehensive project in 2008 to digitize and improve the Math and Science text books in all k-12 grades.
- Saudi Arabia started a project in 2011 to digitize all text books other than Math and Science.

CRITICAL DISCOURSE ABOUT OER AS A MOVEMENT

EXTERNAL DISCOURSE

The OER movement has been accused of insularity and failure to connect globally: "OERs will not be able to help countries reach their educational goals unless awareness of their power and potential can rapidly be expanded beyond the communities of interest that they have already attracted."

More fundamentally, doubts were cast on the altruistic motives typically claimed by OERs. The project itself was accused of imperialism because the economic, political, and cultural preferences of highly developed countries determine the creation and dissemination of knowledge that can be used by less-developed countries and may be a self-serving imposition.

INTERNAL DISCOURSE

Within the open educational resources movement, the concept of OER is essentially contested and active. Consider, for example, the conceptions of gratis versus libre knowledge as found in the discourse about massive open online courses, which may offer free courses but charge for end-of-course awards or course verification certificates from commercial entities. A second example of essentially contested ideas in OER can be found in the usage of different OER logos which can be interpreted as indicating more or less allegiance to the notion of OER as a global movement.

Stephen Downes has argued that, from a connectivist perspective, the production of OER is ironic because "in the final analysis, we cannot produce knowledge for people. Period. The people who are benefiting from these open education resource initiatives are the people who are producing these resources."

Chapter 20

OPEN CONTENT

Open Content is a neologism coined by David Wiley in 1998 which describes a creative work that others can copy or modify. The term evokes open source software, which is a related concept in software.

The logo on the screen in the subject's left hand is a Creative Commons license, while the paper in his right hand explains that the image is open content.

When the term OpenContent was first used by Wiley, it described works licensed under the Open Content License (a non-free share-alike license, see 'Free content' below) and perhaps other works licensed under similar terms. It has since come to describe a broader class of content without conventional copyright restrictions. The openness of content can be assessed under the '5Rs Framework' based on the extent to which it can be reused, revised, remixed and redistributed by members of the public without violating copyright law. Unlike open source and free content, there is no clear threshold that a work must reach to qualify as 'open content'.

Although open content has been described as a counterbalance to copyright, open content licenses rely on a copyright holder's power to license their work.

DEFINITION

The OpenContent website once defined OpenContent as 'freely available for modification, use and redistribution under a license similar to those used by the Open Source / Free Software community'. However, such a definition would exclude the Open Content License (OPL) because that license forbade charging 'a fee for the [OpenContent] itself', a right required by free and open source software licenses.

The term since shifted in meaning. OpenContent "is licensed in a manner that provides users with free and perpetual permission to engage in the 5R activities."

The 5Rs are put forward on the OpenContent website as a framework for assessing the extent to which content is open:

1. Retain - the right to make, own, and control copies of the content (e.g., download, duplicate, store, and manage)
2. Reuse - the right to use the content in a wide range of ways (e.g., in a class, in a study group, on a website, in a video)
3. Revise - the right to adapt, adjust, modify, or alter the content itself (e.g., translate the content into another language)
4. Remix - the right to combine the original or revised content with other open content to create something new (e.g., incorporate the content into a mashup)
5. Redistribute - the right to share copies of the original content, your revisions, or your remixes with others (e.g., give a copy of the content to a friend)

This broader definition distinguishes open content from open source software, since the latter must be available for commercial use by the public. However, it is similar to several definitions for open educational resources, which include resources under noncommercial and verbatim licenses.

The Open Definition, which purports to define open content and open knowledge, draws heavily on the Open Source Definition; it preserves the limited sense of open content as libre content.

OPEN ACCESS

"Open access" refers to toll-free or gratis access to content, consisting mainly of published peer-reviewed scholarly journal articles. Some open access works are also licensed for reuse and redistribution, which would qualify them as open content.

OPEN CONTENT AND EDUCATION

Over the past decade, open content has been used to develop alternative routes towards higher education. Traditional universities are expensive, and their tuition rates are increasing. Open content allows a free way of obtaining higher education that is "focused on collective knowledge and the sharing and reuse of learning and scholarly content." There are multiple projects and organizations that promote learning through open content, including OpenCourseWare Initiative, The Saylor Foundation and Khan Academy. Some universities, like MIT, Yale, and Tufts are making their courses freely available on the internet.

TEXTBOOKS

The textbook industry is one of the educational industries in which open content can make the biggest impact. Traditional textbooks, aside from being expensive can also be inconvenient and out of date, because of publishers' tendency to constantly print new editions. Open textbooks help to eliminate this problem, because they are online and thus

easily updatable. Being openly licensed and online can be helpful to teachers, because it allows the textbook to be modified according to the teacher's unique curriculum. There are multiple organizations promoting the creation of openly licensed textbooks. Some of these organizations and projects include The University of Minnesota's Open Textbook Library, Connexions, OpenStax College, The Saylor Foundation Open Textbook Challenge and Wikibooks

LICENSES

According to the current definition of open content on the OpenContent website, any general, royalty-free copyright license would qualify as an open license because it 'provides users with the right to make more kinds of uses than those normally permitted under the law. These permissions are granted to users free of charge.'

However, the narrower definition used in the Open Definition effectively limits open content to libre content; any free content license would qualify as an open content license. According to this narrower criteria, the following still-maintained licenses qualify:

- Creative Commons licenses (only Creative Commons Attribution, Attribution-Share Alike and Zero)
- Open Publication License (the original license of the Open Content Project, the Open Content License, did not permit for-profit copying of the licensed work and therefore does not qualify)
- Against DRM license
- GNU Free Documentation License
- Open Game License (a license designed for role-playing games by Wizards of the Coast)
- Free Art License

Chapter 21

OPEN LEARNING

Open Learning is an innovative movement in education that emerged in the 1970s and evolved into fields of practice and study. The term refers generally to activities that either enhance learning opportunities within formal education systems or broaden learning opportunities beyond formal education systems. Open learning involves but is not limited to: classroom teaching methods, approaches to interactive learning, formats in work-related education and training, the cultures and ecologies of learning communities, and the development and use of open educational resources. While there is no agreed-upon, comprehensive definition of open learning, central focus is commonly placed on the "needs of the learner as perceived by the learner." Case studies illustrate open learning as an innovation both within and across academic disciplines, professions, social sectors and national boundaries, and in business and industry, higher education institutions, collaborative initiatives between institutions, and schooling for young learners.

India has the maximum number of open learners (around 100 million)

INCEPTION

Open learning as a teaching method is founded on the work of Célestin Freinet in France and Maria Montessori in Italy, among others. Open learning is supposed to allow pupils self-determined, independent and interest-guided learning. A prominent example is the

language experience approach to teaching initial literacy (cf. Brügelmann/ Brinkmann 2011). More recent work on open learning has been conducted by the German pedagogues Hans Brügelmann (1975; 1999), Falko Peschel (2002), Jörg Ramseger (1977) and Wulf Wallrabenstein (1991). The approach is supposed to face up to three challenges :

- the vast differences in experiences, interests, and competencies between children of the same age;
- the constructivist nature of learning demanding active problem-solving by the learner him- and herself;
- the legal requirement of student participation in decisions stipulated by the UN Convention on the Rights of the Child (CRC). of 1989.

Chapter 22

ACTIVE LEARNING

Active Learning is a model of instruction that focuses the responsibility of learning on learners. It was popularized in the 1990s by its appearance on the Association for the Study of Higher Education (ASHE) report. In this report they discuss a variety of methodologies for promoting "active learning". They cite literature which indicates that to learn, students must do more than just listen: They must read, write, discuss, or be engaged in solving problems. It relates to the three learning domains referred to as knowledge, skills and attitudes (KSA), and that this taxonomy of learning behaviours can be thought of as "the goals of the learning process" (Bloom, 1956). In particular, students must engage in such higher-order thinking tasks as analysis, synthesis, and evaluation. Active learning engages students in two aspects – doing things and thinking about the things they are doing (Bonwell and Eison, 1991).

A typical Active Learning Model

ACTIVE LEARNING EXERCISES

Bonwell and Eison (1991) suggested learners work collaboratively, discuss materials while role-playing, debate, engage in case study, take part in cooperative learning, or produce

short written exercises, etc. The argument is "when should active learning exercises be used during instruction?". Numerous studies have shown that introducing active learning activities (such as simulations, games, contrasting cases, labs,..) before, rather than after lectures or readings, results in deeper learning, understanding, and transfer. The degree of instructor guidance students need while being "active" may vary according to the task and its place in a teaching unit. In an active learning environment learners are immersed in experiences within which they are engaged in meaning-making inquiry, action, imagination, invention, interaction, hypothesizing and personal reflection Cranton (2012).

Examples of "active learning" activities include

- A class discussion may be held in person or in an online environment. Discussions can be conducted with any class size, although it is typically more effective in smaller group settings. This environment allows for instructor guidance of the learning experience. Discussion requires the learners to think critically on the subject matter and use logic to evaluate their and others' positions. As learners are expected to discuss material constructively and intelligently, a discussion is a good follow-up activity given the unit has been sufficiently covered already. Some of the benefits of using discussion as a method of learning are that it helps students explore a diversity of perspectives, it increases intellectual agility, it shows respect for students' voices and experiences, it develops habits of collaborative learning, it helps students develop skills of synthesis and integration (Brookfield 2005). In addition, by having the teacher actively engage with the students, it allows for them to come to class better prepared and aware of what is taking place in the classroom.
- A think-pair-share activity is when learners take a minute to ponder the previous lesson, later to discuss it with one or more of their peers, finally to share it with the class as part of a formal discussion. It is during this formal discussion that the instructor should clarify misconceptions. However students need a background in the subject matter to converse in a meaningful way. Therefore a "think-pair-share" exercise is useful in situations where learners can identify and relate what they already know to others. So preparation is key. Prepare learners with sound instruction before expecting them to discuss it on their own. If properly implemented, it saves instructor time, keeps students prepared, helps students to get more involved in class discussion and participation and provide cumulative assessment of student progress. The "think-pair-share" method is useful for teachers to hear from all students even those who are quiet in class. This teaching method functions as a great way for all the students in the class to get involved and learn to work together and feel comfortable sharing ideas. It can also help teachers or instructors to observe students and see if they understand the material being discussed. This is not a good strategy to use in large classes because of time and logistical constraints (Bonwell and Eison, 1991). Think-pair-share is helpful for the instructor as it enables organizing content and tracking students on where they are relative to the topic being discussed in class, saves time so that he/she can move to other topics, helps to make the class more interactive, provides opportunities for

students to interact with each other (Radhakrishna, Ewing, and Chikthimmah, 2012).

- A learning cell is an effective way for a pair of students to study and learn together. The learning cell was developed by Marcel Goldschmid of the Swiss Federal Institute of Technology in Lausanne (Goldschmid, 1971). A learning cell is a process of learning where two students alternate asking and answering questions on commonly read materials. To prepare for the assignment, the students will read the assignment and write down questions that they have about the reading. At the next class meeting, the teacher will randomly put the students in pairs. The process begins by designating one student from each group to begin by asking one of their questions to the other. Once the two students discuss the question, the other student will ask a question and they will alternate accordingly. During this time, the teacher is going around the class from group to group giving feedback and answering questions. This system is also referred to as a student dyad.
- A short written exercise that is often used is the "one minute paper." This is a good way to review materials and provide feedback. However a "one minute paper" does not take one minute and for students to concisely summarize it is suggested that they have at least 10 minutes to work on this exercise.
- A collaborative learning group is a successful way to learn different material for different classes. It is where you assign students in groups of 3-6 people and they are given an assignment or task to work on together. This assignment could be either to answer a question to present to the entire class or a project. Make sure that the students in the group choose a leader and a note-taker to keep them on track with the process. This is a good example of active learning because it causes the students to review the work that is being required at an earlier time to participate. (McKinney, Kathleen. (2010). Active Learning. Normal, IL. Center for Teaching, Learning & Technology.) In order to create participation and draw on the wisdom of all the learners the classroom arrangement needs to be flexible seating to allow for the creation of small groups (Bens, 2005).
- A student debate is an active way for students to learn because they allow students the chance to take a position and gather information to support their view and explain it to others. These debates not only give the student a chance to participate in a fun activity but it also lets them gain some experience with giving a verbal presentation. (McKinney, Kathleen. (2010). Active Learning. Normal, IL. Center for Teaching, Learning & Technology.)
- A reaction to a video is also an example of active learning because most students love to watch movies. The video helps the student to understand what they are learning at the time in an alternative presentation mode. Make sure that the video relates to the topic that they are studying at the moment. Try to include a few questions before you start the video so they will pay more attention and notice where to focus at during the video. After the video is complete divide the students

either into groups or pairs so that they may discuss what they learned and write a review or reaction to the movie. (McKinney, Kathleen. (2010). Active Learning. Normal, IL. Center for Teaching, Learning & Technology.)

- A small group discussion" is also an example of active learning because it allows students to express themselves in the classroom. It is more likely for students to participate in small group discussions than in a normal classroom lecture because they are in a more comfortable setting amongst their peers, and from a sheer numbers perspective, by dividing the students up more students will get opportunities to speak out. There are so many different ways a teacher can implement small group discussion in to the class, such as making a game out of it, a competition, or an assignment. Statistics show that small group discussions is more beneficial to students than large group discussions when it comes to participation, expressing thoughts, understanding issues, applying issues, and overall status of knowledge.
- A class game is also considered an energetic way to learn because it not only helps the students to review the course material before a big exam but it helps them to enjoy learning about a topic. Different games such as *Jeopardy!* and crossword puzzles always seem to get the students' minds going. (McKinney, Kathleen. (2010). Active Learning. Normal, IL. Center for Teaching, Learning & Technology.)
- Learning By Teaching is also an example of active learning because students actively research a topic and prepare the information so that they can teach it to the class. This helps students learn their own topic even better and sometimes students learn and communicate better with their peers than their teachers.

ACTIVE LEARNING AND POLICY

Policy may be satisfied by demonstrating the instructional effectiveness of instruction. Educational rubrics are a good way to evaluate "active learning" based instruction. These instructional tools can be used to describe the various qualities of any activity. In addition, if given to the student, they can provide additional guidance (here is an example rubric).

In the past few years outcome-based education policy has begun to limit instructors to only using those techniques that have been shown to be effective. In the United States for instance, the No Child Left Behind Act requires those developing instruction to show evidence of its "effectiveness."

RESEARCH EVIDENCE

Numerous studies have shown evidence to support active learning, given adequate prior instruction.

Richard Hake (1998) reviewed data from over 6000 physics students in 62 introductory physics courses and found that students in classes that utilized active learning and

interactive engagement techniques improved 25 percent points, achieving an average gain of 48% on a standard test of physics conceptual knowledge, the Force Concept Inventory, compared to a gain of 23% for students in traditional, lecture-based courses.

Similarly, Hoellwarth & Moelter (2011) showed that when instructors switched their physics classes from traditional instruction to active learning, student learning improved 38 percent points, from around 12% to over 50%, as measured by the Force Concept Inventory, which has become the standard measure of student learning in physics courses.

In "Does Active Learning Work? A Review of the Research," Prince (2004) found that "there is broad but uneven support for the core elements of active, collaborative, cooperative and problem-based learning" in engineering education.

Michael (2006), in reviewing the applicability of active learning to physiology education, found a "growing body of research within specific scientific teaching communities that supports and validates the new approaches to teaching that have been adopted."

In a 2012 report titled "Engage to Excel," the United States President's Council of Advisors on Science and Technology (PCAST) described how improved teaching methods, including engaging students in active learning, will increase student retention and improve performance in STEM courses. One study described in the report found that students in traditional lecture courses were twice as likely to leave engineering and three times as likely to drop out of college entirely compared with students taught using active learning techniques. In another cited study, students in a physics class that used active learning methods learned twice as much as those taught in a traditional class, as measured by test results.

Chapter 23

DIDACTIC METHOD

A Didactic Method is a teaching method that follows a consistent scientific approach or educational style to engage the student's mind. The didactic method of instruction is often contrasted with dialectics and the Socratic method; the term can also be used to refer to a specific didactic method, as for instance constructivist didactics.

Didactics is a theory of teaching, and in a wider sense, a theory and practical application of teaching and learning. In demarcation from "Mathetics" (the science of learning), didactics refers only to the science of teaching.

This theory might be contrasted with open learning, also known as experiential learning, in which people can learn by themselves, in an unstructured manner, on topics of interest.

Didactical methodology being practised in Ancient India

The theory of Didactic Learning methods focuses on the baseline knowledge students possess and seeks to improve upon and convey this information. It also refers to the foundation or starting point in a lesson plan, where the overall goal is knowledge. A teacher or educator functions in this role as an authoritative figure, but also as both a guide and a resource for students.

Didactics or the didactic method have different connotations in continental Europe and English speaking countries. For the Anglo-Saxon tradition, the didactic method still carries the original meaning of teaching moral contents, and is therefore associated with unfavourable views opposed to the teachings of a true art or science. The Oxford dictionary merely defines didactics as a particularly moral instruction. Didacticism was indeed the

cultural origin of the didactic method but refers within its narrow context usually pejoratively to the use of language to a doctrinal end.

The interpretation of these opposing views are theorised to be the result of a differential cultural development in the 19th century when Great Britain and its former colonies went through a renewal and increased cultural distancing from continental Europe. It was particularly the later appearance of Romanticism and Aestheticism in the Anglo-Saxon world which offered these negative and limiting views of the didactic method. In continental Europe those moralising aspects of didactics were removed earlier by cultural representatives of the age of enlightenment, such as Voltaire, Rousseau, and later specifically related to teaching by Johann Heinrich Pestalozzi.

The consequences of these cultural differences then created two main didactic traditions: The Anglo-Saxon tradition of curriculum studies on one side and the Continental and North European tradition of didactics on the other. And still today, the science of didactics is carrying much less weight in much of the English speaking world.

With the advent of globalisation at the beginning of the 20th century, however, the arguments for such relative philosophical aspects in the methods of teaching started to diminish somewhat. It is therefore possible to categorise didactics and pedagogy as a general analytic theory on three levels:

- a theoretical or research level (denoting a field of study)
- a practical level (summaries of curricular activities)
- a discursive level (implying a frame of reference for professional dialogs)

Chapter 24

LIFELONG LEARNING

'Lifelong Learning' is the "ongoing, voluntary, and self-motivated" pursuit of knowledge for either personal or professional reasons. Therefore, it not only enhances social inclusion, active citizenship, and personal development, but also self-sustainability, rather than competitiveness and employability.

The concept Lifelong Learning was introduced in Denmark as early as in 1971.

Evolved from the term “life-long learners” created by Leslie Watkins and used by Professor Clint Taylor (CSULA) and Superintendent for the Temple City Unified School District’s mission statement in 1993, the term recognizes that learning is not confined to childhood or the classroom but takes place throughout life and in a range of situations. Allen Tough (1979), Canadian educator and researcher, asserts that almost 70% of learning projects are self-planned.

There is no age limit for Lifelong Learning

During the last fifty years, constant scientific and technological innovation and change has had a profound effect on learning needs and styles. Learning can no longer be divided into a place and time to acquire knowledge (school) and a place and time to apply the knowledge acquired (the workplace). Instead, learning can be seen as something that takes place on an ongoing basis from our daily interactions with others and with the world

around us. It can take the form of formal learning or informal learning, or self-directed learning.

LEARNING ECONOMY

Lifelong learning is being recognized by traditional colleges and universities as valid in addition to degree attainment. Some learning is accomplished in segments or interest categories and can still be valuable to the individual and community. The economic impact of educational institutions at all levels will continue to be significant into the future as formal courses of study continue and interest-based subjects are pursued. The institutions produce educated citizens who buy goods and services in the community and the education facilities and personnel generate economic activity during the operations and institutional activities. Similar to health facilities, educational institutions are among the top employers in many cities and towns of the world.

Whether brick-and-mortar institutions or on-line schools, there is a great economic impact worldwide from learning, including lifelong learning, for all age groups. The lifelong learners, including persons with academic or professional credentials, tend to find higher-paying occupations, leaving monetary, cultural, and entrepreneurial impressions on communities, according to educator Cassandra B. Whyte.

LIFELONG LEARNING CONTEXTS

Although the term is widely used in a variety of contexts its meaning is often unclear. A learning approach that can be used to define lifelong learning is heutagogy.

There are several established contexts for lifelong learning beyond traditional "brick and mortar" schooling:

- Home schooling involves learning to learn or the development of informal learning patterns
- Waldorf education which teaches children to love learning for its own sake .
- Adult education or the acquisition of formal qualifications or work and leisure skills later in life
- Continuing education which often describes extension or not-for-credit courses offered by higher education institutions
- Knowledge work which includes professional development and on-the-job training
- Personal learning environments or self-directed learning using a range of sources and tools including online applications

E-learning is available at most colleges and universities or to individuals learning independently. There are even online courses being offered for free by many institutions.

One new (2008 and beyond) expression of lifelong learning is the Massive Open Online Course (a MOOC), in which a teacher or team offers a syllabus and some direction for the participation of hundreds, sometimes thousands, of learners. Most MOOCs do not offer

typical "credit" for courses taken, which is why they are interesting and useful examples of lifelong learning.

LIFELONG LEARNING AND EMERGING TECHNOLOGIES

Lifelong learning is defined as “all learning activity undertaken throughout life, with the aim of improving knowledge, skills and competences within a personal, civic, social and/or employment-related perspective”. It is often considered learning that occurs after the formal education years of childhood (where learning is instructor driven - pedagogical) and into adulthood (where the learning is individually driven - andragogical). It is sought out naturally through life experiences as the learner seeks to gain knowledge for professional or personal reasons. ‘Knowledge results from the combination of grasping experience and transforming it’ (Kolb 1984: 41). The concept of lifelong learning has become of vital importance with the emergence of new technologies that change how we receive and gather information, collaborate with others, and communicate.

ASSISTIVE TECHNOLOGY

As technology rapidly changes individuals must adapt and learn to meet everyday demands. However, through the lifecourse an individual's functional capacities may also change. Assistive Technology are also important considerations under the umbrella of emerging technology and lifelong learning. Access to informal and formal learning opportunities for individuals with disabilities may be dependent upon low and high tech assistive technology.

WEB 2.0

The emergence of Web 2.0 technologies has great potential to support lifelong learning endeavors, allowing for informal, just-in-time, day-to-day learning. Constant change is emerging as the new normal. In order to survive and thrive, organizations and individuals must be able to adjust, and enhance their knowledge and skills to meet evolving needs. This means the most important thing someone can learn is how to learn. An understanding of web 2.0 tools is critical to keeping up with a changing world and the information explosion.

WORKPLACE LEARNING

The professions in particular are recognizing the importance of developing practitioners to be lifelong learners. Nowadays, formal training is only a beginning; knowledge is accumulating at such a fast rate that one must continue to learn to be effective (Williams, 2001). Indeed, most professions mandate that their members continue learning in order to maintain their license to practice. (Merriam, Caffarella, & Baumgartner, 2007). Having said this, what are the characteristics or skills that a lifelong learner will need to develop. Reflective learning and critical thinking can help a learner to become more self-reliant through learning how to learn, thus making them better able to direct, manage, and control their own learning process (Candy, 1990). Sipe (1995) studied experimentally

“open” teachers and found that they valued self-directed learning, collaboration, reflection, and challenge; risk taking in their learning was seen as an opportunity, not a threat. Dunlap and Grabinger (2003) make the case that in order to prepare students in higher education to be lifelong learners, we must develop their capacity for self-direction, metacognition awareness, and a disposition toward learning (Merriam, Caffarella, & Baumgartner, 2007).

METACOGNITION

Literally ‘thinking about the process of knowing or simply thinking about thinking,’ metacognition refers to “higher order thinking which involves active control over the cognitive processes engaged in learning.” More precisely, it refers to the processes used to plan, monitor, and assess one’s understanding and performance. Metacognition includes a critical awareness of a) one’s thinking and learning and b) oneself as a thinker and learner.

Metacognition involves:

- Knowledge: awareness of your own thought processes and learning styles, and knowledge of the strategies that might be used for different learning tasks.
- Control or self-regulation: keeping track of your thinking processes, regulating and evaluating them.

While the study of metacognition originally gave educational psychologists insights into what differentiated successful students from their less successful peers, it is increasingly being used to inform teaching that aims to make students more aware of their learning processes, and show them how to regulate those processes for more effective learning throughout their lives.

Educators can employ Cognitive Strategy Instruction (CSI) as a means to help learners develop their metacognition. Again, learners who are better equipped to create learning strategies for themselves will have more success in achieving their cognitive goals.

As lifelong learning is "lifelong, lifewide, voluntary, and self-motivated" learning to learn, that is, learning how to recognize learning strategies, and monitor and evaluate learning, is a pre-condition for lifelong learning. Metacognition is an essential first step in developing lifelong learning.

IN PRACTICE

In India and elsewhere, the "University of the Third Age" (U3A) provides an example of the almost spontaneous emergence of autonomous learning groups accessing the expertise of their own members in the pursuit of knowledge and shared experience. No prior qualifications and no subsequent certificates feature in this approach to learning for its own sake and, as participants testify, engagement in this type of learning in later life can indeed 'prolong active life'.

In Sweden the successful concept of study circles, an idea launched almost a century ago, still represents a large portion of the adult education provision. The concept has since spread, and for instance, is a common practice in Finland as well. A study circle is one of the most democratic forms of a learning environment that has been created. There are no teachers and the group decides on what content will be covered, scope will be used, as well as a delivery method.

Sometimes lifelong learning aims to provide educational opportunities outside standard educational systems — which can be cost-prohibitive, if it is available at all. On the other hand, formal administrative units devoted to this discipline exist in a number of universities. For example, the 'Academy of Lifelong Learning' is an administrative unit within the University-wide 'Professional and Continuing Studies' unit at the University of Delaware. Another example is the Jagiellonian University Extension (Wszechnica Uniwersytetu Jagiellonskiego), which is one of the most comprehensive Polish centers for lifelong learning (open learning, organizational learning, community learning).

In recent years 'lifelong learning' has been adopted in the UK as an umbrella term for post-compulsory education that falls outside of the UK Higher Education system - Further Education, Community Education, Work-based Learning and similar voluntary, public sector and commercial settings.

Most colleges and universities in the United States encourage lifelong learning to non-traditional students. Professional licensure and certification courses are also offered at many universities, for instance for teachers, social services providers, and other professionals. Some colleges even enable adults to earn credit for the college-level learning gained through work, volunteer and other experiences.

In Canada, the Federal Government's Lifelong Learning Plan allows Canadian residents to withdraw funds from their Registered Retirement Savings Plan to help pay for lifelong learning, but the funds can only be used for formal learning programs at designated educational institutions.

The open university movement in India has gathered momentum during the last 35 years. Presently, the following open universities are functioning in India with more than 10 million students enrolled in different programmes :

Name of the Open Universities	Address
Indira Gandhi National Open University, New Delhi	Maidan Garhi, New Delhi - 110068
Dr. B.R. Ambedkar Open University Hyderabad, Andhra Pradesh	Prof. G. Ram Reddy Marg Road No.46, Jubilee Hills, Hyderabad – 500033, Andhra Pradesh
Vardhman Mahaveer Open University	Rawatbhata Road, Akhelgarh, Kota-324010,

Name of the Open Universities	Address
Kota, Rajasthan	Rajasthan
Nalanda Open University Patna, Bihar	IIIrd Floor, Biscomaun Bhawan, West Gandhi Maidan, Patna - 800001, Bihar
Yashwantrao Chavan Maharashtra Open University Nashik, Maharashtra	Dnyanagangotri, Near Gangapur Dam, Nashik-422222, Maharashtra
Madhya Pradesh Bhoj Open University Bhopal, Madhya Pradesh	I.T.I (Gas Rahat), Building Govindpura, Bhopal – 462 023, Madhya Pradesh
Dr. Babasaheb Ambedkar Open University Ahmedabad, Gujarat	Govt. Bungalow No.9, Dafnala, Shahi Baug, Ahmedabad-380003, Gujarat
The Global Open University Nagaland	Sodzulhou Village, P.O. - ARTC, NH-39, Dimapur - 797 115, Nagaland
Karnataka State Open University Mysore, Karnataka	Manasagangotri, Mysore - 570006, Karnataka
Netaji Subhas Open University Kolkata, West Bengal	1, Woodburn Park, Kolkata -700020, West Bengal
U.P. Rajarshi Tandon Open University Allahabad, Uttar Pradesh	17, Maharshi Dayanand Marg (Thornhill Road), Allahabad, Uttar Pradesh
Tamil Nadu Open University Chennai, Tamil Nadu	Directorate of Technical Education Campus, Guindy, Chennai-600 025, Tamil Nadu
Pt. Sunderlal Sharma Open University Bilaspur, Chhattisgarh	Near Pandit Deen Dayal Upadhyay Park, Vayapar Vihar, Bilaspur, Chattisgarh - 495001
Uttarakhand Open University, Haldwani, Distt. Nainital, Uttarakhand	Teenpani Bypass Road, Transport Nagar, Haldwani-263139, Distt. Nainital, Uttarakhand
Krishna Kanta Handique State Open University, Guwahati, Assam	Housefed Complex, Last Gate, Dispur, Guwahati – 781006, Assam

Chapter 25

SELF-REGULATED LEARNING

Self-Regulated Learning (SRL) is learning that is guided by metacognition (thinking about one's thinking), *strategic action* (planning, monitoring, and evaluating personal progress against a standard), and *motivation to learn*. "Self-regulated" describes a process of taking control of and evaluating one's own learning and behaviour.

Self-regulated learning emphasizes autonomy and control by the individual who monitors, directs, and regulates actions toward goals of information acquisition, expanding expertise, and self-improvement". In particular, self-regulated learners are cognizant of their academic strengths and weaknesses, and they have a repertoire of strategies they appropriately apply to tackle the day-to-day challenges of academic tasks. These learners hold incremental beliefs about intelligence (as opposed to entity, or fixed views of intelligence) and attribute their successes or failures to factors (e.g., effort expended on a task, effective use of strategies) within their control.

The Self-Regulated Learning Model

Finally, students who are self-regulated learners believe that opportunities to take on challenging tasks, practice their learning, develop a deep understanding of subject matter, and exert effort will give rise to academic success (Perry et al., 2006). In part, these characteristics may help to explain why self-regulated learners usually exhibit a high sense of self-efficacy. In the educational psychology literature, researchers have linked these characteristics to success in and beyond school.

Self regulated learners are successful because they control their learning environment. They exert this control by directing and regulating their own actions toward their learning goals. Self regulated learning should be used in three different phases of learning. The first phase is during the initial learning, the second phase is when troubleshooting a problem encountered during learning and the third phase is when they are trying to teach others.

FOUR PHASES OF SELF-REGULATION

According to Winne and Hadwin, self-regulation unfolds over “four flexibly sequenced phases of recursive cognition.” These phases are task perception, goal setting and planning, enacting, and adaptation. During the task perception phase, students gather information about the task at hand and personalize their perception of it. This stage involves determining motivational states, self-efficacy, and information about the environment around them.

Next, students set goals and plan how to accomplish the task. Several goals may be set concerning explicit behaviors, cognitive engagement, and motivation changes. The goals that are set depend on how the students perceive the task at hand. The students will then enact the plan they have developed by using study skills and other useful tactics they have in their repertoire of learning strategies.

The last phase is adaptation, wherein students evaluate their performance and determine how to modify their strategy in order to achieve higher performance in the future. They may change their goals or their plan; they may also choose not to attempt that particular task again. Winne and Hadwin state that all academic tasks encompass these four phases.

SOURCES OF SELF-REGULATED LEARNING

According to Iran-Nejad and Chissom, there are three sources of self-regulated learning: active/executive, dynamic, and interest-creating discovery model (1992). Active/executive self-regulation is regulated by the person and is intentional, deliberate, conscious, voluntary, and strategic. The individual is aware and effortful in using self-regulation strategies. Under this source of SRL, learning happens best in a habitual mode of functioning. Dynamic self-regulation is also known as unintentional learning because it is regulated by internal subsystems other than the “central executive.”

The learner is not consciously aware they are learning because it occurs “both under and outside the direct influence of deliberate internal control.” The third source of self-regulated learning is the interest-creating discovery module, which is described as “biofunctional” as it is developed from both the active and dynamic models of self-regulation.

In this model, learning takes place best in a creative mode of functioning and is neither completely person-driven nor unconscious, but it is a combination of both.

SOCIAL COGNITIVE PERSPECTIVE

Self-regulation from the social cognitive perspective looks at the triadic interaction among the person (e.g., beliefs about success), his or her behavior (e.g., engaging in a task), and the environment (e.g., feedback from a teacher). Zimmerman et al. specified three important characteristics of self-regulated learning:

1. self-observation (monitoring one's activities); seen as the most important of these processes
2. self-judgment (self-evaluation of one's performance) and
3. self-reactions (reactions to performance outcomes).

To the extent that one accurately reflects on his or her progress toward a learning goal, and appropriately adjusts his or her actions to maximize performance, he or she has effectively self-regulated. During a student's school career the primary goal of teachers is to produce self-regulated learners by using such theories as Information Processing Model (IPM). By storing the information into long term memory (or a live document like a Runbook) the learner can retrieve it upon demand and apply to tasks, becoming a self-regulated learner.

INVOLVING STAGES

Zimmerman suggested that self-regulated learning process better with three stages.

1. Forethought, learners' preparing work before performance on their studying;
2. Volitional control, which is also called "performance control", occurs in the learning process. It involves learners attention and willpower;
3. Self-reflection, happens in the final stage when learners review their performance toward final goals. At the same time, focusing on their learning strategies during the process is also efficient for their final outcomes.

INFORMATION PROCESSING PERSPECTIVE

Winne & Marx posited that motivational thoughts and beliefs are governed by the basic principles of cognitive psychology, which should be conceived in information-processing terms. Motivation plays a major role in self regulated learning. Motivation is needed to apply effort and continue on when faced with difficulty. Control also plays a role in self regulated learning as it helps the learner stay on track in reaching their learning goal and avoid being distracted from things that stand in the way of the learning goal (Palincsar & Brown, 1984).

STUDENT PERFORMANCE PERSPECTIVE

Lovett, Meyer and Thille observed comparable student performance between instructor-led and self-regulated learning environments. In a subsequent study, self-regulated

learning was shown to enable accelerated learning while maintaining long-term retention rates.

Cassandra B. Whyte (Whyte, 1978; Lauridsen & Whyte, 1985) noted the importance of internal locus of control tendencies on successful academic performance, also compatible with self-regulated learning. Whyte recognized and appreciated external factors, to include the benefit of working with a good teacher, while encouraging self-regulated hard work, skill building, and a positive attitude to perform better in academic situations.(Whyte,1978)

To increase positive attitudes and academic performance, expert learners should be created. Expert learners develop self-regulated learning strategies. One of these strategies is the ability to develop and ask questions and use these questions to expand on their own prior knowledge. This technique allows the learners to test the true understanding of their knowledge and make correction about content areas that have a misunderstanding. When learners engage in questioning, it forces them to be more actively engaged in their learning. It also allows them to self analyze and determine their level of comprehension (Palincsar & Brown, 1984).

This active engagement allows the learner to organize concepts into existing schemas. Through the use of questions, learners can accommodate and then assimilate their new knowledge with existing schema. This process allows the learner to solve novel problems and when the existing schema does not work on the novel problem the learner must reevaluate and assess their level of understanding (Paris & Paris, 2001).

APPLICATION OF SELF-REGULATED LEARNING IN PRACTICE

Edirippulige and Marasinghe (2011) reviewed evidences of blending of self-regulated learning with new educational programmes such as e-Health teaching using different ICT technologies.

There are also many practical applications for self-regulated learning in schools and classrooms today. Paris and Paris state there are three main areas of direct application in classrooms: literacy instruction, cognitive engagement, and self-assessment (2001). In the area of literacy instruction, educators can teach students the skills necessary to lead them to becoming self-regulated learners by using strategies such as reciprocal teaching, open-ended tasks, and project-based learning.

Other tasks that promote self-regulated learning are authentic assessments, autonomy-based assignments, and portfolios. These strategies are student-centered and inquiry based, which cause students to gradually become more autonomous, creating an environment of self-regulated learning. However, students do not simply need to know the strategies, but they need to realize the importance of utilizing them in order to experience academic success.

According to Dweck and Master, “Students use of learning strategies – and their continued use of them in the face of difficulty – is based on the beliefs that these strategies are necessary for learning, and that they are effective ways of overcoming obstacles.” Students who are not self-regulated learners may daydream, rarely complete assignments or forget assignments completely.

Those who do practice self-regulation ask questions, take notes, allocate their time effectively, and use resources available to them. Pajares lists several practices of successful students that Zimmerman and his colleagues developed in his chapter of *Motivation and Self-Regulated Learning: Theory, Research, and Applications*.

These behaviors include, but are not limited to, the following: finishing homework assignments by deadlines, studying when there are other interesting things to do, concentrating on school subjects, taking useful class notes of class instruction, using the library for information for class assignments, effectively planning schoolwork, effectively organizing schoolwork, remembering information presented in class and textbooks, arranging a place to study at home without distractions, motivating oneself to do schoolwork, and participating in class discussions.

Examples of self regulated learning strategies in practice:

Self-Assessment: fosters planning, assess what skills the learner has and what skills are needed. Allows students to internalize standards of learning so they can regulate their own learning (Laskey & Hetzel, 2010).

Wrapper Activity : activity based on pre-existing learning or assessment task. This can be done as a homework assignment. Consist of self-assessment questions to complete before completing homework and then after completion of homework. This will allow the learner to draw their own conclusions about the learning process (Laskey & Hetzel, 2010).

Think Aloud: This involves the teacher describing their thought process in solving a problem (Joseph, 2010).

Questioning: Following new material, student develop questions about the material (Joseph, 2010).

Reciprocal Teaching: the learner teaches new material to fellow learners (Joseph, 2010).

Chapter 26

SOCIAL LEARNING AND PEDAGOGY

Social Learning is learning that takes place at a wider scale than individual or group learning, up to a societal scale, through social interaction between peers. It may or may not lead to a change in attitudes and behaviour.

A HISTORY OF SOCIAL LEARNING

The following text is from Reed et al. (2010), where references to other material cited here can be found:

Early work conceptualized social learning as individual learning that takes place in a social context and is hence influenced by social norms, e.g., by imitating role models (Bandura 1977). However, this conceptualization is not particularly useful, because most learning takes place in some social context.

The Global Open University Nagaland believes that social learning is a process that must demonstrate that a change in understanding has taken place in the individuals involved; demonstrate that this change goes beyond the individual and becomes situated within wider social units or communities of practice; and occur through social interactions and processes between actors within a social network.

This literature conceptualizes, often implicitly, social learning as a process of social change in which people learn from each other in ways that can benefit wider social-ecological systems. Originating from concepts of organizational learning (Argyris and Schön 1978, 1996, Senge 1990, Wenger, 1998), this second school of thought is informed by social theories of learning, which define learning as active social participation in the practices of a community (Lave and Wenger 1991, Wenger 1998), and emphasize the dynamic interaction between people and the environment in the construction of meaning and identity (Muro and Jeffrey 2008). However, much of this literature ignores conceptual

advancements in the education and psychology literature (Fazey et al. 2007), and there remains little consensus or clarity over the conceptual basis of social learning (Wals and van der Leij 2007). Furthermore, although dynamic interactions have been emphasized in social learning literature, only most recent work has attempted to explicitly model the dynamics of social learning in evolving social networks based on empirical evidence.

One of the first courses in Social Learning is being offered at Columbia University Teachers College as peer to peer learning and sharing are becoming accepted as imperative in the learning process.

TOWARDS A CLEARER UNDERSTANDING OF SOCIAL LEARNING

Researchers have defined social learning in multiple, overlapping ways and confused social learning with the conditions and methods necessary to facilitate social learning or its potential outcomes. It is important to distinguish social learning as a concept from the conditions or methods that may facilitate social learning, e.g., stakeholder participation, and the potential outcomes of social learning processes, e.g., proenvironmental behavior. Building on this discussion, if learning is to be considered “social learning,” then it must:

i) Demonstrate that a change in understanding has taken place in the individuals involved. This may be at a surface level, e.g., via recall of new information, or deeper levels, e.g., demonstrated by change in attitudes, world views or epistemological beliefs; ii) Go beyond the individual to become situated within wider social units or communities of practice within society; and iii) Occur through social interactions and processes between actors within a social network, either through direct interaction, e.g., conversation, or through other media, e.g., mass media, telephone, or Web 2.0 applications.

As such, social learning may be defined as a change in understanding that goes beyond the individual to become situated within wider social units or communities of practice through social interactions between actors within social networks.

HOW LONG DOES SOCIAL LEARNING TAKE?

The issue of how long social learning takes is important for the design of learning initiatives and policy interventions. The process of going beyond individual learning to a broader understanding situated in a community of practice can take some time to develop. A longitudinal study looking at an environmental group concerned about land degradation found that social learning was documented after approximately 1 year, but was initially restricted to an increased understanding of the problem without improved knowledge to address it. Further knowledge necessary to address the problem in focus emerged during the third year of the program. This suggests that learning initiatives could take around 3 years to develop sufficient new knowledge embedded in a community of practice to address complex problems.

Chapter 27

AUGMENTED LEARNING

Augmented Learning is an on-demand learning technique where the environment adapts to the learner. By providing remediation on-demand, learners can gain greater understanding of a topic while stimulating discovery and learning.

Most implementations of augmented learning are forms of e-learning. In desktop computing environments, the learner receives supplemental, contextual information through an on-screen, pop-up window, toolbar or sidebar.

As the user navigates a website, e-mail or document, the learner associates the supplemental information with the key text selected by a mouse, touch or other input device. In mobile environments, augmented learning has also been deployed on tablets and smartphones.

The Global Open University Nagaland has a strong feeling that technologies incorporating rich media and interaction have demonstrated the educational potential that scholars, teachers and students are embracing. Instead of focusing on memorization, the learner experiences an adaptive learning experience based upon the current context. The augmented content can be dynamically tailored to the learner's natural environment by displaying text, images, video or even playing audio.

Augmented learning is closely related to augmented intelligence (intelligence amplification) and augmented reality. Augmented intelligence applies information processing capabilities to extend the processing capabilities of the human mind through distributed cognition. Augmented intelligence provides extra support for autonomous intelligence and has a long history of success.

Mechanical and electronic devices that function as augmented intelligence range from the abacus, calculator, personal computers and smart phones. Software with augmented intelligence provide supplemental information that is related to the context of the user. When an individual's name appears on the screen, a pop-up window could display person's organizational affiliation, contact information and most recent interactions.

In mobile reality systems, the annotation may appear on the learner's individual "heads-up display" or through headphones for audio instruction. For example, apps for Google Glasses can provide video tutorials and interactive click-throughs, .

Foreign language educators are also beginning to incorporate augmented learning techniques to traditional paper-and-pen-based exercises. For example, augmented information is presented near the primary subject matter, allowing the learner to learn how to write glyphs while understanding the meaning of the underlying characters.

JUST-IN-TIME UNDERSTANDING AND LEARNING

Augmentation tools can help learners understand issues, acquire relevant information and solve complex issues by presenting supplementary information at the time of need or "on demand." This contrasts with traditional methods of associative learning, including rote learning, classical conditioning and observational learning, where the learning is performed in advance of the learner's need to recall or apply what has been learned.

Snyder and Wilson assert that just-in-time learning is not sufficient. Long-term learning demands continuous training should be individualized and built upon individual competencies and strengths.

UNDERSTANDING LANGUAGE

Augmented learning tools have been useful for learners to gain an enhanced understanding of words or to understand a foreign language. The interactive, dynamic nature of these on-demand language assistants can provide definitions, sample sentences and even audible pronunciations. When sentences or blocks of text are selected, the words are read aloud while the user follows along with the native text or phonetics. Speech rate control can tailor the text-to-speech (TTS) to keep pace with the learner's comprehension.

MAKING LEARNING FUN

One researcher has suggested that handheld devices like cell phones and portable game machines (Game Boy, PlayStation Portable) can make an impact on learning. These mobile devices excel in their portability, context sensitivity, connectivity and ubiquity. By incorporating social dynamics in a real-world context, learning games can create compelling environments for learners.

At the Allard Pierson Museum in Amsterdam, visitors view information on-demand at the "A Future for the Past" exhibit. In a virtual reconstruction of Satricum and the Forum

Romanum, users can call up information that is overlaid on room-sized photos and other images. The museum uses both stationary displays and mobile computers to allow users to view translucent images and information keyed to their specific interest.

IS AUGMENTATION REALLY "LEARNING"?

Critics may see learning augmentation as a crutch that precludes memorization; similar arguments have been made about using calculators in the past. Just as rote learning is also not a substitute for understanding, augmented learning is simply another faculty for helping learners recall, present and process information.

Current research suggests that even unconscious visual learning can be effective. Visual stimuli, rendered in flashes of information, showed signs of learning even when the human adult subjects were unaware of the stimulus or reward contingencies.

Chapter 28

OPENNESS

Openness is an overarching concept or philosophy that is characterized by an emphasis on transparency and free, unrestricted access to knowledge and information, as well as collaborative or cooperative management and decision-making rather than a central authority. Openness can be said to be the opposite of secrecy.

IN GOVERNMENT

Open Government is the governing doctrine which holds that citizens have the right to access the documents and proceedings of the government to allow for effective public oversight.

Openness in government applies the idea of freedom of information to information held by authorities and holds that citizens should have the right to see the operations and activities of government at work. Since reliable information is requisite for accountability, freedom of access to information about the government supports government accountability and helps protect other necessary rights.

IN CREATIVE WORKS

Open content and free content both refer to creative works that lack restrictions on how people can use, modify, and distribute them. The terms derive from open source software and free software, similar concepts that refer specifically to software.

IN EDUCATION

Open education refers to institutional practices and programmatic initiatives that broaden access to the learning and training traditionally offered through formal education systems. By eliminating Barriers to entry, open education aids freedom of information by increasing accessibility.

IN ACADEMIA

Open access refers to the practice of allowing peer-reviewed research articles to be available online free of charge and free of most copyright and licensing restrictions. Benefits of this approach include: accelerated discovery and progress as researchers are free to use and build on the findings of others, giving back to the public as much research is paid for with public funds, and greater impact for one's work due to open access articles being accessible to a bigger audience.

Chapter 29

DIGITAL RIGHTS

The term Digital Rights describes the human rights that allow individuals to access, use, create, and publish digital media or to access and use computers, other electronic devices, or communications networks. The term is particularly related to the protection and realization of existing rights, such as the right to privacy or freedom of expression, in the context of new digital technologies, especially the Internet. Internet access is recognized as a right by the laws of several countries.

HUMAN RIGHTS AND THE INTERNET

A number of human rights have been identified as relevant with regard to the Internet. These include: freedom of expression, data protection and privacy and freedom of association. Furthermore, the right to education and multilingualism, consumer rights, and capacity building in the context of the right to development have also been identified. The Internet is a global public good that should be accessible to all and respectful of the rights of others, said an influential Jesuit magazine. With repressive regimes restricting access to information and communications, democratic governments should work to guarantee access to the Internet and adopt general principles to ensure network use respects universal human rights said an editorial in *La Civiltà Cattolica*, a Jesuit journal reviewed by the Vatican before publication.

"What the law permits or prohibits offline must also be the case online," said the editorial released Nov. 17.

The "only widespread international consensus" on online material to be censored regards child pornography and cyberterrorism, the article said.

The Jesuit journal said that with individuals abusing the freedom of expression, with companies potentially exploiting computer users for financial gain and repressive regimes blocking information from their citizens, the world needs a "Charter of Human Rights for the Internet".

The Electronic Frontier Foundation has criticized the United States government for considering during the Megaupload seizure process that people lose property rights by storing data on a cloud computing service.

ENSURING THAT ACCESS IS BROADLY AVAILABLE AND/OR PREVENTING UNREASONABLE RESTRICTIONS

Several countries have adopted laws that require the state to work to ensure that Internet access is broadly available and/or preventing the state from unreasonably restricting an individual's access to information and the Internet:

- Costa Rica: A 30 July 2010 ruling by the Supreme Court of Costa Rica stated: "Without fear of equivocation, it can be said that these technologies [information technology and communication] have impacted the way humans communicate, facilitating the connection between people and institutions worldwide and eliminating barriers of space and time. At this time, access to these technologies becomes a basic tool to facilitate the exercise of fundamental rights and democratic participation (e-democracy) and citizen control, education, freedom of thought and expression, access to information and public services online, the right to communicate with government electronically and administrative transparency, among others. This includes the fundamental right of access to these technologies, in particular, the right of access to the Internet or World Wide Web."
- Estonia: In 2000, the parliament launched a massive program to expand access to the countryside. The Internet, the government argues, is essential for life in the 21st century.
- Finland: By July 2010, every person in Finland was to have access to a one-megabit per second broadband connection, according to the Ministry of Transport and Communications. And by 2015, access to a 100 Mbit/s connection.
- France: In June 2009, the Constitutional Council, France's highest court, declared access to the Internet to be a basic human right in a strongly-worded decision that struck down portions of the HADOPI law, a law that would have tracked abusers and without judicial review and automatically cut off network access to those who continued to download illicit material after two warnings
- Greece: Article 5A of the Constitution of Greece states that all persons has a right to participate in the Information Society and that the state has an obligation to facilitate the production, exchange, diffusion, and access to electronically transmitted information.
- Spain: Starting in 2011, Telefónica, the former state monopoly that holds the country's "universal service" contract, has to guarantee to offer "reasonably" priced broadband of at least one megabyte per second throughout Spain.

APC INTERNET RIGHTS CHARTER

The APC Internet Rights Charter was established by the Association for Progressive Communications (APC) at the APC Europe Internet Rights Workshop, held in Prague, February 2001. The Charter draws on the People's Communications Charter and develops seven themes: internet access for all; freedom of expression and association; access to knowledge, shared learning and creation - free and open source software and technology development; privacy, surveillance and encryption; governance of the internet; awareness, protection and realization of rights.

The APC states that "the ability to share information and communicate freely using the internet is vital to the realisation of human rights as enshrined in the Universal Declaration of Human Rights, the International Covenant on Economic, Social and Cultural Rights, the International Covenant on Civil and Political Rights and the Convention on the Elimination of All Forms of Discrimination against Women."

WORLD SUMMIT ON THE INFORMATION SOCIETY (WSIS)

In December 2003 the World Summit on the Information Society (WSIS) was convened under the auspice of the United Nations (UN). After lengthy negotiations between governments, businesses and civil society representatives the WSIS Declaration of Principles was adopted reaffirming human rights:

"We reaffirm the universality, indivisibility, interdependence and interrelation of all human rights and fundamental freedoms, including the right to development, as enshrined in the Vienna Declaration. We also reaffirm that democracy, sustainable development, and respect for human rights and fundamental freedoms as well as good governance at all levels are interdependent and mutually reinforcing. We further resolve to strengthen the rule of law in international as in national affairs

The WSIS Declaration also makes specific reference to the importance of the right to freedom of expression in the "Information Society" in stating:

"We reaffirm, as an essential foundation of the Information Society, and as outlined in Article 19 of the Universal Declaration of Human Rights, that everyone has the right to freedom of opinion and expression; that this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers. Communication is a fundamental social process, a basic human need and the foundation of all social organisation. It is central to the Information Society. Everyone, everywhere should have the opportunity to participate and no one should be excluded from the benefits of the Information Society offers."

The 2004 WSIS Declaration of Principles also acknowledged that "it is necessary to prevent the use of information resources and technologies for criminal and terrorist purposes, while respecting human rights." Wolfgang Benedek comments that the WSIS Declaration only contains a number of references to human rights and does not spell out any procedures or mechanism to assure that human rights are considered in practice.

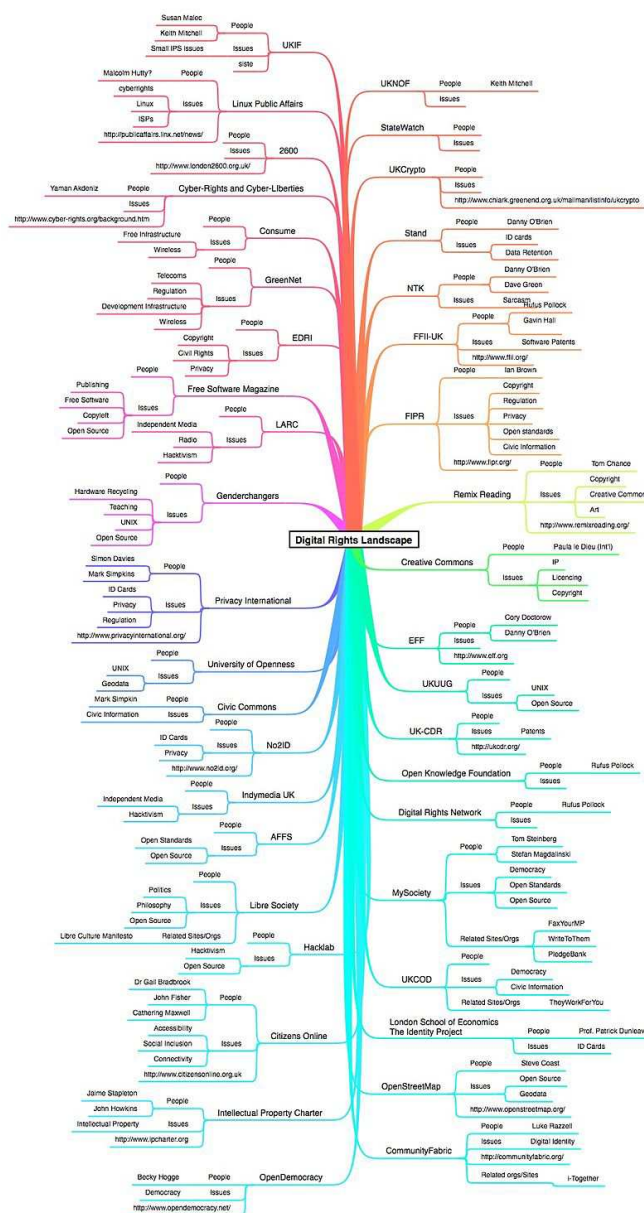

DIGITAL RIGHTS LANDSCAPE

In 2005, the United Kingdom's Open Rights Group published a digital rights landscape, documenting the range of organizations and people active in the cause of preserving digital rights. The diagram related groups, individuals, and websites to interest areas.

INTERNET BILL OF RIGHTS

The Dynamic Coalition for an Internet Bill of Rights emerged in preparation for the 2008 World Summit on the Information Society (WSIS) in Rio as part of which the Coalition held a large preparatory Dialogue Forum on Internet Rights in Rome, September 2007. The Dialogue Forum established that the aim was not to develop a new legal bill of rights, but to work on a set of guidelines interpreting existing human rights with regard to the needs and challenges of the information society. The Coalition intends to undertake an

inventory of existing international human rights instruments and to serve as an engagement platform to elaborate the content of the Internet Bill of Rights.

Digital rights landscape

GLOBAL NETWORK INITIATIVE

On October 29, 2008 the Global Network Initiative (GNI) was founded upon its "Principles on Freedom of Expression and Privacy". The Initiative was launched in the 60th Anniversary year of the Universal Declaration of Human Rights (UDHR) and is based on internationally recognized laws and standards for human rights on freedom of expression and privacy set out in the UDHR, the International Covenant on Civil and Political Rights (ICCPR) and the International Covenant on Economic, Social and Cultural Rights (ICESCR). Participants in the Initiative include the Electronic Frontier Foundation,

Human Rights Watch, Google, Microsoft, Yahoo, other major companies, human rights NGOs, investors, and academics.

According to reports Cisco Systems was invited to the initial discussions but didn't take part in the initiative. Harrington Investments, which proposed that Cisco establish a human rights board, has dismissed the GNI as a voluntary code of conduct having any impact. Chief executive John Harrington called the GNI "meaningless noise" and instead calls for bylaws to be introduced that force boards of directors to accept human rights responsibilities.

BBC WORLD SERVICE GLOBAL PUBLIC OPINION POLL

A poll of 27,973 adults in 26 countries, including 14,306 Internet users, was conducted for the BBC World Service by the international polling firm GlobeScan using telephone and in-person interviews between 30 November 2009 and 7 February 2010. GlobeScan Chairman Doug Miller felt, overall, that the poll showed that:

Despite worries about privacy and fraud, people around the world see access to the internet as their fundamental right. They think the web is a force for good, and most don't want governments to regulate it.

Findings from the poll include:

- Nearly four in five (78%) Internet users felt that the Internet had brought them greater freedom.
- Most Internet users (53%) felt that "the internet should never be regulated by any level of government anywhere".
- Opinion was evenly split between Internet users who felt that "the internet is a safe place to express my opinions" (48%) and those who disagreed (49%).
- The aspects of the Internet that cause the most concern include: fraud (32%), violent and explicit content (27%), threats to privacy (20%), state censorship of content (6%), and the extent of corporate presence (3%).
- Almost four in five Internet users and non-users around the world felt that access to the Internet was a fundamental right (50% strongly agreed, 29% somewhat agreed, 9% somewhat disagreed, 6% strongly disagreed, and 6% gave no opinion).

RECOMMENDATIONS OF THE UN SPECIAL RAPPORTEUR

The 88 recommendations made by the Special Rapporteur on the promotion and protection of the right to freedom of opinion and expression in a May 2011 report to the Human Rights Council of the United Nations General Assembly include several that bear on the question of Internet access:

67. Unlike any other medium, the Internet enables individuals to seek, receive and impart information and ideas of all kinds instantaneously and inexpensively across national borders. By vastly expanding the capacity of individuals to enjoy their

right to freedom of opinion and expression, which is an "enabler" of other human rights, the Internet boosts economic, social and political development, and contributes to the progress of humankind as a whole. In this regard, the Special Rapporteur encourages other Special Procedures mandate holders to engage on the issue of the Internet with respect to their particular mandates.

78. While blocking and filtering measures deny users access to specific content on the Internet, States have also taken measures to cut off access to the Internet entirely. The Special Rapporteur considers cutting off users from Internet access, regardless of the justification provided, including on the grounds of violating intellectual property rights law, to be disproportionate and thus a violation of article 19, paragraph 3, of the International Covenant on Civil and Political Rights.

79. The Special Rapporteur calls upon all States to ensure that Internet access is maintained at all times, including during times of political unrest.

85. Given that the Internet has become an indispensable tool for realizing a range of human rights, combating inequality, and accelerating development and human progress, ensuring universal access to the Internet should be a priority for all States. Each State should thus develop a concrete and effective policy, in consultation with individuals from all sections of society, including the private sector and relevant Government ministries, to make the Internet widely available, accessible and affordable to all segments of population.

These recommendations have led to the suggestion that Internet access itself is or should become a fundamental human right.

INTERNET SOCIETY'S GLOBAL INTERNET USER SURVEY

In July and August 2012 the Internet Society conducted online interviews of more than 10,000 Internet users in 20 countries. Some of the results relevant to Digital rights and Internet access are summarized below.

Question	No. of Responses	Responses
Access to the Internet should be considered a basic human right.	10,789	83% somewhat or strongly agree, 14% somewhat or strongly disagree, 3% don't know
Each individual country has the right to govern the Internet the way they see fit.	10,789	67% somewhat or strongly agree, 29% somewhat or strongly disagree, 4% don't know /not applicable
The Internet does more to help society than it does to hurt it.	10,789	83% somewhat or strongly agree, 13% somewhat or strongly disagree, 4% don't know / not applicable
Increased government control of the Internet would make me use the Internet less.	9,717	57% somewhat or strongly agree, 39% somewhat or strongly disagree, 5% don't know / not applicable
Increased government control of the Internet would increase the number of users.	9,717	40% somewhat or strongly agree, 52% somewhat or strongly disagree,

		8% don't know / not applicable
Governments need to place a higher priority on expanding the Internet and its benefits in my country.	10,789	83% somewhat or strongly agree, 11% somewhat or strongly disagree, 5% don't know / not applicable
For the Internet to reach its full potential in my country people need to be able to access the Internet without data and content restrictions.	10,789	79% somewhat or strongly agree, 17% somewhat or strongly disagree, 4% don't know / not applicable

Chapter 30

LIBRE

Libre is a loan word in English, borrowed from French and Spanish, used to describe something as being "free", in the sense of "having freedom" or "liberty". It is used in English to distinguish the two meanings of free: free as in freedom (*libre*) from free as in free of charge (*gratis*). Another sample is common: Free as "Free Speech", not as "Free Drink"!

Historically the word has been borrowed from Romance languages, usually to refer to free will or freedom of expression in some aspect of the lending culture (e.g. vers libre in French poetry, or the Spanish term Lucha libre, a style of wrestling).

In the 1990s, libre was proposed as an alternative term for free software which avoided the ambiguity in the word "free" in English. The word gained some acceptance in the software community, though the terms "free software" and "open source software" remain dominant. "Free" and "open" have both been rigorously defined in the free software and the open source definitions which have formed the basis of similar definitions in the realms of education, knowledge and culture.

The word "libre" is now used in discourses requiring an unambiguous adjective meaning "free as in freedom", often concerning one or more of the following: open source or open source software, free software, the free software movement or the free culture movement, open and libre knowledge.

In these contexts, "libre" encompasses the four essential freedoms defined in the free software definition, and is used to describe works which may be used, modified, copied and shared without permission from the copyright holder.

Public copyright licenses that grant these freedoms (libre licences) typically require attribution for contributors and may include copyleft terms that ensure these essential freedoms remain in future derivative works. Works that are in the public domain are also considered libre.

The word "libre" has also been recommended as an alternative for "open" when the core freedoms apply.

Examples of terms that use "libre" in this way include libre software, FLOSS (free/libre and open source software), libre knowledge, libre resources and libre works.

The antonym "non-libre" (or proprietary) is used to describe works released under licences which deny users one or more of the essential freedoms. For example, licences that forbid commercial use or derivative works are non-libre, as are works restricted by patents or trademarks.

Libre comes from the Latin word *liber*, via the French and Spanish *libre*; it shares that root with *liberty*. It denotes "the state of being free", in the sense of "having freedom" or "liberty". The *Oxford English Dictionary* (OED) describes *libre* as obsolete, but the word has come back into limited use. Its primary function in English is to serve as an adjective describing something as being free as in freedom (*libre*), irrespective of whether or not it is free of charge (*gratis*).

IN OTHER LANGUAGES

Many Romance languages have separate words for *libre* and *gratis* avoiding the ambiguity of the word "free" in English. In these languages, *libre* (Spanish and French) and equivalents such as *libero* (Italian) and *Livre* (Portuguese), descend from the Latin *liber* ("free" in the liberty sense). The latin word *gratis* is the root of its equivalent in those languages: *gratis* (Spanish), *gratuit* (French), *gratuito* (Italian) and *grátis* (Portuguese).

Libre, gratis, free and open in some Romance languages				
Language	Libre, libre software, etc.	Gratis (from the Latin <i>grātis</i>)	Free (of charge), freeware	Open, open source software, etc.
Root	<i>liber</i> (Latin)	<i>grātis</i> (Latin)	From Middle English <i>fre</i> , from Old English <i>frēo</i> , Proto-Germanic <i>*frijaz</i> , from Proto-Indo-European <i>*prei-</i> .	<i>aperto</i> (Latin)
French	<i>libre</i> , <i>logiciel libre</i> , <i>FLOSS</i>	<i>gratis</i>	<i>gratuit</i> , <i>logiciel gratuit</i> , <i>freeware</i> ou <i>gratuiciel</i>	<i>open source</i> ou <i>code source ouvert</i> or <i>FLOSS</i>
Spanish	<i>libre</i> , <i>software libre</i>	<i>gratis</i>	<i>gratuito</i> , feminine <i>gratuita</i> , <i>freeware</i> (<i>software gratis</i>)	<i>Código abierto</i>
Italian	<i>libero</i> , <i>software libero</i> , <i>contenuto libero</i>	<i>gratis</i> , <i>gratuito</i>	<i>freeware</i>	<i>aperto</i> , <i>contenuto aperto</i> (open content)
Portuguese	<i>livre</i> , <i>software livre</i>	<i>grátis</i> , <i>gratuito</i>	<i>Software gratuito</i> ou <i>freeware</i>	<i>Código aberto</i>
Esperanto	<i>libera</i> , <i>Libera programaro</i>		donace, senkosta or senpaga	<i>aperta</i> , <i>Malfermkoda programaro</i> (not closed)

Most other languages also have separate words for *gratis* and *libre*. However, the ambiguity is not unique to English and subtleties arise in some languages.

In Filipino for example, the word "libre" (borrowed from Spanish) has the same cost/freedom ambiguity as the English word "free". Instead, the term "Malayang software" is recommended.

History

Although use of *libre* in English to distinguish free/libre from free/gratis is relatively recent, the concept of works that are free of permission restrictions is as old as print itself. The Diamond Sutra, the world's oldest dated printed book, includes the sentence:

Reverently [caused to be] made for universal free distribution by Wang Jie on behalf of his two parents on the 13th of the 4th moon of the 9th year of Xiantong [i.e. 11th May, AD 868].

Frontispiece of the Chinese Diamond Sūtra

Similarly, the concept of restricted knowledge is not new. Examples include some Religious texts (e.g. closed canons), esoteric and secret knowledge restricted to initiates such as those associated with mystery religions and martial arts. The reasons and means of restriction have varied over time according to political and technical circumstances.

Expansion of U.S. copyright law.

Contemporary use of the word libre is mostly associated with liberation from restrictions on usage and sharing of works which are subject to copyright and other legal and technical limitations. Works include knowledge and cultural resources such as works of art, writing, education, music, software and other resources, typically in digital forms which are easily copied and distributed.

VERS LIBRE

Vers libre, a term borrowed from French which circulated in English in the early 1900s, refers to poetic forms created in 19th century France which liberated themselves from the rules (i.e. meter patterns, rhyme, etc.) of contemporary traditional forms

Vers libre, had hardly been heard of outside of France. until T. E. Hulme and F. S. Flint shared their knowledge thereof in 1909 with the Poets Club in London which later became the heart of the Imagist movement

Through Flint's advocacy of the genre, vers libre influenced Imagism in the discovery of new forms and rhythms.

Imagism, in the wake of French Symbolism (i.e. vers libre of French Symbolist poets), was the wellspring out of which the main current of Modernism in English flowed, which T. S. Eliot later identified as 'the point de repere usually taken as the starting point of modern poetry', as hundreds of poets were led to adopt vers libre as their medium

LIBRE DEFINITION

The adopted meaning of "libre", as it is currently used, was first formalised in the free software definition published by the Free Software Foundation in 1986.

Although limited to software, the four core freedoms defined therein formed the basis for various definitions emanating from the free culture movement. These include definitions of libre knowledge and free cultural works.

Implicit in these definitions is the requirement that the resource (or work) is not restricted via technical means (e.g. DRM) or legal limitations (e.g. via copyright, trademarks or patents) which would prevent the user from being able to exercise these freedoms.^{[c][d]}>

MUSIC, ART AND CULTURE

The free/libre software movement and definition also inspired initiatives in specific areas such as art and music whose histories are outlined in the Libre culture article.

OPENNESS

In 1998, the term open source software was suggested as a substitute for free software because (like libre) it avoided the ambiguity of 'free' in English, (unlike libre) was not as

value-laden as the term free software, and was therefore more acceptable to the commercial software industry.

As did the free software movement, the open source movement also stimulated initiatives in other areas, usually pertaining to knowledge rather than culture. These promote terms such as "open data", "open content", OER (Open Educational Resources) and open knowledge.

The open source movement and its off-shoots (e.g. open education and open knowledge) emphasise pragmatics such as the benefits of peer production, whereas the free software movement and aligned branches (e.g. elements of the free culture movement such as Students for Free Culture and proponents of libre knowledge) place greater value on ethics, freedom and social solidarity.

Although open source software and open knowledge^[e] have formal definitions which encompass the types of freedoms called for in libre software, the adjective "open" is more broadly used in terms such as MOOC, OER and Open Access which do not all comply with such definitions.

LIBRE RESOURCES

The term "libre resources" or "libre works" typically refers to cultural or knowledge resources which meet the requirements of the libre definitions above. The resources or works are usually digitally represented on a device or medium such as files in an open/free format containing text, an image, sound, multimedia, etc. or combinations of these, accessible with libre software.

LIBRE KNOWLEDGE

Libre knowledge is knowledge released in such a way that

users are free to read, listen to, watch, or otherwise experience it; to learn from or with it; to copy, adapt and use it for any purpose; and to share the work (unchanged or modified).

Whilst shared tacit knowledge is regarded as implicitly libre, (explicit) libre knowledge is defined as a generalisation of the libre software definition (see above).

The vision of the Wikimedia Foundation,

"Imagine a world in which every single human being can freely share in the sum of all knowledge. That's our commitment"

and the success of Wikipedia, along with that of free/libre and open source software as a whole, are often cited as successful examples of libre knowledge and commons-based peer production.

Explicit libre knowledge encompasses its components such as data, content/information, software and other libre resources used to represent and communicate knowledge.

LIBRE LICENCES

Libre licences are licences pertaining to copyright in which the copyright owner has granted the freedoms specified in the definition of libre software and definitions derived from it such as the Definition of Free Cultural Works.^[g] A libre resource (one so-licensed or in the public domain) is free of any restrictions which might prevent users from being able to exercise these freedoms (such as DRM or patent-encumbrance).^[d] For example, of the still active Creative Commons licences, Creative Commons Attribution, Attribution-ShareAlike and Zero are libre licences.

SHARE-ALIKE AND COPYLEFT

Copyleft describes a requirement on some libre licences that copies and modifications of the original work must be available under the same or similar licence. In this way, copyleft libre licences guarantee that all modifications, mixes and extensions of a libre work will be libre as well.

The GNU General Public License was the first copyleft licence and remains the most commonly used for software. When a libre licence has a share-alike term, it is a copyleft licence. For example, the Creative Commons Attribution-ShareAlike licence is a copyleft licence.

Copyleft licences are also described as reciprocal or (pejoratively) as viral licences.

Arguments for using copyleft or share-alike libre licences include that they encourage people to grow the commons, and that they are a stronger defence of the freedom of other users (in future), since the so-licensed resources may not be used to enhance non-libre resources (e.g. proprietary software and other restrictive knowledge and cultural resources).

"Someone who uses your code in a nonfree program is trying to deny freedom to others, and if you let him do it, you're failing to defend their freedom"

PERMISSIVE OR COPYFREE

Permissive libre, copyfree, copycenter or academic licences are those libre licences which do not require derivative works to be licensed under the same licence as the original work. They also typically do not have other requirements that are common in copyleft licences, like restrictions on formats that the work can be available in or whether Digital Rights Management may be used on the product. The Copyfree Standard Definition, used by the

Copyfree Initiative to certify copyfree licenses, disallows licenses that come with such copyleft requirements from certification.

PUBLIC DOMAIN

Public domain works are the least restricted libre works, although their status typically comes from the expiration of copyright rather than a libre licence. However, there are declarations that purport to place a work in the public domain or, in the case of the CC Zero licence, give it the same freedoms as works in the public domain.

Public domain libre software licences are sometimes described as beerware.

STATEMENTS AND SYMBOLS

As well as the libre licences described above, which require copyright law to function, members of the libre movement have also created symbols and statements that purport to operate without a legal mechanism. Kopimi is described as a 'symbol showing that you want to be copied.' Question Copyright artist-in-residence Nina Paley advocates Copyheart, a sentence intended to replace the usual copyright declaration on a work:

'♥2010 by Author/Artist. Copying is an act of love. Please copy.'

Regarding the lack of legal certainty provided by the statement, Paley writes:

We really don't think laws and "imaginary property" have any place in peoples' love or cultural relations. Creating more legally binding licenses and contracts just perpetuates the problem of law—a.k.a. state force—intruding where it doesn't belong. That ♥copyheart isn't a legally binding license is not a bug—it's a feature!

Likewise, the Libre Society drafted two libre 'licences', but celebrated their lack of legal power. They are the Res Divini Juris Licence and the Res Communes Licence, but neither is in common use.

A "Libre Puro" licence and emblem were drafted and discussed in collaboration with the Free Knowledge Foundation. Neither the licence nor the emblem were officially launched or are in common use.

CULTURAL SIGNIFICANCE

The loanword libre has usually entered the English language as part of a technical term in connection with exposure to foreign cultures. The specific reference points have typically been fields of activity where the foreign culture has a dominant role. Examples include cante libre (*free song*, Spanish), vers libre (*free verse*, French, see the History section above), and Lucha libre (*free wrestling*, Spanish). In the relevant communities exposed to these terms, libre is understood to mean free as in freedom, and the terms are frequently used in those communities without translation.

LUCHA LIBRE

Blue Demon Jr. vs. El Hijo Del Santo.

The term Lucha libre was originally used in the same way as the English term "freestyle wrestling", an amateur wrestling style without the restrictions of Greco-Roman wrestling. Nowadays it refers exclusively to the professional form. The style developed in Spanish speaking countries and rose to prominence most notably in Mexico.

Outside of Mexico Lucha Libre has transcended the language barrier and crossed over into popular culture, especially in movies (e.g. *Nacho Libre*) and television.

Lucha libre, its wrestlers (luchadors) and masks have inspired or are featured in other areas of pop culture such as mainstream advertising (e.g. in Canada, Telus's Koodo Mobile Post Paid cell service uses a cartoon lucha libre wrestler as its spokesperson/mascot) and comics (e.g. Sonambulo, El Campeon and challengers in The Amazing Joy Buzzards, Lucha Master in the anime Air Master).

Seven members of the band Pussy Riot wearing lucha libre inspired masks

Many fighting video games have featured characters based on luchadors, featuring both the masked aspects and the different wrestling style of Lucha Libre compared to traditional professional wrestling.

Lucha libre has served as inspiration for products, advertising and activism. Examples include Nike's line of lucha libre inspired athletic shoes, Coca-Cola's Blue Demon Full Throttle energy drink named after the luchador Blue Demon, Jr., and the wearing of lucha libre inspired masks by members of the Russian feminist punk-rock collective Pussy Riot and supporters.

Depictions of luchadores are often used as symbols of Mexico and Mexican culture in non-Spanish speaking cultures.

LIBRE IN POPULAR MUSIC

Popular music is another channel by which words and phrases may cross language and cultural divides. Several albums with title tracks containing the word libre have achieved international acclaim and some have been nominated for Grammy Awards.

Some of these albums or songs are clearly about freedom, while the association is less obvious in others.

UNIVERSITÉ LIBRE

The Global Open University Nagaland team members are greatly influenced by the term Université Libre which means a liberal university, a free university or an open university. Actually the word liberal university is the most appropriate term to be used for universities offering distance, correspondence or online courses in the light of the fact that most of the open universities are liberal in nature by also allowing the prospective candidates to get admitted even without any formal qualification but of course based on age related rules as prescribed by the University Grants Commission under the Ministry of Human Resource Development, Government of India.

Chapter 31

OPEN KNOWLEDGE

Open knowledge is knowledge that one is free to use, reuse, and redistribute without legal, social or technological restriction. Open knowledge is a set of principles and methodologies related to the production and distribution of knowledge works in an *open* manner. Knowledge is interpreted broadly to include data, content and general information.

The concept is related to open source and the Open Knowledge Definition is directly derived from the Open Source Definition. Open knowledge can be seen as being a superset of open data, open content and libre open access with the aim of highlighting the commonalities between these different groups.

Open Knowledge being acquired in Ancient India

HISTORY

Similarly to other 'open' concepts such as open data and open content, though the term is rather new, the concept is old. For example, one of the earliest printed texts of which we have record is a copy of the Buddhist Diamond sutra produced in China around 868 AD, and in it can be found the dedication: "for universal free distribution".

Open Knowledge through meditation in Ancient India

Chapter 32

DISTANCE EDUCATION

Distance Education is a generic term used to define the field of distance learning. Distance learning is a mode of delivering education and instruction, often on an individual basis, to students who are not physically present in a traditional setting such as a classroom. Distance learning provides "access to learning when the source of information and the learners are separated by time and distance, or both." Distance education courses that require a physical on-site presence for any reason (excluding taking examinations) may be referred to as hybrid or blended courses of study. Massive Open Online Courses, aimed at large-scale interactive participation and open access via the web or other network technologies, are recent developments in distance education. A number of other terms (distributed learning, e-learning, online learning, etc.) are used roughly synonymously with distance education. However distance is the oldest and mostly commonly used term globally. It is also the broadest term and has the largest collection of related research articles.

*Distance Education is useful
for everyone*

HISTORY

One of the earliest attempts was advertised in 1728 in the *Boston Gazette* for "Caleb Philipps, Teacher of the new method of Short Hand," who sought students who wanted to learn through weekly mailed lessons.

The first distance education course in the modern sense was provided by Sir Isaac Pitman in the 1840s, who taught a system of shorthand by mailing texts transcribed into shorthand on postcards and receiving transcriptions from his students in return for correction. The element of student feedback was a crucial innovation of Pitman's system.

This scheme was made possible by the introduction of uniform postage rates across England in 1840.

Sir Isaac Pitman, pioneer of distance education in the 1840s.

This early beginning proved extremely successful, and the Phonographic Correspondence Society was founded three years later to establish these courses on a more formal basis. The Society paved the way for the later formation of Sir Isaac Pitman Colleges across the country.

Anybody and everybody should be allowed to acquire distance education qualification from any part of the country and the world.

UNIVERSITY CORRESPONDENCE COURSES

The University of London was the first university to offer distance learning degrees, establishing its External Programme in 1858. The background to this innovation lay in the fact that the institution (later known as University College London) was non-denominational and, given the intense religious rivalries at the time, there was an outcry against the "godless" university. The issue soon boiled down to which institutions had degree-granting powers and which institutions did not.

The London University in 1827, drawn by Thomas Hosmer Shepherd

The compromise solution that emerged in 1836 was that the sole authority to conduct the examinations leading to degrees would be given to a new officially recognized entity called the "University of London", which would act as examining body for the University of London colleges, originally University College London and King's College London, and award their students University of London degrees. As Sheldon Rothblatt states, "thus arose in nearly archetypal form the famous English distinction between teaching and examining, here embodied in separate institutions." With the state giving examining powers to a separate entity, the groundwork was laid for the creation of a programme within the new university that would both administer examinations and award qualifications to students taking instruction at another institution or pursuing a course of self-directed study.

Referred to as "People's University" by Charles Dickens because it provided access to higher education to students from less affluent backgrounds, the External Programme was chartered by Queen Victoria in 1858, making the University of London the first university to offer distance learning degrees to students. Enrolment increased steadily during the late 19th century, and its example was widely copied elsewhere. This program is now known as the University of London International Programme and includes Postgraduate, Undergraduate and Diploma degrees created by colleges such as the London School of Economics, Royal Holloway and Goldsmiths.

William Rainey Harper, encouraged the development of external university courses at the new University of Chicago in the 1890s

In the United States, William Rainey Harper, first president of the University of Chicago, developed the concept of extended education, whereby the research university had satellite colleges of education in the wider community. In 1892 he also encouraged the concept of correspondence school courses to further promote education, an idea that was put into practice by Columbia University. Enrollment in the largest private for-profit school based in Scranton, Pennsylvania, the International Correspondence Schools grew explosively in the 1890s. Originally founded in 1888 to provide training for immigrant coal miners aiming to become state mine inspectors or foremen, it enrolled 2500 new students in 1894 and matriculated 72,000 new students in 1895. By 1906 total enrollments reached 900,000. The growth was due to sending out complete textbooks instead of single lessons, and the use of 1200 aggressive in-person salesmen. There was a stark contrast in pedagogy:

The regular technical school or college aims to educate a man broadly; our aim, on the contrary, is to educate him only along some particular line. The college demands that a student shall have certain educational qualifications to enter it, and that all students study for approximately the same length of time, and when they have finished their courses they are supposed to be qualified to enter any one of a number of branches in some particular profession. We, on the contrary, are aiming to make our courses fit the particular needs of the student who takes them.

Education was a high priority in the Progressive Era, as American high schools and colleges expanded greatly. For men who were older or were too busy with family responsibilities, night schools were opened, such as the YMCA school in Boston that

became Northeastern University. Outside the big cities, private correspondence schools offered a flexible, narrowly focused solution. Large corporations systematized their training programs for new employees. The National Association of Corporation Schools grew from 37 in 1913 to 146 in 1920. Starting in the 1880s, private schools opened across the country which offered specialized technical training to anyone who enrolled, not just the employees of one company. Starting in Milwaukee in 1907, public schools began opening free vocational programs.

The latest modes and technologies of distance education has enabled everyone to seek knowledge through distance, open and virtual education (DOVE)

Only a third of the American population lived in cities of 100,000 or more population In 1920; to reach the rest, correspondence techniques had to be adopted. Australia with its vast distances was especially active; the University of Queensland established its Department of Correspondence Studies in 1911. In South Africa, the University of South Africa, formerly an examining and certification body, started to present distance education tuition in 1946. The International Conference for Correspondence Education held its first meeting in 1938. The goal was to provide individualized education for students, at low cost, by using a pedagogy of testing, recording, classification, and differentiation.

OPEN UNIVERSITIES

Walton Hall, renovated in 1970 to act as the headquarters of the newly established The Open University, U.K.

The Open University in the United Kingdom was founded by the then serving Labour Party government under the prime minister, Harold Wilson, based on the vision of Michael Young. Planning commenced in 1965 under the Minister of State for Education, Jennie Lee, who established a model for the OU as one of widening access to the highest standards of scholarship in higher education, and set up a planning committee consisting of university vice-chancellors, educationalists and television broadcasters, chaired by Sir Peter Venables. The British Broadcasting Corporation (BBC) Assistant Director of Engineering at the time, James Redmond, had obtained most of his qualifications at night school, and his natural enthusiasm for the project did much to overcome the technical difficulties of using television to broadcast teaching programmes.

The Open University revolutionized the scope of the correspondence program and helped to create a respectable learning alternative to the traditional form of education. It has been at the forefront of developing new technologies to improve the distance learning service as well as undertaking research in other disciplines. Walter Perry was appointed the OU's first vice-chancellor in January 1969, and its foundation secretary was Anastasios Christodoulou. The election of the new Conservative Party government under the prime minister, Edward Heath, in 1970 led to budget cuts under Chancellor of the Exchequer Iain Macleod (who had earlier called the idea of an Open University "blithering nonsense"). However, the OU accepted its first 25,000 students in 1971, adopting a radical open admissions policy. At the time, the total student population of conventional universities in the United Kingdom was around 130,000.

Athabasca University, Canada's Open University, was created in 1970 and followed a similar, though independently developed, pattern. The Open University inspired the creation of Spain's National University of Distance Education (1972) and Germany's

FernUniversität in Hagen (1974). There are now many similar institutions around the world, often with the name "Open University" (in English or in the local language).

All "open universities" use distance education technologies as delivery methodologies though some require attendance at local study centres or at regional "summer schools". Some open universities have grown to become 'mega-universities', a term coined to denote institutions with more than 100,000 students.

OPEN COLLEGES

In 1976, Bernard Luskin launched Coastline Community College as a college beyond walls, combining computer assisted instruction with telecourses produced by KOCE TV, the Coast Community College District public television station. Coastline has been a landmark strategic success in helping to establish online distance learning using modern technology for learning.

Distance Education and specially Online Education is less expensive and can be taken as a hobby course

TECHNOLOGIES

Although the expansion of the Internet blurs the boundaries, distance education technologies are divided into two modes of delivery: synchronous learning and asynchronous learning.

In synchronous learning, all participants are "present" at the same time. In this regard, it resembles traditional classroom teaching methods despite the participants being located remotely. It requires a timetable to be organized. Web conferencing, videoconferencing,

educational television, instructional television are examples of synchronous technology, as are direct-broadcast satellite (DBS), internet radio, live streaming, telephone, and web-based VoIP. Web conferencing software such as Adobe Connect help to facilitate meetings in distance learning courses and usually contain additional interaction tools such as text chat, polls, hand raising, emoticons etc. These tools also support asynchronous participation by students being able to listen to recordings of synchronous sessions. Immersive environments (notably SecondLife) have also been used to enhance participant presence in distance education courses. Another form of synchronous learning that has been entering the classroom over the last couple of years is the use of robot proxies including those that allow sick students to attend classes.

Many more learners may join distance education courses as there is no seat limitation in the distance and open university programmes

In asynchronous learning, participants access course materials flexibly on their own schedules. Students are not required to be together at the same time. Mail correspondence, which is the oldest form of distance education, is an asynchronous delivery technology, as are message board forums, e-mail, video and audio recordings, print materials, voicemail, and fax.

The two methods can be combined. Many courses offered by both open universities and an increasing number of campus based institutions use periodic sessions of residential or day teaching to supplement the sessions delivered at a distance. This type of mixed distance and campus based education has recently come to be called "blended learning" or less often "hybrid learning". Many open universities use a blend of technologies and a blend of learning modalities (face-to-face, distance, and hybrid) all under the rubric of "distance learning."

Distance learning can also use Interactive Radio Instruction (IRI), Interactive Audio Instruction (IAI), online virtual worlds, digital games, webinars, and webcasts, all of which are referred to as e-Learning. Media psychology and media studies have evolved as research foci in the study of media effects. Each has grown into important academic areas with graduate degree programs now providing professional research, teaching and field staff to help build understanding of the behavioral implications of media. The first MA, PhD and EdD programs in Media Psychology and Media Studies were launched in 2002 by Bernard Luskin at Fielding Graduate University.

The reach of distance education is global

RADIO AND TELEVISION

The very rapid spread of film in the 1920s and radio in the 1930s led to proposals to use it for distance education. By 1938, at least 200 city school systems, 25 state boards of education, and many colleges and universities broadcast educational programs for the public schools. One line of thought was to use radio as a master teacher.

" Experts in given fields broadcast lessons for pupils within the many schoolrooms of the public school system, asking questions, suggesting readings, making assignments, and conducting tests. This mechanizes education and leaves the local teacher only the tasks of preparing for the broadcast and keeping order in the classroom."

A typical setup came in Kentucky in 1948 when John Wilkinson Taylor, president of the University of Louisville, teamed up with the National Broadcasting Corporation to use radio as a medium for distance education. The chairman of the Federal Communications Commission endorsed the project and predicted that the "college-by-radio" would put "American education 25 years ahead." The University was owned by the city, and local

residents would pay the low tuition rates, receive their study materials in the mail, and listen by radio to live classroom discussions that were held on campus. Charles Wedemeyer of the University of Wisconsin–Madison also promoted new methods. From 1964 to 1968, the Carnegie Foundation funded Wedemeyer's *Articulated Instructional Media Project* (AIM) which brought in a variety of communications technologies aimed at providing learning to an off-campus population. The radio courses faded away in the 1950s. Many efforts to use television along the same lines proved unsuccessful, despite heavy funding by the Ford Foundation.

INTERNET

The widespread use of computers and the internet have made distance learning easier and faster, and today virtual schools and virtual universities deliver full curricula online. The capacity of Internet to support voice, video, text and immersion teaching methods made earlier distinct forms of telephone, videoconferencing, radio, television and text based education somewhat redundant. However, many of the techniques developed and lessons learned with earlier media are used in Internet delivery.

Virtual Education is an advanced form of distance education

In 1996 Jones International University was launched by Glenn Jones, CEO and Bernard Luskin, Chancellor as the first fully online university accredited by a regional accrediting association in the US.

Between 2000 and 2008, enrollment in distance education courses increased rapidly in almost every country in both developed and developing countries. Many private, public, non-profit and for-profit institutions worldwide now offer distance education courses from the most basic instruction through to the highest levels of degree and doctoral programs.

Levels of accreditation vary: Widely respected universities such as Stanford University and Harvard now deliver online courses—but other online schools receive little outside oversight, and some are actually fraudulent, i.e., diploma mills. In the US, the Distance Education Accrediting Commission (DEAC) specializes in the accreditation of distance education institutions.

In the United States in 2011, it was found that a third of all the students enrolled in postsecondary education had taken an accredited online course in a postsecondary institution. Even though growth rates are slowing, enrollment for online courses has been seen to increase with the advance in technology. The majority of public and private colleges now offer full academic programs online. These include, but are not limited to, training programs in the mental health, occupational therapy, family therapy, art therapy, physical therapy, and rehabilitation counseling fields. Distance education has a long history, but its popularity and use has grown exponentially as more advanced technology has become available. By 2008, online learning programs were available in the United States in 44 states at the K-12 level.

*The Government of India considers the degrees of
the open universities at par with the degrees of
the conventional universities*

Internet forums, online discussion group and online learning community can contribute to an efficacious distance education experience. Research shows that **socialization** plays an important role in some forms of distance education.

PACED AND SELF PACED MODELS

Distance education can be delivered in a paced format similar to traditional campus based models in which learners commence and complete a course at the same time. Paced delivery is currently the most common mode of distance education delivery. Alternatively,

some institutions offer self-paced programs that allow for continuous enrolment and the length of time to complete the course is set by the learner's time, skill and commitment levels. Paced courses may be offered in either synchronus mode, but self-paced courses are almost always offered asynchronously. Each delivery model offers both advantages and disadvantages for students, teachers and institutions.

Paced models are a familiar mode as they are used almost exclusively in campus based schools. Institutes that offer both distance and campus programs usually use paced models as teacher workload, student semester planning, tuition deadlines, exam schedules and other administrative details can be synchronized with campus delivery. Student familiarity and the pressure of deadlines encourages students to readily adapt to and usually succeed in paced models. However, student freedom is sacrificed as a common pace is often too fast for some students and too slow for others. In addition life events, professional or family responsibilities can interfere with a students capability to complete tasks to an external schedule. Finally, paced models allows students to readily form communities of inquiry and to engage in collaborative work.

New and emerging subjects can be introduced at the global level through distance education mode

Self-paced courses maximize student freedom, as not only can students commence studies on any date, but they can complete a course in as little time as a few weeks or up to a year or longer. Students often enrol in self-paced study when they are under pressure to complete programs, have not been able to complete a scheduled course, need additional courses or have pressure which precludes regular study for any length of time. The self-paced nature of the programming, though is an unfamiliar model for many students and can lead to excessive procrastination resulting in course incomplection. Assessment of learning can also be challenging as exams can be written on any day, making it possible

for students to share examination questions with resulting loss of academic integrity. Finally, it is extremely challenging to organize collaborative work activities, though some schools are developing cooperative models based upon networked and connectivist pedagogies, for use in self-paced programs.

BENEFITS

Distance learning can expand access to education and training for both general populace and businesses since its flexible scheduling structure lessens the effects of the many time-constraints imposed by personal responsibilities and commitments. Devolving some activities off-site alleviates institutional capacity constraints arising from the traditional demand on institutional buildings and infrastructure. Furthermore, there is the potential for increased access to more experts in the field and to other students from diverse geographical, social, cultural, economic, and experiential backgrounds.

Distance Education does not affect the routine vocation or engagement of the learner

As the population at large becomes more involved in lifelong learning beyond the normal schooling age, institutions can benefit financially, and adult learning business courses may be particularly lucrative. Distance education programs can act as a catalyst for institutional innovation and are at least as effective as face-to-face learning programs, especially if the instructor is knowledgeable and skilled.

Distance education can also provide a broader method of communication within the realm of education. With the many tools and programs that technological advancements have to offer, communication appears to increase in distance education amongst students and their professors, as well as students and their classmates. The distance educational increase in communication, particularly communication amongst students and their classmates, is an improvement that has been made to provide distance education students with as many of the opportunities as possible as they would receive in in-person education. The improvement being made in distance education is growing in tandem with the constant technological advancements. Present-day online communication allows students to associate with accredited schools and programs throughout the world that are out of reach for in-person learning. By having the opportunity to be involved in global institutions via distance education, a diverse array of thought is presented to students

through communication with their classmates. This is beneficial because students have the opportunity to "combine new opinions with their own, and develop a solid foundation for learning.". It has been shown through research that "as learners become aware of the variations in interpretation and construction of meaning among a range of people [they] construct an individual meaning," which can help students become knowledgeable of a wide array of viewpoints in education. To increase the likelihood that students will build effective ties with one another during the course, instructors should use similar assignments for students across different locations to overcome the influence of co-location on relationship building.

*Online and web based learning
is the latest as books are not required,
rather the CDs etc. are commonly used.*

The high cost of education affects students in higher education, to which distance education may be an alternative in order to provide some relief. Distance education has been a more cost-effective form of learning, and can sometimes save students a significant amount of money as opposed to traditional education. Distance education may be able to help to save students a considerable amount financially by removing the cost of transportation. In addition, distance education may be able to save students from the economic burden of high-priced course textbooks. Many textbooks are now available as electronic textbooks, known as e-textbooks, which can offer digital textbooks for a reduced price in comparison to traditional textbooks. Also, the increasing improvements in technology have resulted in many school libraries having a partnership with digital publishers that offer course materials for free, which can help students significantly with educational costs.

Within the class, students are able to learn in ways that traditional classrooms would not be able to provide. It is able to promote good learning experiences and therefore, allow students to obtain higher satisfaction with their online learning. For example, students can review their lessons more than once according to their need. Students can then manipulate the coursework to fit their learning by focusing more on their weaker topics while breezing through concepts that they already have or can easily grasp. When course

design and the learning environment are at their optimal conditions, distance education can lead students to higher satisfaction with their learning experiences.

Studies have shown that high satisfaction correlates to increased learning. Students who are enrolled in distance education with high satisfaction in their online coursework are then motivated intrinsically to learn, which often means that their performance in class will improve. For those in a healthcare or mental health distance learning program, online-based interactions have the potential to foster deeper reflections and discussions of client issues as well as a quicker response to client issues, since supervision happens on a regular basis and is not limited to a weekly supervision meeting. This also may contribute to the students feeling a greater sense of support, since they have ongoing and regular access to their instructors and other students.

Distance Education helps in national as well as international integration all over the world

Distance learning may enable students who are unable to attend a traditional school setting, due to disability or illness such as decreased mobility and immune system suppression, to get a good education. Children who are sick or are unable to attend classes are now able to attend them in “person” through the use of robot proxies. This helps the students have experiences of the classroom and social interaction that they are unable to receive at home or the hospital, while still keeping them in a safe learning environment. Over the last few years more students are entering safely back into the classroom thanks to the help of robots. Attached is an article from the New York Times: A Swiveling Proxy Will Even Wear a Tutu that explains the positive impact of virtual learning in the

classroom. and another Robot brings classroom to sick students that explains how even a simple, stationary telepresence robot can help.

Distance education may provide equal access regardless of socioeconomic status or income, area of residence, gender, race, age, or cost per student. Applying universal design strategies to distance learning courses as they are being developed (rather than instituting accommodations for specific students on an as-needed basis) can increase the accessibility of such courses to students with a range of abilities, disabilities, learning styles, and native languages. Distance education graduates, who would have never have been associated with the school under a traditional system, may donate money to the school.

Distance Learning may also offer a final opportunity for adolescences that are no longer permitted in the General Education population due to behavior disorders. Instead of these students having no other academic opportunities, they may continue their education from their homes and earn their diplomas, offering them another chance to be an integral part of society.

CRITICISM

Barriers to effective distance education include obstacles such as domestic distractions and unreliable technology, as well as students' program costs, adequate contact with teachers and support services, and a need for more experience.

Some students attempt to participate in distance education without proper training of the tools needed to be successful in the program. Students must be provided with training on each tool that is used throughout the program. The lack of advanced technology skills can lead to an unsuccessful experience. Schools have a responsibility to adopt a proactive policy for managing technology barriers.

Mother Earth protection strategies and cleanliness education is feasible through distance education

The results of a study of Washington state community college students showed that distance learning students tended to drop out more often than their traditional counterparts due to difficulties in language, time management, and study skills.

Distance learning benefits may outweigh the disadvantages for students in such a technology driven society however before indulging into use of educational technology a few more disadvantages should be considered. Some say a negative to distance education is the lack of direct face-to-face social interaction, however as more people become used to personal and social interaction online (for example dating, chat rooms, shopping, blogging etc.) it is becoming easier for learners to both project themselves and socialize with others. Not all courses required to complete a degree may be offered online. Health care profession programs in particular, require some sort of patient interaction through field work before a student may graduate. Studies have also shown that students pursuing a medical professional graduate degree who are participating in distance education courses, favor face to face communication over professor-mediated chat rooms and/or independent studies. However, this is little to correlation between student performance when comparing the previous different distance learning strategies.

Peace education as a mass movement should be promoted all over the globe through distance education for solving the problems of peacelessness and insurgency

There is a theoretical problem about the application of traditional teaching methods to online courses because online courses may have no upper size limit. Daniel Barwick noted that there is no evidence that large class size is always worse or that small class size is always better, although a negative link has been established between certain types of instruction in large classes and learning outcomes; he argued that higher education has not made a sufficient effort to experiment with a variety of instructional methods to determine whether large class size is always negatively correlated with a reduction in learning outcomes. Early proponents of Massive Open Online Courses (MOOC)s saw them

as just the type of experiment that Barwick had pointed out was lacking in higher education, although Barwick himself has never advocated for MOOCs.

There may also be institutional challenges. Distance learning is new enough that it may be a challenge to gain support for these programs in a traditional brick-and-mortar academic learning environment. Furthermore, it may be more difficult for the instructor to organize and plan a distance learning program, especially since many are new programs and their organizational needs are different from a traditional learning program. Another benefit of distance education is one for developing countries. Judith Adler Hellman states, "In the face of the pressure on these countries to join the global information economy, distance education appears to provide the opportunity to train more people better and at lower cost."

Even though there are advantages in advancing industrial countries, there are still negative sides to distance education. Hellman states, "These include its cost and capital intensiveness, time constraints and other pressures on instructors, the isolation of students from instructors and their peers, instructors' enormous difficulty in adequately evaluating students they never meet face-to-face, and drop-out rates far higher than in classroom-based courses."

A more complex challenge of distance education relates to cultural differences between the two sides. Distance programmes tend to be more diverse as they could go beyond the geographical borders of regions, countries, and continents, and cross the cultural borders that may exist with respect to race, gender, and religion. That requires a proper understanding and awareness of the norms, differences, preconceptions and potential conflicting issues.

EDUCATIONAL TECHNOLOGY

The modern use of electronic educational technology (also called e-learning) facilitates distance learning and independent learning by the extensive use of Information and Communications Technology (ICT), replacing traditional content delivery by postal correspondence. Instruction can be synchronous and asynchronous online communication in an interactive learning environment or virtual communities, in lieu of a physical classroom. "The focus is shifted to the education transaction in the form of virtual community of learners sustainable across time." One of the most significant issues encountered in the mainstream correspondence model of Distance Education is transactional distance. Transactional distance results from the lack of appropriate communication between learner and teacher. This gap has been observed to become wider if there is no communication between the learner and teacher and has direct implications over the learning process and future endeavors in Distance Education. Distance Education providers began to introduce various strategies, techniques, and procedures to increase the amount of interaction between learner and teacher. These measures e.g. more frequent face-to-face tutorials, increased use of Information and Communication Technologies including teleconferencing and the Internet, were designed to close the gap in transactional distance.

Chapter 33

PROFESSIONAL DEVELOPMENT

Professional Development encompasses all types of facilitated learning opportunities including credentials such as academic degrees to formal coursework, conferences and informal learning opportunities situated in practice. It has been described as intensive and collaborative, ideally incorporating an evaluative stage. There are a variety of approaches to professional development, including consultation, coaching, communities of practice, lesson study, mentoring, reflective supervision and technical assistance.

HISTORY

The Oxford English Dictionary notes the use of the phrase "professional development" from 1857 onwards.

In the training of school staff in the United States, "[t]he need for professional development [...] came to the forefront in the 1960's".

PARTICIPANTS

A wide variety of people, such as teachers, military officers and non-commissioned officers, health care professionals, lawyers, accountants and engineers engage in professional development. Individuals may participate in professional development because of an interest in lifelong learning, a sense of moral obligation, to maintain and improve professional competence, to enhance career progression, to keep abreast of new technology and practices, or to comply with professional regulatory organizations. Indeed many are also forced to participate in so called professional development courses as part of a human resources exercise; the point and use of which is debatable.

Many American states have professional development requirements for school teachers. For example, Arkansas teachers must complete 60 hours of documented professional development activities annually. Professional development credits are named differently from state to state. For example, teachers: in Indiana are required to earn 90 Continuing Renewal Units (CRUs) per year; in Massachusetts, teachers need 150 Professional Development Points (PDPs); and in Georgia, must earn 10 Professional Learning Units (PLUs). American and Canadian nurses, as well as those in the United Kingdom, have to participate in formal and informal professional development (earning Continuing education units, or CEUs) in order to maintain professional registration. Other groups such as engineering and geoscience regulatory bodies also have mandatory professional development requirements.

APPROACHES

In a broad sense, professional development may include *formal* types of vocational education, typically post-secondary or poly-technical training leading to qualification or credential required to obtain or retain employment. Professional development may also come in the form of pre-service or in-service professional development programs.

These programs may be formal, or informal, group or individualized. Individuals may pursue professional development independently, or programs may be offered by human resource departments. Professional development on the job may develop or enhance process skills, sometimes referred to as leadership skills, as well as task skills. Some examples for process skills are 'effectiveness skills', 'team functioning skills', and 'systems thinking skills'.

Professional development opportunities can range from a single workshop to a semester-long academic course, to services offered by a medley of different professional development providers and varying widely with respect to the philosophy, content, and format of the learning experiences. Some examples of approaches to professional development include:

- **Case Study Method** - The case method is a teaching approach that consists in presenting the students with a case, putting them in the role of a decision maker facing a problem (Hammond 1976) - *see also* Case method.
- **Consultation** - to assist an individual or group of individuals to clarify and address immediate concerns by following a systematic problem-solving process.
- **Coaching** - to enhance a person's competencies in a specific skill area by providing a process of observation, reflection, and action.
- **Communities of Practice** - to improve professional practice by engaging in shared inquiry and learning with people who have a common goal
- **Lesson Study** - to solve practical dilemmas related to intervention or instruction through participation with other professionals in systematically examining practice
- **Mentoring** - to promote an individual's awareness and refinement of his or her own professional development by providing and recommending structured opportunities for reflection and observation
- **Reflective Supervision** - to support, develop, and ultimately evaluate the performance of employees through a process of inquiry that encourages their understanding and articulation of the rationale for their own practices
- **Technical Assistance** - to assist individuals and their organization to improve by offering resources and information, supporting networking and change efforts. Professional development is a broad term, encompassing a range of people, interests and approaches. Those who engage in professional development share a common purpose of enhancing their ability to do their work. At the heart of professional development is the individual's interest in lifelong learning and increasing their own skills and knowledge

ONLINE PROFESSIONAL DEVELOPMENT

The 21st century has seen a significant growth in online professional development. Content providers incorporate collaborative platforms such as discussion boards and wikis, thereby encouraging and facilitating interaction, and optimizing training effectiveness.

In the education industry, the use of online sources of professional development represents a significant shift. Whereas many other industries have used online sources of continuing education and professional practices for many years, traditionally educators have turned solely to internal professional development departments, local education agencies (LEAs), and local colleges and universities to acquire the necessary education to meet the required hours/units for renewal of their state teaching-licenses.

Rather than replacing traditional sources of professional development, online sources and providers have served to augment existing options and can bring a widening access to topics and a broader scope to “learning communities.” As teacher performance comes under increased scrutiny, a study conducted by Boston College found that English and math teachers who took professional development courses online improved their instructional practices and boosted their subject knowledge scores, producing modest performance gains for their students.

“A series of online professional development courses that focus on specific content and target student learning needs can have positive effects on teacher knowledge and instructional practices,” said Boston College Associate Professor of Education Laura O’Dwyer. “The studies also show that teacher participation in online professional development can translate into improvements in targeted student outcomes.”

This type of research-based and outcomes-focused study has lent credibility to the idea that online professional development can and will serve an important role in supporting the educational goals of the United States Department of Education.

Chapter 34

PEN ACCESS

Open Access (OA) means unrestricted online access to research. Open access can be applied to all forms of published research output, including peer-reviewed and non peer-reviewed academic journal articles, conference papers, theses, book chapters, and monographs.

Open access comes in two degrees: *gratis* open access, which is online access free of charge, and *libre* open access, which is online access free of charge and with some additional usage rights. These additional usage rights are often granted through the use of various specific Creative Commons licenses. Only libre open access is fully compliant with definitions of open access such as the Berlin Declaration on Open Access to Knowledge in the Sciences and Humanities.

Two of the ways authors can provide open access are (1) by self-archiving their journal articles in an open access repository, also known as 'green' open access, or (2) by publishing in an open access journal, known as 'gold' open access. With green open access authors publish in any journal and then self-archive a version of the article for *gratis* public use in their institutional repository, in a central repository (such as PubMed Central), or on some other open access website. With gold open access, authors publish in open access journals, which provide immediate open access to all of their articles, usually on the publisher's website. Hybrid open access journals are subscription journals that provide gold open access only for those individual articles for which their authors (or their author's institution or funder) pay an open access publishing fee.

Widespread public access to the World Wide Web in the late 1990s and early 2000s fueled the open access movement, and prompted both the green open access self-archiving of non-open access journal articles and the creation of gold open access journals. Conventional non-open access journals cover publishing costs through access tolls such as subscriptions, site licenses or pay-per-view. Some non-open access journals provide open access after an embargo period of 6–12 months or longer. Active debate over the economics and reliability of various ways of providing open access continues among researchers, academics, librarians, university administrators, funding agencies, government officials, commercial publishers, editorial staff and society publishers.

DEFINITIONS

The idea and practise of providing free online access to journal articles began at least a decade before the term "open access" was formally coined. Computer scientists had been self-archiving in anonymous ftp archives since the 1970s and physicists had been self-archiving in arxiv since the 1990s. The Subversive Proposal to generalize the practice was posted in 1994. The initial concept of open access refers to an unrestricted online access to scholarly research primarily intended for scholarly journal articles. The term "open access"

itself was first formulated in three public statements in the 2000s: the Budapest Open Access Initiative in February 2002, the Bethesda Statement on Open Access Publishing in June 2003, and the Berlin Declaration on Open Access to Knowledge in the Sciences and Humanities in October 2003.

The Budapest statement defined open access as follows:

There are many degrees and kinds of wider and easier access to this literature. By 'open access' to this literature, we mean its free availability on the public internet, permitting any users to read, download, copy, distribute, print, search, or link to the full texts of these articles, crawl them for indexing, pass them as data to software, or use them for any other lawful purpose, without financial, legal, or technical barriers other than those inseparable from gaining access to the internet itself. The only constraint on reproduction and distribution, and the only role for copyright in this domain, should be to give authors control over the integrity of their work and the right to be properly acknowledged and cited.

The Bethesda and Berlin statements add that for a work to be open access, users must be able to "copy, use, distribute, transmit and display the work publicly and to make and distribute derivative works, in any digital medium for any responsible purpose, subject to proper attribution of authorship."

GRATIS AND LIBRE OA

In order to reflect actual practice in providing two different degrees of open access, the further distinction between gratis OA and libre OA was added in 2006 by two of the co-drafters of the original BOAI definition. Gratis OA refers to free online access, and libre OA refers to free online access plus some additional re-use rights. The Budapest, Bethesda, and Berlin definitions had corresponded only to libre OA. The re-use rights of libre OA are often specified by various specific Creative Commons licenses; these almost all require attribution of authorship to the original authors.

MOTIVATIONS FOR OPEN ACCESS PUBLISHING

Open access itself (mostly green and gratis) began to be sought and provided worldwide by researchers when the possibility itself was opened by the advent of Internet and the World Wide Web. The momentum was further increased by a growing movement for academic journal publishing reform, and with it gold and libre OA. Electronic publishing created new benefits as compared to paper publishing but beyond that, it contributed to causing problems in traditional publishing models.

The premises behind open access publishing are that there are viable funding models to maintain traditional peer review standards of quality while also making the following changes:

- Rather than making journal articles accessible through a subscription business model, all academic publications could be made free to read and published with some other cost-recovery model, such as publication charges, subsidies, or charging subscriptions only for the print edition, with the online edition gratis or "free to read".
- Rather than applying traditional notions of copyright to academic publications, they could be libre or "free to build upon".

The OA movement is motivated by the problems of social inequality caused by restricting access to academic research, which favor large and wealthy institutions with the financial means to purchase access to many journals, as well as the economic challenges and perceived unsustainability of academic publishing.

STAKEHOLDERS AND CONCERNED COMMUNITIES

The intended audience of research articles is usually other researchers. Open access helps researchers as readers by opening up access to articles that their libraries do not subscribe to. One of the great beneficiaries of open access may be users in developing countries, where currently some universities find it difficult to pay for subscriptions required to access the most recent journals.

Some schemes exist for providing subscription scientific publications to those affiliated to institutions in developing countries at little or no cost. All researchers benefit from open access as no library can afford to subscribe to every scientific journal and most can only afford a small fraction of them – this is known as the "serials crisis".

Open access extends the reach of research beyond its immediate academic circle. An open access article can be read by anyone – a professional in the field, a researcher in another field, a journalist, a politician or civil servant, or an interested layperson. Indeed, a 2008 study revealed that mental health professionals are roughly twice as likely to read a relevant article if it is freely available.

AUTHORS AND RESEARCHERS

The main reason authors make their articles openly accessible is to maximize their research impact. A study in 2001 first reported an open access citation impact advantage, and a growing number of studies have confirmed, with varying degrees of methodological rigor, that an open access article is more likely to be used and cited than one behind subscription barriers. For example, a 2006 study in *PLoS Biology* found that articles published as immediate open access in *PNAS* were three times more likely to be cited than non-open access papers, and were also cited more than *PNAS* articles that were only self-archived. This result has been challenged as an artifact of authors self-selectively paying to publish their higher quality articles in hybrid open access journals, whereas a 2010 study found that the open access citation advantage was equally big whether self-archiving was self-selected or mandated.

Scholars are paid by research funders and/or their universities to do research; the published article is the report of the work they have done, rather than an item for commercial gain. The more the article is used, cited, applied and built upon, the better for research as well as for the researcher's career. Similarly, the more *quickly* it is accessible, the better; open access can reduce publication delays, an obstacle which led some research fields such as high-energy physics to adopt widespread preprint access.

Some professional organizations have encouraged use of open access: in 2001, the International Mathematical Union communicated to its members that "Open access to the mathematical literature is an important goal" and encouraged them to "[make] available electronically as much of our own work as feasible" to "[enlarge] the reservoir of freely available primary mathematical material, particularly helping scientists working without adequate library access."

RESEARCH FUNDERS AND UNIVERSITIES

Research funding agencies and universities want to ensure that the research they fund and support in various ways has the greatest possible research impact. As a means of achieving this, research funders are beginning to expect open access to the research they support. Many of them (including all seven UK Research Councils) have already adopted green open access self-archiving mandates, and others are on the way to do so (see ROARMAP).

CANADIAN FUNDING AGENCIES

The Canadian Institutes of Health Research (CIHR) proposed a mandate in 2006 and adopted it in September 2007, becoming the first North American public research funder to do so. The CIHR Policy on Access to Research Outputs provides two options to researchers: publication in open access journals, and making their manuscripts available in an online central (PubMed Central Canada is recommended) or institutional repository.

In October 2013, the two other Canadian federal funding agencies, the National Science and Engineering Council (NSERC) and the Social Science and Humanities Research Council (SSHRC) jointly proposed the same mandate as CIHR's, and launched a two-month consultation on what will become the Tri-Agency Open Access Policy.

On February 27, 2015 a Tri-Agency Open Access Policy on Publications was announced. Peer-reviewed journal publications arising from Agency-supported research must be made freely available within 12 months of publication, whether by depositing in an online repository or by publishing in a journal that offers immediate or delayed open access. The policy is effective for grants awarded from May 1, 2015 onward.

On May 1, 2015 the International Development Research Centre adopted a new open access policy. Books and journal articles must be made freely available within 12 months of publication, whether by publishing open access and using open access journals, or by

uploading to an open access repository. The policy is effective for proposals received on or after July 20, 2015.

UNITED STATES FUNDING AGENCIES

In May 2006, the US Federal Research Public Access Act (FRPAA) was proposed toward improving the NIH Public Access Policy. Besides points about making open access mandatory, to which the NIH complied in 2008, it argues to extend self-archiving to the full spectrum of major US-funded research. In addition, the FRPAA would no longer stipulate that the self-archiving must be central; the deposit can now be in the author's own institutional repository (IR). The new U.S. National Institutes of Health's Public Access Policy took effect in April 2008 and states that "all articles arising from NIH funds must be submitted to PubMed Central upon acceptance for publication". It stipulates self-archiving in PubMed Central rather than in the author's own institutional repository. In 2012, the NIH announced it would enforce its Public Access Policy by blocking the renewal of grant funds to authors who don't follow the policy.

In February 2013, the Fair Access to Science and Technology Research bill was introduced into both houses of Congress. It was described as a "strengthened version of FRPAA" In the same month, the White House issued a directive requiring federal agencies "with over \$100 million in annual conduct of research and development expenditures" to develop, within the next 6 months, a plan to make the peer-reviewed publications directly arising from Federal funding "publicly accessible to search, retrieve, and analyze".

EUROPEAN FUNDING AGENCIES

In April 2006, the European Commission recommended: "EC Recommendation A1: "Research funding agencies... should [e]stablish a European policy mandating published articles arising from EC-funded research to be available after a given time period in open access archives..." This recommendation has since been updated and strengthened by the European Research Advisory Board (EURAB). The OpenAIRE (Open Access Infrastructure for Research in Europe) project has since been started.

The global shift towards open access to the results of publicly funded research (publications and data) has been a core strategy in the European Commission to improve knowledge circulation and thus innovation. It is illustrated in particular by the general principle for open access to scientific publications in Horizon 2020 and the pilot for research data. In 2012, via a Recommendation, the European Commission encouraged all EU Member States to put publicly funded research results in the public sphere in order to make strengthen science and the knowledge-based economy.

To somewhat improve on the European Commission's (and FRPAA's) allowable embargo of up to six months, EURAB has revised the mandate: all articles must be deposited immediately upon acceptance; the allowable delay applies only to the time when access to the deposit must be made open access rather than to the time when it must be deposited. This is intended to permit individual users to use an eprint request "email eprint" button

or "Fair Dealing" button found on some archives (e.g., DSPACE, EPrints) to send a semi-automatic email message to the author requesting an individual eprint during the embargo period. This is not open access, but may provide for some needs during any embargo. A related idea was later put forth as the Open Access Button.

UNIVERSITIES

A growing number of universities are providing institutional repositories in which their researchers can deposit their published articles. Some open access advocates believe that institutional repositories will play a very important role in responding to open access mandates from funders. EnablingOpenScholarship (EPS) provides universities with OA policy-building.

In May 2005, 16 major Dutch universities cooperatively launched DAREnet, the Digital Academic Repositories, making over 47,000 research papers available to anyone with internet access. From 1 January 2007, at the completion of the DARE programme, KNAW Research Information has taken over responsibility for the DAREnet portal. On 2 June 2008, DAREnet has been incorporated into the scholarly portal NARCIS. At the end of 2009, NARCIS provided access to 185,000 open access publications from all Dutch universities, KNAW, NWO and a number of scientific institutes.

In 2011, a group of universities in North America formed the Coalition of Open Access Policy Institutions (COAPI). Starting with 21 institutions where the faculty had either established an open access policy or were in the process of implementing one, COAPI now has nearly 50 members. These institutions' administrators, faculty and librarians, and staff support the international work of the Coalition's awareness-raising and advocacy for open access. Members agree to the following COAPI Principles:

1. The immediate and barrier-free online dissemination of scholarly research resulting in faster growth of new knowledge, increased impact of research, and improved return on public research investments
2. Developing and implementing institutional open access policies
3. Sharing experiences and best practices in the development and implementation of Open Access Policies with individuals at institutions interested in cultivating cultures of open access
4. Fostering a more open scholarly communication system through cultural and legislative change at the local, national, and international levels

A list of the COAPI institutions and COAPI Affiliate Members is available at the COAPI website hosted by The Scholarly Publishing and Academic Resources Coalition (SPARC).

In 2013 a group of nine Australian universities formed the Australian Open Access Support Group (AOASG) to advocate, collaborate, raise awareness, and lead & build capacity in the open access space in Australia. A list of the member institutions is available on the AOASG website.

LIBRARIES AND LIBRARIANS

As information professionals, librarians are vocal and active advocates of open access. These librarians believe that open access promises to remove both the *price barriers* and the *permission barriers* that undermine library efforts to provide access to the scholarly record, as well as helping to address the serials crisis. Many library associations have either signed major open access declarations, or created their own. For example, the Canadian Library Association endorsed a Resolution on Open Access in June 2005.

Librarians also lead education and outreach initiatives to faculty, administrators, and others about the benefits of open access. For example, the Association of College and Research Libraries of the American Library Association has developed a Scholarly Communications Toolkit. The Association of Research Libraries has documented the need for increased access to scholarly information, and was a leading founder of the Scholarly Publishing and Academic Resources Coalition (SPARC).

At most universities, the library manages the institutional repository, which provides free access to scholarly work by the university's faculty. The Canadian Association of Research Libraries has a program to develop institutional repositories at all Canadian university libraries.

An increasing number of libraries provide hosting services for open access journals. A 2008 survey by the Association of Research Libraries found that 65% of surveyed libraries either are involved in journal publishing, or are planning to become involved in the very near future.

In 2013, open access activist Aaron Swartz was posthumously awarded the American Library Association's James Madison Award for being an "outspoken advocate for public participation in government and unrestricted access to peer-reviewed scholarly articles". In March 2013, the entire editorial board and the editor-in-chief of the *Journal of Library Administration* resigned en masse, citing a dispute with the journal's publisher. One board member wrote of a "crisis of conscience about publishing in a journal that was not open access" after the death of Aaron Swartz.

The pioneer of the open access movement in France and one of the first librarians to advocate the self-archiving approach to open access worldwide is H       Bosc. Her work is described in her "15-year retrospective".

THE PUBLIC

Open access to scholarly research is argued to be important to the public for a number of reasons. One of the arguments for public access to the scholarly literature is that most of the research is paid for by taxpayers through government grants, who therefore have a right to access the results of what they have funded. This is one of the primary reasons for the creation of advocacy groups such as The Alliance for Taxpayer Access in the US. Examples of people who might wish to read scholarly literature include individuals with

medical conditions (or family members of such individuals) and serious hobbyists or 'amateur' scholars who may be interested in specialized scientific literature (e.g. amateur astronomers). Additionally, professionals in many fields may be interested in continuing education in the research literature of their field, and many businesses and academic institutions cannot afford to purchase articles from or subscriptions to much of the research literature that is published under a toll access model.

Even those who do not read scholarly articles benefit indirectly from open access. For example, patients benefit when their doctor and other health care professionals have access to the latest research. As argued by open access advocates, open access speeds research progress, productivity, and knowledge translation. Every researcher in the world can read an article, not just those whose library can afford to subscribe to the particular journal in which it appears. Faster discoveries benefit everyone. High school and junior college students can gain the information literacy skills critical for the knowledge age. Critics of the various open access initiatives claim that there is little evidence that a significant amount of scientific literature is currently unavailable to those who would benefit from it. While no library has subscriptions to every journal that might be of benefit, virtually all published research can be acquired via interlibrary loan. Note that interlibrary loan may take a day or weeks depending on the loaning library and whether they will scan and email, or mail the article. Open access online, by contrast is faster, often immediate, making it more suitable than interlibrary loan for fast-paced research.

In developing nations, open access archiving and publishing acquires a unique importance. Scientists, health care professionals, and institutions in developing nations often do not have the capital necessary to access scholarly literature, although schemes exist to give them access for little or no cost. Among the most important is HINARI, the Health InterNetwork Access to Research Initiative, sponsored by the World Health Organization. HINARI, however, also has restrictions. For example, individual researchers may not register as users unless their institution has access, and several countries that one might expect to have access do not have access at all (not even "low-cost" access) (e.g. South Africa).

Many open access projects involve international collaboration. For example, the SciELO (Scientific Electronic Library Online), is a comprehensive approach to full open access journal publishing, involving a number of Latin American countries. Bioline International, a non-profit organization dedicated to helping publishers in developing countries is a collaboration of people in the UK, Canada, and Brazil; the Bioline International Software is used around the world. Research Papers in Economics (RePEc), is a collaborative effort of over 100 volunteers in 45 countries.

The Public Knowledge Project in Canada developed the open source publishing software Open Journal Systems (OJS), which is now in use around the world, for example by the African Journals Online group, and one of the most active development groups is Portuguese. This international perspective has resulted in advocacy for the development of open-source appropriate technology and the necessary open access to relevant information for sustainable development.

IMPLEMENTATION PRACTICES

There are various ways in which open access can be provided, with the two most common methods usually categorised as either gold or green open access.

JOURNALS: GOLD OPEN ACCESS

One option for authors who wish to make their work openly accessible is to publish in an open access journal ("gold open access"). There are many business models for open access journals. Open access can be provided by traditional publishers, who may publish open access as well as subscription-based journals, or open access publishers such as Public Library of Science (PLOS), who publish only open access journals. An open access journal may or may not charge a publishing fee; open access publishing does not necessarily mean that the author has to pay. Traditionally, many academic journals levied page charges, long before open access became a possibility. When open access journals do charge processing fees, it is the author's employer or research funder who typically pays the fee, not the individual author, and many journals will waive the fee in cases of financial hardship, or for authors in less-developed countries. Some no-fee journals have institutional subsidies. Examples of open access publishers are BioMed Central and the Public Library of Science.

Roughly 30% of gold open access journals have author fees to cover the cost of publishing (e.g. PLoS fees vary from \$1,350 to \$2,900) instead of reader subscription fees. Advertising revenue and/or funding from foundations and institutions are also used to provide funding.

SELF-ARCHIVING: GREEN OPEN ACCESS

Self-archiving, also known as green open access, refers to the practice of depositing articles in an institutional repository or a subject repository such as arXiv.

Green open access journal publishers endorse immediate open access self-archiving by their authors. Open access self-archiving was first formally proposed in 1994 by Stevan Harnad in his *"Subversive Proposal"*. However, self-archiving was already being done by computer scientists in their local FTP archives in the 1980s, later harvested into CiteSeer. What is deposited can be either a preprint, or the peer-reviewed postprint – either the author's refereed, revised final draft or the publisher's version of record.

To find out if a publisher or journal has given a green light to author self-archiving, the author can check the Publisher Copyright Policies and Self-Archiving list on the SHERPA RoMEO web site. To find out by journal, the author can check the EPrints Romeo site, which is derived from the SHERPA/RoMEO dataset. The EPrints site itself also provides a FAQ on self-archiving. Extensive details and links can also be found in the Open Access Archivangelism blog and the Eprints Open Access site.

MANNER OF DISTRIBUTION

Like the self-archived green open access articles, most gold open access journal articles are distributed via the World Wide Web, due to low distribution costs, increasing reach, speed, and increasing importance for scholarly communication. Open source software is sometimes used for institutional repositories, open access journal websites, and other aspects of open access provision and open access publishing.

Access to online content requires Internet access, and this distributional consideration presents physical and sometimes financial barriers to access. Proponents of open access argue that Internet access barriers are relatively low in many circumstances, that efforts should be made to subsidize universal Internet access, whereas pay-for-access presents a relatively high additional barrier over and above Internet access itself.

The Directory of Open Access Journals lists a number of peer-reviewed open access journals for browsing and searching. Open access articles can also often be found with a web search, using any general search engine or those specialized for the scholarly and scientific literature, such as OAIster and Google Scholar.

POLICIES AND MANDATES

Many universities, research institutions and research funders have adopted mandates requiring their researchers to provide open access to their peer-reviewed research articles by self-archiving them in an open access repository. Some publishers and publisher associations have lobbied against introducing mandates.

The idea of mandating self-archiving was mooted at least as early as 1998. Since 2003 efforts have been focused on open access mandating by the funders of research: governments, research funding agencies, and universities.

The Registry of Open Access Repository Mandatory Archiving Policies (ROARMAP) is a searchable international database charting the growth of open access mandates. As of May 2014, mandates have been adopted by over 200 universities (including Harvard, MIT, Stanford, University College London, and University of Edinburgh) and over 80 research funders worldwide.

FUNDING ISSUES

The "article processing charges" which are often used for open access journals shift the burden of payment from readers to authors, which creates a new set of concerns. One concern is that if a publisher makes a profit from accepting papers, it has an incentive to accept anything submitted, rather than selecting and rejecting articles based on quality. This could be remedied, however, by charging for the peer-review rather than acceptance. Another concern is that institutional budgets may need to be adjusted in order to provide funding for the "article processing charges" required to publish in many open access journals (e.g. those published by BioMed Central). It has been argued that this may reduce

the ability to publish research results due to lack of sufficient funds, leading to some research not becoming a part of the public record. Unless discounts are available to authors from countries with low incomes or external funding is provided to cover the cost, article processing charges could exclude authors from developing countries or less well-funded research fields from publishing in open access journals. However, under the traditional model, the prohibitive costs of some non-open access journal subscriptions already place a heavy burden on the research community; and if green open access self-archiving eventually makes subscriptions unsustainable, the cancelled subscription savings can pay the gold open access publishing costs without the need to divert extra money from research. Moreover, many open access publishers offer discounts or publishing fee waivers to authors from developing countries or those suffering financial hardship. Self-archiving of non-open access publications provides a low cost alternative model.

Another concern is the redirection of money by major funding agencies such as the National Institutes of Health and the Wellcome Trust from the direct support of research to the support of publication. The Wellcome Trust spends over £400 million (over US\$700 million) a year on biomedical research. Robert Terry, Senior Policy Advisor at the Wellcome Trust, has said that he feels that 1–2% of their research budget will change from the creation of knowledge to the dissemination of knowledge. This is £4–8 million of research a year that is being lost to cover the cost of publication. In the past, grants from such agencies typically funded only research projects themselves, and the costs of publication were borne by journal subscribers. By adding support for gold open access charges onto grant funding, these agencies redirect money that would otherwise have supported new research projects, with the result that access to research results greatly increases while the number of projects funded decreases. Some argue that in light of this issue, green open access self-archiving should come before gold open access publishing. This fulfills the need for open access. If green open access leads to institutions cancelling subscriptions, making subscriptions unsustainable as the means of covering the costs of publication, then that in turn will induce journals to cut costs and convert to gold open access publishing. Meanwhile, the subscription cancellations will have released the institutional funds to pay for publishing via gold open access fees.

As long as subscription publication continues to prevail (as it still does for a majority of journals today, including many of the top journals), the institutional funds that could potentially pay gold open access publication fees are still locked into subscriptions to the journals that their institutional users need to access. Cancelling them is not possible unless those user access needs can be fulfilled by some alternative means of access. Meanwhile, publication costs are being paid for in full by the institutional subscriptions. So the only thing lacking is access for those users whose institutions cannot afford subscriptions. It has been argued that the global adoption of green open access self-archiving mandates by all institutions and funders could result in both access for all users lacking it, and an eventual alternative means of access even for users at subscribing institutions (allowing their institutions to cancel their subscriptions and free them to pay for gold open access publication fees).

Outside of science and academia, it is unusual for producers of creative output to be financially compensated on anything other than a pay-for-access model. (Notable exceptions include open source software and public broadcasting.) Successful writers, for example, support themselves by the revenues generated by people purchasing copies of their works; publishing houses are able to finance the publication of new authors based on anticipated revenues from sales of those that are successful. It could be argued that without direct financial compensation via pay-for-access, many authors would be unable to afford to write, but this argument does not apply to most academic publishing because journals do not pay royalties to article authors and researchers are usually funded by their institutions and funders.

HISTORY

EFFORTS BEFORE INTERNET

Even before the advent of the Internet various models were proposed to increase access to academic research.

One early proponent of the publisher-pays model was the physicist Leó Szilárd. To help stem the flood of low-quality publications, he jokingly suggested in the 1940s that at the beginning of his career each scientist should be issued with 100 vouchers to pay for his papers. Closer to the present, but still ahead of its time, was Common Knowledge.

This was an attempt to share information for the good of all, the brainchild of Brower Murphy, formerly of The Library Corporation. Both Brower and Common Knowledge are recognised in the Library Microcomputer Hall of Fame.

One of Mahatma Gandhi's earliest publications, *Hind Swaraj* published in Gujarati in 1909 is recognised as the intellectual blueprint of India's freedom movement. The book was translated into English the next year, with a copyright legend that read "No Rights Reserved".

The modern open access movement (as a social movement) traces its history at least back to the 1950s, with the Letterist International (LI) placing anything in their journal *Potlatch* in the public domain. As the LI merged to form the Situationist International, Guy Debord wrote to Patrick Straram "All the material published by the Situationist International is, in principle, usable by everyone, even without acknowledgement, without the preoccupations of literary property."

This was to facilitate detournement. It became much more prominent in the 1990s with the advent of the Digital Age. With the spread of the Internet and the ability to copy and distribute electronic data at no cost, the arguments for open access gained new importance. The fixed cost of producing the article is separable from the minimal marginal cost of the online distribution.

EARLY YEARS OF ONLINE OPEN ACCESS

Probably the earliest book publisher to provide open access was the National Academies Press, publisher for the National Academy of Sciences, Institute of Medicine, and other arms of the National Academies. They have provided free online full-text editions of their books alongside priced, printed editions since 1994, and assert that the online editions promote sales of the print editions. As of June 2006 they had more than 3,600 books up online for browsing, searching, and reading.

An explosion of interest and activity in open access journals has occurred since the 1990s, largely due to the widespread availability of Internet access. It is now possible to publish a scholarly article and *also* make it instantly accessible anywhere in the world where there are computers and Internet connections. The fixed cost of producing the article is separable from the minimal marginal cost of the online distribution.

These new possibilities emerged at a time when the traditional, print-based scholarly journals system was in a crisis. The number of journals and articles produced had been increasing at a steady rate; however the average cost per journal had been rising at a rate far above inflation for decades, and budgets at academic libraries have remained fairly static. The result was decreased access – ironically, just when technology has made almost unlimited access a very real possibility, for the first time. Libraries and librarians have played an important part in the open access movement, initially by alerting faculty and administrators to the serials crisis. The Association of Research Libraries developed the Scholarly Publishing and Academic Resources Coalition (SPARC), in 1997, an alliance of academic and research libraries and other organizations, to address the crisis and develop and promote alternatives, such as open access.

The first online-only, free-access journals (eventually to be called "open access journals") began appearing in the late 1980s. Among them were *Bryn Mawr Classical Review*, *Postmodern Culture* and *Psycology*.

The first free scientific online archive was arXiv.org, started in 1991, initially a preprint service for physicists, initiated by Paul Ginsparg. Self-archiving has become the norm in physics, with some sub-areas of physics, such as high-energy physics, having a 100% self-archiving rate. The prior existence of a "preprint culture" in high-energy physics is one major reason why arXiv has been successful. arXiv now includes papers from related disciplines including computer science, mathematics, nonlinear sciences, quantitative biology, quantitative finance, and statistics. However, computer scientists mostly self-archive on their own websites and have been doing so for even longer than physicists. arXiv now includes postprints as well as preprints. The two major physics publishers, American Physical Society and Institute of Physics Publishing, have reported that arXiv has had no effect on journal subscriptions in physics; even though the articles are freely available, usually before publication, physicists value their journals and continue to support them.

Computer scientists had been self-archiving on their own FTP sites and then their websites since even earlier than the physicists, as was revealed when Citeseer began harvesting their papers in the late 1990s. Citeseer is a computer science archive that harvests, Google-style, from distributed computer science websites and institutional repositories, and contains almost twice as many papers as arXiv. The 1994 "Subversive Proposal" was to extend self-archiving to all other disciplines; from it arose CogPrints (1997) and eventually the OAI-compliant generic GNU Eprints.org software in 2000.

While Editor-in-Chief of the *Journal of Clinical Investigation*, Ajit Varki made it the first major biomedical journal to be freely available on the web in 1996.

In 1997, the U.S. National Library of Medicine (NLM) made Medline, the most comprehensive index to medical literature on the planet, freely available in the form of PubMed. Usage of this database increased a tenfold when it became free, strongly suggesting that prior limits on usage were impacted by lack of access. While indexes are not the main focus of the open access movement, Medline is important in that it opened up a whole new form of use of scientific literature – by the public, not just professionals. The *Journal of Medical Internet Research (JMIR)*, one of the first open access journals in medicine, was created in 1998, publishing its first issue in 1999.

In 1998, the American Scientist Open Access Forum was launched (and first called the "September98 Forum").

One of the first humanities journals published in open access is *CLCWeb: Comparative Literature and Culture* <<http://docs.lib.purdue.edu/clcweb>> founded at the University of Alberta in 1998 with its first issue published in March 1999 and since 2000 published by Purdue University Press.

In 1999, Harold Varmus of the NIH proposed a journal called E-biomed, intended as an open access electronic publishing platform combining a preprint server with peer-reviewed articles. E-biomed later saw light in a revised form as PubMed Central, a postprint archive.

It was also in 1999 that the Open Archives Initiative and its OAI-PMH protocol for metadata harvesting was launched in order to make online archives interoperable.

2000s

In 2000, BioMed Central, a for-profit open access publisher, was launched by the then Current Science Group (the founder of the *Current Opinion* series, and now known as the Science Navigation Group). In some ways, BioMed Central resembles Harold Varmus' original E-biomed proposal more closely than does PubMed Central. As of October 2013 BioMed Central publishes over 250 journals.

In 2001, 34,000 scholars around the world signed "An Open Letter to Scientific Publishers", calling for "the establishment of an online public library that would provide

the full contents of the published record of research and scholarly discourse in medicine and the life sciences in a freely accessible, fully searchable, interlinked form". Scientists signing the letter also pledged not to publish in or peer-review for non-open access journals. This led to the establishment of the Public Library of Science, an advocacy organization. However, most scientists continued to publish and review for non-open access journals. PLoS decided to become an open access publisher aiming to compete at the high quality end of the scientific spectrum with commercial publishers and other open access journals, which were beginning to flourish. Critics have argued that, equipped with a \$10 million grant, PLoS competes with smaller open access journals for the best submissions and risks destroying what it originally wanted to foster.

The first major international statement on open access was the Budapest Open Access Initiative in February 2002, launched by the Open Society Institute. This provided the first definition of open access, and has a growing list of signatories. Two further statements followed: the Bethesda Statement on Open Access Publishing in June 2003 and the Berlin Declaration on Open Access to Knowledge in the Sciences and Humanities in October 2003. Also in 2003, the World Summit on the Information Society included open access in its Declaration of Principles and Plan of Action.

In 2006, a Federal Research Public Access Act was introduced in US Congress by senators John Cornyn and Joe Lieberman. The act continues to be brought up every year since then, but has never made it past committee.

The year 2007 recorded some backlash from non-OA publishers.

In 2008, Ajit Varki worked with David Lipman to create the first viable model for a major Open Access textbook hosted at NCBI, the 2nd. Edition of the *Essentials of Glycobiology*.

Perhaps the first dedicated publisher of open access monographs in the humanities was re.press who published their first title in that 2006. Two years later in 2008 Open Humanities Press, another publisher of humanities monographs, was launched. Most recently, the Open Library of Humanities is set to launch in September 2015.

In 2008, USENIX, the advanced computing systems association, implemented an open access policy for their conference proceedings. In 2011 they added audio and video recordings of paper presentations to the material to which they provide open access.

2010s

In 2013, John Holdren, Barack Obama's director of the Office of Science and Technology Policy, issued a memorandum directing United States' Federal Agencies with more than \$100M in annual R&D expenditures to develop plans within six months to make the published results of federally funded research freely available to the public within one year of publication. As of March 2015, two agencies had made their plans public: the Department of Energy and the National Science Foundation.

In 2013, the UK Higher Education Funding Council for England (HEFCE) proposed adopting a mandate that in order to be eligible for submission to the UK Research Excellence Framework (REF) all peer-reviewed journal articles submitted after 2014 must be deposited in the author's institutional repository *immediately upon acceptance for publication*, regardless of whether the article is published in a subscription journal or in an open access journal. HEFCE expresses no journal preference, places no restriction on authors' choice and requires the deposit itself to be immediate, irrespective of whether the publisher imposes an embargo (for an allowable embargo period that remains to be decided) on the date at which access to the deposit can be made open. The HEFCE/REF mandate proposal complements the recent Research Councils UK (RCUK) mandate that requires all articles resulting from RCUK funding to be made open access by 6 months after publication at the latest (12 months for arts and humanities articles).

HEFCE also provided grants to universities in England wishing to participate in the Pilot Collection of Knowledge Unlatched, a not-for-profit organisation enabling humanities and social sciences monographs to become open access. The Pilot Collection ran from October 2013 to February 2014 and 297 libraries and institutions worldwide participated in 'unlatching' the collection of 28 titles. 61 of these participating institutions were university libraries in England eligible for the HEFCE grant of 50% towards the \$1195 participation fee.

GROWTH

A study published in 2010 showed that roughly 20% of the total number of peer-reviewed articles published in 2008 could be found openly accessible. Another study found that by 2010, 7.9% of all academic journals with impact factors were gold open access journals and showed a broad distribution of Gold Open Access journals throughout academic disciplines. 8.5% of the journal literature could be found free at the publishers' sites (gold open access), of which 62% in full open access journals, 14% in delayed-access subscription journals, and 24% as individually open articles in otherwise subscription journals. For an additional 11.9% of the articles, open access full text copies were available via green open

access in either subject-based repositories (43%), institutional repositories (24%) or on the home pages of the authors or their departments (33%). These copies were further classified into exact copies of the published article (38%), manuscripts as accepted for publishing (46%) or manuscripts as submitted (15%).

In the 2010 study, of all scientific fields chemistry had the lowest overall share of open access (13%), while Earth Sciences had the highest (33%). In medicine, biochemistry and chemistry gold publishing in open access journals was more common than author self-archiving. In all other fields self-archiving was more common.

In August 2013, a study done for the European Commission reported that 50% of a random sample of all articles published in 2011 as indexed by Scopus were freely accessible online by the end of 2012.

JOURNALS

A study on the development of publishing of open access journals from 1993 to 2009 published in 2011 suggests that, measured both by the number of journals as well as by the increases in total article output, direct gold open access journal publishing has seen rapid growth particularly between the years 2000 and 2009. It was estimated that there were around 19,500 articles published open access in 2000, while the number has grown to 191,850 articles in 2009. The journal count for the year 2000 is estimated to have been 740, and 4769 for 2009; numbers which show considerable growth, albeit at a more moderate pace than the article-level growth. These findings support the notion that open access journals have increased both in numbers and in average annual output over time.

The development of the number of active open access journals and the number of research articles published in them during the period 1993–2009 is shown in the figure above. If these gold open access growth curves are extrapolated to the next two decades, the Laakso et al. (Björk) curve would reach 60% in 2022, and the Springer curve would reach 50% in

2029 as shown in the figure below (the reference provides a more optimistic interpretation which does not match with the values shown in the figure).

Gold open access growth projections

SELF-ARCHIVING

The Registry of Open Access Repositories (ROAR) indexes the creation, location and growth of open access institutional repositories and their contents. As of May 2014, over 3,000 institutional and cross-institutional repositories have been registered in ROAR.

ROAR Growth map of repositories and contents, 1 Aug 2011

Chapter 35

OPENCOURSEWARE

OpenCourseWare (OCW) are course lessons created at universities and published for free via the Internet. OCW projects first appeared in the late 1990s, and after gaining traction in Europe and then the United States have become a worldwide means of delivering educational content.

HISTORY

The OpenCourseWare movement started in 1999 when the University of Tübingen in Germany published videos of lectures online for its *timms* initiative (Tübinger Internet Multimedia Server). The OCW movement only took off, however, with the launch of MIT OpenCourseWare at the Massachusetts Institute of Technology (MIT) and the Open Learning Initiative at Carnegie Mellon University in October 2002. The movement was soon reinforced by the launch of similar projects at Yale, the University of Michigan, and the University of California Berkeley.

MIT's reasoning behind OCW was to "enhance human learning worldwide by the availability of a web of knowledge". MIT also stated that it would allow students (including, but not limited to its own) to become better prepared for classes so that they may be more engaged during a class. Since then, a number of universities have created OCW, some of which have been funded by the William and Flora Hewlett Foundation.

PRINCIPLES

According to the website of the OCW Consortium, an OCW project:

- is a free and open digital publication of high quality educational materials, organized as courses.
- is available for use and adaptation under an open license, such as certain Creative Commons licenses.
- does not typically provide certification or access to faculty.

edX

Ten years after the US debut of OCW, in 2012 MIT and Harvard University announced the formation of edX, a massive open online course (MOOC) platform to offer online university-level courses in a wide range of disciplines to a worldwide audience at no charge. This new initiative was based on MIT's "MITx" project, announced in 2011, and extends the concepts of OCW by offering more structured formal courses to online students, including in some cases the possibility of earning academic credit or certificates based on supervised examinations. A major new feature of the edX platform is the ability for students to interact with each other and with teachers in online forums. In some cases,

students will help evaluate each other's work, and may even participate in some of the teaching online.

In addition, edX is being used as an experimental research platform to support and evaluate a variety of other new concepts in online learning.

PROBLEMS

A problem is that the creation and maintenance of comprehensive OCW requires substantial initial and ongoing investments of human labor. Effective translation into other languages and cultural contexts requires even more investment by knowledgeable personnel. This is one of the reasons why English is still the dominant language, and fewer open courseware options are available in other languages. The OCW platform SlideWiki addresses these issues through a crowdsourcing approach.

AMERICAS

COLOMBIA

- Universidad Icesi, OpenCourseWare de la Universidad Icesi

BRAZIL

- Fundação Getulio Vargas (FGV Online)
- Universidade Estadual de Campinas

MEXICO

- Universidad de Monterrey, 2007

UNITED STATES

This listing is roughly in the order of adoption of OCW principles.

- Massachusetts Institute of Technology (MIT), 2002
- Carnegie Mellon University, 2002
- University of California, Berkeley
- Stanford University
- Princeton University
- University of Pennsylvania
- University of Michigan
- Harvard University
- Yale University
- Caltech
- Johns Hopkins University

The following are not directly affiliated with a specific university:

- Academic Earth - privately owned
- Khan Academy - non-profit
- Students Circle Network - peer to peer
- Coursera - venture capital financed
- Udacity - venture capital financed
- edX - non-profit
- iversity - mixed (free and paid)

ASIA

CHINA

OpenCourseWare originally initiated by MIT and the Hewlett Foundation, began movement in China in September, 2003, when MIT and the Internet Engineering Task Force (IETF) joined together with the Beijing Jiaotong University to organize an OpenCourseWare conference in Beijing. As a result of this conference, 12 universities petitioned the government to institute a program of OpenCourseWare in China. This group included both some of the most prestigious universities in China, as well as the Central Radio and Television University, which is China's central open university, covering more than 2 million students.

As a result of this petition, the Chinese government approved to institute the CORE(China Open Resources for Education) to promote the OpenCourseWare in Chinese Universities, with Fun-Den Wang (the head of IETF) as chairman. The CORE is an NGO supported by Hewlett Foundation, Internet Engineering Task Force (IETF) and other foundations. According to CORE's website, it has nearly 100 Chinese universities as members, including the most prestigious universities in China, such as Tsinghua University, Peking University and Shanghai Jiaotong University. This organization organized volunteers to translate foreign OpenCourseWare, mainly MIT OpenCourseWare into Chinese and to promote the application of OpenCourseWare in Chinese universities. At February, 2008, 347 courses had been translated into Chinese and 245 of them were used by 200 professors in courses involving a total of 8,000 students. It also tried to translate some Chinese courses into English, but the number is not too much and some are only title translated. There have also been produced 148 comparative studies comparing MIT curriculum with Chinese curriculum using the MIT OpenCourseWare material. CORE's offices are hosted within the China Central Radio and Television University, and they receive partial funding from the IETF and the Hewlett foundation. They also host annual conferences on open education, and the 2008 conference was co-located with the international OpenCourseWare Consortium conference, which brought a large amount of foreign participants.

But before the OpenCourseWare conference in Beijing and the establishment of CORE, at April 8, 2003, the Ministry of Education had published a policy to launch the China Quality Course program. This program accepts applications for university lecturers that

wish to put their courses online, and gives grants of between \$10,000 – 15,000 CAD per course that is put online, and made available free of charge to the general public (ibid.). The most prestigious award is for the “national level CQOCW”, then there is “provincial level” and “school level”. From 2003 to 2010, there have produced 3862 courses at the national level by 746 universities. According to the official website for the China Quality Course, the total number of the courses available online is more than 20,000. These typically include syllabus, course notes, overheads, assignments, and in many cases audio or video of the entire lectures. The scale of this project has also spurred a large research activity, and over 3,000 journal articles have been written in Chinese about the topic of OpenCourseWare.

PAKISTAN

The Virtual University is a public university located in urban area of Lahore, Punjab, Pakistan. Its additional campus is also located in residential area of Karachi, Sindh, Pakistan.

Established in 2002 by the Government of Pakistan to promote distance education in modern information and communication sciences as its primary objectives, the university is noted for its online lectures and broadcasting rigorous programs regardless of their students' physical locations. The university offers undergraduate and post-graduate courses in business administration, economics, computer science, and information technology. Due to its heavy reliance on serving lectures through the internet, Pakistani students residing overseas in several other countries of the region are also enrolled in the University's programs.

INDIA

The National Programme on Technology Enhanced Learning (NPTEL) is a Government of India sponsored collaborative educational programme. By developing curriculum-based video and web courses the programme aims to enhance the quality of engineering education in India. It is being jointly carried out by 7 IITs and IISc Bangalore, and is funded by the Ministry of Human Resources Development of the Government of India.

Flexilearn is a very useful open course portal. It was initiated by Indira Gandhi National Open University, and apart from providing free course materials, flexilearn also provides opportunities to enroll oneself for a course and appear for exam conducted by university and thereby get certification.

To provide open access to the resources for school education, Department of School Education and Literacy, Ministry of Human Resource Development, Government of India and the Central Institute of Educational Technology, National Council of Educational Research and Training launch National Repository of Open Educational Resources" (NROER) Anyone can participate in, contribute, curate and organise resources and activities, growing it to reach every teacher and every student in all languages.

TARGET AUDIENCE

Teachers: The repository is primarily for teachers so that they can have access to variety of resources available in different subject areas. The idea is to introduce teachers to a bouquet of resources and provide them with an opportunity to pick and choose the resources which suits their requirement in classroom transaction. In addition to accessing resources and using them in their classroom, teacher can also create and contribute resources.

Teacher Educators: The repository aims to house various policy documents for example copy of National Curriculum Frameworks, National Focus Group papers on all the subjects and other policy documents which will be helpful for teacher educators.

Students/ Parents: Students can access variety of resources. They should be able to access the resources grade wise, subject wise and language wise.

Photographers: Photographs and images which can be mapped to school curriculum are invited. Photographers or any individual who has an access to such photographs/images can contribute to the repository making it relevant for school students and teachers by appropriately tagging them and by providing relevant keywords.

Producers: Documentary filmmakers/ audio producers/ video producers who have produced films/ video/ audio programmes can contribute to the repository. Also by having a look at spectrum of content which the repository plans to offer they can create content and contribute.

Other government and non-government organizations: As far as e-content is concerned, it is available in abundance. Many organisations have been creating such content for many years. The NROER aims to bring all such organisations on board so that the content created by all these organisations can be mapped to school curriculum and can be made available to teachers and students.

JAPAN

OpenCourseWare originally initiated by MIT and the Hewlett Foundation, was introduced and adopted in Japan.

In 2002, researchers from the National Institute of Multimedia Education (NIME) and Tokyo Institute of Technology (Tokyo Tech) studied the MIT OpenCourseWare, leading them to develop an OCW pilot plan with 50 courses at Tokyo Institute of Technology in September. Later, in July 2004, MIT gave a lecture about MIT OpenCourseWare at Tokyo Tech that prompted the first meeting of the Japan OCW Alliance. The meeting was held with four Japanese universities that had mainly been recruited through the efforts of MIT professor Miyagawa, and his personal contacts. In one case, the connection was the former president of the University of Tokyo being an acquaintance of Charles Vest, the former president of MIT.

In 2006, the OCW International Conference was held at Kyoto University wherein the Japanese OCW Association was reorganized into the Japan OCW Consortium. At that time, Japan OCW Consortium had over 600 courses; currently they have 18 university members, including the United Nations University (JOCW, n.d.). On Japanese university campuses there are few experts in content production, which makes it difficult to get support locally, and many of the universities have had to out-source their production of OCW. In example, the University of Tokyo has had to mainly employ students to create OCW.

The motivation for joining the OCW movement seems to be to create positive change among Japanese universities, including modernizing presentation style among lecturers, as well as sharing learning material. Japanese researchers have been particularly interested in the technical aspects of OCW, for example in creating semantic search engines. There is currently a growing interest for Open Educational Resources (OER) among Japanese universities, and more universities are expected to join the consortium.

“In order to become an integral institution that contributes to OER, the JOCW Consortium needs to forge solidarity among the member universities and build a rational for OER on its own, different from that of MIT, which would support the international deployment of Japanese universities and also Japanese style e-Learning.”

EUROPE

- Middle East Technical University

MIDDLE EAST

In the United Arab Emirates, a discussion, led by Dr. Linzi J. Kemp, American University of Sharjah, has begun about sharing teaching and learning materials ('open course ware') through a community of educators and practitioners in the GCC. There is growing availability of high quality and free open access materials shared between universities e.g. MIT (USA). Resource sharing also takes place on the 'Open University (UK), OpenLearn' platform. Kemp (2013) proposes that teaching and learning will be enhanced when teachers across institutions of higher education work together to bring their shared knowledge into classrooms. Furthermore, when the platform is opened up to include practitioners - e.g. employers - then the relationship with the industry will further ensure that the teaching and learning is available and beneficial for a wider community.

Chapter 36

VIRTUAL LEARNING ENVIRONMENT

A Virtual Learning Environment (VLE) is a Web-based platform for the digital aspects of courses of study, usually within educational institutions. VLEs typically: allow participants to be organised into cohorts, groups and roles; present resources, activities and interactions within a course structure; provide for the different stages of assessment; report on participation; and have some level of integration with other institutional systems. For those who edit them VLEs may have a de facto role as authoring and design environments. VLEs have been adopted by almost all higher education institutions in the anglosphere.

Virtual Learning Environment allows the participants to be organised into cohorts, groups and roles; present resources, activities and interactions within a course structure; provide for the different stages of assessment; report on participation; and have some level of integration with other institutional systems

MAJOR COMPONENTS

The following are the basic or the main components required for a virtual learning environment or online education curriculum to take place

A VLE may include some or all of the following elements:

- The course syllabus
- Administrative information about the course: prerequisites, credits, registration, payments, physical sessions, and contact information for the instructor.
- A notice board for current information about the ongoing course

- The basic content of some or all of the course; the complete course for distance learning applications, or some part of it, when used as a portion of a conventional course. This normally includes material such as copies of lecture in the form of text, audio, or video presentations, and the supporting visual presentations
- Additional resources, either integrated or as links to outside resources. This typically consists of supplementary reading, or innovative equivalents for it.
- Self-assessment quizzes or analogous devices, normally scored automatically
- Formal assessment functions, such as examinations, essay submission, or presentation of projects. this now frequently includes components to support peer assessment
- Support for communications, including e-mail, threaded discussions, chat rooms, Twitter and other media, sometimes with the instructor or an assistant acting as moderator. Additional elements include wikis, blogs, RSS and 3D virtual learning spaces.
- Links to outside sources – pathways to all other online learning spaces are linked via the VLE (Virtual Learning Environment).
- Management of access rights for instructors, their assistants, course support staff, and students
- Documentation and statistics as required for institutional administration and quality control
- Authoring tools for creating the necessary documents by the instructor, and, usually, submissions by the students
- Provision for the necessary hyperlinks to create a unified presentation to the students.

A VLE is normally not designed for a specific course or subject, but is capable of supporting multiple courses over the full range of the academic program, giving a consistent interface within the institution and—to some degree—with other institutions using the system. The virtual learning environment supports an exchange of information between a user and the learning institute he or she is currently enrolled in through digital mediums like e-mail, chat rooms, web 2.0 sites or a forum thereby helping convey information to any part of the world with just a single click.

SIMILAR TERMS

Computerized learning systems have been referred to as electronic educational technology, e-learning, learning platform or learning management system. The major difference is that a VLE and LMS is an application, whereas the Learning Platform share characteristics with an Operating System (or CoursePark Platform) where different educational web based applications can be run on the platform.

The terms virtual learning environment (VLE) and learning platform are generically used to describe a range of integrated web based applications that provide teachers, learners, parents and others involved in education with information, tools and resources to support and enhance educational delivery and management. These terms are broadly synonymous

with 'managed learning environments' (MLEs) and 'managed virtual learning environments' (MVLEs).

The applications that form part of these online services can include web pages, email, message boards and discussion forums, text and video conferencing, shared diaries, online social areas, as well as assessment, management and tracking tools.

The term learning platform refers to a range of tools and services often described using terms such as educational extranet, VLE, LMS, ILMS and LCMS providing learning and content management. The term learning platform also includes the personal learning environment (PLE) or personal online learning space (POLS), including tools and systems that allow the development and management of eportfolios.

The specific functionality associated with any implementation of a learning platform will vary depending upon the needs of the users and can be achieved by bringing together a range of features from different software solutions either commercially available, open source, self built or available as free to use web services. These tools are delivered together via a cohesive user environment with a single entry point, through integration achieved by technical standards.

- a Learning Management System (LMS). Related concepts include" Content Management System (CMS), which properly refers to the organization of the educational or other content, not the overall environment; Learning Content Management System (LCMS), which is more often used for corporate training systems than for systems in education institutions; Managed Learning Environment (MLE), which normally refers to the overall infrastructure in an institution of which the VLE is a component, Learning Support System (LSS); Online Learning Centre (OLC); or Learning Platform (LP), education via computer-mediated communication (CMC); or online education. The term "Virtual Learning Environment" is more commonly used in Europe and Asia, while the synonymous term "Learning Management System" is the more common usage in North America.

The term LMS can also mean "Library Management System" (which is now more commonly referred to as Integrated Library System, or ILS).

PURPOSE

VLE Learning platforms commonly allow:

- Content management – creation, storage, access to and use of learning resources
- Curriculum mapping and planning – lesson planning, assessment and personalisation of the learning experience
- Learner engagement and administration – managed access to learner information and resources and tracking of progress and achievement
- Communication and collaboration - emails, notices, chat, wikis, blogs

In principle a learning platform is a safe and secure environment that is reliable, available online and accessible to a wide user base. A user should be able to move between learning platforms throughout their life with no loss of access to their personal data. The concept of a learning platform accommodates a continuously evolving description of functionality changing to meet the needs of the user. Becta publishes Functional Requirements and Technical Specifications that give a more precise description of how a learning platform may be constructed.

JUSTIFICATION

Institutions of higher and further education use VLEs in order to:

- Economize on the time of teaching staff, and the cost of instruction.
- Facilitate the presentation of online learning by instructors without web authoring experience.
- Provide instruction to students in a flexible manner to students with varying time and location constraints.
- Provide instruction in a manner familiar to the current web-oriented generation of students.
- Facilitate the networking of instruction between different campuses or even colleges.
- Provide for the reuse of common material among different courses.
- Provide automatic integration of the results of student learning into campus information systems.

STANDARDS

Most VLEs support the Shareable Content Object Reference Model (SCORM) as a standard, but there are no commonly used standards that define how the learner's performance within a course can be transferred from one VLE to another.

There are also standards for sharing content such as those defined by the IMS Global Consortium. Local bodies such as in the schools sector in the UK the DCSF via Becta have additionally defined a learning platform "conformance framework" to encourage interoperability.

Virtual Learning Environments are not limited only to students and learners in university level studies. There are many virtual learning environments for students in grades K-12. These systems are also particularly suited for the needs of independent educational programs, charter schools and home-based education.

ASSESSMENT

Educators need benchmark tools to assess a virtual learning environment as a viable means of education.

Walker developed a survey instrument known as the Distance Education Learning Environment Survey (DELES), which is accessible to students anywhere. DELES examines instructor support, student interaction and collaboration, personal relevance, authentic learning, active learning, and student autonomy.

Harnish and Reeves provide a systematic criteria approach based on training, implementation, system usage, communication, and support.

SYSTEMS AVAILABLE

There are many open source and proprietary VLEs available for use. On-demand elearning services are also a popular choice because they can be deployed in minutes and do not require instructors and institutions to run their own servers.

Many VLEs are placed on a web server. In a typical VLE there are one or more programs or languages that provides the user (Teacher-Student) interface, and which interacts with a database. For example, a VLE might use PHP as its web language/program, with MySQL as a database.

Chapter 37

OPEN FORMAT

An open file format is a published specification for storing digital data, usually maintained by a standards organization, and which can be used and implemented by anyone. For example, an open format can be implemented by both proprietary and free and open source software, using the typical software licenses used by each. In contrast to open formats, closed formats are considered trade secrets.

SPECIFIC DEFINITIONS

SUN MICROSYSTEMS

Sun Microsystems defines the criteria for open formats as follows:

- The format is based on an underlying open standard
- The format is developed through a publicly visible, community driven process
- The format is affirmed and maintained by a vendor-independent standards organization
- The format is fully documented and publicly available
- The format does not contain proprietary extensions

Open formats are also called free file formats if they are not encumbered by any copyrights, patents, trademarks or other restrictions (for example, if they are in the public domain) so that anyone may use them at no monetary cost for any desired purpose.

US GOVERNMENT

Within the framework of Open Government Initiative, the federal government of the United States adopted the Open Government Directive, according to which: "An open format is one that is platform independent, machine readable, and made available to the public without restrictions that would impede the re-use of that information".

STATE OF MINNESOTA

The State of Minnesota defines the criteria for open, XML-based file formats as follows:

- The format is interoperable among diverse internal and external platforms and applications
- The format is fully published and available royalty-free
- The format is implemented by multiple vendors
- The format is controlled by an open industry organization with a well-defined inclusive process for evolution of the standard

COMMONWEALTH OF MASSACHUSETTS

The Commonwealth of Massachusetts "defines open formats as specifications for data file formats that are based on an underlying open standard, developed by an open community, affirmed and maintained by a standards body and are fully documented and publicly available."

The Enterprise Technical Reference Model (ETRM) classifies four formats as "Open Formats":

1. OASIS Open Document Format For Office Applications (OpenDocument) v. 1.1
2. Ecma-376 Office Open XML Formats (Open XML)
3. Hypertext Document Format v. 4.01
4. Plain Text Format

THE LINUX INFORMATION PROJECT

According to The Linux Information Project, the term *open format* should refer to "any format that is published for anyone to read and study but which may or may not be encumbered by patents, copyrights or other restrictions on use" – as opposed to a *free format* which is *not* encumbered by any copyrights, patents, trademarks or other restrictions.

EXAMPLES OF OPEN FORMATS

In alphabetical order:

MULTIMEDIA

IMAGING

- APNG — It allows for animated PNG files that work similarly to animated GIF files.
- GBR - an 2D binary vector image file format, the de-facto standard in the printed circuit board (PCB) industry
- GIF — CompuServe's Graphics Interchange Format (openly published specification, but patent-encumbered by a 3rd party; became free when patents expired in 2004)
- JPEG 2000 — an image format standardized by ISO/IEC
- MNG — moving pictures, based on PNG
- OpenEXR — a high dynamic range imaging image file format, released as an open standard along with a set of software tools created by Industrial Light and Magic (ILM).
- PNG — a raster image format standardized by ISO/IEC
- SVG — a vector image format standardized by W3C
- WebP — image format developed by Google

AUDIO

- ALAC — lossless audio codec, previously a proprietary format of Apple Inc.
- FLAC — lossless audio codec
- DAISY Digital Talking Book — a talking book format
- Musepack — an audio codec
- Ogg — container for Vorbis, FLAC, Speex and Opus (audio formats) & Theora (a video format), each of which is an open format
- Opus — a lossy audio compression format developed by the IETF. Suitable for VOIP, videoconferencing (just audio), music transmission over the Internet and streaming applications (just audio).
- Speex — speech codec
- Vorbis — a lossy audio compression format.
- WavPack — "Hybrid" (lossless/lossy) audio codec

VIDEO

- Dirac — a video compression format supporting both lossless and lossy compression
- Matroska (mkv) — container for all type of multimedia formats (audio, video, images, subtitles)
- WebM — a video/audio container format
- Theora — a lossy video compression format.

VARIOUS

- CMML — timed metadata and subtitles
- SMIL — a media playlisting format and multimedia integration language

- VRML/X3D — realtime 3D data formats standardized by ISO/IEC
- XSPF — a playlist format for multimedia

TEXT

- Plain text — encoded in numerous non-proprietary encodings, such as ASCII
- HTML — HyperText Markup Language (HTML) is the main markup language for creating web pages and other information that can be displayed in a web browser.
- Unicode Transformation Formats — text encodings with support for all common languages and scripts
 - UTF-8 — byte oriented and ASCII compatible
 - UTF-16 — 16-bit oriented
- DVI — device independent (TeX)
- ePub — open e-book standard by the International Digital Publishing Forum (IDPF)
- FictionBook — open XML-based e-book format, which originated and gained popularity in Russia
- LaTeX — document markup language
- Office Open XML — a formatted text format (ISO/IEC 29500:2008); see Licensing for details
- OpenDocument — a formatted text format (ISO/IEC 26300:2006).
- OpenXPS — open standard for a page description language and a fixed-document format
- Various subsets of PDF are open standard for documents exchange (ISO 15930-1:2001, ISO 19005-1:2005). PDF started out a proprietary standard, but was later submitted through standardization (ISO 32000-1). However, there are still some technologies indispensable for the application of ISO 32000-1 that are defined only by Adobe and remain proprietary (e.g. Adobe XML Forms Architecture, Adobe JavaScript).
- PostScript — a page description language and programming language. PostScript started out as a proprietary standard, but was later submitted^[by whom?] through standardization
- XHTML — XHTML (Extensible HyperText Markup Language) is a family of XML markup languages that mirror or extend versions of the widely used Hypertext Markup Language (HTML), the language in which web pages are written.
- ZIM — an open file format that stores wiki content for offline usage.

ARCHIVING AND COMPRESSION

- 7z — for archiving and/or compression
- B1 — for archiving and/or compression
- bzip2 — for compression
- gzip — for compression
- lzip — for compression
- MAFF — for web page archiving, based on ZIP
- PAQ — for compression

- SQX — for archiving and/or compression
- tar — for archiving
- xz — for compression
- ZIP — for archiving and/or compression; the base format is in the public domain, but newer versions have some patented features

OTHER

- CSS — style sheet format usually used with (X)HTML, standardized by W3C
- CSV — comma separated values, commonly used for spreadsheets or simple databases
- DjVu — file format for scanned images or documents
- EAS3 — binary file format for floating point data
- ELF — Executable and Linkable Format
- FreeOTFE — container for encrypted data
- GPX — GPs eXchange format — for describing waypoints, tracks and routes
- Hierarchical Data Format — multi-platform data format for storing multidimensional arrays, among other data structures
- HTML/XHTML — markup language for web pages (ISO/IEC 15445:2000)
- iCalendar — calendar data format
- IFC — data model describing building and construction industry data
- JSON — object notation, subset of YAML and correct ECMAScript statement
- LTFS — Linear Tape File System
- NetCDF — for scientific data
- NZB — for multipart binary files on Usenet
- RSS — syndication
- SDXF — the Structured Data eXchange Format
- SFV — checksum format
- LUKS — disk-encryption specification originally intended for Linux
- TrueCrypt — discontinued container for encrypted data
- WebDAV — Internet filesystem format
- XML — a general-purpose markup language, standardized by W3C
- YAML — human readable data serialization format

Chapter 38

OER COMMONS

OER Commons is a freely accessible online library that allows teachers and others to search and discover Open Educational Resources (OER) and other freely available instructional materials.

HISTORY

OER Commons, created by the Institute for the Study of Knowledge Management in Education, was developed to serve curriculum experts and educators in discovering Open Educational Resources (OER) and collaborating around the use, evaluation, and improvement of those materials. Resources on the site can be searched and filtered using an expanded set of descriptive data, including conditions of use. Teachers, students, and others enrich this "metadata" when they tag, rate, and review materials, and share what works for them.

OER Commons Teachers Training Initiative

In 2007, with a grant from the William and Flora Hewlett Foundation, OER Commons opened as a digital library and intermediary for openly licensed and freely available content. By aggregating resources and standardizing metadata from OER content

providers, the site supports knowledge sharing and access to teaching and learning materials, strategies, and curricula online. Individual educators submit their own contributions which are curated. Materials are reviewed for quality and alignment to standards and shared primarily using Creative Commons licenses.

In a second phase, beginning in 2009, ISKME developed an initiative for teacher professional development program to support educators in finding and using OER supported by the William and Flora Hewlett Foundation and the Ford Foundation. As part of its teacher training program, ISKME trained educators from over 25 countries to use OER through workshops and summer academies, including ISKME's Teachers as Makers Academies.

RESEARCH

ISKME's OER research revealed how teachers' exposure to OER, tools and professional development cultivates collaboration among teachers, as well as new conversations and reflection about teaching practices and roles. Petrides et al., 2011

Furthermore, research conducted on the impact of teachers' participation in ISKME's own OER training network revealed that engagement with OER reduced teacher isolation (Petrides & Jimes, 2010), as well as expanded the role of teachers in becoming more active innovators as they shared, collaborated and learned from one another (Petrides et al., 2011). This work also revealed the role that OER teacher champions play in sharing the benefits of OER with colleagues and supporting the knowledge sharing, collaboration, and use of OER in online OER communities (ISKME, 2008; Petrides & Jimes, 2010; Petrides et al., 2011).

ISKME's OER research also explored OER as a vehicle for disseminating adaptable curricula that support learner-centric approaches to pedagogy. ISKME's evaluation of the Community College Open Textbook Project revealed that study habits improved when learners were able to interact with open course material, and that students' use of open textbooks cultivated new, self-directed learning behaviors (Petrides et al., 2011).

Finally, ISKME's research revealed the role that collaboration plays in supporting the creation of open educational resources. Specifically, ISKME's study of authors who created content within the open repository Connexions revealed how as content creation group size increased beyond one author, the probability that users stayed with Connexions (and continued to create content) increased with it (Petrides et al., 2008).

TECHNOLOGY AND DESIGN

ISKME's technology platform, tools, and metadata enhancement in its work with OER Commons are designed to support an open platform that serves as a knowledge base for content providers and platform developers, particularly related to accessibility and inclusive design. Metadata, data that describes a resource, and in the case of open educational resources, includes descriptors such as title, author, material type, and

material license. Metadata standards provide a template for OER providers to share their resources with other providers. OER Commons receives feeds of OER in Dublin Core (DC), IEEE's Learning Object Metadata (LOM), and RSS. OER Commons provide targets to other providers to harvest content in these formats. Partnered with the Inclusive Design Research Centre since 2010 to incorporate FLOE components into the OER Commons platform, ISKME's efforts combine OER discovery and enhancement tools and processes with FLOE's personalized network-delivered accessibility standards and tools.

In 2012, ISKME released Open Author, an authoring and remixing environment to support the creation and adaption of multi-media accessible OER and enable collaborative workflows of content reviewers and creators. The authoring environment produces OER that is accessible using a broad range of assistive technology devices such as screen readers.

To support user contributions, in 2010 ISKME released the OER-Connector browser plug-in on GitHub that enables users to add resources to OER Commons.

To support interoperability, OER Commons is an experimental node in the Learning Registry, a joint US Department of Education and US Department of Defense initiative to support educational content and platform interoperability.

The OER Commons contains custom curated resource collections, or microsites. Within a microsite, OER is presented in the context of customized taxonomies to categorize and describe relevant OER. In 2011, ISKME announced the Green Micro-site with Greek partner Agro-Know. It is an aggregation of sustainability-related learning resources and features interdisciplinary lesson plans such as STEAM (Science Technology Engineering Art and Math) resources.

The OER Commons infrastructure facilitates evaluation of content and alignment to quality rubrics and standards. Starting in 2011, OER Commons provides an embedded Common Core State Standards alignment tool and Achieve OER Rubric to support state-level curriculum committees as well as individual instructors to review content for quality and alignment and to collaboratively address gaps in content collections.

AWARDS

ISKME was named an Education Laureate by the San Jose Tech Museum of Innovation in 2007 for OER Commons. In December 2010, ISKME was named a finalist in the Qatar Foundation World Innovation Summit for Education (WISE) Awards for its OER Commons teacher professional development programs. In 2011, ISKME won the Award for Bodies which Influence Policy from the Open Educational Quality Initiative (OPAL), a consortium that includes UNESCO, the International Council for Open and Distance Education, the European Foundation for Quality in e-Learning, and several European universities.

Chapter 39

CONNEXIONS

Connexions, now called OpenStax, is a global repository of educational content provided by volunteers. The platform is provided and maintained by Rice University. The collection is available free of charge, is available for remixing and editing, and is available for download in various digital formats.

Founded in 1999 by Richard Baraniuk, Connexions is based on the philosophy that scholarly and educational content can and should be shared, re-used and recombined, interconnected and continually enriched. As such, it was one of the first Open Educational Resources (OER) initiatives along with projects such as MIT OpenCourseWare and the Public Library of Science. The materials in Connexions are available under a CC-BY Creative Commons license.

SUBJECT MATTER

Connexions contains educational materials at all levels—from children to college students to professionals—organized in small modules that can be connected into larger courses. Material is authored by people from all walks of life. Much content is created by university professors, but the collection also contains very popular music content created by a part-time music teacher.

Connexions popular material is translated into many languages, aided by the open-content licensing.

COPYRIGHT

To ensure the legal reusability of content, Connexions requires authors to license materials they publish under the Creative Commons Attribution License (presently, version 3.0). Under this license, the author retains the right to be credited (attributed) wherever the content is reused. The author grants others the right to copy, distribute, and display the work, and to derive works based on it, as long as the author is credited.

FEATURES OF CONNEXIONS

- Connexions has content from all over the world in a growing variety of languages, not just materials from one specific school or university. It also collects materials to support education in K-12, community college, university, continuing education, and industrial training settings.
- Connexions is globally accessible to anyone to not only read and use the materials, but also take them, customize them, and contribute them back to the repository or not.

- Connexions is grassroots organized from the bottom up rather than from the top down like many other open education projects. Everyone is free to join and take on a leadership role.

TECHNICAL DETAILS

Three key factors enable the collaborative environment in Connexions:

- Copyright licenses that preserve attribution but permit sharing: Creative Commons "attribution" licenses
- Semantic markup of documents using XML (extensible markup language) so they can be searched for and combined. The markup language used is called "CNXML".
- Workspaces that facilitate collaboration by providing shared space, the ability to version materials and derive content from existing modules.

FUNDING

The Connexions project was started in 1999 and initially supported by individuals and Rice University. That support has been substantially supplemented by grants from the William and Flora Hewlett Foundation.

Chapter 40

OPEN TEXTBOOK

An Open Textbook is a textbook licensed under an open copyright license, and made available online to be freely used by students, teachers and members of the public. Many open textbooks are distributed in either print, e-book, or audio formats that may be downloaded or purchased at little or no cost.

Part of the broader open educational resources movement, open textbooks increasingly are seen as a solution to challenges with traditionally published textbooks, such as access and affordability concerns. Open textbooks were identified in the New Media Consortium's *2010 Horizon Report* as a component of the rapidly progressing adoption of open content in higher education.

Open Textbooks are our future resources

USAGE RIGHTS

The defining difference between open textbooks and traditional textbooks is that the copyright permissions on open textbooks allow the public to freely use, adapt and distribute the material. Open textbooks either reside in the public domain or are released under an open license that grants usage rights to the public so long as the author is attributed.

The copyright permissions on open textbooks extend to all members of the public and cannot be rescinded. These permissions include the right to do the following:

- use the textbook freely
- create and distribute copies of the textbook
- adapt the textbook by revising it or combining it with other materials

Some open licenses limit these rights to non-commercial use or require that adapted versions be licensed the same as the original.

OPEN LICENSES

Some examples of open licenses are:

- Creative Commons Attribution (CC-BY)
- Creative Commons Attribution Share-Alike (CC-BY-SA)
- Creative Commons Attribution Non-Commercial Share-Alike (CC-BY-NC-SA)
- GNU Free Documentation License

Waivers of copyright that place materials in the public domain include:

- Creative Commons Public Domain Certification

AFFORDABILITY

Open textbooks increasingly are seen as an affordable alternative to traditional textbooks in both K-12 and higher education. In both cases, open textbooks offer both dramatic up-front savings and the potential to drive down traditional textbook prices through competition.

HIGHER EDUCATION

Overall, open textbooks have been found by the Student PIRGs to offer 80% or more savings to higher education students over traditional textbook publishers. Research commissioned by the Florida State Legislature found similarly high savings and the state has since implemented a system to facilitate adoption of open textbooks.

In the Florida legislative report, the governmental panel found after substantial consultation with educators, students, and administrators that "there are compelling academic reasons to use open access textbooks such as: improved quality, flexibility and access to resources, interactive and active learning experiences, currency of textbook information, broader professional collaboration, and the use of teaching and learning technology to enhance educational experiences." (OATTF, p. i) Similar state-backed initiatives are underway in Washington, Ohio, California, and Texas. In Canada, the province of British Columbia became the first jurisdiction to have a similar open textbook program.

K-12 EDUCATION

Research at Brigham Young University has produced a web-based cost comparison calculator for traditional and open K-12 textbooks. To use the calculator the inputs commercial textbook cost, planned replacement frequency, and number of annual textbook user count are required. A section is provided to input time requirements for adaptation to

local needs, annual updating hours, labor rate, and an approximation of pages. The summary section applies an industry standard cost for print-on-demand of the adapted open textbook to provide a cost per student per year for both textbook options. A summed cost differential over the planned period of use is also calculated.

MILESTONES

In November 2010, Dr. Anthony Brandt was awarded an "Access to Artistic Excellence" grant from the National Endowment for the Arts for his innovative music appreciation course in Connexions. "Sound Reasoning" "takes a new approach [to teaching music appreciation]: It presents style-transcendent principles, illustrated by side-by-side examples from both traditional and contemporary music. The goal is to empower listeners to be able to listen attentively and think intelligently about any kind of music, no matter its style. Everything is listening based; no ability to read music is required." The module being completed with grant funds is entitled "Hearing Harmony". Dr. Brandt cites choosing the Connexions open content publishing platform because "it was an opportunity to present an innovative approach in an innovative format, with the musical examples interpolated directly into the text."

In December 2010, open textbook publisher Flat World Knowledge was recognized by the American Library Association's Business Reference and Services Section (ALA BRASS) by being named to the association's list of "Outstanding Business Reference Sources: The 2010 Selection of Recent Titles." The categories of business and economics open textbooks from Flat World Knowledge's catalog were selected for this award and referenced as "an innovative new vehicle for affordable (or free) online access to premier instructional resources in business and economics." Specific criteria used by the American Library Association BRASS when evaluating titles for selection were:

A resource compiled specifically to supply information on a certain subject or group of subjects in a form that will facilitate its ease of use. The works are examined for authority and reputation of the publisher, author, or editor; accuracy; appropriate bibliography; organization, comprehensiveness, and value of the content; currency and unique addition to the field; ease of use for intended purpose; quality and accuracy of indexing; and quality and usefulness of graphics and illustrations. Each year more electronic reference titles are published, and additional criteria by which these resources are evaluated include search features, stability of content, graphic design quality, and accuracy of links. Works selected are intended to be suitable for medium to large academic and public libraries.

Because authors do not make money from the sale of open textbooks, several organizations have tried to use prizes or grants as financial incentives for writing open textbooks or releasing existing textbooks under open licenses. Connexions announced a series of two grants in early 2011 that will allow them to produce a total of 20 open textbooks.

The first five titles will be produced over an 18-month time frame for Anatomy & Physiology, Sociology, Biology, Biology for non-majors, and Physics.

The second phase will produce an additional 15 titles with subjects that have yet to be determined. It is noted the most expensive part of producing an open textbook is image rights clearing. As images are cleared for this project, they will be available for reuse in even more titles. In addition, the Saylor Foundation sponsored an "Open Textbook Challenge", offering a \$20,000 reward for newly written open textbooks or existing textbooks released under a CC-BY license.

The Text and Academic Author's Association awarded a 2011 Textbook Excellence Award ("Texty") to the first open textbook to ever win such recognition this year. A maximum of eight academic titles can earn this award each year.

The title "Organizational Behavior" by Talya Bauer and Berrin Erdogan earned one of seven 2011 Textbook Excellence Awards granted. Bauer & Erdogan's "Organizational Behavior" open textbook is published by Flat World Knowledge.

INSTRUCTION

Open textbooks are flexible in ways that traditional textbooks are not, which gives instructors more freedom to use them in the way that best meets their instructional needs.

One common frustration with traditional textbooks is the frequency of new editions, which force the instructor to modify the curriculum to the new book. Any open textbook can be used indefinitely, so instructors need only change editions when they think it is necessary.

Many open textbooks are licensed to allow modification. This means that instructors can add, remove or alter the content to better fit a course's needs. Furthermore, the cost of textbooks can in some cases contribute to the quality of instruction when students are not able to purchase required materials.

A Florida governmental panel found after substantial consultation with educators, students, and administrators that "there are compelling academic reasons to use open access textbooks such as: improved quality, flexibility and access to resources, interactive and active learning experiences, currency of textbook information, broader professional collaboration, and the use of teaching and learning technology to enhance educational experiences." (OATTF, p. i)

AUTHORSHIP

Author compensation for open textbooks works differently than traditional textbook publishing. By definition, the author of an open textbook grants the public the right to use the textbook for free, so charging for access is no longer possible. However, numerous models for supporting authors are developing.

For example, a startup open textbook publisher called Flat World Knowledge pays its authors royalties on the sale of print copies and study aids. Other proposed models include grants, institutional support and advertising.

LEGISLATION

Legislation "to authorize grants for the creation, update, or adaption of open textbooks" and assure those developed would be made available under favorable licenses was introduced into the 111th United States Congress, both in the Senate and the House of Representatives. Findings specific to open textbooks detailed in the bill text are:

1. The growth of the Internet has enabled the creation and sharing of open content, including open educational resources.
2. The President has proposed a new, significant Federal investment in the creation of online open-source courses for community colleges that will make learning more accessible, adaptable, and affordable for students.
3. The high cost of college textbooks continues to be a barrier for many students in achieving higher education, and according to the Advisory Committee on Student Financial Assistance, 200,000 qualified students fail to enroll in college each year due to cost.
4. The College Board reported that for the 2007-2008 academic year an average student spent an estimated \$805 to \$1,229 on college books and supplies.
5. Making high quality open textbooks freely available to the general public could significantly lower college textbook costs and increase accessibility to such education materials.
6. Open textbooks can improve learning and teaching by creating course materials that are more flexible, adaptable, and accessible through the use of technology.

This legislation did not reach the floor of either chamber for debate or vote prior to the conclusion of the 111th Congress.

INDUSTRY OPPOSITION

The current higher education textbook industry has voiced stiff opposition to creation and adoption of open textbooks. The industry is represented by Bruce Hildebrand, a former Senior Vice President from the controversial firm Hill & Knowlton International Public Relations, who is now acting as Executive Director for Higher Education for the Association of American Publishers.

PROJECTS

A number of projects seek to develop, support and promote open textbooks. Two very notable advocates and supporters of open textbook and related open education projects include the William and Flora Hewlett Foundation and the Bill and Melinda Gates Foundation.

Chapter 41

MIT OPENCOURSEWARE

MIT OpenCourseWare (MIT OCW) is an initiative of the Massachusetts Institute of Technology (MIT) to put all of the educational materials from its undergraduate- and graduate-level courses online, partly free and openly available to anyone, anywhere. MIT OpenCourseWare is a large-scale, web-based publication of MIT course materials. The project was announced in October 2002 at the Wayback Machine (archived October 14, 2002) and uses Creative Commons Attribution-Noncommercial-Share Alike license. The program was originally funded by the William and Flora Hewlett Foundation, the Andrew W. Mellon Foundation, and MIT. Currently, MIT OpenCourseWare is supported by MIT, corporate underwriting, major gifts, and donations from site visitors. The initiative has inspired more than 250 other institutions to make their course materials available as open educational resources through the OpenCourseWare Consortium.

As of October 2012, over 2180 courses were available online. While a few of these were limited to chronological reading lists and discussion topics, a majority provided homework problems and exams (often with solutions) and lecture notes. Some courses also included interactive web demonstrations in Java, complete textbooks written by MIT professors, and streaming video lectures.

As of October 2012, 60 courses included complete video lectures. The videos were available in streaming mode, but could also be downloaded for viewing offline. All video and audio files were also available from iTunes U and the Internet Archive.

MIT Opencourseware are very useful and practical

PROJECT

HISTORY

The concept of MIT OpenCourseWare grew out of the MIT Council on Education Technology, which was charged by MIT provost Robert Brown in 1999 with determining how MIT should position itself in the distance learning/e-learning environment. MIT

OpenCourseWare was then initiated to provide a new model for the dissemination of knowledge and collaboration among scholars around the world, and contributes to the “shared intellectual commons” in academia, which fosters collaboration across MIT and among other scholars. The project was spearheaded by professors Dick K.P Yue, Shigeru Miyagawa, Hal Abelson and other MIT Faculty. The main challenge in implementing the OCW initiative had not been faculty resistance, but rather, the logistical challenges presented by determining ownership and obtaining publication permission for the massive amount of intellectual property items that are embedded in the course materials of MIT's faculty, in addition to the time and technical effort required to convert the educational materials to an online format. Copyright in MIT OpenCourseWare material remains with MIT, members of its faculty, or its students.

In September 2002, the MIT OpenCourseWare proof-of-concept pilot site opened to the public, offering 32 courses. In September 2003, MIT OpenCourseWare published its 500th course, including some courses with complete streaming video lectures. By September 2004, 900 MIT courses were available online. The response from MIT faculty and students has been very positive and MIT OpenCourseWare is seen as being consistent with MIT's mission (to advance knowledge and educate students in science, technology, and other areas of scholarship that will best serve the nation and the world in the 21st century) and is true to MIT's values of excellence, innovation, and leadership.

In 2005, MIT OpenCourseWare and other leading open educational resources projects formed the OpenCourseWare Consortium, which seeks to extend the reach and impact of open course materials, foster new open course materials and develop sustainable models for open course material publication.

In 2007, MIT OpenCourseWare introduced a site called Highlights for High School that indexes resources on the OCW applicable to advanced high school study in biology, chemistry, calculus and physics in an effort to support US STEM education at the secondary school level. In 2011, MIT OpenCourseWare introduced the first of fifteen OCW Scholar courses, which are designed specifically for the needs of independent learners. While still publications of course materials like the rest of the site content, these courses are more in-depth and the materials are presented in logical sequences that facilitate self-study. No interaction with other students is supported by the OCW site, but study groups on collaborating project OpenStudy are available for some OCW Scholar courses.

As of August 2014, some MIT OCW courses are delivered by the European MooC platform Eliademy.

TECHNOLOGY

MIT OCW was originally served by a custom content management system based on Microsoft's Microsoft Content Management Server, which was replaced in mid-2010 with a Plone-based content management system. The publishing process is described by MIT as a "large-scale digital publishing infrastructure consists of planning tools, a content management system (CMS), and the MIT OpenCourseWare content distribution

infrastructure". Video content for the courses were originally primarily in RealMedia format. In 2008, OCW transitioned to using YouTube as the primary digital video streaming platform for the site, embedding YouTube video back into the OCW site. OCW video and audio files are also provided in full for offline downloads on iTunesU and the Internet Archive. In 2011, OCW introduced an iPhone App called LectureHall in partnership with Irynsoft.

FUNDING

As of 2013, the annual cost of running MIT OCW is about \$3.5 million. "MIT's goal for the next decade is to increase our reach ten-fold" and to secure funding for this.

Chapter 42

OPEN ACCESS JOURNAL

Open Access (OA) Journals are scholarly journals that are available online to the reader "without financial, legal, or technical barriers other than those inseparable from gaining access to the internet itself." While open access journals are freely available to the reader, there are still costs associated with the publication and production of such journals. Some are subsidized, and some require payment on behalf of the author.

Some open access journals are subsidized and are financed by an academic institution, learned society or a government information center. Others are financed by payment of article processing charges by submitting authors, money typically made available to researchers by their institution or funding agency. Sometimes these two are referred to respectively as "gold" and "platinum" models to emphasize their distinction, although other times "gold" OA is used to refer to both paid and unpaid OA.

In 2009, there were approximately 4800 active open access journals, publishing approximately 190,000 articles.

OPENNESS

There have also been several modifications of open access journals that have considerably different natures: hybrid open access journals and delayed open access journals. Open access journals are one of the two general methods for providing open access. The other one (sometimes called the "green road to open access", as opposed to the "gold road" above) is self-archiving in a repository. The publisher of an open access journal is known as an "open access publisher", and the process, "open access publishing".

In successively looser senses, open access journals may be considered as:

- Journals entirely open access
- Journals with research articles open access (hybrid open access journals)
- Journals with some research articles open access (hybrid open access journals)
- Journals with some articles open access and the other delayed access
- Journals with delayed open access (delayed open access journals)
- Journals permitting self-archiving of articles

HISTORY

Many journals have been subsidized ever since the beginnings of scientific journals. It is common for those countries with developing higher educational and research facilities to subsidize the publication of the nation's scientific and academic researchers, and even to provide for others to publish in such journals, to build up the prestige of these journals and their visibility. Such subsidies have sometimes been partial, to reduce the

subscription price, or total, for those readers in the respective countries, but are now often universal.

The first digital-only, free journals (eventually to be called "open access journals") were published on the Internet in the late 1980s. Among them were *Bryn Mawr Classical Review*, *Postmodern Culture*, *Psycology*, and *The Public-Access Computer Systems Review*.

One of the very first online journals, *GeoLogic*, *Terra NOVA*, was published by Paul Browning and started in 1989. It was not a discrete journal but an electronic section of *TerraNova*. The journal ceased to be open access in 1997 due to a change in the policy of the editors (EUG) and publishing house (Blackwell).

Full-blown scientific journals followed. In 1998, one of the first open access journals in medicine was created, the *Journal of Medical Internet Research*, publishing its first issue in 1999. One of the more unusual models is utilized by the *Journal of Surgical Radiology*, which uses the net profits from external revenue to provide compensation to the editors for their continuing efforts.

In the biological and geological sciences, paleontology came into the forefront in 1998 with *Palaeontologia Electronica*, which quickly became the most-read paleontological journal in any format. One challenge to digital-only biological journals was the lack of protection afforded by the International Code of Zoological Nomenclature to scientific names published in formats other than paper, but this was overcome by revisions to the Code in 1999 (effective January 1, 2000).

It is estimated that the number of open access journals increased by 500% during the 2000-2009 decade. Also, the average number of articles that were published per open access journal per year increased from approximately 20 to 40 during the same period, resulting in that the number of open access articles increased by 900% during that decade.

FINANCING OPEN ACCESS JOURNALS

Open access journals divide into those that charge publication fees and those that do not.

FEE-BASED OPEN ACCESS JOURNALS

Fee-based open access journals require payment on behalf of the author. The money might come from the author but more often comes from the author's research grant or employer. In cases of economic hardship, many journals will waive all or part of the fee. (This generally includes instances where the authors come from a less developed economy). Journals charging publication fees normally take various steps to ensure that editors conducting peer review do not know whether authors have requested, or been granted, fee waivers, or to ensure that every paper is approved by an independent editor with no financial stake in the journal. While the payments are normally incurred *per article published* (e.g. BMC journals or PLOS ONE), there are some journals that apply them *per*

manuscript submitted (e.g. Atmospheric Chemistry and Physics) or *per author* (PeerJ). A 2013 study found that only 28% of journals in the Directory of Open Access Journals (DOAJ) required payment by the authors, however, this figure was higher in journals with a scientific or medical focus (43% and 47% respectively), and lowest in journals publishing in the arts and humanities (0% and 4% respectively).

NO-FEE OPEN ACCESS JOURNALS

No-fee open access journals use a variety of business models. As summarized by Peter Suber: "Some no-fee OA journals have direct or indirect subsidies from institutions like universities, laboratories, research centers, libraries, hospitals, museums, learned societies, foundations, or government agencies. Some have revenue from a separate line of non-OA publications. Some have revenue from advertising, auxiliary services, membership dues, endowments, reprints, or a print or premium edition. Some rely, more than other journals, on volunteerism. Some undoubtedly use a combination of these means".

DEBATE

Advantages and disadvantages of open access journals are the subjects of much discussion amongst scholars and publishers. Reactions of existing publishers to open access journal publishing have ranged from moving with enthusiasm to a new open access business model, to experiments with providing as much free or open access as possible, to active lobbying against open access proposals. There are many publishers that started up as open access publishers, such as BioMed Central and Public Library of Science.

An obvious advantages of open access journals is the free access to scientific papers regardless of affiliation with a subscribing library and improved access for the general public; this is specially true in developing countries. Lower costs for research in academia and industry has been claimed as well.

The main argument against open access journals is the possible damage to the peer review system, diminishing the overall quality of scientific journal publishing. For example in 2009, a hoax paper generated by a computer program was accepted for publication by a major publisher under the author-pays-for-publication model. In a similar incident, a staff writer for Science magazine and popular science publications targeted the open access system in 2013 by submitting to a number of such journals a deeply flawed paper on the purported effect of a lichen constituent. About 60% of those journals, including the Journal of Natural Pharmaceuticals, accepted the faked medical paper, although PLOS ONE, the most established one, did reject it. As a result, this experiment was criticised for being not peer-reviewed itself and for having a flawed methodology and lack of a control group. Many newer open access journals also lack the reputation of their subscription counterparts, which have been in business for decades. This effect has been diminishing though since 2001, reflecting the emergence of high quality professional open access publishers such as PLOS and BioMedCentral.

Opponents of the open access model continue to assert that the pay-for-access model is necessary to ensure that the publishers are adequately compensated for their work. Scholarly journal publishers that support pay-for-access claim that the "gatekeeper" role they play, maintaining a scholarly reputation, arranging for peer review, and editing and indexing articles, require economic resources that are not supplied under an open access model. Opponents claim that open access is not necessary to ensure fair access for developing nations; differential pricing, or financial aid from developed countries or institutions can make access to proprietary journals affordable. Some critics also point out the lack of funding for author fees.

TESTS OF THE OPEN ACCESS CITATION ADVANTAGE

There has been claims of higher citation rates for open access authors. However, a recent study concluded that overall citation rates for a time period of 2 years (2010/11) were 30% higher for subscription journals. After controlling for discipline, age of the journal and the location of the publisher, the differences largely disappeared in most subcategories except for journals that had been launched prior to 1996.

Two major studies dispute the claim that open access articles lead to more citations. Using a randomized controlled trial of open access publishing involving 36 participating journals in the sciences, and humanities, researchers from Cornell University report on the effects of free access on article downloads and citations. Articles placed in the open access condition (n=712) received significantly more downloads and reached a broader audience within the first year, yet were cited no more frequently, nor earlier, than subscription-access control articles (n=2533) within 3 years.

There are many other studies, however, both major and minor, that report that open access does lead to significantly more citations. For example, a 2010 study – on a much larger and broader sample (27,197 articles in 1,984 journals) than the Cornell University study – used institutionally mandated open access instead of randomized open access to control for any bias on the part of authors toward self-selectively making their better (hence more citeable) articles open access. The result was a replication of the repeatedly reported open access citation advantage, with the advantage being equal in size and significance whether the open access was self-selected or mandated.

CURRENT PROBLEMS AND PROJECTS

IDENTIFYING OPEN ACCESS JOURNALS AND THE ARTICLES IN THEM

There are several major directories of open access journals, most notably Directory of Open Access Journals (DOAJ). Each has its own special standards for what journals are included.

Articles in the major open access journals are included in the standard bibliographic databases for their subject, such as PubMed. Those established long enough to have an

impact factor, and otherwise qualified, are in Web of Science and Scopus. *DOAJ* includes indexing for the individual articles in some but not all of the many journals it includes.

MAJOR PROJECTS TO PROVIDE OPEN ACCESS JOURNALS

Pioneers in open access publishing in the biomedical domain were journals like the BMJ, Journal of Medical Internet Research, and Medscape, who were created or made their content freely accessible in the late 90s. BioMed Central, a for-profit publisher with now dozens of open-access journals, published its first article in the year 2000. The Public Library of Science launched its first open access journal, PLOS Biology in 2003, with PLOS Medicine following in 2004, and PLOS ONE in 2006.

Chapter 43

LEARNING OBJECT

A Learning Object is "a collection of content items, practice items, and assessment items that are combined based on a single learning objective". The term is credited to Wayne Hodgins when he created a working group in 1994 bearing the name though the concept was first described by Gerard in 1967. Learning objects go by many names, including content objects, chunks, educational objects, information objects, intelligent objects, knowledge bits, knowledge objects, learning components, media objects, reusable curriculum components, nuggets, reusable information objects, reusable learning objects, testable reusable units of cognition, training components, and units of learning.

Learning objects offer a new conceptualization of the learning process: rather than the traditional "several hour chunk", they provide smaller, self-contained, re-usable units of learning.

They will typically have a number of different components, which range from descriptive data to information about rights and educational level. At their core, however, will be instructional content, practice, and assessment. A key issue is the use of metadata.

Learning object design raises issues of portability, and of the object's relation to a broader learning management system.

DEFINITIONS

The Institute of Electrical and Electronics Engineers (IEEE) defines a learning object as "any entity, digital or non-digital, that may be used for learning, education or training".

Chiappe defined Learning Objects as: "A digital self-contained and reusable entity, with a clear educational purpose, with at least three internal and editable components: content, learning activities and elements of context. The learning objects must have an external structure of information to facilitate their identification, storage and retrieval: the metadata."

The following definitions focus on the relation between learning object and digital media. RLO-CETL, a British inter-university Learning Objects Center, defines "reusable learning objects" as "web-based interactive chunks of e-learning designed to explain a stand-alone learning objective". Daniel Rehak and Robin Mason define it as "a digitized entity which can be used, reused or referenced during technology supported learning".

Adapting a definition from the Wisconsin Online Resource Center, Robert J. Beck suggests that learning objects have the following key characteristics:

- Learning objects are a new way of thinking about learning content. Traditionally, content comes in a several hour chunk. Learning objects are much smaller units of learning, typically ranging from 2 minutes to 15 minutes.
- Are self-contained – each learning object can be taken independently
- Are reusable – a single learning object may be used in multiple contexts for multiple purposes
- Can be aggregated – learning objects can be grouped into larger collections of content, including traditional course structures
- Are tagged with metadata – every learning object has descriptive information allowing it to be easily found by a search

COMPONENTS

The following is a list of some of the types of information that may be included in a learning object and its metadata:

- General Course Descriptive Data, including: course identifiers, language of content (English, Spanish, etc.), subject area (Maths, Reading, etc.), descriptive text, descriptive keywords
- Life Cycle, including: version, status
- Instructional Content, including: text, web pages, images, sound, video
- Glossary of Terms, including: terms, definition, acronyms
- Quizzes and Assessments, including: questions, answers
- Rights, including: cost, copyrights, restrictions on Use
- Relationships to Other Courses, including prerequisite courses
- Educational Level, including: grade level, age range, typical learning time, and difficulty. [IEEE 1484.12.1:2002]
- Typology as defined by Churchill (2007): presentation, practice, simulation, conceptual models, information, and contextual representation

METADATA

One of the key issues in using learning objects is their identification by search engines or content management systems. This is usually facilitated by assigning descriptive learning object metadata. Just as a book in a library has a record in the card catalog, learning objects must also be tagged with metadata. The most important pieces of metadata typically associated with a learning object include:

1. **objective:** The educational objective the learning object is instructing
2. **prerequisites:** The list of skills (typically represented as objectives) which the learner must know before viewing the learning object
3. **topic:** Typically represented in a taxonomy, the topic the learning object is instructing
4. **interactivity:** The Interaction Model of the learning object.
5. **technology requirements:** The required system requirements to view the learning object.

MUTABILITY

A mutated learning object is, according to Michael Shaw, a learning object that has been "re-purposed and/or re-engineered, changed or simply re-used in some way different from its original intended design". Shaw also introduces the term "contextual learning object", to describe a learning object that has been "designed to have specific meaning and purpose to an intended learner".

PORTABILITY

Before any institution invests a great deal of time and energy into building high-quality e-learning content (which can cost over \$10,000 per classroom hour), it needs to consider how this content can be easily loaded into a Learning Management System. It is possible for example, to package learning objects with SCORM specification and load it in Moodle Learning Management System or Desire2Learn Learning Environment.

If all of the properties of a course can be precisely defined in a common format, the content can be serialized into a standard format such as XML and loaded into other systems. When it is considered that some e-learning courses need to include video, mathematical equations using MathML, chemistry equations using CML and other complex structures, the issues become very complex, especially if the systems needs to understand and validate each structure and then place it correctly in a database.

CRITICISM

In 2001, David Wiley criticized learning object theory in his paper, The Reusability Paradox which is summarized by D'Arcy Norman as, *If a learning object is useful in a particular context, by definition it is not reusable in a different context. If a learning object is reusable in many contexts, it isn't particularly useful in any.* In Three Objections to Learning Objects and E-learning Standards, Norm Friesen, Canada Research Chair in E-Learning Practices at Thompson Rivers University, points out that the word *neutrality* in itself implies *a state or position that is antithetical ... to pedagogy and teaching.*

Chapter 44

CREATIVE COMMONS LICENSE

A Creative Commons (CC) License is one of several public copyright licenses that enable the free distribution of an otherwise copyrighted work. A Creative Commons license is used when an author wants to give people the right to share, use, and build upon a work that they have created. Creative Commons provides an author flexibility (for example, they might choose to allow only non-commercial uses of their own work) and protects the people who use or redistribute an author's work from concerns of copyright infringement as long as they abide by the conditions that are specified in the license by which the author distributes the work.

There are several types of Creative Commons licenses. The licenses differ by several combinations that condition the terms of distribution. They were initially released on December 16, 2002 by Creative Commons, a U.S. non-profit corporation founded in 2001.

APPLICABLE WORKS

Work licensed under a Creative Commons license is governed by applicable copyright law. This allows Creative Commons licenses to be applied to all work falling under copyright, including: books, plays, movies, music, articles, photographs, blogs, and websites. Creative Commons does not recommend the use of Creative Commons licenses for software.

However, application of a Creative Commons license may not modify the rights allowed by fair use or fair dealing or exert restrictions which violate copyright exceptions. Furthermore, Creative Commons licenses are non-exclusive and non-revocable. Any work or copies of the work obtained under a Creative Commons license may continue to be used under that license.

In the case of works protected by multiple Creative Commons licenses, the user may choose either.

Mixing and matching these conditions produces sixteen possible combinations, of which eleven are valid Creative Commons licenses and five are not. Of the five invalid combinations, four include both the "nd" and "sa" clauses, which are mutually exclusive; and one includes none of the clauses. Of the eleven valid combinations, the five that lack the "by" clause have been retired because 98% of licensors requested attribution, though they do remain available for reference on the website.

VERSION 4.0 AND INTERNATIONAL USE

The original non-localized Creative Commons licenses were written with the U.S. legal system in mind, so the wording could be incompatible within different local legislations and render the licenses unenforceable in various jurisdictions. To address this issue,

Creative Commons asked its affiliates to translate the various licenses to reflect local laws in a process called "porting." As of July 2011, Creative Commons licenses have been ported to over 50 jurisdictions worldwide.

The latest version 4.0 of the Creative Commons licenses, released on November 25, 2013, are generic licenses that are applicable to most jurisdictions and do not usually require ports. No new ports have been implemented in version 4.0 of the license. Version 4.0 discourages using ported versions and instead acts as a single global license.

RIGHTS

ATTRIBUTION

Since 2004, all current licenses require attribution of the original author (the BY component). The attribution must be given to "the best of [one's] ability using the information available". Generally this implies the following:

- **Include any copyright notices (if applicable).** If the work itself contains any copyright notices placed there by the copyright holder, those notices must be left intact, or reproduced in a way that is reasonable to the medium in which the work is being re-published.
- **Cite the author's name, screen name, or user ID,** etc. If the work is being published on the Internet, it is nice to link that name to the person's profile page, if such a page exists.
- **Cite the work's title or name (if applicable),** if such a thing exists. If the work is being published on the Internet, it is nice to link the name or title directly to the original work.
- **Cite the specific CC license the work is under.** If the work is being published on the Internet, it is nice if the license citation links to the license on the CC website.
- **Mention if the work is a derivative work or adaptation,** in addition to the above, one needs to identify that their work is a derivative work, e.g., "This is a Finnish translation of [original work] by [author]." or "Screenplay based on [original work] by [author]."

NON-COMMERCIAL LICENSES

The "non-commercial" option included in some Creative Commons licenses is controversial in definition, as it is sometimes unclear what can be considered a non-commercial setting, and application, since its restrictions differ from the principles of open content promoted by other permissive licenses.

In 2014 Wikimedia published a guide to using Creative Commons licences as wiki pages for translations and as PDF.

ZERO / PUBLIC DOMAIN

Besides licenses, Creative Commons also offers a way to release material into the public domain through CC0, a legal tool for waiving as many rights as legally possible, worldwide. Development of CC0 began in 2007 and the tool was released in 2009.

In 2010, Creative Commons announced its Public Domain Mark, a tool for labeling works already in the public domain. Together, CC0 and the Public Domain Mark replace the Public Domain Dedication and Certification, which took a U.S.-centric approach and co-mingled distinct operations.

In 2011, the Free Software Foundation added CC0 to its free software licenses, and currently recommends CC0 as the preferred method of releasing software into the public domain. In February 2012 CC0 was submitted to Open Source Initiative (OSI) for their approval but, due to problems, it was rejected. The OSI FAQ concludes "At this time, we do not recommend releasing software using the CC0 public domain dedication" because of the reservations of being able to waiver copyright (aka "public domain") from a legal standpoint in all jurisdictions.

The OSI FAQ further explains that "CC0 was not explicitly rejected, but the License Review Committee was unable to reach consensus that it should be approved, and Creative Commons eventually withdrew the application". In the withdrawal message the Creative Commons representative explained that CC0 was initially developed for the needs of the scientific data community in order to help sharing data freely.

ADAPTATION

Rights in an adaptation can be expressed by a CC license that is compatible with the status or licensing of the original work or works on which the adaptation is based.

LEGAL ASPECTS

The legal implications of large numbers of works having Creative Commons licensing is difficult to predict, and there is speculation that media creators often lack insight to be able to choose the license which best meets their intent in applying it.

Some works licensed using Creative Commons licenses have been involved in several court cases. Creative Commons itself was not a party to any of these cases; they only involved licensors or licensees of Creative Commons licenses. When the cases went as far as decisions by judges (that is, they were not dismissed for lack of jurisdiction or were not settled privately out of court), they have all validated the legal robustness of Creative Commons public licenses. Here are some notable cases:

DUTCH TABLOID

In early 2006, podcaster Adam Curry sued a Dutch tabloid who published photos from Curry's Flickr page without Curry's permission. The photos were licensed under the Creative Commons Non-Commercial license. While the verdict was in favor of Curry, the tabloid avoided having to pay restitution to him as long as they did not repeat the offense. Professor Bernt Hugenholtz, main creator of the Dutch CC license and director of the Institute for Information Law of the University of Amsterdam, commented, "The Dutch Court's decision is especially noteworthy because it confirms that the conditions of a Creative Commons license automatically apply to the content licensed under it, and bind users of such content even without expressly agreeing to, or having knowledge of, the conditions of the license."

VIRGIN MOBILE

In 2007, Virgin Mobile Australia launched an Australian bus stop ad campaign promoting their cellphone text messaging service using the work of amateur photographers who uploaded their work to Flickr using a Creative Commons-BY (Attribution) license. Users licensing their images this way freed their work for use by any other entity, as long as the original creator was attributed credit, without any other compensation required. Virgin upheld this single restriction by printing a URL leading to the photographer's Flickr page on each of their ads. However, one picture, depicting 15-year-old Alison Chang at a fund-raising carwash for her church, caused some controversy when she sued Virgin Mobile. The photo was taken by Alison's church youth counselor, Justin Ho-Wee Wong, who uploaded the image to Flickr under the Creative Commons license. In 2008, the case (concerning personality rights rather than copyright as such) was thrown out of a Texas court for lack of jurisdiction.

SGAE *vs.* FERNÁNDEZ

In the fall of 2006, collecting society Sociedad General de Autores y Editores (SGAE) in Spain sued Ricardo Andrés Utrera Fernández, owner of a disco bar located in Badajoz who played CC-licensed music. SGAE argued that Fernández should pay royalties from public

performance of music during the period between November 2002 and August 2005. The Lower Court rejected the collecting society's claims because the owner of the bar proved that the music he was using was not managed by the society.

GATEHOUSE MEDIA, Inc. vs. THAT'S GREAT NEWS, LLC

On June 30, 2010 GateHouse Media filed a lawsuit against That's Great News. GateHouse Media owns a number of local newspapers, including *Rockford Register Star*, which is based in Rockford, Illinois. That's Great News makes plaques out of newspaper articles and sells them to the people featured in the articles. GateHouse sued That's Great News for copyright infringement and breach of contract. GateHouse claimed that TGN violated the non-commercial and no-derivative works restrictions on GateHouse Creative Commons licensed work when TGN published the material on its website. The case was settled on August 17, 2010, though the settlement was not made public.

WORKS WITH A CREATIVE COMMONS LICENSE

Number of Creative Commons licensed works as of 2014

Creative Commons maintains a content directory wiki of organizations and projects using Creative Commons licenses. On its website CC also provides case studies of projects using CC licenses across the world. CC licensed content can also be accessed through a number of content directories and search engines.

RETIRED LICENSES

Due to either disuse or criticism, a number of previously offered Creative Commons licenses have since been retired, and are no longer recommended for new works. The retired licenses include all licenses lacking the Attribution element other than CC0, as well as the following four licenses :

- **Developing Nations License:** a license which only applies to developing countries deemed to be "non-high-income economies" by the World Bank. Full copyright restrictions apply to people in other countries.
- **Sampling:** parts of the work can be used for any purpose other than advertising, but the whole work cannot be copied or modified
- **Sampling Plus:** parts of the work can be copied and modified for any purpose other than advertising, and the entire work can be copied for noncommercial purposes
- **NonCommercial Sampling Plus:** the whole work or parts of the work can be copied and modified for noncommercial purposes

Chapter 45

GNU FREE DOCUMENTATION LICENSE

The GNU Free Documentation License (GNU FDL or simply GFDL) is a copyleft license for free documentation, designed by the Free Software Foundation (FSF) for the GNU Project. It is similar to the GNU General Public License, giving readers the rights to copy, redistribute, and modify a work and requires all copies and derivatives to be available under the same license. Copies may also be sold commercially, but, if produced in larger quantities (greater than 100), the original document or source code must be made available to the work's recipient.

The GFDL was designed for manuals, textbooks, other reference and instructional materials, and documentation which often accompanies GNU software. However, it can be used for any text-based work, regardless of subject matter. For example, the free online encyclopedia Wikipedia uses the GFDL (coupled with the Creative Commons Attribution Share-Alike License) for all of its text.

HISTORY

The GFDL was released in draft form for feedback in September 1999. After revisions, version 1.1 was issued in March 2000, version 1.2 in November 2002, and version 1.3 in November 2008. The current state of the license is version 1.3.

The first discussion draft of the GNU Free Documentation License version 2 was released on September 26, 2006, along with a draft of the new GNU Simpler Free Documentation License.

On December 1, 2007, Jimmy Wales announced that a long period of discussion and negotiation between and amongst the Free Software Foundation, Creative Commons, the Wikimedia Foundation and others had produced a proposal supported by both the FSF and Creative Commons to modify the Free Documentation License in such a fashion as to allow the possibility for the Wikimedia Foundation to migrate the projects to the similar Creative Commons Attribution Share-Alike (CC BY-SA) license. These changes were implemented on version 1.3 of the license, which includes a new provision allowing certain materials released under the license to be used under a Creative Commons Attribution Share-Alike license also.

CONDITIONS

Material licensed under the current version of the license can be used for any purpose, as long as the use meets certain conditions.

- All previous authors of the work must be attributed.
- All changes to the work must be logged.

- All derivative works must be licensed under the same license.
- The full text of the license, unmodified invariant sections as defined by the author if any, and any other added warranty disclaimers (such as a general disclaimer alerting readers that the document may not be accurate for example) and copyright notices from previous versions must be maintained.
- Technical measures such as DRM may not be used to control or obstruct distribution or editing of the document.

SECONDARY SECTIONS

The license explicitly separates any kind of "Document" from "Secondary Sections", which may not be integrated with the Document, but exist as front-matter materials or appendices. Secondary sections can contain information regarding the author's or publisher's relationship to the subject matter, but not any subject matter itself. While the Document itself is wholly editable, and is essentially covered by a license equivalent to (but mutually incompatible with) the GNU General Public License, some of the secondary sections have various restrictions designed primarily to deal with proper attribution to previous authors.

Specifically, the authors of prior versions have to be acknowledged and certain "invariant sections" specified by the original author and dealing with his or her relationship to the subject matter may not be changed. If the material is modified, its title has to be changed (unless the prior authors give permission to retain the title).

The license also has provisions for the handling of front-cover and back-cover texts of books, as well as for "History", "Acknowledgements", "Dedications" and "Endorsements" sections. These features were added in part to make the license more financially attractive to commercial publishers of software documentation, some of whom were consulted during the drafting of the GFDL. "Endorsements" sections are intended to be used in official standard documents, where distribution of modified versions should only be permitted if they are not labeled as that standard any more.

COMMERCIAL REDISTRIBUTION

The GFDL requires the ability to "copy and distribute the Document in any medium, either commercially or noncommercially" and therefore is incompatible with material that excludes commercial re-use. As mentioned above, the GFDL was designed with commercial publishers in mind, as Stallman explained:

The GFDL is meant as a way to enlist commercial publishers in funding free documentation without surrendering any vital liberty. The 'cover text' feature, and certain other aspects of the license that deal with covers, title page, history, and endorsements, are included to make the license appealing to commercial publishers for books whose authors are paid.

Material that restricts commercial re-use is incompatible with the license and cannot be incorporated into the work. However, incorporating such restricted material may be fair use under United States copyright law (or fair dealing in some other countries) and does not need to be licensed to fall within the GFDL if such fair use is covered by all potential subsequent uses. One example of such liberal and commercial fair use is parody.

COMPATIBILITY WITH CREATIVE COMMONS LICENSING TERMS

Although the two licenses work on similar copyleft principles, the GFDL is not compatible with the Creative Commons Attribution-ShareAlike license.

However, at the request of the Wikimedia Foundation, version 1.3 added a time-limited section allowing specific types of websites using the GFDL to additionally offer their work under the CC BY-SA license. These exemptions allow a GFDL-based collaborative project with multiple authors to transition to the CC BY-SA 3.0 license, without first obtaining the permission of every author, if the work satisfies several conditions:

- The work must have been produced on a "Massive Multiauthor Collaboration Site" (MMC), such as a public wiki for example.
- If external content originally published on a MMC is present on the site, the work must have been licensed under Version 1.3 of the GNU FDL, or an earlier version but with the "or any later version" declaration, with no cover texts or invariant sections. If it was not originally published on an MMC, it can only be relicensed if it were added to an MMC before November 1, 2008.

To prevent the clause from being used as a general compatibility measure, the license itself only allowed the change to occur before August 1, 2009. At the release of version 1.3, the FSF stated that all content added before November 1, 2008 to Wikipedia as an example satisfied the conditions.

The Wikimedia Foundation itself after a public referendum, invoked this process to dual-license content released under the GFDL under the CC BY-SA license in June 2009, and adopted a foundation-wide attribution policy for the use of content from Wikimedia Foundation projects.

ENFORCEMENT

There have currently been no cases involving the GFDL in a court of law, although its sister license for software, the GNU General Public License, has been successfully enforced in such a setting. Although the content of Wikipedia has been plagiarized and used in violation of the GFDL by other sites, such as Baidu Baike, no contributors have ever tried to bring an organization to court due to violation of the GFDL. In the case of Baidu, Wikipedia representatives asked the site and its contributors to respect the terms of the licenses and to make proper attributions.

CRITICISM

Some critics consider the GFDL a non-free license. Some reasons for this are that the GFDL allows "invariant" text which cannot be modified or removed, and that its prohibition against digital rights management (DRM) systems applies to valid usages, like for "private copies made and not distributed".

Notably, the Debian project and Nathanael Nerode have raised objections. In 2006, Debian developers voted to consider works licensed under the GFDL to comply with their Debian Free Software Guidelines provided the invariant section clauses are not used. The results was GFDL without invariant sections is DFSG compliant. However, their resolution stated that even without invariant sections, GFDL-licensed software documentation "is still not free of trouble", namely because of its incompatibility with the major free software licenses.

Those opposed to the GFDL have recommended the use of alternative licenses such as the BSD Documentation License or the GNU GPL.

The FLOSS Manuals foundation, an organization devoted to creating manuals for free software, decided to eschew the GFDL in favor of the GPL for its texts in 2007, citing the incompatibility between the two, difficulties in implementing the GFDL, and the fact that the GFDL "does not allow for easy duplication and modification", especially for digital documentation.

DRM CLAUSE

The GNU FDL contains the statement:

You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute.

A criticism of this language is that it is too broad, because it applies to private copies made but not distributed. This means that a licensee is not allowed to save document copies "made" in a proprietary file format or using encryption.

In 2003, Richard Stallman said about the above sentence on the debian-legal mailing list:

This means that you cannot publish them under DRM systems to restrict the possessors of the copies. It isn't supposed to refer to use of encryption or file access control on your own copy. I will talk with our lawyer and see if that sentence needs to be clarified.

INVARIANT SECTIONS

A GNU FDL work can quickly be encumbered because a new, different title must be given and a list of previous titles must be kept. This could lead to the situation where there are a whole series of title pages, and dedications, in each and every copy of the book if it has a

long lineage. These pages cannot be removed until the work enters the public domain after copyright expires.

Richard Stallman said about invariant sections on the *debian-legal* mailing list:

The goal of invariant sections, ever since the 80s when we first made the GNU Manifesto an invariant section in the Emacs Manual, was to make sure they could not be removed. Specifically, to make sure that distributors of Emacs that also distribute non-free software could not remove the statements of our philosophy, which they might think of doing because those statements criticize their actions.

GPL INCOMPATIBLE IN BOTH DIRECTIONS

The GNU FDL is incompatible in both directions with the GPL—material under the GNU FDL cannot be put into GPL code and GPL code cannot be put into a GNU FDL manual. At the June 22nd and 23rd 2006 international GPLv3 conference in Barcelona, Eben Moglen hinted that a future version of the GPL could be made suitable for documentation:

By expressing LGPL as just an additional permission on top of GPL we simplify our licensing landscape drastically. It's like for physics getting rid of a force, right? We just unified electro-weak, ok? The grand unified field theory still escapes us until the document licences too are just additional permissions on top of GPL. I don't know how we'll ever get there, that's gravity, it's really hard.

BURDENS WHEN PRINTING

The GNU FDL requires that licensees, when printing a document covered by the license, must also include "this License, the copyright notices, and the license notice saying this License applies to the Document". This means that if a licensee prints out a copy of an article whose text is covered under the GNU FDL, he or she must also include a copyright notice and a physical printout of the GNU FDL, which is a significantly large document in itself. Worse, the same is required for the standalone use of just one (for example, Wikipedia) image. Wikivoyage, a web site dedicated to free content travel guides, chose not to use the GFDL because it considers it unsuitable for short printed texts.

OTHER FREE CONTENT LICENSES

Some of these were developed independently of the GNU FDL, while others were developed in response to perceived flaws in the GNU FDL.

- Creative Commons licenses
- Design Science License
- Free Art license
- FreeBSD Documentation License
- Open Content License
- Open Gaming License

- Open Publication License
- WTFPL

LIST OF PROJECTS THAT USE THE GFDL

- Most projects of the Wikimedia Foundation, including Wikipedia (excluding Wikivoyage and Wikinews) - On June 15, 2009, the Section 11 clauses were used to dual-license the content of these wikis under the Creative Commons Attribution Share-Alike license and GFDL.
- An Anarchist FAQ
- Citizendium - the project uses GFDL for articles originally from Wikipedia.
- Free On-line Dictionary of Computing
- Last.fm - artists descriptions are under GFDL
- Marxists Internet Archive
- PlanetMath
- Rosetta Code
- SourceWatch
- The specification documents that define TRAK, an enterprise architecture framework, are released under the GFDL.
- The Virginia Commonwealth University Mathematics Department has begun commercially publishing mathematics texts licensed under the GFDL, including *Abstract Algebra* by Thomas W. Judson.
- the Baseball-Reference's BR Bullpen, a free user-contributed baseball wiki

Chapter 46

COPYLEFT

Copyleft is a form of licensing, and can be used to maintain copyright conditions for works ranging from computer software, to documents, to art. In general, copyright law is used by an author to prohibit recipients from reproducing, adapting, or distributing copies of their work. In contrast, under copyleft, an author may give every person who receives a copy of the work permission to reproduce, adapt, or distribute it, with the accompanying requirement that any resulting copies or adaptations are also bound by the same licensing agreement.

Copyleft licenses (for software) require that information necessary for reproducing and modifying the work must be made available to recipients of the binaries. The source code files will usually contain a copy of the license terms and acknowledge the author(s).

Copyleft (a play on the word *copyright*) is the practice of offering people the right to freely distribute copies and modified versions of a work with the stipulation that the same rights be preserved in derivative works down the line.

Copyleft type licenses are a novel use of existing copyright law to ensure a work remains freely available. The GNU General Public License, originally written by Richard Stallman, was the first software copyleft license to see extensive use, and continues to dominate in that area. Creative Commons, a non-profit organization founded by Lawrence Lessig, provides a similar license provision condition called ShareAlike.

RECIPROCITY

Copyleft can be characterized as a copyright licensing scheme in which an author surrenders some, but not all rights under copyright law. Instead of allowing a work to fall completely into the public domain (where no ownership of copyright is claimed), copyleft allows an author to impose some restrictions on those who want to engage in activities that would more usually be reserved by the copyright holder. Under copyleft, derived works may be produced provided they are released under the compatible copyleft scheme.

The underlying principle is that one benefits freely from the work of others but any modifications one makes must be released under compatible terms. For this reason some copyleft licenses are also known as reciprocal licenses, they have also been described as "viral" due to their self-perpetuating terms. Under fair use, however, the copyleft license may be superseded, just like regular copyrights. Therefore, any person utilizing a copyleft-licensed source for their own work is free to choose any other license provided they meet the fair use standard.

While copyright law gives software *authors* control over copying, distribution and modification of their works, the goal of copyleft is to give all *users* of the software the

freedom to carry out these activities. In this way, copyleft licenses are distinct from other types of free software licenses, which do not guarantee that all "downstream" recipients of the program receive these rights, or the source code needed to make them effective. In particular, permissive free software licenses such as BSD allow re-distributors to remove some or all these rights, and do not require the distribution of source code.

Reuses of open source software which subvert the freedom of the software are called open source hijacking. Open source hijacking is the act of “subtracting other people’s works from the public domain and embodying them in proprietary assemblages.” Other forms of open source licensing are susceptible to hijacking, so creators who desire that their work remain free may choose to use copyleft. The Open Directory Project (ODP, also known as DMOZ), which is created and maintained entirely by volunteer editors, can be considered an example of open-source hijacking. Since all of the top search engines use DMOZ, it is an extremely important public commodity which is entirely built by volunteer contributions. Despite this, the DMOZ has remained a commercial product for its entire existence.

The economic incentives to work on copyleft content can vary. Traditional copyright law is designed to promote progress by providing economic benefits to creators. When choosing to copyleft their work, content creators may seek complementary benefits like recognition from their peers. The open-source culture had been described as a gift culture, where social status is determined by an individual's contributions. Working on free software may also be an outlet for programmers to fill a need they have noticed. For some creators, keeping their work open is an incentive in and of itself. For these programmers, preventing commercial enterprises from absorbing and selling their product is another incentive.

Copyleft software has economic effects beyond the individual creators. The presence of quality copyleft software can force commercial producers to increase the quality of their products, which must compete with free software. This may also have the effect of preventing large commercial entities from applying monopoly prices. However, competition with proprietary software can also be a reason to forego copyleft. The Free Software Foundation recommends that when “widespread use of the code is vital for advancing the cause of free software,” allowing the code to be copied and used freely is more important than a copyleft.

HISTORY

An early use of the word "copyleft" was in Li-Chen Wang's Palo Alto Tiny BASIC's distribution notice "@COPYLEFT ALL WRONGS RESERVED" in June 1976, but Tiny BASIC was not distributed under any form of copyleft distribution terms, so the wordplay is the only similarity.

The concept of copyleft was described in Richard Stallman's GNU Manifesto in 1985, where he wrote:

GNU is not in the public domain. Everyone will be permitted to modify and redistribute GNU, but no distributor will be allowed to restrict its further redistribution. That is to say, proprietary modifications will not be allowed. I want to make sure that all versions of GNU remain free.

Stallman worked a few years earlier on a Lisp interpreter. Symbolics asked to use the Lisp interpreter, and Stallman agreed to supply them with a public domain version of his work. Symbolics extended and improved the Lisp interpreter, but when Stallman wanted access to the improvements that Symbolics had made to his interpreter, Symbolics refused. Stallman then, in 1984, proceeded to work towards eradicating this emerging behavior and culture of proprietary software, which he named *software hoarding*. This was not the first time Stallman had dealt with proprietary software, but he deemed this interaction as a "turning point". He justified software sharing, protesting that when sharing, the software online can be copied without the loss of the original piece of work. Everyone is a winner. The software can be used multiple times without ever being damaged or wearing out.

As Stallman deemed it impractical in the short term to eliminate current copyright law and the wrongs he perceived it perpetuated, he decided to work within the framework of existing law; in 1985, he created his own copyright license, the Emacs General Public License, the first copyleft license. This later evolved into the GNU General Public License, which is now one of the most popular Free Software licenses. For the first time a copyright holder had taken steps to ensure that the maximal number of rights be perpetually transferred to a program's users, no matter what subsequent revisions anyone made to the original program. This original GPL did not grant rights to the public at large, only those who had already received the program; but it was the best that could be done under existing law.

The new license was not at this time given the copyleft label. Richard Stallman stated that the use of "Copyleft" comes from Don Hopkins, who mailed him a letter in 1984 or 1985, on which was written: "Copyleft – all rights reversed." The term "copyleft" with the notation "All Rights Reversed" was also in use in the early 1970s, within the *Principia Discordia*, which may have inspired Hopkins or influenced other usage. And in the arts Ray Johnson had earlier coined the term independently as it pertained to his making of and distribution of his mixed media imagery in his mail art and ephemeral gifts, for which he encouraged the making of derivative works. (While the phrase appears briefly as (or on) one of his pieces in the 2002 documentary *How to Draw a Bunny*, Johnson himself is not referenced in the 2001 documentary *Revolution OS*.)

Some have suggested that copyleft became a divisive issue in the ideological strife between the Open Source Initiative and the free software movement. However, there is evidence that copyleft is both accepted and proposed by both parties:

- Both the OSI and the FSF have copyleft and non-copyleft licenses in their respective lists of accepted licenses.

- The OSI's original Legal Counsel Lawrence Rosen has written a copyleft license, the Open Software License.
- The OSI's licensing how-to recognises the GPL as a "best practice" license.
- Some of the software programs of the GNU Project are published under non-copyleft licenses.
- Stallman himself has endorsed the use of non-copyleft licenses in certain circumstances, most recently in the case of the Ogg Vorbis license change.

APPLYING COPYLEFT

Common practice for using copyleft is to codify the copying terms for a work with a license. Any such license typically gives each person possessing a copy of the work the same freedoms as the author, including (from the Free Software Definition):

Freedom 0 – the freedom to use the work,
 Freedom 1 – the freedom to study the work,
 Freedom 2 – the freedom to copy and share the work with others,
 Freedom 3 – the freedom to modify the work, and the freedom to distribute modified and therefore derivative works.

(Note that the list begins from 0 as a reference to computer programming, where zero-based numbering is prevalent.)

These freedoms do not ensure that a derivative work will be distributed under the same liberal terms. In order for the work to be truly copyleft, the license has to ensure that the author of a derived work can only distribute such works under the same or equivalent license.

In addition to restrictions on copying, copyleft licenses address other possible impediments. These include ensuring the rights cannot be later revoked and requiring the work and its derivatives to be provided in a form that facilitates modification. In software, this requires that the source code of the derived work be made available together with the software itself.

Copyleft licenses necessarily make creative use of relevant rules and laws. For example, when using copyright law, those who contribute to a work under copyleft usually must gain, defer or assign copyright holder status. By submitting the copyright of their contributions under a copyleft license, they deliberately give up some of the rights that normally follow from copyright, including the right to be the unique distributor of copies of the work.

Some laws used for copyleft licenses vary from one country to another, and may also be granted in terms that vary from country to country. For example, in some countries it is acceptable to sell a software product without warranty, in standard GNU GPL style (see articles 11 and 12 of the GNU GPL version 2), while in most European countries it is not permitted for a software distributor to waive all warranties regarding a sold product. For

this reason the extent of such warranties are specified in most European copyleft licenses. Regarding that, see the European Union Public Licence EUPL, or the CeCILL license, a license that allows one to use GNU GPL (see article 5 of the EUPL and article 5.3.4 of CeCILL) in combination with a limited warranty (see article 7 and 8 of the EUPL and 9 of CeCILL). For projects which will be run over a network, a variation of the GPL is provided in the Affero General Public License, which ensures that the source code is available to users of network software.

TYPES OF COPYLEFT AND RELATION TO OTHER LICENSES

Copyleft is a distinguishing feature of some free software licenses. Many free software licenses are not copyleft licenses because they do not require the licensee to distribute derivative works under the same license. There is an ongoing debate as to which class of license provides the greater degree of freedom. This debate hinges on complex issues such as the definition of freedom and whose freedoms are more important, or whether to maximize the freedom of all potential future recipients of a work (*freedom from* the creation of proprietary software). Non-copyleft free software licenses maximize the freedom of the initial recipient (*freedom to* create proprietary software).

In common with the Creative Commons share-alike licensing system, GNU's Free Documentation License allows authors to apply limitations to certain sections of their work, exempting some parts of their creation from the full copyleft mechanism. In the case of the GFDL, these limitations include the use of invariant sections, which may not be altered by future editors. The initial intention of the GFDL was as a device for supporting the documentation of copylefted software. However, the result is that it can be used for any kind of document.

STRONG AND WEAK COPYLEFT

The strength of the copyleft governing a work is an expression of the extent that the copyleft provisions can be efficiently imposed on all kinds of derived works. "Weak copyleft" refers to licenses where not all derived works inherit the copyleft license; whether a derived work inherits or not often depends on the manner in which it was derived.

"Weak copyleft" licenses are generally used for the creation of software libraries, to allow other software to link to the library, and then be redistributed without the legal requirement for the work to be distributed under the library's copyleft license. Only changes to the weak-copylefted software itself become subject to the copyleft provisions of such a license, not changes to the software that links to it. This allows programs of any license to be compiled and linked against copylefted libraries such as glibc (the GNU project's implementation of the C standard library), and then redistributed without any re-licensing required.

The most well known free software license that uses strong copyleft is the GNU General Public License. Free software licenses that use "weak" copyleft include the GNU Lesser

General Public License and the Mozilla Public License. Examples of non-copyleft free software licenses include the X11 license, Apache license and the BSD licenses.

The Design Science License is a strong copyleft license that can apply to any work that is not software or documentation, such as art, music, sports photography, and video. It is hosted on the Free Software Foundation website's license list, but it is not considered compatible with the GPL by the Free Software Foundation.

FULL AND PARTIAL COPLYLEFT

"Full" and "partial" copyleft relate to another issue: Full copyleft exists when all parts of a work (except the license itself) may only be modified and distributed under the terms of the work's copyleft license. Partial copyleft exempts some parts of the work from the copyleft provisions, thus permitting distribution of some modifications under terms other than the copyleft license, or in some other way does not impose all the principles of copylefting on the work. For example, the GPL linking exception made for some software packages (see below).

SHARE-ALIKE

Share-alike imposes the requirement that any freedom that is granted regarding the original work must be granted on exactly the same or compatible terms in any derived work: this implies that any copyleft license is automatically a share-alike license, but not the other way around, as some share-alike licenses include further restrictions, for instance prohibiting commercial use. Another restriction is that not everyone wants to share their work and some share-alike agreements require that the whole body of work be shared, even if the author only wants to share a certain part. The plus side for the author of the source code is that any modification to the code will not only benefit the company, but the author will be recognized and hold equal claim over the changed code. Some permutations of the Creative Commons licenses are examples of share-alike.

VIRAL LICENSING

Viral license is a pejorative name for copyleft licenses. It originates from the terms 'General Public Virus' or 'GNU Public Virus' (GPV), which dates back to 1990, a year after the GPLv1 was released. The name "viral licenses" refers to the fact that any works derived from a copyleft work must preserve the copyleft permissions when distributed. Some BSD License advocates used the term derisively in regards to the GPL's tendency to absorb BSD licensed code without allowing the original BSD work to benefit from it, while at the same time promoting itself as "freer" than other licenses. Microsoft vice-president Craig Mundie remarked, "This viral aspect of the GPL poses a threat to the intellectual property of any organization making use of it." In another context, Steve Ballmer declared that code released under GPL is useless to the commercial sector (since it can only be used if the resulting surrounding code becomes GPL), describing it thus as "a cancer that attaches itself in an intellectual property sense to everything it touches". In response to Microsoft's attacks on the GPL, several prominent Free Software developers and

advocates released a joint statement supporting the license. According to FSF compliance engineer David Turner, it creates a misunderstanding and a fear of using copylefted free software. David McGowan has written that there is no reason to believe the GPL could force proprietary software to become free software, but could "try to enjoin the firm from distributing commercially a program that combined with the GPL'd code to form a derivative work, and to recover damages for infringement." If the firm "actually copied code from a GPL'd program, such a suit would be a perfectly ordinary assertion of copyright, which most private firms would defend if the shoe were on the other foot."

Popular copyleft licenses, such as the GPL, have a clause allowing components to interact with non-copyleft components as long as the communication is abstract, such as executing a command-line tool with a set of switches or interacting with a Web server. As a consequence, even if one module of an otherwise non-copyleft product is placed under the GPL, it may still be legal for other components to communicate with it normally. This allowed communication may or may not include reusing libraries or routines via dynamic linking – some commentators say it does, the FSF asserts it does not and explicitly adds an exception allowing it in the license for the GNU Classpath re-implementation of the Java library. This ambiguity is an important difference between the GPL and the LGPL, in that the LGPL specifically allows linking or compiling with the covered work.

SYMBOL

The copyleft symbol is a backwards C in a circle (copyright symbol © mirrored). It has no legal significance.

Because it is unavailable on Unicode, it can be approximated with character U+2184 ◡ LATIN SMALL LETTER REVERSED C or the more widely available character U+0254 ◡ LATIN SMALL LETTER OPEN O between parenthesis '(◡)' or, if supported by the application, by combining it with the character U+20DD ◯ COMBINING ENCLOSING CIRCLE:◯'. A discussion on the Unicode mailing list in July 2012, contended that there are other ways to insert the copyleft symbol, so it need not be encoded.

Chapter 47

OPEN EDUCATIONAL PRACTICES

Open Educational Practices (OEP) are teaching techniques that draw upon open technologies and high-quality open educational resources (OER) in order to facilitate collaborative and flexible learning. They may involve students participating in online, peer production communities within activities intended to support learning or more broadly, any context where access to educational opportunity through freely available online content and services is the norm. Such activities may include (but are not limited to), the creation, use and repurposing of open educational resources and their adaptation to the contextual setting. OEP can also include the open sharing of teaching practices and aim "to raise the quality of education and training and innovate educational practices on an institutional, professional and individual level". The OEP community includes policy makers, managers/ administrators of organisations, educational professionals and learners. OEP are also viewed as the next phase in OER development that continues to transform 21st century learning and learners.

THE SCOPE OF OPEN EDUCATIONAL PRACTICES

A database or repository of open educational resources is not open educational practice. OEP have a lifecycle of creation, use, and management. Open educational practices aim to take the focus beyond building further access to OER and consider how in practice, such resources support education and promote quality and innovation in teaching and learning. They focus on reproduction/understanding, connecting information, application, competence and responsibility rather than the availability of good resources.

DEFINITIONS

There is no canonical definition of open educational practice, however various groups and scholars have given their definition or view. One such scholar is Ehlers (2011) who defines OEP "as practices which support the (re)use and production of OER through institutional policies, promote innovative pedagogical models, and respect and empower learners as co-producers on their lifelong learning path". A definition used by others either in its entirety or as basis for further development.

- The *Open Educational Quality (OPAL) Initiative* define Open Educational Practices as "the use of Open Educational Resources to raise the quality of education and training and innovate educational practices on institutional, professional and individual level".
- The International Council for Open and Distance Education (ICDE): "Open Educational Practices are defined as practices which support the production, use and reuse of high quality open educational resources (OER) through institutional policies, which promote innovative pedagogical models, and respect and empower learners as co-producers on their lifelong learning path".

- The UK OER support and evaluation team suggest that (compared to ICDE) "a broader definition would encompass all activities that open up access to educational opportunity, in a context where freely available online content and services (whether 'open', 'educational' or not) are taken as the norm".
- The Center for Open Learning and Teaching (University of Mississippi) state that "Open Educational Practices (OEP) are teaching techniques that introduce students to online peer production communities. Such communities (for instance, Wikipedia, YouTube, Open Street Map) host dynamic communities and offer rich learning environments".
- The European Foundation for Quality in e-Learning (EFQUEL) write that Open Educational Practices are "the next phase in OER development which will see a shift from a focus on resources to a focus on open educational practices being a combination of open resources use and open learning architectures to transform learning into 21st century learning environments in which universities', adult learners and citizens are provided with opportunities to shape their lifelong learning pathways in an autonomous and self-guided way".
- The Cape Town Open Education Declaration (with over 2,500 signatories) reads: "open education is not limited to just open educational resources. It also draws upon open technologies that facilitate collaborative, flexible learning and the open sharing of teaching practices that empower educators to benefit from the best ideas of their colleagues. It may also grow to include new approaches to assessment, accreditation and collaborative learning".

OEP AREAS

Best practice case studies identify a number of OEP areas.

- Business Model for OEP
- Commitment
- Creation of OER
- Digital Literacy
- Incentives and/or Motivation
- IPR Framework for OEP
- Mindsets and Attitudes
- Open Educational Practices
- Partnerships
- Quality Concepts
- Relevance: How to Convince Others of OEP?
- Repurposing OER
- Sharing OER
- Skills and Knowledge for OEP
- Strategy and/or Policy for OEP
- Support Mechanisms
- Tools for Sharing
- Using OER
- Vision of OEP

These areas surround the following topics, with other studies identifying categories and elements of Open Educational Practices.

<i>topics</i>	<i>categories</i>	<i>elements</i>
<ul style="list-style-type: none"> • Using OER • Innovation • Learning • Improving Quality • Something Else 	<ul style="list-style-type: none"> • open educational resources • open/public pedagogies • open learning • open scholarship • open sharing (of teaching practice) • open technologies 	<ul style="list-style-type: none"> • Infrastructure (tools) • OER Use • Open Design • Adoption • Policy

IMPACT

Adopting OEP can lead to opportunities for collaborative learning through the affordances of Web 2.0 tools. In this context, open also refers to the learning environment where learner's set their own objectives rather than being restricted by those set externally (a closed environment).

Open educational practices can also provide the experience and tools to help bridge the gap between formal and informal learning, and potentially an open source curriculum or emergent curriculum.

LEVELS OF OPENNESS

The trajectory to Open Education Practices lies between the use of open pedagogical models and, resource use and creation.:

- Low - teachers believe they know what learners have to learn. A focus on knowledge transfer
- Medium - Predetermined Objectives (closed environment) but, using open pedagogical models and encourage dialogue and Problem-based learning.
- High - Learning Objectives and pathways highly governed by learners.

INITIATIVES

THE OPAL CONSORTIUM

OPAL members		Country
International Council for Open and Distance Education	ICDE	Norway

United Nations Educational, Scientific and Cultural Organisation	UNESCO	France
Open University	OU	United Kingdom
European Foundation for Quality in e-Learning	EFQUEL	Belgium
Aalto University	AALTO	Finland
Universidade Católica Portuguesa	UCP	Portugal
University Duisburg-Essen	UDE	Germany

The *Open Educational Quality (OPAL) Initiative* define Open Educational Practices (OEP) as "the use of Open Educational Resources (OER) to raise the quality of education and training and innovate educational practices on institutional, professional and individual level".

For the mainstreaming of Open Educational Practices OPAL recommends:

- Enabling Legislation to Facilitate OEP
 - Incentivising OEP through Legislation
 - Reducing Legislative Burdens through Harmonisation
 - Rethinking Intellectual Property Law for the 21st Century
- Empowering Learners to take up OEP
 - Addressing Fragmentation in Learning Resources
 - Promoting the provision of Open Educational Assessment
- Strengthening the Evidence-Base of OEP
 - Helping institutions nurture OEP
 - Addressing Sustainability Concerns
 - Making the Societal Benefit Explicit
- Culturing Innovation through Networks
 - Supporting Truly Open Collaboration
 - Building a Coalition of Stakeholders around Principles of Openness
- Improving Trust in OEP
 - Integrate OEP into Institutional Quality Procedures
 - Create Open Academic/Scientific Trust Infrastructures

The International Council for Open and Distance Education sees OEP as those practices which support the production, use and reuse of high quality open educational resources

and regards that OEP are often achieved through institutional policies, which promote innovative pedagogical models, and respect. Learners are empowered as co-producers on their lifelong learning path. The scope of OEP covers all areas of OER governance: policy makers, managers and administrators of organizations, educational professionals and learners.

The OLCOS Consortium

OLCOS members	Country
European Centre for Media Competence	Germany
European Distance and E-learning Network	Hungary
FernUniversität Hagen	Germany
Mediamaisteri Group	Finland
Open University of Catalonia	Spain
project co-ordinator Salzburg Research / EduMedia Group	Austria

Open e-Learning Content Observatory Services (OLCOS) project is a Transversal Action under the European eLearning Programme.

The OLCOS Roadmap focuses on Open Educational Practices, providing orientation and recommendations to educational decision makers on how to develop the use of OER. To further benefit from OERs one needs to better understand how their role could promote innovation and change in educational practices.

The Roadmap states that; delivering OER to the dominant model of teacher-centred knowledge transfer will have little effect in equipping teachers, students and workers with the knowledge and skills required in the knowledge economy and, lifelong learning. Downloading Web-accessible, open teaching materials for classes and, continuing a one-way channel of content provision, will likely mirror the little impact achieved with regard to changing educational practices following the massive investments in the e-learning infrastructure by educational institutions. Open Educational Practices aim to deliver a competency-focused, constructivist paradigm of learning and promote a creative and collaborative engagement with digital content, tools and services to meet knowledge and skills required today.

SCORE

The Support Centre for Open Resources in Education (SCORE) at the Open University (UK), was the second major initiative to be funded by the Higher Education Funding Council for England (Hefce). (The first being the UKOER programme, jointly run by the Joint Information Systems Committee (JISC) and the Higher Education Academy (HEA)).

Discussions and actions were moving on from how open educational resources are published to how they are used. Placing OER as an enabler, within a wider set of open educational practices. Over a period of three years, SCORE, initiated a series of activities and events that involved several hundred educational practitioners from the majority of the higher education institutions in England.

There has been interest in how educational practitioners would accept and embed open resources into their practices (Geser, 2007 in). Sharing is at the heart of the philosophy OER and probably OEP and thus collective and cooperative activities between people and institutions are likely to be a key factor in the sustainability of such practices. SCORE reports it succeeded in raising the profile of OER and OEP within UK higher education institutions by assisting existing communities of practice and by creating new communities of practice to form a much larger network of practice that will be sustained by its participants.

CHALLENGES

There are many challenges to the adoption of open educational practices. Certain aspects like technology have received greater attention than others but all of the factors below inhibit widespread use of open educational practices:

- Technology - Lack of or insufficient investment in broadband access as well as up-to-date software and hardware
- Business Model - OER and OEP can incur a significant provider cost. Typically financial models focus on technology, but they also need to account for staff; i.e., those who create, reuse, mix, and modify the content.
- Law & Policy - There is either ignorance on open access licenses, such as Creative Commons License and Gnu Public License, and/or restrictive intellectual property rights that limit the development of OEP.
- Pedagogy - Traditional models of learning are teacher-centric where teachers dispense knowledge to students, and teachers/professors may not know how to integrate OEP into courses.
- Quality Assessment - There is not a quick and universal way to assess the quality of OER. MERLOT, based on the academic peer review process, has only reviewed 14% of submitted material.
- Cultural Imperialism - There is the concern that Western institutions use OEP to design educational courses for developing countries.

STRATEGIES & RECOMMENDATIONS

In order for there to be widespread adoption of OEP, legal and educational policy must change and OEP needs to become sustainable.

- Funding - Develop a sustainable funding model for OEP that addresses technology and staffing. Various funding models being explored and examples:

- Endowment Model, e.g. the Stanford Encyclopedia of Philosophy Project.
 - Membership Model, e.g. Sakai Educational Partners Program where member organizations pay a fee.
 - Donations Model, e.g. Wikipedia and Apache Foundation. Even though Apache has modified it so that there are fees for some services.
 - Conversion Model, e.g. Redhat, Ubuntu, SuSe. They convert free subscribers to paying customers for advanced features and support.
 - Contributor Pay Model, e.g. Public Library of Science (PLOS) where contributors pay for the cost of maintaining the contribution.
 - Sponsorship Model, e.g. MIT iCampus Outreach Initiative, which is sponsored by Microsoft & China Open Resources for Education, and Stanford on iTunes, which is sponsored by Stanford & Apple. They are free for users with commercial messages by sponsors.
 - Institutional Model, e.g. MIT OpenCourseWare Project.
 - Government Model including UN programmes, e.g. Canada's SchoolNet Project.
 - Partnership and Exchange, e.g. Universities working together to create OER systems.
- Law and Policy - In terms of law, there should be an open access mandate for partially or fully publicly funded research. Also teachers and researchers should be better informed about their intellectual property rights. Researchers and teachers who use public funding should sign non-exclusive copyrights so their institutions make their work available under appropriate licenses.
 - Open advocates should demand public-private partnerships
 - Build stakeholders -
 - Quality Assessment -
 - Pedagogy - Help teachers change to facilitate use of OER to emphasize learners' developing competences, knowledge, and skills. Therefore teaching is no longer educator-centric, but instead it focuses on what learners can do for themselves.

Chapter 48

CONNECTIVISM

Connectivism is a hypothesis of learning which emphasizes the role of social and cultural context. Connectivism is often associated with and proposes a perspective similar to Vygotsky's 'Zone of Proximal Development' (ZPD), an idea later transposed into Engeström's (2001) Activity theory. The relationship between work experience, learning, and knowledge, as expressed in the concept of 'connectivity, is central to connectivism, motivating the theory's name. It is somewhat similar to Bandura's Social Learning Theory that proposes that people learn through contact. What sets connectivism apart from theories such as constructivism is the view that "learning (defined as actionable knowledge) can reside outside of ourselves (within an organization or a database), is focused on connecting specialized information sets, and the connections that enable us to learn more are more important than our current state of knowing".

The phrase "a learning theory for the digital age" indicates the emphasis that connectivism gives to technology's effect on how people live, communicate and learn.

The relationship between work experience, learning, and knowledge, as expressed in the concept of 'connectivity, is central to connectivism, motivating the theory's name

NODES AND LINKS

The central aspect of connectivism is the metaphor of a network with nodes and connections. In this metaphor, a node is anything that can be connected to another node such as an organization, information, data, feelings, and images. Connectivism sees learning as the process of creating connections and expanding or increasing network complexity. Not all connections are of equal strength.

The idea of organisations as cognitive systems where knowledge is distributed across nodes originated from the Perceptron, and is directly borrowed from Connectionism, "a paradigm in cognitive sciences that sees mental or behavioral phenomena as the emergent processes of interconnected networks of simple units". The network metaphor allows a notion of "know-where" (the understanding of where to find the knowledge when it is needed) to supplement to the ones of "know-how" and "know-what" that make the cornerstones of many theories of learning. As Downes states: "at its heart, connectivism is the thesis that knowledge is distributed across a network of connections, and therefore that learning consists of the ability to construct and traverse those networks".

PRINCIPLES

- Learning and knowledge rests in diversity of opinions.
- Learning is a process of connecting specialized nodes or information sources.
- Learning may reside in non-human appliances.
- Learning is more critical than knowing.
- Maintaining and nurturing connections is needed to facilitate continual learning.
- Perceiving connections between fields, ideas and concepts is a core skill.
- Currency (accurate, up-to-date knowledge) is the intent of learning activities.
- Decision-making is itself a learning process. Choosing what to learn and the meaning of incoming information is seen through the lens of a shifting reality. While there is a right answer now, it may be wrong tomorrow due to alterations in the information climate affecting the decision.

TEACHING METHODS

Summarizing connectivist teaching and learning, Downes states: "to teach is to model and demonstrate, to learn is to practice and reflect." In 2008, Siemens and Downes delivered an online course called "Connectivism and Connective Knowledge". It covered connectivism as content while attempting to implement some of their ideas. The course was free to anyone who wished to participate, and over 2000 people worldwide enrolled.

The phrase "Massive Open Online Course" (MOOC) describes this model. All course content was available through RSS feeds, and learners could participate with their choice of tools: threaded discussions in Moodle, blog posts, Second Life and synchronous online meetings. The course was repeated in 2009 and in 2011.

At its core, connectivism is a form of experiential learning which prioritizes the set of connections formed by actions and experience over the idea that knowledge is propositional.

HISTORY

Connectivism was introduced in 2005 by two publications, Siemens' *Connectivism: Learning as Network Creation* and Downes' *An Introduction to Connective Knowledge*. Both works received significant attention in the blogosphere and an extended discourse

has followed on the appropriateness of connectivism as a learning theory for the digital age. In 2007 Kerr entered into the debate with a series of lectures and talks on the matter, as did Forster, both at the Online Connectivism Conference at the University of Manitoba. In 2008, in the context of digital and e-learning, connectivism was reconsidered and its technological implications were discussed by Siemens' and Ally.

The networked teaching model

CRITICISMS

The idea that connectivism is a new theory of learning is not widely accepted. Verhagen argued that connectivism is rather a "pedagogical view."

The lack of comparative literature reviews in Connectivism papers complicate evaluating how Connectivism relates to prior theories, such as Socially Distributed Cognition (Hutchins, 1995), which explored how connectionist ideas could be applied to social systems. Classical theories of cognition such as Activity theory (Vygotsky, Leont'ev, Luria, and others starting in the 1920s) proposed that people are embedded actors, with learning considered via three features – a subject (the learner), an object (the task or activity) and tool or mediating artifacts. Social cognitive theory (Bandura, 1962) claimed that people learn by watching others. Social learning theory (Miller and Dollard) elaborated this notion. Situated cognition (Brown, Collins, & Duguid, 1989; Greeno & Moore, 1993) alleged that knowledge is situated in activity bound to social, cultural and physical contexts; knowledge and learning that requires thinking on the fly rather than the storage and retrieval of conceptual knowledge. Community of practice (Lave & Wenger 1991) asserted that the process of sharing information and experiences with the group enables

members to learn from each other. Collective intelligence (Lévy, 1994) described a shared or group intelligence that emerges from collaboration and competition.

Kerr claims that although technology affects learning environments, existing learning theories are sufficient. Kop and Hill conclude that while it does not seem that connectivism is a separate learning theory, it "continues to play an important role in the development and emergence of new pedagogies, where control is shifting from the tutor to an increasingly more autonomous learner."

Ally recognizes that the world has changed and become more networked, so learning theories developed prior to these global changes are less relevant. However, he argues that, "What is needed is not a new stand-alone theory for the digital age, but a model that integrates the different theories to guide the design of online learning materials."

Chatti notes that Connectivism misses some concepts, which are crucial for learning, such as reflection, learning from failures, error detection and correction, and inquiry. He introduces the Learning as a Network (LaaN) theory which builds upon connectivism, complexity theory, and double-loop learning. LaaN starts from the learner and views learning as the continuous creation of a personal knowledge network (PKN).

Chapter 49

HEUTAGOGY

In education, Heutagogy, is a term coined by Stewart Hase and Chris Kenyon of Southern Cross University in Australia, and is also called self-determined learning. The basic tenet of the approach states that a learner should be at the centre of his or her own learning, and, hence, that 'learning' should not be seen as teacher- or curriculum-centric, but learner-centric. Since the theory was first launched in 2000 it has become accepted as a practical proposition with its approach being particularly suitable in e-learning environments. Recent (post-2010) research into brain plasticity indicates that the approach can be useful in increasing learning capability.

Heutagogy is the art and science of self determined learning

EXAMPLES

Although the term arose in 2000, it relates to a phenomenon which has been prevalent for many years before this.

SWEDISH STUDY CIRCLES

The first study circle was introduced in Sweden in 1902 as a temperance movement for a sober life among people and it quickly gained followers as well as spreading the study

circle culture among the society. It was created by Oscar Olsson who is regarded as the "father of study circles".

The idea of the study circle emerged from the lack of affordable higher education for working class children and families, it allowed people to learn from each other about a subject they had common interest in. It was a method also heavily based on democracy and the idea of "For the people, by the people" which became a universal slogan for education in the Scandinavian world.

HOME BREW COMPUTER CLUB

Homebrew Computer Club Newsletter, September 1976

The Homebrew Computer Club (1975-1986) was learning and sharing environment created by Fred Moore and Gordon French. It emerged from the Midpeninsula Free University based in Menlo Park. When the first MITS Altair microcomputer arrived at the People's Computer Company Moore and French wanted to organise a social space where people could get together to share experiences, learn from each other and making computers more accessible to the broader public. Steve Wozniak, one of the participants described the theme of the club as "Give to help others." He outlined how the event was organised in different periods:

- A mapping period where people in turn would contribute something about what they had been doing or what they were interested in.

- A random access period where people would wander around to see what was being demonstrated, trading surplus parts, networking or otherwise sharing information.

The Homebrew Computer Club provided an incubator for both high profile Silicon Valley corporations like Microsoft and Apple while also facilitating the growth of not-for-profit initiatives primarily linked to the open-source movement.

HACKATHONS

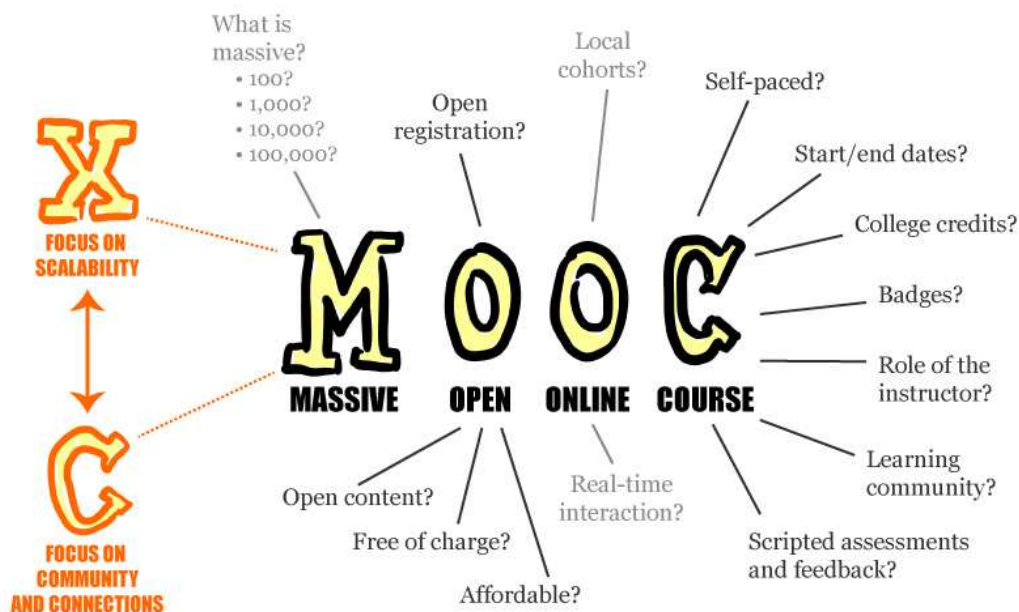

Hackathon Barcelona

A collaborative activity that has originally emerged from the developers' community in 1999, has now been in increasing use for learning and sharing environment. Collaborators participate in a time-limited learning and sharing environment, using Web resources and creating an innovative outcomes or achieving learning goals, with best results obtaining prizes and trophies

Chapter 50

MASSIVE OPEN ONLINE COURSE

A Massive Open Online Course (MOOC) is an online course aimed at unlimited participation and open access via the web. In addition to traditional course materials such as filmed lectures, readings, and problem sets, many MOOCs provide interactive user forums to support community interactions between students, professors, and teaching assistants (TAs). MOOCs are a recent and widely researched development in distance education which was first introduced in 2008 and emerged as a popular mode of learning in 2012.

Poster, entitled "MOOC, every letter is negotiable", exploring the meaning of the words "Massive Open Online Course"

Early MOOCs often emphasized open-access features, such as open licensing of content, structure and learning goals, to promote the reuse and remixing of resources. Some later MOOCs use closed licenses for their course materials while maintaining free access for students. Robert Zemsky (2014) argues that they have passed their peak: "They came; they conquered very little; and now they face substantially diminished prospects."

HISTORY

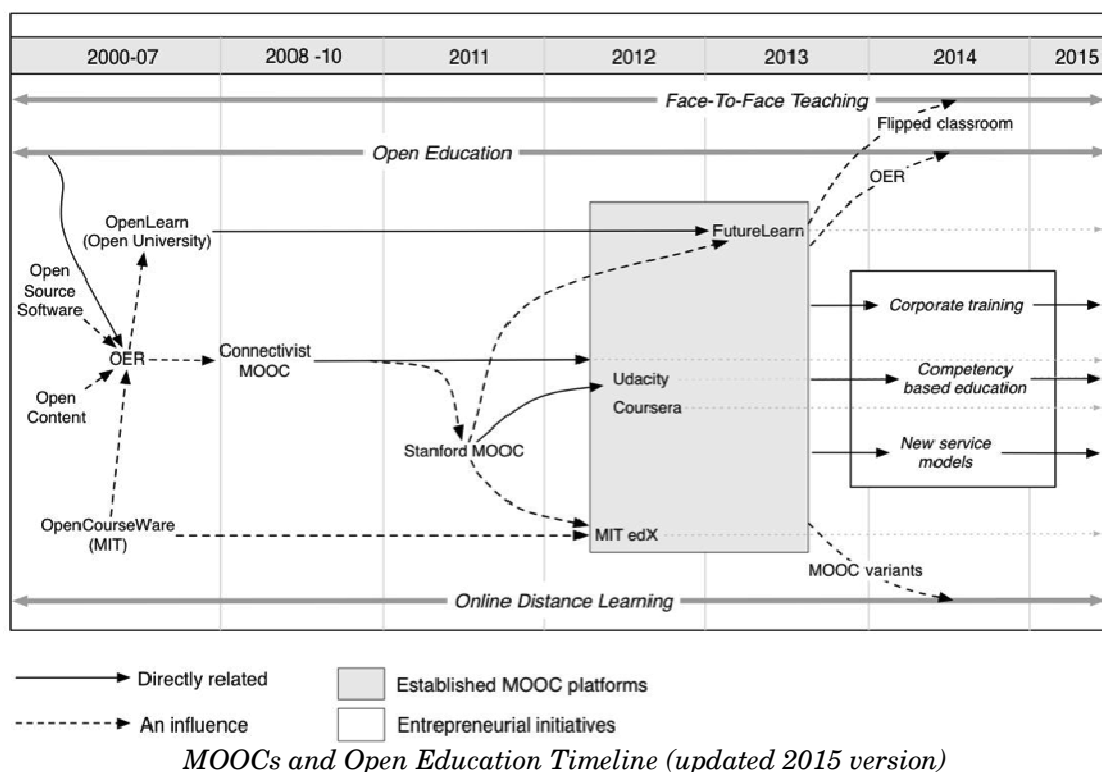

PRECURSORS

Before the Digital Age, distance learning appeared in the form of correspondence courses in the 1890s-1920s, and later radio and television broadcast of courses and early forms of e-learning. Typically fewer than five percent of the students would complete a course. The

York hosted MOOCs through several universities starting with 2011's 'Digital Storytelling' (ds106) MOOC. These early MOOCs did not rely on posted resources, learning management systems and video lectures, instead using structures that mix the learning management system with more open web resources. MOOCs from private, non-profit institutions emphasized prominent faculty members and expanded existing distance learning offerings (e.g., podcasts) into free and open online courses.

Alongside the development of these open courses, other E-learning platforms emerged - such as Khan Academy, Peer-to-Peer University (P2PU), Udemy and ALISON - which are viewed as similar to MOOCs and work outside the university system or emphasize individual self-paced lessons.

cMOOCs and xMOOCs

As MOOCs have evolved, there appear to be two distinct types: those that emphasize the connectivist philosophy, and those that resemble more traditional courses. To distinguish the two, Stephen Downes proposed the terms "cMOOC" and "xMOOC".

cMOOCs are based on principles from connectivist pedagogy indicating that material should be *aggregated* (rather than pre-selected), *remixable*, *re-purposable*, and *feeding forward* (i.e. evolving materials should be targeted at future learning).

cMOOC instructional design approaches attempt to connect learners to each other to answer questions and/or collaborate on joint projects. This may include emphasizing

collaborative development of the MOOC. Ravenscroft claimed that connectivist MOOCs better support collaborative dialogue and knowledge building.

EMERGENCE OF MOOC PROVIDERS

According to The New York Times, 2012 became "the year of the MOOC" as several well-financed providers, associated with top universities, emerged, including Coursera, Udacity, and edX.

During a presentation at SXSWedu in early 2013, Instructure CEO Josh Coates suggested that MOOCs are in the midst of a hype cycle, with expectations undergoing wild swings. Dennis Yang, President of MOOC provider Udemy, later made the point in an article for the Huffington Post.

Many universities scrambled to join in the "next big thing", as did more established online education service providers such as Blackboard Inc, in what has been called a "stampede." Dozens of universities in Canada, Mexico, Europe and Asia have announced partnerships with the large American MOOC providers. By early 2013, questions emerged about whether academia was "MOOC'd out." This trend was later confirmed in continuing analysis.

The industry has an unusual structure, consisting of linked groups including MOOC providers, the larger non-profit sector, universities, related companies and venture capitalists. *The Chronicle of Higher Education* lists the major providers as the non-profits Khan Academy and edX, and the for-profits Udacity and Coursera.

The larger non-profit organizations include the Bill & Melinda Gates Foundation, the MacArthur Foundation, the National Science Foundation, and the American Council on Education. University pioneers include Stanford, Harvard, MIT, the University of Pennsylvania, CalTech, the University of Texas at Austin, the University of California at

Berkeley, San Jose State University and the Indian Institute of Technology, Bombay IIT Bombay. Related companies investing in MOOCs include Google and educational publisher Pearson PLC. Venture capitalists include Kleiner Perkins Caufield & Byers, New Enterprise Associates and Andreessen Horowitz.

In the fall of 2011 Stanford University launched three courses. The first of those courses was *Introduction Into AI*, launched by Sebastian Thrun and Peter Norvig. Enrollment quickly reached 160,000 students. The announcement was followed within weeks by the launch of two more MOOCs, by Andrew Ng and Jennifer Widom. Following the publicity and high enrollment numbers of these courses, Thrun started a company he named Udacity and Daphne Koller and Andrew Ng launched Coursera. Coursera subsequently announced university partnerships with University of Pennsylvania, Princeton University, Stanford University and The University of Michigan.

In January 2013, Udacity launched its first MOOCs-for-credit, in collaboration with San Jose State University. In May 2013 the company announced the first entirely MOOC-based Master's Degree, a collaboration between Udacity, AT&T and the Georgia Institute of Technology, costing \$7,000, a fraction of its normal tuition.

Concerned about the commercialization of online education, in 2012 MIT created the not-for-profit MITx. The inaugural course, 6.002x, launched in March 2012. Harvard joined the group, renamed edX, that spring, and University of California, Berkeley joined in the summer. The initiative then added the University of Texas System, Wellesley College and Georgetown University.

In September 2013, edX announced a partnership with Google to develop Open edX, an open source platform and its MOOC.org, a site for non-xConsortium groups to build and host courses. Google will work on the core platform development with edX partners. In addition, Google and edX will collaborate on research into how students learn and how technology can transform learning and teaching. MOOC.org will adopt Google's infrastructure. The Chinese Tsinghua University MOOC platform XuetangX.com (launched Oct. 2013) uses the EdX platform.

Before 2013 each MOOC tended to develop its own delivery platform. EdX in April 2013 joined with Stanford University, which previously had its own platform called Class2Go, to work on XBlock SDK, a joint open-source platform. It is available to the public under the Affero GPL open source license, which requires that all improvements to the platform be publicly posted and made available under the same license. Stanford Vice Provost John Mitchell said that the goal was to provide the "Linux of online learning." This is unlike companies such as Coursera that have developed their own platform.

EdX currently offers 94 courses from 29 institutions around the world (as of November 2013). During its first 13 months of operation (ending March 2013), Coursera offered about 325 courses, with 30% in the sciences, 28% in arts and humanities, 23% in information technology, 13% in business and 6% in mathematics. Udacity offered 26

courses. Udacity's CS101, with an enrollment of over 300,000 students, was the largest MOOC to date.

A range of other global MOOC providers have emerged.

Provider	Type	Example institutional participants	Headquarters	Founded
Stanford Online	Non-profit	Stanford University	USA	2006
Khan Academy	Non-profit	n/a	USA	2006
NPTEL	Non-profit	Indian Institutes of Technology, Indian Institute of Science	India	2006
WizIQ	Commercial	IIT Delhi, Des Moines Area Community College	India/USA	2007
Canvas Network	Commercial	Santa Clara University, University of Utah, Université Lille 1	USA	2008
Peer to Peer University	Non-profit	n/a	USA	2009
Academic Earth	Non-profit	UC Berkeley, UCLA, University of Michigan, Oxford University	USA	2009
Udemy	Commercial	Professors from Universidad de Chile, University of Chicago Law School, George Washington University, and other institutions. Other professionals are also involved.	USA	2010
Udacity	Commercial	Georgia Institute of Technology, San Jose State University, Google, Salesforce.com, Facebook, Cloudera, Nvidia, Autodesk, Cadence	USA	2012
Eliademy based on the Open Source Moodle Virtual learning environment.	Commercial	Aalto University Executive Education The site is localized to more than 19 languages (including Latin), designed for mobile use.	Finland	2012
openHPI	n/a	launched in September 2012 by the Hasso Plattner Institute at the University of Potsdam, Germany	Germany	2012
FutureLearn	Commercial	University of Birmingham, University of Edinburgh, University of Reading, Open University, Monash University, Trinity College Dublin, Warwick University, University of Bath, University of Southampton	UK	2012
OpenLearning	Commercial	University of New South Wales, Taylor's University, University of Canberra	Australia	2012
Coursera	Commercial	University of Maryland, Wharton School, University of Virginia, Stanford University, University of Houston System, University of Tokyo, University of Edinburgh	USA	2012
edX	Non-profit	MIT, Harvard University, UC Berkeley, Kyoto University, Australian National University, University of Queensland, IIT Bombay, IIM Bangalore, Dartmouth College, Universidad	USA	2012

		Autonoma de Madrid		
iversity	Commercial	Universidad Autonoma de Madrid, University of Florence, University of Hamburg	EU	2013
One Month	Commercial	School of Visual Arts	USA	2013
MOOEC	Non-profit	University of Queensland, Griffith University, Queensland University of Technology	Australia	2013
NovoEd	Commercial	Stanford University, Wharton, Princeton, Darden, Comcast, Carnegie Foundation, Universidad Católica de Chile	USA	2013
Open2Study	Commercial	James Cook University, Griffith University, University of Wollongong, Flinders University, RMIT University, Central Institute of Technology, Sydney Institute, University of Western Sydney, Polytechnic West, Macquarie Graduate School of Management, Swinburne University of Technology, University of Newcastle, Jordan University of Science and Technology, University of Tasmania, International College of Management, Sydney, e3Learning, Enterprise Architects, Massey University, Macquarie University, Gowrie Victoria, South China University of Technology, TAFE SA, Curtin University	Australia	2013
Université Numérique France Université Numérique	Non-profit	Institut Mines-Télécom, Conservatoire National des Arts et Métiers, École normale supérieure de Cachan, University of Paris-Sud	France	2013
XuetangX	Non-profit	Tsinghua University	China	2014
Master University	Commercial	Launched in January 2015 by the Miramondo Network s.r.l.	Italy	2015

EMERGENCE OF INNOVATIVE COURSES

Early cMOOCs such as CCK08 and ds106 used innovative pedagogy, with distributed learning materials rather than a video-lecture format, and a focus on education and learning, and digital storytelling respectively.

Following the 2011 launch of three stanford xMOOCs, including *Introduction Into AI*, launched by Sebastian Thrun and Peter Norvig a number of other innovative courses have emerged. As of May 2014, more than 900 MOOCs are offered by US universities and colleges: List of MOOCs offered by US universities. As of February 2013 dozens of universities had affiliated with MOOCs, including many international institutions. In addition, some organisations operate their own MOOCs – including Google's Power Search.

A range of courses have emerged; "There was a real question of whether this would work for humanities and social science", said Ng. However, psychology and philosophy courses

are among Coursera's most popular. Student feedback and completion rates suggest that they are as successful as math and science courses even though the corresponding completion rates are lower.

In November 2012, the University of Miami launched its first high school MOOC as part of Global Academy, its online high school. The course became available for high school students preparing for the SAT Subject Test in biology.

"Gender Through Comic Books" was a course taught by Ball State University's Christina Blanch on Instructure's Canvas Network, a MOOC platform launched in November 2012. The course used examples from comic books to teach academic concepts about gender and perceptions.

In January 2012, University of Helsinki launched a Finnish MOOC in programming. The MOOC is used as a way to offer high-schools the opportunity to provide programming courses for their students, even if no local premises or faculty that can organize such courses exist. The course has been offered recurrently, and the top-performing students are admitted to a BSc and MSc program in Computer Science at the University of Helsinki. At a meeting on E-Learning and MOOCs, Jaakko Kurhila, Head of studies for University of Helsinki, Department of Computer Science, claimed that to date, there has been over 8000 participants in their MOOCs altogether.

In 18 June 2012, Ali Lemus from Galileo University launched the first Latin American MOOC titled "Desarrollando Aplicaciones para iPhone y iPad" This MOOC is a Spanish remix of Stanford University's popular "CS 193P iPhone Application Development" and had 5,380 students enrolled. The technology used to host the MOOC was the Galileo Educational System platform (GES) which is based on the .LRN project.

In the UK of summer 2013, Physiopedia ran their first MOOC regarding Professional Ethics in collaboration with University of the Western Cape in South Africa. This was followed by a second course in 2014, Physiotherapy Management of Spinal Cord Injuries, which was accredited by the World Confederation of Physical Therapy and attracted approximately 4000 participants with a 40% completion rate. Physiopedia is the first provider of physiotherapy/physical therapy MOOCs, accessible to participants worldwide

In March 2013, Coursolve piloted a crowdsourced business strategy course for 100 organizations with the University of Virginia. A data science MOOC began in May 2013.

In May 2013 Coursera announced free e-books for some courses in partnership with Chegg, an online textbook-rental company. Students would use Chegg's e-reader, which limits copying and printing and could use the book only while enrolled in the class.

In June 2013, the University of North Carolina at Chapel Hill launched Skynet University, which offers MOOCs on introductory astronomy. Participants gain access to the university's global network of robotic telescopes, including those in the Chilean Andes and Australia. It incorporates YouTube, Facebook and Twitter.

In July 2013 the University of Tasmania launched *Understanding Dementia*, the world's first Dementia MOOC. With one of the world's highest completion rates (39%), the course was recognized in the journal Nature.

Startup Veduca launched the first MOOCs in Brazil, in partnership with the University of São Paulo in June 2013. The first two courses were Basic Physics, taught by Vanderlei Salvador Bagnato, and Probability and Statistics, taught by Melvin Cymbalista and André Leme Fleury. In the first two weeks following the launch at Polytechnic School of the University of São Paulo, more than 10,000 students enrolled.

Startup Wedubox (Finalist at MassChallenge 2013) launched the first MOOC in finance and third MOOC in Latam, the MOOC was created by Jorge Borrero (MBA Universidad de la Sabana) with the title "WACC and the cost of capital" it reached 2,500 students in Dec 2013 only 2 months after the launch.

In the fall 2014 Georgia Institute of Technology launched the first *MOOD* (massive online open degree) (Master's degree) in computer science for \$7000 by partnering with Udacity and AT&T.

In September 2014, the high street retailer, Marks & Spencer partnered up with University of Leeds to construct an MOOC business course "which will use case studies from the Company Archive alongside research from the University to show how innovation and people are key to business success. The course will be offered by the UK based MOOC platform, FutureLearn.

On 16 March 2015, the University of Cape Town launched its first MOOC, *Medicine and the Arts* on the UK-led platform, Futurelearn.

STUDENT EXPERIENCE AND PEDAGOGY

STUDENTS SERVED

By June 2012 more than 1.5 million people had registered for classes through Coursera, Udacity and/or edX. As of 2013, the range of students registered appears to be broad, diverse and non-traditional, but concentrated among English-speakers in rich countries. By March 2013, Coursera alone had registered about 2.8 million learners. By October 2013, Coursera enrollment continued to surge, surpassing 5 million, while edX had independently reached 1.3 million.

Coursera enrollees	
Country	Percentage
United States	27.7%
India	8.8%
Brazil	5.1%

United Kingdom	4.4%
Spain	4.0%
Canada	3.6%
Australia	2.3%
Russia	2.2%
Rest of world	41.9%

A course billed as "Asia's first MOOC" given by the Hong Kong University of Science and Technology through Coursera starting in April 2013 registered 17,000 students. About 60% were from "rich countries" with many of the rest from middle-income countries in Asia, South Africa, Brazil or Mexico. Fewer students enrolled from areas with more limited access to the internet, and students from the People's Republic of China may have been discouraged by Chinese government policies.

Koller stated in May 2013 that a majority of the people taking Coursera courses had already earned college degrees.

According to a Stanford University study of a more general group of students "active learners" – anybody who participated beyond just registering – found that 64% of high school active learners were male and 88% were male for undergraduate- and graduate-level courses.

A study from Stanford University's Learning Analytics group identified four types of students: auditors, who watched video throughout the course, but took few quizzes or exams; completers, who viewed most lectures and took part in most assessments; disengaged learners, who quickly dropped the course; and sampling learners, who might only occasionally watch lectures. They identified the following percentages in each group:

Course	Auditing	Completing	Disengaging	Sampling
High school	6%	27%	29%	39%
Undergraduate	6%	8%	12%	74%
Graduate	9%	5%	6%	80%

Jonathan Haber focused on questions of what students are learning and student demographics. About half the students taking US courses are from other countries and do not speak English as their first language. He found some courses to be meaningful, especially about reading comprehension. Video lectures followed by multiple choice questions can be challenging since they are often the "right questions." Smaller discussion boards paradoxically offer the best conversations. Larger discussions can be "really, really thoughtful and really, really misguided", with long discussions becoming rehashes or "the same old stale left/right debate." MOOC helps everyone to learn according to their own pace . It helps us to access lectures from prestigious universities . It is also an cost effective medium.

EDUCATOR EXPERIENCE

In 2013, the Chronicle of Higher Education surveyed 103 professors who had taught MOOCs. "Typically a professor spent over 100 hours on his MOOC before it even started, by recording online lecture videos and doing other preparation", though some instructors' pre-class preparation was "a few dozen hours." The professors then spent 8–10 hours per week on the course, including participation in discussion forums.

The medians were: 33,000 students enrollees; 2,600 passing; and 1 teaching assistant helping with the class. 74% of the classes used automated grading, and 34% used peer grading. 97% of the instructors used original videos, 75% used open educational resources and 27% used other resources. 9% of the classes required a physical textbook and 5% required an e-book.

Unlike traditional courses, MOOCs require additional skills, provided by videographers, instructional designers, IT specialists and platform specialists. Georgia Tech professor Karen Head reports that 19 people work on their MOOCs and that more are needed. The platforms have availability requirements similar to media/content sharing websites, due to the large number of enrollees. MOOCs typically use cloud computing and are often created with authoring systems. Authoring tools for the creation of MOOCs are specialized packages of educational software like Elicitus, IMC Content Studio and Lectora that are easy-to-use and support e-learning standards like SCORM and AICC.

COMPLETION RATES

Completion rates are typically lower than 10%, with a steep participation drop starting in the first week. In the course *Bioelectricity, Fall 2012* at Duke University, 12,725 students enrolled, but only 7,761 ever watched a video, 3,658 attempted a quiz, 345 attempted the final exam, and 313 passed, earning a certificate.

Early data from Coursera suggest a completion rate of 7%–9%. Most registered students intend to explore the topic rather than complete the course, according to Koller and Ng. The completion rate for students who complete the first assignment is about 45 percent. Students paying \$50 for a feature designed to prevent cheating on exams have completion rates of about 70 percent.

One online survey published a "top ten" list of reasons for dropping out. These were that the course required too much time, or was too difficult or too basic. Reasons related to poor course design included "lecture fatigue" from courses that were just lecture videos, lack of a proper introduction to course technology and format, clunky technology and trolling on discussion boards. Hidden costs were cited, including required readings from expensive textbooks written by the instructor that also significantly limited students' access to learning material. Other non-completers were "just shopping around" when they registered, or were participating for knowledge rather than a credential. Other reasons for the poor completion rates include the workload, length and difficulty of a course. Providers

are exploring multiple techniques to increase the often single-digit completion rates in many MOOCs.

About 10% of the students who sign up typically complete the course. Most participants participate peripherally ("lurk"). For example, one of the first MOOCs in 2008 had 2200 registered members, of whom 150 actively interacted at various times.

Learners control where, what, how and with whom they learn, although different learners choose to exercise more or less of that control.

Students include traditional university students, along with degreed professionals, educators, business people, researchers and others interested in internet culture.

The effectiveness of MOOCs is an open question as completion rates are substantially less than traditional online education courses. Alraimi et al. explained in their research model a substantial percentage of the variance for the intention to continue using MOOCs, which is significantly influenced by perceived reputation, perceived openness, perceived usefulness, perceived, and user satisfaction. Perceived reputation and perceived openness were the strongest predictors and have not previously been examined in the context of MOOCs.

INSTRUCTIONAL DESIGN

Many MOOCs use video lectures, employing the old form of teaching (lecturing) using a new technology. Thrun testified before the President's Council of Advisors on Science and Technology (PCAST) that MOOC "courses are 'designed to be challenges,' not lectures, and the amount of data generated from these assessments can be evaluated 'massively using machine learning' at work behind the scenes. This approach, he said, dispels 'the medieval set of myths' guiding teacher efficacy and student outcomes, and replaces it with evidence-based, 'modern, data-driven' educational methodologies that may be the instruments responsible for a 'fundamental transformation of education' itself".

Some view the videos and other material produced by the MOOC as the next form of the textbook. "MOOC is the new textbook", according to David Finegold of Rutgers University. A study of edX student habits found that certificate-earning students generally stop watching videos longer than 6 to 9 minutes. They viewed the first 4.4 minutes (median) of 12- to 15-minute videos. Some traditional schools blend online and offline learning, sometimes called flipped classrooms.

Students watch lectures online at home and work on projects and interact with faculty while in class. Such hybrids can even improve student performance in traditional in-person classes. One fall 2012 test by San Jose State and edX found that incorporating content from an online course into a for-credit campus-based course increased pass rates to 91% from as low as 55% without the online component. "We do not recommend selecting an online-only experience over a blended learning experience", says Coursera's Andrew Ng.

Because of massive enrollments, MOOCs require instructional design that facilitates large-scale feedback and interaction. The two basic approaches are:

- Peer-review and group collaboration
 - Automated feedback through objective, online assessments, e.g. quizzes and exams
- Machine grading of written assignments is also underway.

So-called connectivist MOOCs rely on the former approach; broadcast MOOCs rely more on the latter. This marks a key distinction between cMOOCs where the 'C' stands for 'connectivist', and xMOOCs where the x stands for extended (as in TEDx, EdX) and represents that the MOOC is designed to be in addition to something else (university courses for example).

Assessment can be the most difficult activity to conduct online, and online assessments can be quite different from the bricks-and-mortar version. Special attention has been devoted to proctoring and cheating.

Peer review is often based upon sample answers or rubrics, which guide the grader on how many points to award different answers. These rubrics cannot be as complex for peer grading as for teaching assistants. Students are expected to learn via grading others and become more engaged with the course. Exams may be proctored at regional testing centers. Other methods, including "eavesdropping technologies worthy of the C.I.A." allow testing at home or office, by using webcams, or monitoring mouse clicks and typing styles. Special techniques such as adaptive testing may be used, where the test tailors itself given the student's previous answers, giving harder or easier questions accordingly.

"The most important thing that helps students succeed in an online course is interpersonal interaction and support", says Shanna Smith Jaggars, assistant director of Columbia University's Community College Research Center. Her research compared online-only and face-to-face learning in studies of community-college students and faculty in Virginia and Washington state. Among her findings: In Virginia, 32% of students failed or withdrew from for-credit online courses, compared with 19% for equivalent in-person courses.

Assigning mentors to students is another interaction-enhancing technique. In 2013 Harvard offered a popular class, *The Ancient Greek Hero*, instructed by Gregory Nagy and taken by thousands of Harvard students over prior decades. It appealed to alumni to volunteer as online mentors and discussion group managers. About 10 former teaching fellows also volunteered. The task of the volunteers, which required 3–5 hours per week, was to focus online class discussion. The edX course registered 27,000 students.

Research by Kop and Fournier highlighted as major challenges the lack of social presence and the high level of autonomy required. Techniques for maintaining connection with students include adding audio comments on assignments instead of writing them, participating with students in the discussion forums, asking brief questions in the middle of the lecture, updating weekly videos about the course and sending congratulatory emails on prior accomplishments to students who are slightly behind. Grading by peer review has

had mixed results. In one example, three fellow students grade one assignment for each assignment that they submit. The grading key or rubric tends to focus the grading, but discourages more creative writing.

A. J. Jacobs in an op-ed in the *New York Times* graded his experience in 11 MOOC classes overall as a "B". He rated his professors as "B+", despite "a couple of clunkers", even comparing them to pop stars and "A-list celebrity professors." Nevertheless he rated teacher-to-student interaction as a "D" since he had almost no contact with the professors. The highest rated ("A") aspect of Jacobs' experience was the ability to watch videos at any time. Student-to-student interaction and assignments both received "B-". Study groups that didn't meet, trolls on message boards and the relative slowness of online vs. personal conversations lowered that rating. Assignments included multiple choice quizzes and exams as well as essays and projects. He found the multiple choice tests stressful and peer graded essays painful. He completed only 2 of the 11 classes.

INDUSTRY

MOOCs are widely seen as a major part of a larger disruptive innovation taking place in higher education. In particular, the many services offered under traditional university business models are predicted to become unbundled and sold to students individually or in newly formed bundles. These services include research, curriculum design, content generation (such as textbooks), teaching, assessment and certification (such as granting degrees) and student placement. MOOCs threaten existing business models by potentially selling teaching, assessment, and/or placement separately from the current package of services.

President Barack Obama has cited recent developments, including the online learning innovations at Carnegie Mellon University, Arizona State University and Georgia Institute of Technology, as having potential to reduce the rising costs of higher education.

James Mazoue, Director of Online Programs at Wayne State University describes one possible innovation:

The next disruptor will likely mark a tipping point: an entirely free online curriculum leading to a degree from an accredited institution. With this new business model, students might still have to pay to certify their credentials, but not for the process leading to their acquisition. If free access to a degree-granting curriculum were to occur, the business model of higher education would dramatically and irreversibly change. But how universities will benefit by "giving our product away free online" is unclear.

No one's got the model that's going to work yet. I expect all the current ventures to fail, because the expectations are too high. People think something will catch on like wildfire. But more likely, it's maybe a decade later that somebody figures out how to do it and make money.

—James Grimmelmann, *New York Law School professor*

Principles of openness inform the creation, structure and operation of MOOCs. The extent to which practices of Open Design in educational technology are applied vary.

Attributes of major MOOC providers				
Initiatives	For profit	Free to access	Certification fee	Institutional credits
EdX	No	Yes	Yes	No
Coursera	Yes	Yes	Yes	Partial
Udacity	Yes	No	Yes	Partial
Udemy	Yes	Partial	Yes	Partial
P2PU	No	Yes	No	No

FEE OPPORTUNITIES

In the freemium business model the basic product – the course content – is given away free. "Charging for content would be a tragedy", said Andrew Ng. But "premium" services such as certification or placement would be charged a fee.

Course developers could charge licensing fees for educational institutions that use its materials. Introductory or "gateway" courses and some remedial courses may earn the most fees. Free introductory courses may attract new students to follow-on fee-charging classes. Blended courses supplement MOOC material with face-to-face instruction. Providers can charge employers for recruiting its students. Students may be able to pay to take a proctored exam to earn transfer credit at a degree-granting university, or for certificates of completion. Udemy allows teachers to sell online courses, with the course creators keeping 70–85% of the proceeds and intellectual property rights.

Coursera found that students who paid \$30 to \$90 were substantially more likely to finish the course. The fee was ostensibly for the company's identity-verification program, which confirms that they took and passed a course.

Overview of potential revenue sources for three MOOC providers		
edX	Coursera	UDACITY
<ul style="list-style-type: none"> Certification 	<ul style="list-style-type: none"> Certification Secure assessments Employee recruitment Applicant screening Human tutoring or assignment marking Enterprises pay to run their own training courses Sponsorships Tuition fees 	<ul style="list-style-type: none"> Certification Employers paying to recruit talented students Students résumés and job match services Sponsored high-tech skills courses

In February 2013 the American Council on Education (ACE) recommended that its members provide transfer credit from a few MOOC courses, though even the universities who deliver the courses had said that they would not. The University of Wisconsin offered multiple, competency-based bachelor's and master's degrees starting Fall 2013, the first public university to do so on a system-wide basis. The university encouraged students to take online-courses such as MOOCs and complete assessment tests at the university to receive credit. As of 2013 few students had applied for college credit for MOOC classes. Colorado State University-Global Campus received no applications in the year after they offered the option.

Academic Partnerships is a company that helps public universities move their courses online. According to its chairman, Randy Best "We started it, frankly, as a campaign to grow enrollment. But 72 to 84 percent of those who did the first course came back and paid to take the second course."

While Coursera takes a larger cut of any revenue generated – but requires no minimum payment – the not-for-profit EdX has a minimum required payment from course providers, but takes a smaller cut of any revenues, tied to the amount of support required for each course.

CHALLENGES AND CRITICISMS

The MOOC Guide suggests five possible challenges for cMOOCs:

1. Relying on user-generated content can create a chaotic learning environment
2. Digital literacy is necessary to make use of the online materials
3. The time and effort required from participants may exceed what students are willing to commit to a free online course
4. Once the course is released, content will be reshaped and reinterpreted by the massive student body, making the course trajectory difficult for instructors to control
5. Participants must self-regulate and set their own goals

These general challenges in effective MOOC development are accompanied by criticism by journalists and academics.

Some dispute that the "territorial" dimensions of MOOCs have received insufficient discussion or data-backed analysis, namely: 1. the true geographical diversity of enrolls in/completes courses; 2. the implications of courses scaling across country borders, and potential difficulties with relevance and knowledge transfer; and 3. the need for territory-specific study of locally relevant issues and needs.

Other features associated with early MOOCs, such as open licensing of content, open structure and learning goals, and community-centeredness, may not be present in all MOOC projects.

Effects on the structure of higher education were lamented for example by Moshe Y. Vardi, who finds an "absence of serious pedagogy in MOOCs", and indeed in all of higher education. He criticized the format of "short, unsophisticated video chunks, interleaved with online quizzes, and accompanied by social networking." An underlying reason is simple cost cutting pressures, which could hamstring the higher education industry.

The changes predicted from MOOCs generated objections in some quarters. The San Jose State University philosophy faculty wrote in an open letter to Harvard University professor and MOOC teacher Michael Sandel:

Should one-size-fits-all vendor-designed blended courses become the norm, we fear two classes of universities will be created: one, well-funded colleges and universities in which privileged students get their own real professor; the other, financially stressed private and public universities in which students watch a bunch of video-taped lectures.

Cary Nelson, former president of the American Association of University Professors claimed that MOOCs are not a reliable means of supplying credentials, stating that "It's fine to put lectures online, but this plan only degrades degree programs if it plans to substitute for them." Sandra Schroeder, chair of the Higher Education Program and Policy Council for the American Federation of Teachers expressed concern that "These students are not likely to succeed without the structure of a strong and sequenced academic program."

With a 60% majority, the Amherst College faculty rejected the opportunity to work with edX based on a perceived incompatibility with their seminar-style classes and personalized feedback. Some were concerned about issues such as the "information dispensing" teaching model of lectures followed by exams, the use of multiple-choice exams and peer-grading. The Duke University faculty took a similar stance in the spring of 2013. The effect of MOOCs on second- and third-tier institutions and of creating a professorial "star system" were among other concerns.

At least one alternative to MOOCs has advocates: Distributed open collaborative courses (DOCC) challenge the roles of the instructor, hierarchy, money and massiveness. DOCC recognizes that the pursuit of knowledge may be achieved better by not using a centralized singular syllabus, that expertise is distributed throughout all the participants and does not just reside with one or two individuals.

Although the purpose of MOOCs is ultimately to educate more people, recent criticisms include accessibility and a Westernized curriculum that lead to a failure to reach the very audience they were intended to save.

Chapter 51

PERSONAL LEARNING ENVIRONMENTS

Personal Learning Environments are systems that help learners take control of and manage their own learning. This includes providing support for learners to set their own learning goals and manage their own content and learning process, thereby achieving their learning goals. A Personal Learning Environment (PLE) involves both formal and informal learning experiences.

A PLE may be composed of one or more subsystems: As such it may be a desktop application, or composed of one or more web-based services. Important concepts in PLEs include the integration of both formal and informal learning episodes into a single experience, the use of social networks that can cross institutional boundaries, and the use of networking protocols (Peer-to-Peer, web services, syndication) to connect a range of resources and systems within a personally-managed space.

Unique model of a Personal Learning Environment (PLE)

While PLE is a very new term, the concept represents the latest step in an alternative approach to e-learning which can trace its origins to early systems such as Colloquia, the first peer-to-peer learning system, and in more recent phenomena such as the Epsilon Environment developed by Ali Jafari and the Elgg system developed by Ben Werdmuller

and Dave Tosh, and PebblePAD developed by UK-based Pebble Learning. This alternative approach developed in parallel to that of Learning Management Systems, which unlike the PLE take an institution-centric (or course-centric) view of learning.

1970s

1976

The earliest recorded use (so far) of the concept of a personal learning environment is by Goldstein and Miller in 1976. Though the publication uses PLE without defining it, it can be attributed to classical artificial intelligence (AI) research. From today's viewpoint, it is still interesting to see how the early Papert papers on constructionism are cited and have clearly influenced thinking.

1990s

1998

Learning Environments research group of the Media Lab in Helsinki released the first version of FLE (Future Learning Environment – later Fle3) - web-based learning environment designed to support learner and group centered work that concentrates on creating and developing expressions of knowledge. FLE had student "WebTops" that were used to store, organize and share different items (documents, files, links, knowledge building notes) related to the study work. Furthermore FLE contained Knowledge Building tool and Jamming tool for collaborative knowledge building and construction of digital artifacts.

2000s

2000

- Oleg Liber publishes *Colloquia - a Conversation Manager*'. Colloquia provides support for a conversational and activity-based model of learning; maintaining information about people, resources, and tasks. Teachers set up activities and sub-activities at different levels of granularity and allocate people, resources and tasks to those activities. Learners may also create and parameterize sub-activities. Personalisation is only possible in a limited sense in that teachers and learners may add resources for an activity or subactivity. Most importantly, however, the new system incorporates a strong element of social networking - individual users constructed activities and invited friends to participate, rather than subscribing to courses or having courses allocated to them. This was implemented in Colloquia using peer-to-peer networking, however the conceptual foundations for this feature lay in earlier educational literature, such as Ivan Illich's concept of learning exchanges and networks.

2001

- The NIIMLE Project in Northern Ireland begins, implementing a personal space for students integrated from multiple institutional systems. A similar project, SHELL, is initiated at the same time, as part of the UK funding agency Jisc's Managed Learning Environments for Lifelong Learning development programme.

2002

- May 7–11, 2002: "EDUTELLA: A P2P Networking Infrastructure Based on RDF" is presented at the WWW 2002 conference. Edutella uses P2P protocols to enable the construction of a distributed global learning object network based on social networking principles. This enables any learner to publish or search for learning objects to enhance their educational experience.

2003

- 2003: The ROMA project begins at the Open University of the Netherlands, focusing on the use of stigmergic connections within social networks to enhance individual learning experiences through the mining of anonymized information on the pathways chosen by successful learners. This work provided a foundation for the educational use and methods of social network analysis to support learning.
- September: Pebble Learning developed the Personal Development Planning tool "Profilability" to allow users to audit their skills and create plans to develop these skills with the aid of embedded resources. Users reflect upon their skills and receive feedback and comments from others.

2004

Robot Coop released 43 Things, a social networking site based around the concepts of describing and sharing personal goals (in many cases learning goals) and then collaborating towards achieving them with others with similar goals. 43Things distinguishes between 'peers' and 'experts', in the sense of enabling connections of people who want to achieve a goal, and those who report already having achieved it.

- February 2004: Working in collaboration with the University of Wolverhampton, Pebble Learning added a Flash-based interface to their ProfilAbility tool to create the first version of PebblePad, originally called PACE (Personal, Academic, Careers and Employability). A key feature of even the earliest version of the system was absolute control by the user both in terms of choices over interface and output designs, and over what was shared with who, with what permissions (view, comment, copy, collaborate) and for how long.
- March 2004: The Elgg personal learning system was developed by Ben Werdmuller and Dave Tosh. Initially described as an e-portfolio system, and as a personal

'learning landscape' (which was, coincidentally, the original name of the Colloquia system), Elgg had from the beginning many of the characteristics that would become the critical features of PLEs, including social networking (based on FOAF), feeds, and a high degree of personalization.

- September 2004: The University of Wolverhampton launches a year-long pilot for PACE with 160 students in four academic subject areas. While originally promoted as an ePortfolio system, with the inclusion of tools such as action planning facilities, meeting recording, sharing and commenting as well as linking to wider tools on the Internet the system began to be recognized as a Personal Learning System.
- November 4, 2004: The first recorded use of the term Personal Learning Environments: The Personal Learning Environments Session at JISC/CETIS Conference 2004.
- November 20, 2004: Elgg opened to its first public users.

2005

- January 25, 2005: Scott Wilson publishes on his weblog a diagram illustrating a future vision for a VLE (and which later became incorporated into the Bolton PLE project). This vision is based around a personal system interacting with a range of Web 2.0 services as well as services offered by institutional systems to create a personal environment to support learning. Wilson's model also explicitly articulates the link between the personal learning environment (and learning process) with the presentation of an electronic portfolio.
- May 25, 2005: Scott Wilson distributes a presentation given at the University of Sydney on the topic of ePortfolios, which incorporates architectural models of what are clearly PLE systems. Again, the link between personal learning and e-portfolios is made clear. The presentation also mentions a model of verification of claims - this was based on detailed work circulated within the UK funding agency JISC and a number of organisations the previous year proposing a method to support the verification by institutions of claims of competence or qualifications made by individuals using digital signatures and web services.
- October 1, 2005: the EC-funded iCamp project starts. This will lead to the development of a Mash-Up Personal Learning Environment (MUPPLE).
- October 17, 2005: Stephen Downes publishes E-Learning 2.0 in elearn magazine, articulating the themes and ongoing changes in education and web technology that together contribute to and combine to form what is now called e-learning 2.0.
- July, 2005: JISC-funded Manchester Framework Project ends, produces a Tomcat-based framework that can be instantiated as a VLE or a PLE, where the PLE is a desktop client that is capable of offline use, and is to inter-work with the VLE that acts as a server for the PLE. A (not completely implemented) protocol, VPTP, is to

be used for PLE to VLE communications. A single PLE may be connected to multiple institutional VLEs to support lifelong learning needs.

- November 15 and 16, 2005: Personal Learning Environment Theme, JISC-CETIS Conference 2005 included presentations from several PLE projects and general discussion.
- 2005 sees the start of a movement that eschews desktop facilities in favour of browser-based integrations of web server facilities, as for example in Leigh Blackall's post *Die LMS die! You too PLE!*. While Blackall denies that an aggregation of web-based server facilities in a browser is a PLE, by 2006 PLE is regularly being applied to such highly personal assemblages.

2006

- March 31, 2006: PLEX Beta released by the Personal Learning Environments Project at the University of Bolton. Informed by theory from Heidegger, Winograd & Flores, and Beer, the basic structure of PLEX has echoes of Colloquia: There is a resource manager, a people manager, and activities consisting of resources and people. People and resources are discoverable. PLEX supports the setting and realisation of learner goals with the creation of learning opportunities and their transformation into learning activities. Two versions were produced, a desktop version based on Eclipse, and a web-based version using a LifeRay portal. The Eclipse version is highly pluggable via Eclipse's plug-in architecture.
- May 16, 2006: Connected Learning Community launched as part of the Australian Flexible Learning Network. The community is expressly interested in the use of browser-accessed Web 2.0 tools to provide PLEs.
- June 6–7, 2006: CETIS PLE Meeting in Manchester, UK.

2008

- Scott Leslie publishes the first version of his "Collection of PLE Diagrams" which contained 80 diagrams in 2012.
- Fridolin Wild, Felix Moedritscher, and Steinn Sigurdarson of the iCamp project publish "Designing for Change: Mash-Up Personal Learning Environments"

2009

- Dokeos released Dokeos 1.8.6 BETA, a PLE that focusses on individual learning through a personal notebook, conditional surveys (go to question 3 if answered B to question 1) and an individualized testing tool with scenario and redirections depending on the student's answers.
- RWTH Aachen University released the Personal Learning Environment framework (PLEF), a PLE mashup service that supports learners in aggregating, managing, tagging, commenting, and sharing their favorite resources (e.g. feeds, widgets, and different media) within a personalized space.
- The EU Funded Integrated Research Project TENCompetence released the Personal Competence Manager. This open sources and open standards based system aims to

support lifelong learning and provides full control and ownership to the users themselves to manage, create, use and share eportfolios, learning activities, assessments, learning goals, social interaction, etc.

- June 2009, Dapsang.com launched a PLE project, YPGoGo.com. This approach appears to be much more aligned with theories of instructional design rather than falling within the European paradigm of learning environments which are assembled and customised by the learner individually.

2010s

2010

- At the International Plymouth e-learning conference which took place in April, James Carhart, Daniel Houton and Adam Skill, three B.Ed students (supervised by Steve Wheeler at the University of Plymouth) presented a paper on personal learning environments and how they could be implemented in primary schools..
- Wendy Drexler PhD, University of Florida conducted her dissertation research on the construction of personal learning environments in a middle school science course. A student who participated in this project created a video entitled "Welcome to My PLE".
- The First International Personal Learning Environment Conference was held in Barcelona, Spain, in July 2010. The event was hosted by CitiLab, attracted over 150 physical participants, and many more who contributed to the online discussion. The conference used the hashtag #PLE_BCN which can be used to retrieve artefacts such as Twitter backchannel discussions, YouTube videos, SlideShare records of sessions and Flickr archives. The conference emphasised interactivity and discussion, but there are also online proceedings, and selected papers are being published in the International Journal of Virtual and Personal Learning Environments (ISSN 1947-8518).
- Steve Wheeler publishes 'Anatomy of a PLE' and ' Physiology of a PLE ', which respectively describe the components and functionality of PLEs.

2011

- The Second International Conference of Personal Learning Environments was held at the University of Southampton, UK in July 2011.
- The 25th annual SLOAN-C Conference on Online Learning, hosted by the Sloan Consortium, featured speakers highlighting the benefits and progression of the PLE in the future of education.
- Sebastian H.D. Fiedler and Terje Våljetaga publish a critical PLE literature review titled "Personal learning environments: concept or technology?"

2012

- The Third International Conference of Personal Learning Environments was jointly held in Aveiro, Portugal & Melbourne, Australia, 11–13 July 2012.

2013

- The Fourth International Conference of Personal Learning Environments was jointly held in Berlin, Germany & Melbourne, Australia, 10–12 July 2013.

2014

- The Fifth International Conference of Personal Learning Environments was held in Tallinn, Estonia, 16–18 July 2014.

Chapter 52

COMMONWEALTH OF DISTANCE EDUCATION

The Commonwealth of Distance Education (CODE) is a non-political, non-governmental and non-profit making international organization dedicated for strengthening the cause of distance and open education all over the world in in general and the commonwealth countries in particular. Established on the occasion of the International Volunteer Day for Economic and Social Development on 5th December 1987, CODE during the past 28 years has designed more than 3000 programmes having social, cultural, vocational, scientific, environmental, educational, economic and positive contents to be conducted under open and distance education mode.

The Prime Minister of India Shri Rajiv Gandhi perusing the CODE Charter after inaugurating the Commonwealth of Distance Education (CODE)

The Commonwealth of Distance Education (CODE) has a mandate for helping the following Commonwealth countries besides other interested countries contemplating to solve the problems of unemployment, peacelessness, insurgency, pollution, population explosion etc. by vocationalising the existing careers of young boys and girls through informal, non-formal, continuing, distance, open and virtual education modes :

Country	Joined	Continent	Population	Notes
 Antigua and Barbuda	1 November 1981	North America	86,295	
 Australia	11 December 1931	Oceania	23,795,300	Granted nominal independence (Dominion status) on 1 January 1901. Australia was one of the original Dominions at the time of the Statute of Westminster 1931, although the statute was not adopted in Australia until 1942 (with retroactive effect from 1939). Removed final links with the British Parliament in 1986.
 Bahamas	10 July 1973	North America	368,390	
 Bangladesh	18 April 1972	Asia	158,088,000	Declared independence from Pakistan in 1971.
 Barbados	30 November 1966	North America	285,000	
 Belize	21 September 1981	North America	358,899	
 Botswana	30 September 1966	Africa	2,024,904	
 Brunei	1 January 1984	Asia	393,372	
 Cameroon	13 November 1995	Africa	21,143,237	Most of the country was the formerly French mandate territory (later UN trust territory) of Cameroun and gained independence from France on 1 January 1960, uniting with the much smaller former British mandate/trust territory of Southern Cameroons on its gaining independence from the United Kingdom on 1 October 1961.
 Canada	11 December 1931	North America	35,702,707	Granted nominal independence (Dominion status) on 1 July 1867. Canada was the first among the several original Dominions at the time of the Statute of Westminster 1931. Incorporated another original Dominion, Newfoundland, on 31 March 1949. Removed final links with the British Parliament in 1982.
 Cyprus	13 March 1961	Europe	858,000	Gained independence from the United Kingdom on 16 August 1960.
 Dominica	3 November 1978	North America	71,293	

Country		Joined	Continent	Population	Notes
 Fiji	10 October 1970	Oceania	859,178	Left in 1987; rejoined in 1997; suspended on 6 June 2000; suspension lifted on 20 December 2001; again suspended on 8 December 2006 because of the 2006 Fijian coup d'état.	
 Ghana	6 March 1957	Africa	27,043,093		
 Grenada	7 February 1974	North America	103,328		
 Guyana	26 May 1966	South America	746,900		
 India	15 August 1947	Asia	1,269,090,000	Incorporated former French India (Chandannagar from 2 May 1950 and Puducherry, Karaikal, Yanam and Mahé from 1 November 1954), former Portuguese India (Goa, Daman and Diu from 19 December 1961 and Dadra and Nagar Haveli formally from 1961) and Sikkim (from 16 May 1975).	
 Jamaica	6 August 1962	North America	2,717,991		
 Kenya	12 December 1963	Africa	46,749,000		
 Kiribati	12 July 1979	Oceania	106,461		
 Lesotho	4 October 1966	Africa	2,120,000		
 Malawi	6 July 1964	Africa	16,310,431		
 Malaysia	31 August 1957	Asia	30,538,100	Joined as the Federation of Malaya in 1957; reformed as Malaysia on 16 September 1963 with its federation with Singapore (which became a separate state on 9 August 1965), North Borneo, and Sarawak.	
 Maldives	9 July 1982	Asia	341,256	Gained independence from the United Kingdom on 26 July 1965. A special member from 9 July 1982 until 20 July 1985.	
 Malta	21 September 1964	Europe	425,384		
 Mauritius	12 March 1968	Africa	1,261,208		
 Mozambique	13 November 1995	Africa	25,727,911	Gained independence from Portugal on 26 June 1975. The first country to be admitted to the Commonwealth without any former colonial or constitutional links with the United Kingdom. However, British troops were present in the	

Country		Joined	Continent		Population	Notes
						country during the World War I East Africa Campaign.
 Namibia	21 March 1990	Africa	2,113,077			Gained independence from South Africa. ^[27] Includes Walvis Bay and the Penguin Islands transferred by South Africa at midnight 28 February 1994.
 Nauru	1 November 1968	Oceania	10,084			Gained independence on 31 January 1968 from joint trusteeship of Australia, New Zealand and United Kingdom. A special member from 1 November 1968 until 1 May 1999, when it became a full member, before reverting to special status in January 2006. A full member again since June 2011.
 New Zealand	11 December 1931	Oceania	4,572,100			Granted nominal independence (Dominion status) on 26 September 1907. One of the original Dominions at the time of the Statute of Westminster 1931, although the Statute was not adopted in New Zealand until 1947. Removed final links with the British Parliament in 1986.
 Nigeria	1 October 1960	Africa	183,523,000			Incorporated the former British mandate/trust territory of Northern Cameroons on 31 May 1961. Suspended in 1995, suspension lifted in 1999.
 Pakistan	14 August 1947	Asia	189,388,000			Includes the city of Gwadar, transferred from Muscat and Oman on 8 September 1958. Included Bangladesh (then known as East Pakistan) until 1971. Left Commonwealth in 1972, rejoined 1989; suspended in 1999, suspension lifted in 2004; again suspended in 2007, suspension lifted in 2008.
 Papua New Guinea	16 September 1975	Oceania	7,398,500			Gained independence from Australia.
 Rwanda	29 November 2009	Africa	10,966,891			Gained independence from Belgium on 1 July 1962. The second country (after Mozambique) to be admitted to the Commonwealth without any former colonial or constitutional links with the United Kingdom. Unlike Mozambique, has adopted English as an official language since joining.
 Saint Kitts and Nevis	19 September 1983	North America	55,000			
 Saint Lucia	22 February 1979	North America	185,000			
 Saint Vincent and the Grenadines	27 October 1979	North America	109,000			A special member from 27 October 1979 until 1 June 1985.
 Samoa	28 August	Oceania	187,820			Gained independence from New Zealand on 1 January 1962. Joined as Western Samoa, subsequently changing its name to

Country		Joined	Continent	Population	Notes
	1970			Samoa on 4 July 1997.	
 Seychelles	29 June 1976	Africa	89,949		
 Sierra Leone	27 April 1961	Africa	6,319,000		
 Singapore	9 August 1966 (effective from 9 August 1965)	Asia	5,469,700	Gained independence from the United Kingdom and joined federation of Malaysia on 16 September 1963. Became independent on 9 August 1965.	
 Solomon Islands	7 July 1978	Oceania	581,344		
 South Africa	11 December 1931	Africa	54,002,000	Granted nominal independence (Dominion status) on 31 May 1910. One of the original Dominions at the time of the Statute of Westminster 1931. Left on 31 May 1961; rejoined 1 June 1994.	
 Sri Lanka	4 February 1948	Asia	20,675,000	Joined as the Dominion of Ceylon, subsequently changing its name in 1972. Became a republic in 1972 and served final ties with Britain.	
 Swaziland	6 September 1968	Africa	1,119,375		
 Tanzania	9 December 1961	Africa	47,421,786	Joined as Tanganyika and later Zanzibar, which subsequently merged to form Tanzania on 26 April 1964.	
 Tonga	4 June 1970	Oceania	103,252		
 Trinidad and Tobago	31 August 1962	North America	1,328,019		
 Tuvalu	1 October 1978	Oceania	11,323	A special member from 1 October 1978 until 1 September 2000.	
 Uganda	9 October 1962	Africa	34,856,813		
 United Kingdom	11 December 1931	Europe	64,511,000	The Parliament of the United Kingdom enacted the Statute of Westminster 1931.	
 Vanuatu	30 July 1980	Oceania	264,652	Gained independence from joint rule of France and United Kingdom.

FORMER MEMBERS

Country	Joined	Continent	Left	
 The Gambia	18 February 1965	Africa	3 October 2013	Withdrew on 3 October 2013 citing "neo-colonialism".
 Ireland	11 December 1931	Europe	18 April 1949	One of the original Dominions at the time of the Statute of Westminster 1931. Withdrew after passing the Republic of Ireland Act in 1949.
 Zimbabwe	1 October 1980	Africa	7 December 2003	Suspended on 19 March 2002. Withdrew voluntarily on 7 December 2003.

FORMER PROTECTORATES OF THE UK AND OTHER COMMONWEALTH COUNTRIES

A protectorate, in the British Empire, is a territory which is not formally annexed but in which, by treaty, grant or other lawful means, the Crown has power and jurisdiction.

A protectorate differs from a "protected state". A protected state is a territory under a ruler which enjoys Her Britannic Majesty's protection, over whose foreign affairs she exercises control, but in respect of whose internal affairs she does not exercise jurisdiction.

When the British took over Cephalonia in 1809, they proclaimed, "We present ourselves to you, Inhabitants of Cephalonia, not as invaders, with views of conquest, but as allies who hold forth to you the advantages of British protection." When the British continued to occupy the Ionian Islands after the Napoleonic wars, they did not formally annex the islands, but described them as a protectorate. The islands were constituted by the Treaty of Paris in 1815 as the independent United States of the Ionian Islands under British protection. Similarly, Malta was a British protectorate between the capitulation of the French in 1800 and the Treaty of Paris of 1814.

Other British protectorates followed. In 1894, Prime Minister William Ewart Gladstone's government officially announced that Uganda was to become a British Protectorate, where Muslim and Christian strife had attracted international attention. The British administration installed carefully selected local kings under a programme of indirect rule through the local oligarchy, creating a network of British-controlled civil service. Most British protectorates were overseen by a Commissioner or a High Commissioner, rather than a Governor.

British law makes a distinction between a protectorate and protected state. Constitutionally the two are of similar status where Britain provides controlled defence and external relations. However, a protectorate has an internal government established, while a protected state establishes a form of local internal self-government based on the already existing one.

Persons connected with former British protectorates, protected states, mandated or trust territories may remain British Protected Persons if they did not acquire the nationality of the country at independence.

The last British protectorate proper was the Solomon Islands, which gained independence in 1978; the last British protected state was Brunei, which gained full independence in 1984.

Other cases include the following:

AMERICAS

- Barbados (1627–1652) (as a proprietary colony under both William Courteen, followed by James Hay I.)
- Mosquito Coast (1655–1860) (over Central America's Miskito Indian nation)

ARAB WORLD

- Aden Protectorate in Yemen (1873–1967)
- Sultanate of Egypt (1914–1922)
- Anglo-Egyptian Sudan (1899–1956; condominium with Egypt)
- Persian Gulf Residency (1822–1971)
 - Bahrain (1880–1971)
 - Kuwait (1899–1961)
 - Qatar (1916–1971)
 - Trucial States, precursor of the UAE (1892–1971)
- British Somaliland (1887–1960)

SOUTH AND SOUTH EAST ASIA

- Bhutan (1910–1947)
- British North Borneo (1888–1946)
- Brunei (1888–1984)
- Federation of Malaya (1948–1957)
 - Federated Malay States (1895–1946)

While CODE desires to provide fullest support to all the Commonwealth countries, however the main activities have been concentrated in the Indian Subcontinent and accordingly the resources provided have been based on the data regarding South Asia.

The Universities in British India have a 158 - years old history. On the recommendations of the Wood's Despatch (1854), three Universities were established, one each in Calcutta, Madras and Bombay. These were supposed to be on the lines of London University, which then was a purely examining body, non-resident and non-teaching in its basic character. The Punjab and the Allahabad universities were incorporated on the lines of the old universities in 1882 and 1887 respectively.

By 1901-02, there was a very rapid expansion of college education. As against 68 colleges in 1881-82, there were 179 affiliated colleges in 1901-02, 138 in the so-called British India, 32 in Indian princely states and 9 in Ceylon. In 1902, during Lord Curzon's Viceroyalty, the India University Commission was appointed. The recommendations of this Commission gave birth to the Indian Universities Act of 1904. Within ten years of this Act, however, the position changed vastly and new Universities had to be started. In 1916, Banaras and Mysore came into being. In 1917, Patna became the seat of a new university. The same year saw the emergence of the S.N.D.T. Women's University at Bombay, followed closely, the next year, by a university at Hyderabad. In 1916, the Calcutta University started post-graduate departments where direct university involvement in teaching, transcending its affiliating or examining character, was witnessed for the first time. The Calcutta University Commission recommendation brought about a sea change in the scene of higher education in India. A number of new universities sprang up. These included Dhacca and Rangoon in 1920, Aligarh and Lucknow in 1921, Delhi in 1922, Travancore in 1937, Utkal in 1943, Sagar in 1946 and Sind as also Rajputana in 1947. This is the short history of higher education in India during the British period.

Since enrolment in various courses is inalienably related to the manpower needs in terms of the faculty strength, the projected increase in the vital sector of higher education can be easily predicted. Given 80 students per faculty member, an additional number of 68,000 new faculty members and 1,480 additional arts, science and commerce colleges will be needed every five years. Understandably, therefore, the Education Commission observed in June 1966 : "If the present rate of expansion (10% a year) is assumed to continue for the next 20 years, the total enrolment in higher education would be between 7 and 8 million by 1985-86 or more than twice the estimated requirements for manpower for national development. An economy like ours can neither have the funds to expand higher education at this scale nor the capacity to find suitable employment for the millions of graduates who come out of the educational system at this level of enrolment."

The essence of the matter is that the existing educational apparatus has reached a point of saturation beyond which it can be stretched only with danger both to the system and to the economy of the country. While on the one hand the solution may lie in faster economic growth, on the other it lies in diversification of the modes of education which at present remain deeply embedded in the traditional soil. One way out is the expansion and steady growth of non-traditional modes. "So long as the basic imbalances persist, there is no escape from containing the enrolment within available resources while stretching the resources to the utmost through part-time and correspondence or distance education". The Education Commission in this connection observed : "An economy like ours can neither have the funds to expand higher education on this scale nor the capacity to find suitable

employment for the millions of graduates who would come annually out of the educational system at this level on enrolment."

The Commission was of the view that admission to the institutions of higher education should be made selective. This view, no doubt tenable from one angle, was found unacceptable by political pundits who held the reigns of power. They opined that the development of a democracy primarily depends on the quality and quanta of education which a State can give to its citizens. Indeed, the observation had been made in almost all the five year plans.

*The President of CODE Dr. P R Trivedi
with the United Nations Secretary General
Boutros Boutros Ghali discussing the CODE's
Action Plan for its 10th Annual Day Celebrations*

Education is the most important single factor in achieving rapid economic development and technological progress and in creating a social order founded on the values of freedom, social justice and equal opportunity. It has been one of the major aims of the Five Year Plans to expand and intensify the education effort so that from now on, in all branches of national life, education becomes the focal point of planned development.

This view, contrary to the Kothari Commission Report, was held by many educationists also. But the stresses and strains of a stagnant economy, which had to be further subjected to wasteful expenditure of a nature and magnitude unheard of, were factors responsible not only for the reasons behind the Kothari Commission's view, but also for others who thought in the same manner. It was also recommended that the admissions to colleges should be open only to those who 'deserved being in a college'. However, the statistics again made a nonsense of what was being thought of at the levels of planning and implementation.

It is a statistical fact that only one in every forty men of the age-group 20-25 now goes to the college. Even if the stipulated increase in the number of college-going students become a hard fact by 2000, the ratio of college-going and non-college-going students will not change. Thus every time 39 students will prefer not to go to a college, only one will do so. Will it be worthwhile or even desirable to shut the gates of colleges to some of the 25 young men or women out of a thousand of the relevant age-group in the Indian population who want to seek admission ? In an egalitarian society it becomes more of an imperative than a choice to throw open avenues of betterment to all those who desire. Whether or not they deserve is a question which should engage attention either in a totalitarian state or in an absolute, monarchical order of things. Naturally, therefore, the Report of the Education Commission (1964-65) had given detailed comments on the equalization of educational opportunities. It has said that inequalities of educational opportunities arise in various ways which include the non-location of institutes of higher learning in rural, hilly or backward areas. While the recommendation of the Commission was "this handicap should be overcome by the widest dispersal of educational institutions, consistent with economy and efficiency," it also noted with dismay that "another cause of inequality of educational opportunity is the poverty of large sections of the population and the relative affluence of a small minority" with the result that "even in the neighbourhood of an educational institution, children from poor families do not have the same chance as those who come from, richer ones". Among other recommendations such as the progressive abolition of fee, provision for free books and scholarship, the Commission stressed the need for the Indian universities to take upon their shoulders the task of community service, through adult education programmes, extension lectures, correspondence courses and establishment of evening institutions. About programmes of adult education, it said :

Another special responsibility of the Indian universities is to develop programmes of adult education in a big way, and to that end, evolve widespread network of part-time and correspondence courses. The universities have to provide these courses in all their faculties, not only as extramural preparation for their examinations, but also as programmes of in-service education for professional workers in all walks of life. General adult education programmes are also needed to create a unity of outlook and faith between the masses and the intelligentsia.

The concept of a university may be defined as "an organised and degree giving institution, intended for the study and advancement of higher branches of learning, self-governing in its nature, and, to a greater or lesser extent, national in scope". The university may further be defined as "a corporation or society which devotes itself to a search after knowledge for the sake of its intrinsic value". Neither of the two definitions enable it appropriate to include the 'methodology' or 'medium' of teaching to be of such intrinsic value to be incorporated in the definition of university. However, today's university has a greater role to play than - say - the ancient universities of Takshashila and Nalanda or *stadium generale* of Bologna, Salamanca, Paris, Oxford or Prague. Let us understand the point this way.

It is a national institution, hence it cannot keep itself aloof from the main currents of national life. It cannot become recluse in its 'ivory tower' of culture. It will have to bring its policies and programmes into line with social and national problems, and keep itself in

contact with the needs of all sections of our population, well-educated and illiterate, workmen and labourers, artisans and farmers. In short, it should provide suitable extension programmes too. Thus, a university in Free India will have four main functions : (i) instruction, (2) research, (3) affiliation, and (4) extension.

Under 'extension', comes adult education programmes and community service. The initiation of correspondence courses is a part of the extension of the university to the doorstep of the receiver. It is the university that goes out into the community to meet its student and not the students who come to the university. Unless the university, without diverting its attention from higher goals of research and accumulation of knowledge, pays due attention to correspondence and continuing education, it is likely to end up as a study in decay. The University in essence is a living organism, and is inevitable subject to the principles of is a living organism, and is inevitable subject to the principles of evolution. It cannot remain static. To do so would be to perish.

In the USA, Carnegie Commission Reports (in thirteen volumes) suggest a blueprint for some fundamental academic reforms and reveal certain great new opportunities that lie before higher education. The major theme adumbrated therein relates to sufficient open access to opportunities for all who wish to have post-secondary education besides measures to overcome educational disadvantages due to race, sex, economic deprivation and inadequacies of prior schooling.

Besides, the Open Door Community Colleges have been recommended to be spread across the nation with a view to providing for comprehensive type of education serving both academic and occupational interests. Stress has also been laid on encouraging the widespread use of the new educational technology to greatly enrich post-secondary education and to help people learn, as and when they wish, even beyond the traditional campus, to enable them to enhance their lives, professionally and academically. The new emphasis is on the development of individual human capabilities to enhance the quality of life in all its aspects and to enhance individual and social well-being.

What according to the Carnegie Commission Reports is good for U.S.A. is still better for India. An elementary proposition if the sociology of education suggests that education is an important channel to the social and economic rewards of society. It is essential to the economy and it is a large-scale and highly visible organisation. For these reasons education is controlled by the dominant groups of society so as to meet their definition of society's priorities.

It would not be far wrong to say that this is what exactly happened in the traditional system of education in India. At the university stage, more than 70 percent of the seats are taken by the top 5 percent of the social strata.

Educational development, particularly at the Secondary and higher stages, is benefiting the 'haves' more than 'have-nots'. This is a negation of social justice.

The elitist bias in higher education has indeed been more marked in India than in the western countries. It was quite appropriate in the British India for educationists to think of a three-fold-significance of the work of the Universities - teaching, research and service to the society. However, the position has changed considerably since then and new pulls

and pressures of an egalitarian society committed to the programme of social welfare have made it abundantly incumbent upon the universities to expand this programme. The elitist bias in higher education can indeed be minimised through universal education which should bring the university out of its ivory-tower isolation to the very door step of the student. The three-fold programme of the traditional university own includes a fourth goal - the goal of adult literacy, converting itself into continuing education for the adult in the course of time.

The Education Commission once again paid attention to the problem and recommended in a later paragraph :

At present, a student at the undergraduate stage must either be admitted to a full-time basis or go without education altogether. This creates a great demand for full-time seats in colleges and leads to a deterioration of standards as the resources to provide all the seats needed are not available. Once solution to this is to keep full-time seats strictly limited on the basis of resources available and correspondence courses, part-time courses, evening courses etc. for those who aspire to a university degree but are not able to get admission to the regular courses. This device is being increasingly used in many countries such as the USA, the UK and Japan. The correspondence / distance education courses recently started by many universities have proved to be a promising experiment and are producing satisfactory examination results. CODE since its inception in the year 1987 is engaged in producing self-instructional resource materials besides organising conferences, seminars, symposia, congresses and conventions related to correspondence, distance as well as open education in different countries.

Correspondence, distance and open education courses, in addition to the provision by Universities of regular part-time courses through evening colleges and other institutes, were visualised by CODE in the context of

- (a) an ever-growing number of students who want to seek higher education;
- (b) non-availability of seats in the existing colleges and university departments which have already reached a saturation point;
- (c) throwing open the opportunities of higher education to all who desire and deserve;
- (d) doing away with the need of opening institutions of higher education in remote corners, hilly areas and other places where a sufficient number of students may not be available and hence opening of colleges would be economically unwise;
- (e) providing dropouts a fresh start in their academic career if they have taken up jobs, and
- (f) relying mainly on the existing faculty of parent departments for designing courses and tailoring reading material for distant students thereby not adding considerably to the faculty strength.

At present, the parent universities which have established correspondence courses as multi-channel extension limbs have not taken into account the basic philosophical premise of correspondence education for giving them independence and autonomy from the inflexible course meant for regular students. CODE has been active in providing advice to

the Central as well as the State Governments besides the concerned universities for providing independence and autonomy to the Departments and Centers / Directorates of Distance Education / Correspondence Courses. CODE is determined to provide assistance and guidance to all the open universities in all the Commonwealth countries.

There is a rigidity born of highbrow and stiff-collar attitudes. No attention has been paid, for example, to tailoring of new courses, flexible enough to have sufficient elbow room for academic reactivity, meant primarily for those 'academic orphans' who have failed to get seats in regular courses obviously on account of socio-economic compulsions. "The scope of correspondence education (in India) has remained narrow. It has got to be widened. For this purpose, new courses have to be designed keeping in mind the need of our society. Such courses should specially be linked to job requirements.

Though the aims of correspondence/distance/online/open/web-based instruction and those of oral teaching are the same, the incitements, motives and methods differ. In oral teaching it is the established equation of the physical presence of the teacher and the taught in a given point in space and time which holds good only for that environment. In correspondence study, the equation of physical absence of oral communication makes it possible for the written and printed work to be employed as a vehicle for the dissemination of knowledge.

Such a course of study transcends the physical limitations imposed on classroom teaching. It is with this end in view that governments and educational bodies have become increasingly aware of the possibilities offered by correspondence education and the record success of its programmes all over the world has strengthened the faith of educationists.

The traditional classroom teaching, as is evident, is a hang-over from the days of Plato and Aristotle. The golden age of Greek learning or the equally lustrous age of Indian scholarship in our hoary past conceptualised higher teaching as some thing fixed in the place where the wisdom-giver had his *ashrama* or his *academy*. The physical limitations of distance, scanty means of travel and lack of facilities for a number of students to work as in-scholars made it impossible for more than a selected few to sit at the feet of the master and learn. Nonetheless many flocked to the fountain-head to get wisdom.

The very name *Upanishadas* (near sitting) symbolised the cadre of those who sat nearer to the wisdom-giver or the *guru* with their folded knees to imbibe his teaching. Suffice to say that but for the diligence of his pupils, the notes of Aristotle's *Poetics* or Manu's code known as 'Manusmriti' and some other great works would have been lost to us. Education, throughout the intervening centuries, remained the prerogative and monopoly of those who could claim it by virtue of their higher birth or whole time life-long vocation. This indeed was true of the pre-Independence period because institutions of higher education were so few as to thwart the aspirations of many. But in spite of the great multiplication of the number of colleges as also their proliferation in the back belts of the known urban centres in India, the number of those who desire and deserve a seat in a higher study course has mounted manifold.

The socio-economic compulsions may thwart the aspirations of millions from higher education today. This particularly true of a big country like India with its large land-mass and teeming population living in rural areas. As it is, universities and affiliated colleges

can function only in towns and cities, away from the interior rural landscape, isolating the student community living in villages from the process of continuing education.

Another socio-economic compulsion which cripples the aspirations of a large body of our youth is the seasonal employment or under-employment in a vocation which they have either inherited as their partimony (though a rigid caste-system which still holds its sway) or for the reason that they are compelled to eke out an existence solely because they are born at a certain place. Hill-folk in India, as sociologists will testify, still retain almost a racial compulsion to get their last rites at the place of their birth. The bulk of these under-employed, partly-employed or seasonally-employed young men and women cannot pursue a regular course of study in a college whereby they have to leave their village based life for a three-year sojourn in a city. It is befitting, therefore, that correspondence education should cater to this significant but ignored segment of humanity by reaching out to millions who work for their living and to those who do not have an institution in their geographical proximity.

A change in the educational technology, of which the introduction of correspondence or distance education is but a significant part, becomes imperative seen in the context of the education scene in India. This question has indeed received very little consideration at the hands of planners in the last fifty years and it was only with the advent of the nineties that a serious note was taken by policy-framers and planners to the central level while States which zealously guarded the realm of education as a State subject merely wasted time. A typical class of one teacher attached to 60 or 80 students using textbooks is the prototype of the traditional classroom method.

Absence of programmed learning though which teaching-learning apparatus could have been systematised leads to further pigmentation of an already hardened system in which formal education, apronstring-tied to degrees or diplomas linked with job-qualifications, rather than with job-requirements, become the *summum bonum* of education. Programmed learning within or on the periphery of the framework of a formal system can, by itself, reduce some of the burden. It can systematise learning considerably in many of its aspects and increase average class size of pupil-teacher ratio. Its requirements indeed would be highly professionalised manpower of programmes which would substitute for any very great improvement on the present formal education-intellectual competence of the teacher or the receptivity calibre of the pupils.

Education being a labour-intensive industry in the context of a developing country like India, a rapid technical change requires higher capital layout. Denied this, we have to fall back upon the home-made and indigenous systems which may come up to the modern level if they are given a fair deal of help and assistance. Whether it is the stress on productive work (earn while you learn - a cliché, but also a hard reality), or the fundamental change in the medium of teaching, the system has to be carried along in the changes of educational technology relevant to the Indian situation. But it is obvious that rapid technical change has to be carried out in education if, within the resources constraints that exist, much larger educational outcomes are sought to be achieved.

In a country of the magnitude of India, teacher's salaries alone amount to as much as 83.5% of the total educational outlay. Figures calculated reveal that consumption

expenditure (teacher's salaries, scholarships etc.) and investment expenditure (buildings, equipment, library books, laboratories etc.) have a discordant ratio. It was found that the percentage of 'consumption expenditure' to the total university expenditure increased from about 41 in 1947-48 to 52 in 1965-66. It further jumped to 64 in 1971-72, 73 in 1974-75 and 83.5 in 1998-99, after the revision of the grades of university teachers. Since the year 2000 this percentage has kept increasing on a continuing basis.

Seen in real terms, the position is that idle children and idle adults who are eating and living at a level lower than the poverty line in most cases, have to be bunched together in order to bring them into the fold of education. It is, however, not they who finance education, for they obviously cannot, it is the state which has to do so. It has also been the time-honoured practice that higher the level of academic courses pursued, higher still is the public subsidy for the student trainee.

Judging from the scheme of social expenditure on education and training, a regular college student in a College of Arts or Science costs something like Rs. 401 per annum to the Government or the Management, without giving anything by way of return except that the gets a degree after completing a course and qualifying an examination. A correspondence student literally costs less than one-fourth to the Government or the Management. Since most of the institutions are run on a non-profit-no-loss basis (their surpluses are occasionally carried forward to the next year or become a source of general revenue for the University). There are normally no grants to meet deficit-on-account except where last years' surpluses are available. This position is, however, in for a welcome change in as much as many universities have now started meeting the on-account deficit of their correspondence course. A correspondence student, again, is not only not a liability on the State, but is a positive asset to the society.

However, while the fact remains that correspondence course can finance their own programmes from the revenue resources of fees from the students and do not become a dead burden on the sponsoring universities, it should not create an impression that such courses should eventually become commercial concerns running at a profit and constitute a permanent revenue source for the general budget of the university. Any part of its resources should at no time be regarded as surplus and utilised for purposes of the university unconnected with the correspondence courses institute. The surplus money should be diverted for more and more of developments and charitable purposes like earmarking substantial amounts for grant of fee concession or total exemption of fee or for scholarships to deserving but financially crippled sections of students of which there is a large number.

Correspondence / distance education has come of age in India. However, no serious attempt has been made to evaluate the work and efficacy of the system in catering to the needs of thousands of students who cannot pursue a regular course of study. Institutes of Correspondence Education, Centres of Distance Education and Open Universities have been working more or less as extension service agencies of universities which have created them. They not only teach the same courses of study but also use tools and skills which still retain their musky odour of the classroom system. Since the examinations for regular students and correspondence students are one and the same, the students have to be given examination-oriented study programmes to make them show an equal rating with regular

students. This forces designers of lessons and other reading material to fall back upon the time-honoured and time-abused system of written notes which some-times border on the realm of cheap 'digests' available in market. In some cases, even the question-answer form is used to give the correspondence students readymade material for use in the examination.

Evaluation of any educational programme which has successfully run for over a decade becomes one of the categorical imperatives of a system if the system has to look to the future needs of a changing situation. This applies to correspondence/distance education as much as to the traditional modes of education.

However, in the last decade U.G.C. Committees on distance education have been able to review the working of only a few universities. It has been in the fitness of things that the Distance Education Council (DEC) established under the provisions of IGNOU at 1985 has merged with the U.G.C. under the name of Distance Education Bureau. CODE is dedicated to provide support, guidance and counseling to all the statutory bodies in India for ensuring quality education at all the institutions offering distance education programmes.

Occasional meetings and seminars or workshops organised by different universities have, however, given to the participants opportunities for exchanging views on various subjects. One thing that has emerged from this exchange of view and comparison of notes is the widespread belief that unless correspondence institutes are considered autonomous institutes, allowed to run their own courses to give their own degrees, they will continue to be looked down upon and considered 'poor relations' of their traditional counterparts. This is in spite of the fact that the system of degree linked jobs makes it imperative for a job-seeking individual to have the same degree either regular or through correspondence course of study. If an overhaul has to be done, it shall have to be done to the entire fabric of education. A built-in element of flexibility in course of study which can be given only through correspondence education is the need of the hour.

Chapter 53

COMMONWEALTH OF LEARNING

The Commonwealth of Learning (COL) is an intergovernmental organisation of the Commonwealth of Nations headquartered in Vancouver, British Columbia, Canada. Founded at the 1987 Commonwealth Heads of Government Meeting (CHOGM) and inaugurated in 1988, COL's mandate is to promote and develop the use of open learning and distance education knowledge, resources and technologies throughout the Commonwealth's 54 member states. COL has evolved into one of the world's leading distance education providers and leads the international development in distance education along with UNESCO. COL is the only intergovernmental organisation solely concerned with the development of distance education.

COL's activities are grouped under two sectors: Education and Livelihoods and Health. COL helps nations increase access to quality education at all levels by focusing on quality assurance, teacher development, new approaches to higher education and the creation of expertise in Electronic learning. It helps countries to identify where livelihoods can be improved, and to create matching learning opportunities. Successful approaches to improving rural and peri-urban economies draw on COL's close relationship with international agricultural bodies.

*Dr. H. Ian Macdonald, Chairman of Commonwealth of Learning (COL) Board of Governors
with the Honourable Murli Manohar Joshi, Union Minister for HRD, Government of India*

Financial support for COL's core operations is provided by Commonwealth governments on a voluntary basis, with primary funding renewed every three years. COL also receives extra-budgetary income from other development sources and provides fee-for-service distance education and open learning course delivery and training for international agencies, such as the United Nations High Commissioner for Refugees (UNHCR) and the World Health Organization (WHO).

COL's major financial contributors currently include Canada, India, New Zealand, Nigeria, South Africa and the United Kingdom, all of which have representatives on COL's Board of Governors. The Board of Governors is chaired by Dr. Linda Sissons, CNZM, former Chief Executive Officer of New Zealand's Wellington Institute of Technology (WelTec). Dr. Sissons has worked in university and institutes of technology management roles in New Zealand and the United Kingdom. The current President and chief executive officer of COL is Professor Asha Kanwar. COL's professional staff includes an internationally recruited group of education specialists.

COL works co-operatively with Commonwealth governments and operates through a wide range of partnerships. COL's partners include national and international development agencies and banks, such as non-governmental organisations, other Commonwealth agencies like the Commonwealth Secretariat, United Nations bodies such as UNESCO, UNICEF, UNIFEM, UNDP and the World Bank, national and regional distance education associations and industry.

COL's overall approach and the focus, scope and type of specific programmes and projects is directed by a guidance document referred to as the Three-year Plan, revised with each funding cycle. Revisions are based on input and feedback from Commonwealth member governments and organisations, and are informed by the changing development needs of Commonwealth member nations. *Learning for Development* is the theme of COL's Three-year Plan 2012–2015. COL uses the United Nations' Millennium Development Goals (MDGs) and Education for All (EFA) declarations and the Commonwealth's priorities of peace, democracy, equality and good governance as its framework for action. The Three-Year Plan, 2012–2015 has three Strategic Goals:

- **Quality education for all Commonwealth citizens**

Increased access to affordable primary, secondary and tertiary education, especially for girls, women and the marginalised.

- **Human resources development in the Commonwealth**

Sustainable and replicable learning systems in place for farming, health and skills development in the formal and informal sectors.

- **Harnessing ODL and technologies to achieve development goals**

Improved capacity of governments and civil society to provide quality learning for achieving MDG and EFA goals.

COL co-ordinated the development of a Virtual University for Small States of the Commonwealth and WikiEducator, a community resource for the development of free educational content. COL has been at the forefront of the OER movement, which promotes the creation, sharing and adaptation of learning materials that anyone can freely use for teaching, learning, development and research. Most recently, COL spearheaded an

initiative to get governments worldwide to recognise officially the importance of sharing OER. "Fostering Governmental Support for OER Internationally" involved consultation workshops in every region of the Commonwealth and a survey of governments worldwide, culminating in the presentation and approval of the Paris Declaration on OER at UNESCO's World OER Congress in Paris in June 2012. The Paris Declaration is a commitment to making educational resources developed with public funds available for re-use and re-purposing under open licences.

COL hosts a biennial Pan-Commonwealth Forum on Open Learning where its Excellence in Distance Education Awards (EDEA) are presented. In 2002, COL awarded the BBC World Service the EDEA for Institutional Achievement for the standard of its English teaching on radio and online.

Chapter 54

OPEN EDUCATIONAL RESOURCES POLICY

Open Educational Resource Policies (OER policies) are principles or tenets adopted by governing bodies in support of the use of open content—specifically open educational resources (OER) -- and practices in educational institutions. Such policies are emerging increasingly at the national, state/province, and local levels. Creative Commons defines (OER) policies as "legislation, institutional policies, and/or funder mandates that lead to the creation, increased use, and/or support for improving OER." OER are learning materials that reside in the public domain or have been released under an intellectual property license that permits their free use and re-purposing by others.

OER POLICY CLEARINGHOUSES

Creative Commons hosts an open educational resources policy registry which lists 112 current and proposed open education policies from around the world.

Another resource for finding OER policies is the Open Educational Quality Initiative OPAL Best Practice Clearing House. The OPAL Initiative is a partnership between seven organizations including the International Council for Open and Distance Education (ICDE), UNESCO, European Foundation for Quality, the Open University UK, Aalto University and the Catholic University Portugal. Led by the University of Duisburg-Essen in Germany, it is partly funded by the European Commission.

UNESCO OER CONGRESS

On Friday 22 June 2012, the UNESCO World Open Educational Resources (OER) Congress released the 2012 Paris OER Declaration which called on governments to openly license publicly funded educational materials.

UNESCO member states unanimously approved the declaration, which highlights the importance of open educational resources and gives recommendations to governments and institutions around the globe.

POLICIES ADOPTED BY NATIONAL COUNCILS OF EDUCATION

On January 17, 2014, the Council on Higher Education in South Africa published a *White Paper for Post-School Education and Training*. This paper emphasized open learning principles and set the stage for supporting national efforts to design and develop high-quality open educational resources. In response the University of South Africa (UNISA) -- one of the founding partners of the OERu network and a member of the 2012 Unesco OER conference in Paris -- approved an Open Educational Resource (OER) Strategy in March 2014.

POLICIES ADOPTED BY RESEARCH UNIVERSITIES

An open-access policy enacted by the Faculty of a research university can empower them in choosing how to distribute their own scholarly work. If a faculty member wishes to grant exclusive rights to a publisher, they would first need to request a waiver from their faculty governance body. Some reasons to implement this kind of policy institution-wide are to:

1. increase the overall impact of an institution's research contributions to the global knowledge economy,
2. individual faculty receive their institution's full support in a unified action to work with publishers to simplify procedures and broaden access to their scholarly work (allowing for greater possibilities for citations of their work - important for hiring, tenure and promotion decisions),
3. take advantage of scholarly interactions with a greater diversity of readers, not just those who can afford to purchase the information from a vendor or attend an academic conference.

This kind of blanket policy provides support to those whose research is not part of a project that requires open access to the research done. For example, since the February 2013 directive from the United States Office of Science and Technology Policy, U.S. federal agencies have been developing their own policies on making research freely available within a year of publication.

SPARC, the Scholarly Publishing and Academic Resources Coalition, led the collaborative and open effort to create an "Open Access Spectrum" that demonstrates a more sophisticated approach is needed in discussions about the concept of openness in research communications. The "HowOpenIsIt? Guide (as well as an FAQ document and slide deck) is available for download on the SPARC website. Another useful guide has been developed by members of the Harvard Office for Scholarly Communication, the Harvard Open Access Project, and the Berkman Center for Internet and Society. This online guide, "Good practices for university open-access policies" is built on a wiki and is designed to evolve over time, according to the co-authors: Emily Kilcer, Stuart Shieber and Peter Suber.

CALIFORNIA INSTITUTE OF TECHNOLOGY

On June 10, 2013, the Faculty Board of the California Institute of Technology (Caltech) created an institution-wide Open Access Policy. The ruling stated that as of January 1, 2014, all Caltech faculty must agree to grant nonexclusive rights to Caltech to disseminate their scholarly papers either via the authors' own sites or to Caltech AUTHORS, the online repository. The goal is to encourage wider distribution of their work and to simplify the copyright process when posting research on faculty or institutional Web sites. The initiative was put in place to prevent publishers of those journals from threatening legal action or issuing takedown notices to authors who have posted their content on their own sites or to CaltechAUTHORS, an online repository for research papers authored by Caltech faculty and other researchers at Caltech.

DUKE UNIVERSITY

On March 21, 2010, the Duke University Academic Council voted to support the University Library's new data repository, DukeSpace, with a blanket policy to provide open access to their scholarly writings. The policy allows for faculty members to opt out at any time, and it is regularly reviewed to determine its effectiveness.

Duke also in 2010 joined the Compact for Open-Access Publishing Equity (COPE) and established a fund to help Duke faculty members to cover any author fees required to publish in open access journals.

HARVARD UNIVERSITY

On February 12, 2008, the Faculty of Arts and Sciences of Harvard University approved their Open Access Policy, granting to the President and Fellows of Harvard to "make available his or her scholarly articles and to exercise the copyright in those articles ... in a nonexclusive, irrevocable, paid-up, worldwide license..." Since then, several other schools within the University now participate in the Open Access Policies supported by the Office for Scholarly Communication: the Graduate School of Design, the School of Education, the Business School, the Law School, the Kennedy School of Government, the Divinity School, and the School of Public Health. The University's open-access repository is called DASH (Digital Access to Scholarship at Harvard) which is where the faculty upload their scholarly articles for access by all.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY

Adopted by a unanimous vote on March 18, 2009, the Massachusetts Institute of Technology (MIT) Faculty adopted an open access policy. The policy applies to "all scholarly articles written while the person is a member of the Faculty except for any articles completed before the adoption of this policy and any articles for which the Faculty member entered into an incompatible licensing or assignment agreement before the adoption of this policy." The MIT online repository is called DSpace@MIT and it was designed to work seamlessly with Google Scholar. The Faculty revised and updated the policy in 2010 to take into consideration the various issues associated with the MIT librarians' discussions with publishers.

PRINCETON UNIVERSITY

In 2010 the Dean of the Faculty of Princeton University appointed an ad-hoc committee of faculty and the University Librarian to study the question of open access to faculty publications - and in March 2011, the committee recommended several changes to the Faculty rules to allow for a blanket policy for open access to Princeton faculty scholarship. The faculty approved an open access policy on September 19, 2011, which was last revised in January 2012.

STANFORD UNIVERSITY

On June 26, 2008, the Stanford University Graduate School of Education (GSE) were the first in that school to grant permission to the University to make their scholarly articles publicly accessible and to exercise the copyright in a "nonexclusive, irrevocable, worldwide license ... provided that the articles are properly attributed to the authors not sold for a profit." The GSE Open Archive houses and makes publicly available the GSE authors' working papers as well as published articles. Between May 21-24th, 2013, the Stanford GSE doctoral students voted in favor of a motion to enact an Open Access policy. At this time, however, despite the strong case made by Professors John Willinsky and Juan Pablo Alperin, no other Stanford academic units have stepped forward.

UNIVERSITY OF CALIFORNIA

On July 24, 2013, the Academic Senate of the University of California (UC) approved the UC Open Access Policy for all 8,000 plus faculty at their ten campuses. Some confusion at the local campuses led to online postings of journal articles whose copyright was already owned by publishers. For example, in December 2013, the academic publishing company Elsevier sent several UC faculty notices to take down certain journal articles posted openly on their campus webpages, e.g., on the department websites or faculty profiles. The UC Open Access Policy protected those faculty who had correctly uploaded their articles to the UC eScholarship repository. In another case of misunderstanding by the faculty about open access, in March 2014 the University received a Digital Millennium Copyright Act (DMCA) takedown notice for nine articles owned by the American Society for Civil Engineers (ASCE). The UC faculty authors had uploaded to eScholarship the publisher-formatted articles between 2004 and 2008, before the UC Open Access Policy had been enacted and in violation of the publisher's agreement with the authors when they gave their copyrights to the ASCE.

UNIVERSITY OF COLORADO BOULDER

In 2014 the Faculty Assembly of the University of Colorado Boulder approved the CU Boulder Open Access Policy "in order to allow for broad dissemination of their research." They granted to The Regents of the University of Colorado "a nonexclusive, irrevocable, worldwide license to exercise any and all rights under copyright relating to their scholarly work, as long as the works are properly attributed to the authors and not used for commercial purposes" -- and that the individual faculty would retain full ownership of the material. Authors at UC Boulder are expected to inform publishers about the University's policy and that they "have granted a pre-existing License." The digital repository, CU Scholar, is maintained by the University Libraries and functions under a set of policies derived from the Open Access Policy. Contributions from the CU Boulder community can include working papers and technical reports, published scholarly research articles, completed manuscripts, digital art or multimedia, conference papers and proceedings, theses and dissertations, Undergraduate Honors theses, journals published on campus, faculty course-related output primarily of scholarly interest, and data sets. The

Chancellor's Executive Committee recently approved the new policy, following the lead of the Council of Deans and the Office of the Provost and Executive Vice Chancellor.

UNIVERSITY OF KANSAS

In 2005 the University of Kansas (KU) created KU ScholarWorks, a digital repository for scholarly work created by KU faculty and staff. Faculty Senate President Lisa Wolf-Wendel, professor of education leadership and policy studies, approved a new policy, "Open Access Policy for University of Kansas Scholarship" on April 30, 2009, in order to provide the broadest possible access to the journal literature authored by KU faculty." In June 2009, under a faculty-initiated policy approved by Chancellor Robert Hemenway, KU became the first U.S. public university to implement an open access policy. Unless a KU author sought a waiver, all articles must be submitted to KU ScholarWorks. "Processes to Implement the KU Open Access Policy" were endorsed by the Faculty Senate in February 2010. Theses and dissertations at the University of Kansas are also openly available, however in 2010 KU Graduate Studies established a policy that a student may request permission to embargo its publication for six months, one year or two years. Graduates earning the KU Master of Fine Arts in Creative Writing or PhD in English (Literature and Creative Writing track) may request a permanent embargo.

Chapter 55

NONFORMAL LEARNING

Non-formal Learning is a loosely defined term covering various structured learning situations, such as swimming sessions for toddlers, community-based sports programs and conference style seminars, which do not either have the level of curriculum, syllabus, accreditation and certification associated with 'formal learning', but have more structure than that associated with 'informal learning', which typically take place naturally and spontaneously as part of other activities. These form the three styles of learning recognised and supported by the OECD.

Children acquiring knowledge through non-formal learning in India

Examples of non-formal learning include swimming sessions for toddlers, community-based sports programs, and programs developed by organisations such as the Boy Scouts or the Girl Guides, community or non-credit adult education courses, sports or fitness programs, professional conferences and continuing professional development. The learner's objectives may be to increase skills and knowledge, as well as to experience the emotional rewards associated with increased love for a subject or increased passion for learning.

HISTORY

The debate over the relative value of formal and informal learning has existed for a number of years. Traditionally formal learning that takes place in a school or university and has a greater value placed upon it than informal learning, such as learning within the workplace. This concept of formal learning being the socio-cultural accepted norm for

learning was first challenged by Scribner and Cole in 1973, who claimed most things in life are better learnt through informal processes, citing language learning as an example. Moreover, anthropologists noted that complex learning still takes place within indigenous communities that had no formal educational institutions. It's the acquisition of this knowledge or learning which occurs in everyday life that has not been fully valued or understood. This led to the declaration the by OECD educational ministers of the "life-long learning for all" strategy in 1996. This includes 23 countries from five continents, who have sought to clarify and validate all forms of learning including formal, non-formal and informal. This has been in conjunction with the European Union which has also developed policies for life-long learning which focus strongly on the need to identify, assess and certify non-formal and informal learning, particularly in the workplace.

COUNTRIES INVOLVED IN RECOGNITION OF NON-FORMAL LEARNING (OECD 2010)

Austria	Denmark	Italy	South Africa
Australia	Germany	Korea	Spain
Belgium	Greece	Malta	Slovenia
Canada	Hungary	Mexico	Switzerland
Chile	Iceland	Netherlands	United Kingdom
Czech Republic	Ireland	Norway	

FORMAL, INFORMAL AND NON-FORMAL LEARNING

Although all definitions can be contested (see below) this article shall refer to the European Centre for the Development of Vocational Training (Cedefop) 2001 communication on 'lifelong learning: formal, non-formal and informal learning' as the guideline for the differing definitions.

Formal learning: learning typically provided by an education or training institution, structured (in terms of learning objectives, learning time or learning support) and leading to certification. Formal learning is intentional from the learner's perspective. (Cedefop 2001)

Informal learning: learning resulting from daily life activities related to work, family or leisure. It is not structured (in terms of learning objectives, learning time or learning support) and typically does not lead to certification. Informal learning may be intentional but in most cases it is not-intentional (or "incidental"/random)(Cedefop 2001))

CONTESTED DEFINITIONS

If there is no clear distinction between formal and in-formal learning where is the room for non formal learning. It is a contested issue with numerous definitions given. The following are some the competing theories.

"It is difficult to make a clear distinction between formal and informal learning as there is often a crossover between the two."

Similarly, Hodkinson et al. (2003), conclude after a significant literature analysis on the topics of formal, informal, and non-formal learning, that "the terms informal and non-formal appeared interchangeable, each being primarily defined in opposition to the dominant formal education system, and the largely individualist and acquisitional conceptualisations of learning developed in relation to such educational contexts."(Hodkinson et al., 2003, p. 314) Moreover, he states that "It is important not to see informal and formal attributes as somehow separate, waiting to be integrated.

This is the dominant view in the literature, and it is mistaken. Thus, the challenge is not to, somehow, combine informal and formal learning, for informal and formal attributes are present and inter-related, whether we will it so or not. The challenge is to recognise and identify them, and understand the implications. For this reason, the concept of non-formal learning, at least when seen as a middle state between formal and informal, is redundant."(p. 314)

Eraut's classification of learning into formal and non-formal:

This removes informal learning from the equation and states all learning outside of formal learning is non-formal. Eraut equates informal with connotations of dress, language or behaviour that have no relation to learning. Eraut defines formal learning as taking place within a learning framework; within a classroom or learning institution, with a designated teacher or trainer; the award of a qualification or credit; the external specification of outcomes. Any learning that occurs outside of these parameters is non-formal.(Ined 2002)

The EC (2001) Communication on Lifelong Learning: formal, non-formal and informal learning:

The EU places non-formal learning in between formal and informal learning (see above). This has learning both in a formal setting with a learning framework and as an organised event but within a qualification. "Non-formal learning: learning that is not provided by an education or training institution and typically does not lead to certification. It is, however, structured (in terms of learning objectives, learning time or learning support). Non-formal learning is intentional from the learner's perspective." (Cedefop 2001)

Livingstone's adults formal and informal education, non-formal and informal learning:

This focuses on the idea of adult non-formal education. This new mode, 'informal education' is when teachers or mentors guide learners without reference to structured learning outcomes. This informal education learning is gaining knowledge without an imposed framework, such as learning new job skills. (Infed, 2002)

Billett (2001): there is no such thing as informal learning:

Billet's definition states there is no such thing as non-formal and informal learning. He states all human activity is learning, and that everything people do involves a process of learning. "all learning takes place within social organisations or communities that have formalised structures." Moreover he states most learning in life takes place outside of formal education.(Ined 2002)

VALIDATION

Cedefop has created European guidelines to provide validation to a broad range of learning experiences, thereby aiding transparency and comparability across its national borders. The broad framework for achieving this certification across both non-formal and informal learning is outlined in the Cedefop European guidelines for validating non-formal and informal learning; Routes from learning to certification.

DIFFERENT COUNTRIES APPROACHES

There are different approaches to validation between OCED and EU countries, with countries adopting different measures. The EU, as noted above, through the Cedefop - released European guidelines for validating non-formal and informal learning in 2009 to standardise validation throughout the EU. Within the OCED countries, the picture is more mixed.

COUNTRIES WITH THE EXISTENCE OF RECOGNITION FOR NON-FORMAL AND INFORMAL LEARNING

Chapter 56

CONTRIBUTION OF WIBP GROUP IN THE AREA OF OPEN AND DISTANCE LEARNING

The World Institution Building Programme (WIBP) was conceived as an international charity on the occasion of the 2nd Anniversary of the World Environment Day on 5th June 1974 by the young technocrat and institution builder Priya Ranjan Trivedi who after one year of continuous labour for locating a critical path in the area of institution building, planning and development and who declared his master plan and his thought in the following manner before the world citizenry on 5th June 1975 :

Those who have worked with me continuously refer to my behaviour of letting the people take decisions, giving them a sense of autonomy and respect in taking those decisions. To what do I attribute this quality which many people think is one of the rarest qualities ? How did I develop this quality of helping people to take on independent respectful roles when they are working with me and not lean on my shoulders ? The reason why I refer to it as a quality is that a person would not be able to behave that way unless he socialises in a culture in which he experiences such behaviour. Actually it is difficult to say whether it is a quality or whether it is merely a way in which I saw the task I had undertaken when I had thought of entering into the field of institution building last year. I had then lots of misgivings about entering in this unique field and throwing myself into a totally new environment with full of zeal and enthusiasm. But I decided to take on because I was intrigued by the thought of building an institution practically from scratch. So what always dominated was the fact that the objective was to help build institutions for having a sustainable society. So I did make deliberate choices in the terms of what I set about. I imposed on myself, for example, the limitations that I would not accept any external assignment and work i.e. the work concerned with any external agency unless that work had a very direct bearing on the functioning of the institutions I have been building and managing directly. Discussing regarding my strengths as an institution builder, I have great pleasure in disclosing that my main strength has been my ignorance. I am not being entirely facetious. When I started my activities in the field of institution building even when I was studying engineering at the Birla Institute of Technology, Mesra, Ranchi, I knew nothing about building an educational or any other institution, let alone managing the same. So may be the strength was my ignorance. In that I had no structural preconceptions. On the other hand I did have attitudinal biases towards education arising from my knowledge as a student of engineering as well as management. Those biases were the very common “motherhood” types of normatives. I thought that creativity and innovation were good; This required “freedom of views and expression”, this required self discipline which required self confidence which again required self esteem and mutual self respect between colleagues and so on. But I had no preconceptions as and how all this could be achieved. All I had were biases in favour of self reliance of individuals, groups and the institution. So when I had decided to have outfits of my institutions all over the world, starting from India to different countries, I had to generate ideas of what a development institution should be and how to manage it. I had to also generate thinking not merely about what but also how to develop and sustain the strength without over

dependence on external patronage or regulation or leadership. It really all started from a point of ignorance, a lack of experience. Perhaps experience might have constrained me. Today I have a little bit of experience. I do not know whether this has made me more or less constrained. Perhaps one's attitude towards the value of experience changes, the greater the variety. Ignorance as Isay that it was my strength may also be treated as openness, creativity and not going by the stereotyped understanding. Here I would like to mention my weakness. One weakness which I think sometimes harms the institution is my lack of socialising within the institution. I have a very strong need for privacy. If the whole day from early morning to about 11.00 pm in the night is spent primarily on discussions with community groups, individuals, outsiders and so on, then the whole day is spent in talking about important problems that is of concern to all of us who raised them. On the other hand, I have to be alone to think about the longer term about what I regarded were the more basic problems of developing the culture of the institution. So every evening I barred and bolted myself in my room, with no meetings, and no one was allowed to see me. I would not be sociable. The second aspect is that I can not do a task effectively unless I am emotionally involved with it. I suppose this might mean that I have instinctive attitudinal traits. With the best of intentions, for me reasoning is necessary but not sufficient. More often than not I need to get emotionally involved. When I get emotionally involved in the task it is very difficult to remain objective, unbiased and to satisfy all the other requirements of rationality. Apart from being my thinking time, perhaps my need for privacy is also because of my coping mechanism. Sometimes I found this emotional involvement a somewhat inhibiting factor. A third aspect is not so much a weakness as a debatable tactic. I am not as open they might have thought me to be. Sometimes I do not take my team into confidence when starting new activities. I am generally reluctant to confine in people in case it bothered or embarrassed them to become involved in my problems, nor did I like the idea of confining in some and not in others. I have seen many persons saying that Priya Ranjan Trivedi is a friend of everyone, but no one knows him. Concluding on the different aspects of institution building, I would like to stress the building of people, their relationships, attitudes and behavioural norms. I would stress the development of conditions in the institution conducive to the development of individual and the group self esteem, autonomy and creativity. This should be characteristic of the institution itself. I think it is important for the institution builder to spend time thinking about his own perceptions of the task he has accepted. Another important aspect, to my mind, in thinking about the institution far beyond his own commitment. One must see oneself neither as a phase of institutional development nor as a period of institution building with a definite boundary around it, but as a part of a continuum whether it eventually works out the way the individual planned or not. Life is a cosmic dance of formlessness manifesting itself into innumerable patterns of forms and the forms having played around in space of nothingness merge back into the formlessness from where they had come. The formlessness, the nothingness, the emptiness of space seemingly is creativity although it is a mystery how the formless emptiness of space contains creativity or rather is creativity, how the seed is the whole tree and it has an urge to manifest the treeness contained in it. As the seed becomes a sapling, as a sapling grows into a plant, plant grows into a tree, the tree grows into a flower, or a fruit and the fruit matures into a seed - so the seed goes back to seedness. In the human body, the creativity condenses itself in the form of some fluid and the creativity in their body (man and

woman) lead to the reproduction of whole human being. The formless, shapeless fluid contains a whole human being, interacting with the creativity in the mother's womb, in the mother's body. In the mother's body the fluid manifests the form concealed in its nothingness. Self created and self sustained creativity has no form, it is the formless, empty - nothingness of space. It manifests into forms not because of any motivation. Institution building in its wider meaning includes establishing an institution, nurturing the same through its earlier years and making sure that it passes through the various stages. Institution Building can be conceived as one end of a continuum, in the other end being that of decay and death, one point of this continuum towards the latter institutional stagnation.

During my research in the field of institution building, I feel like discussing the following one dozen propositions of institution building.

1. If the goals of an institution are perceived as important for the society and those are seen as challenging, and further if these are shared among the co-promoters and the functionaries of the institution, the process of institution building will be smooth.
2. If the goals are accepted widely amongst the members of the institution and those are fairly focussed, the institution has good chances of success.
3. If an institution identifies key, committed people before identifying the specific programmes, it has cent per cent chance of being up to the mark.
4. If enough time is not put in people working in the institution and they are not given enough autonomy to work, institution building activity will suffer.
5. If enough attention is paid to the process in the institution's life in the very beginning, less attention will be needed to it later and enough time will be available for the substantive work.
6. The matrix form of organisation is the most suitable for institution building.
7. An institution which establishes the necessary mechanism to foster and stabilize the tradition and culture has more chances of making more impact on other institution.
8. Sharing of common experience and developing some homogeneity of thinking by various members of an institution in its earlier rather early life would help in the institution building process.
9. Mechanisms of establishing a balance between the autonomy of individual members and their collaboration for common goals help in the institution building process.

10. A delicate balance between the autonomy of the institution and its strong linkages with and support from outside may help the institution building process.
11. A non competitive leader helps in the process of institution building.
12. The most crucial test of institution building is to what extent a leader is able to dispossess the institution which is built. Otherwise the process of stagnation starts.

The professional or tutorial discourse, popularly known today as the 'lecture' was a medieval invention designed for the serious students who were too poor to buy extensive books and who had not access to a library. This made it necessary for them to listen to a person who was familiar with books. We are no longer in that situation.

Education, in the modern world, has come to mean - what has been called - 'guided reading'. The essential job of the teacher, particularly at the University level, is to direct students to do the work themselves and solve their problems in an informal manner. Not only the protagonists of non-formal education but progressive educationists all over the world hold the view that the lecture method of instruction might have been useful in the past, but in the modern context it tires the teacher and leaves the student uninterested and often hostile.

They argue that the students may admire the eloquence of their college teachers, but in the process they relapse into a state of intellectual passivity. Again, the lecture method is such that the lecturer's prime concern is his subject rather than his audience. The average college teacher cares little whether his listeners actually benefit from his exposition. He is only concerned with the accurate exposition of his subject. It is indeed a fact that in the context of 'essay type' questions which are invariably set in the question papers at the end of a term, students turn to other sources of study 'primarily to cram and in this invidious process forget' or even 'un-learn', what their teachers had been talking throughout the year.

Teachers as pedagogues have to deliver classroom lectures. Their work quantum is measured in terms of 'hours'. In all universities in India, unless there are exceptions, a period runs into an hour. In colleges, however, a period is usually of 40 or 45 minutes' duration. While at the university level, a teacher is supposed to meet his classes every day at the same hour, the compactness of the time-table at the under graduate college level makes it necessary for a teacher to have his periods with different classes scattered over a span of 3 to 5 hours. In both cases, however, the entire course is supposed to be covered in a fixed number of lectures during a whole session. Where more than one teacher is assigned to a single class for teaching the same course, the work is divided in such a way that the students get their course of study 'finished' at least twenty days before the commencement of the examination.

The quantum of work for teachers at the undergraduate level is fixed, at 24 periods or 16 hours a week. The week consists of seven days. In the universities, however, it is the hierarchical order of seniority that determines the quanta of work for various categories of

teachers. While a professor who is also the Head of the Department is required to teach 8 periods a week, (many of them do not teach more than 4 periods, and consider 'research guidance' to be their sole prerogative), a Reader is supposed to teach 8 periods and a Lecturer 12 periods a week. Of this, roughly one half of the periods is devoted to classroom lectures, while the rest constitute - what has been called - 'seminars' or 'tutorials'. Any one who has seen university teacher at work should know that while students attend their lectures on pain of penalty and for the fear of accumulated shortage of lectures at the term-end, they rarely turn up for their seminars or tutorials. Even when one or two zealous ones do come for the purpose, the teachers prefer to ask them to leave their written assignments for correction and go away.

In the classroom there is hardly any scope for discussion. It is a one-way traffic, and the teacher has no time for entertaining a doubt or two from a vocal student. "Discussion is also inhibited by the fact that many students are genuinely not interested in their course. Most of them enrol at colleges only for the certificate to be obtained at the end of the course."

As things stand at present, there is hardly any interaction between teachers and students either at the undergraduate or at the postgraduate level. The student goes to the classroom without any inkling of what a particular teacher is going to teach in a particular period. The English teacher decides for himself whether he would take up a poem from the anthology of poetry or a prose piece from a similar anthology prescribed for an undergraduate course. The same is true of a teacher social sciences. The choice of a subject or a topic is made by him without prior notification to his students. Similarly, at the postgraduate level it is the teacher who has the advantage of entering the classroom, ill-equipped or well-equipped, without fear of the students knowing before hand what exactly is in store for them on a particular day. Again, since lectures are supposed to be delivered in the medium of English and a majority of undergraduate students are not well-versed in that language, most of the lecture goes over the head of the students.

Again, in States and the regional language where a three-language formula governs the medium of instruction (English, Hindi), it is mixed class of students opting for one of the three media, the teacher has to alternate between English, Hindi and the mother-tongue in the same breath. His lecture is a curious mixture of terms and phrases which alternate, change their meaning and sense, and occasionally border on confusion. However, since the job is to be done, it is done.

Since courses of study presuppose books prescribed for study and this is done by respective Boards of study in different subjects, extra-academic considerations are often made for continuation of books written by favourites over periods as long as seven years. This, indeed, is a boom for the classroom lecturer because they can articulate themselves without much preparation, term after term, and year after year. "The teachers' own admissions in this respect strengthen the viewpoint that the level of undergraduate education and the manner in which instruction is organised make for stagnation of teachers. Seventy-two per cent out of 171 teachers interviewed for this study said it was

not necessary to read much in order to teach at the first year. Forty-eight per cent thought it was not necessary to read even for teaching at the senior B.A. or B.Sc. level."

It is in this context that the Report of the Education Commission (1946-66) spoke of the deplorable state in the realm of formal education in this country. It said that the existing situation in higher education during the academic year broadly alternates between slackness and strain-slackness during the session, strain at the time of examinations. In many of the weaker colleges and universities, a majority of teachers teach mechanically and listlessly. The subjects in which they lecture do not often involve their intellectual passion. They do not usually have a part in the formulation of the syllabus which they are required to teach, nor do they make - with a few exceptions - experiments in methods of teaching. There is little enthusiasm for learning or discovery of new truths because research is not considered an integral part of their duties, and whatever research is done is usually of unconvincing quality. In the absence of a 'research impregnated' atmosphere, even the intellectually ambitious younger members of the staff are soon caught up in the general atmosphere of indifference or cynicism. A large proportion of teachers find physical conditions unbearable.

In some of the institutions there are additional factors which are uncongenial for development of intellectual vitality. The hierarchical concentration of authority within the departments and colleges, the atmosphere of distrust between senior teachers and junior teachers, the cynicism, about administrative authorities, the unseemly conflicts about offices and positions and the attitude of envy towards persons of superior attainments - all have contributed to the deadening of the spirit of intellectual curiosity and adventure. Some of the members are diverted from intellectual concerns into intrigue and conflict over small administrative or financial prizes afforded by the Indian academic life. On top of all this, the bureaucratic structure within which teaching and research have to go hand in hand, the dependence on the approval of indifferent superiors, the elaborate procedure through which things have to go to become available to the aspirant for research or writing, have had a depressing effect on the morale of teachers and on the quality and quantity of their creative and meaningful academic work.

What is true of teachers is equally true of students. Not that they do not want to work. There are among those who do work in spite of the constraints and handicaps on account of indifferent and bad teachers. But many students come from comparatively or entirely uneducated homes and are ill-prepared at the secondary level to undertake genuine university work; they have little experience of independent study; their curiosity is unquicken and learning for them is mainly a matter of mechanical memorization. There is, as a rule, little discussion of intellectual matters with their teachers or fellow students; their main duty is considered to be able to attend dull lectures usually given in a language which they understand inadequately. When the medium is an Indian language, there is dearth of suitable textbooks and supplementary literature necessary to achieve competence in their subjects. Many of them cannot be expected to read textbooks in English because it has not become for them the language of the library. The capacities of better students are not fully stretched by curricular offering or the stimulus which

inspiring teachers could provide. In addition, a large majority of students are beset with financial worries which make concentration on academic work difficult.

The governance of most Indian universities is reverely out of date and in need of revision. Yet, practically nothing has been done to modernize the ways in which universities are administered. Simple matters of bureaucratic inefficiency and rather rigid hierarchical structure add to student frustrations as well as hinder improvement in higher education.

The failure of the formal system of education is again apparent when one looks at the examination results. In spite of large scale use of unfair means, the average percentage of 'pass' students remains negligibly low. There have been cases of this percentage remaining as low as 12 in some university examinations. Of the use of unfair means, suffice it to say that a university in the North put on 'trial' as many as 9,421 students (both belonging to the campus and to the affiliated colleges) and 'convicted' 35 per cent of them by debarring them from any university examination for two to three years !

This may seem an exaggerated picture of a situation which is indeed dismal, but to the optimists it still seems capable of salvation. However, those of us who have known college and university situation at first hand can say it with some amount of responsibility that picture is true. Taken all in all, the ideal of academic excellence is confined to a microscopic minority of teachers and students in the formal system of higher education in India who have to keep it alive against the downward pressure of discouraging circumstances. This situation has been in existence for a long time. In fact, for the past fifty years situation has deteriorated progressively. The problem indeed is old. What is new is the magnitude of the problem and its accentuation as a result of extraordinarily rapid expansion of higher education and the development of new expectations in the post-independence era. In the past the need for a better, more effective education was not felt so keenly because, so long as India did not supply the higher cadres of its own ruling class - or did so to a limited extent - the efficiency and effectiveness of its intelligentsia was of secondary importance from the point of view of the tasks it was expected to perform. Now that the responsibility for the progress of the country squarely rests on us, we cannot afford to plead any alibis.

The traditional method has failed - and has failed miserably. The system has suffered from an incapacity to generate a compelling tradition of intellectual work of its own. In a certain sense, every university system is to some extent alien to the culture in which it operates - it is more differentiated, more critical, more innovative than its envioning culture. But what has come to stay in India as the traditional system of education in colleges and universities has failed not only in differentiating itself from the envioning cultural traditions and in generating its own traditions - institutional, professional and disciplinary - but also because it has not risen to the other pinnacle, the goal of the service of the community by merging itself with the community's aspirations. So, it has neither served in an egalitarian way nor in the old egalitarian way in which the universities have functioned in the past.

However, it would be wrong to assume that all is lost. The system of higher education in India even now has sound and strong legs to stand on. A transplant in India of a model which was once upon a time good enough for Europe, this over-formalised system has outlived its utility in India. There is no doubt that the British Government in India in the nineteenth century needed native support in running its administration, judiciary, communications and for the diffusion of information chiefly for propaganda and dissemination of knowledge about the European way of life.

Narrow as the motives were, the results were indeed very fruitful. Within four decades of the founding of first universities in India, not only a small number of outstanding Indian scientists and scholars produced but also, strictly from the British point of view, a class of 'educated Indians' came into being. This class could be looked upon as the stable and strong backbone of the raj. Westernised in its outlook, dress, speech and style of living, this elitist group indeed served the purpose for which, purely for historical and imperialistic reasons, it was helped in its birth.

When we achieved our independence, the need for a new educational system was often and forcefully stated by the national leadership. Pandit Jawaharlal Nehru, as back as 1948, while opening an educational conference, said : "Whenever conferences were held in the past to form a plan for education in India, the tendency as a rule was to maintain the existing system with slight modifications. This must not happen now. Great changes have taken place in the country and the educational system must keep pace with them. The entire basis of educational system must be revolutionised." Nehru himself was a thinker, not a doer. Nothing indeed happened in the intervening years. J.P. Naik, wrote in 1965 : "What has happened is merely an expansion of the earlier system with a few marginal changes in content and technique." Again : "In short, while we have talked of 'revolutionary changes', we have practised only a 'moderate reformisms'...."

The Report of the Education Commission (1964-66) of which Dr. J.P. Naik was the Member-Secretary, concurred with his appraisal : "Indian education needs a drastic reduction, almost a revolution... Tinkering with the existing situation, and moving forward with faltering steps and lack of faith can make things worse than before." Further : "We must either build a sound, balanced, effective and imaginative educational system to meet our developing needs and respond to our challenging aspirations or be content to be swept aside by the strong currents of history".

In the 68th year of our freedom it looks rather strange that we are hugging a system which by and large has not only outlived its utility but has become obsolete, if not in its fundamental essentials then at least in its application. Not that we have not experimented with other models in the past. Indeed noisy tinkering and hammer-hitting has been going on all along the line from primary to higher education all the time. But the capacity of our traditional system to resist or contain change has been impressively demonstrated in recent years.

What we thought of 'basic education' and what we did with it is ample illustration of our flattery of a cause and our apathy to its application. The way it was accepted as the

panacea for all ills was in itself academic dishonesty on the part of those who paid lip service to it, but further along the line the way it was given an indecent burial by state governments which had earlier found in it an 'educational leap' which would take India fifty years ahead, is something of a nauseating story. Even the mild-mannered Dr. Zakir Husain, the chief formulator of the system, had to denounce it as a "fraud" on the government and the students. The quip went round in Bihar that "Basic education is good - for children of other parents !"

High-ups even in the field of education who attended seminars and symposia and eulogized Dr. Zakir Husain's enthusiasm and Dr. K.L. Shrimali's dynamism in this Gandhian approach to education sent their own children to public schools and expected poor men's children to give it a trial run in ill-equipped schools. Educational hypocrisy indeed reached such a pass that even the oft-repeated proverb that an oft-repeated lie convinces the lie-teller of its truth could not apply to the case. Now that Basic Education has had an inglorious burial and except some institutions which still invoke the name of Mahatma Gandhi and keep the system going, the rest have been steamrolled into giving it up.

Yet another sad example can be drawn from the chequered history of 'rural institutions'. On the recommendations of a Rural Higher Education Committee appointed in 1954, the Central Government appointed a National Council for Higher Education in Rural Areas in 1956. Its job was to advise the government in matters which concerned the problem of taking higher education to the doorstep of Indian ruralities. Consequently, 14 institutions, one each in the states of West Bengal, Bihar, Rajasthan, Delhi, U.P., Gujarat, Madhya Pradesh, Mysore and Kerala, and two each in the States of Tamil Nadu (then Madras) and Maharashtra were established.

Five of these institutes were affiliated to neighbouring universities without loss of time. The other were likely to be affiliated with universities in their own area. Three more institutions were added in due course of time. Today, a half century later, except for two or three institutes which still keep afloat, others have 'bartered away their autonomy, their distinct identity and mission'. Some of them have just closed down. The Government on its part has chosen to remain a silent spectator and has not cared to find what went wrong with a good idea.

This is what has happened to the two 'pious' experiments which gave a much-needed practical bias to education in India. One was designed to inculcate the spirit of 'swadeshi' and teach the student the love of physical labour by learning local art and crafts, the other was designed to take the benefits of higher education to the countryside. Both floundered in the straits of implementation mainly because those who swore by them had no ideological commitment and wanted only to please the distinguished authors of the schemes - Dr. Zakir Hussain and Dr. Radhakrishnan. It would indeed be rather naive to take the new enthusiasm for non-formal education as something genuine and inspired by a genuine ideological consideration. The innovative programmes in the past have gone down the drain without any one remaining behind to mourn their loss. Whether or not

non-formal education will go the way 'basic education' and 'rural institutions' have gone, only time will show.

It will be good to have a look at what steps should be taken to tackle the present situation and a remedial course of treatment.

The first and the most important step would be to abandon our exclusive reliance on the traditional system of formal education and to move in the direction of providing life-long education for all for creating a learning society. From this point of view

- education should cease to be considered as a one-shot affair meant for children and youth;
- all the three channels of education - full-time, part-time, and own-time - should be developed in every stage and in every sector of education and given equal status;
- education should cease to be looked upon as a school process : it should be a social process covering all learning that takes place, whether in or outside the schools;
- education should also cease to be the delegated responsibility of a profession and should become the direct social responsibility in which every individual is involved, both as a teacher and as a student;
- the right to learn should be assured to every individual, without any discrimination and with full equality of opportunity, and the individual learner should also receive all the support and facilities necessary for its effective exercise throughout life; and
- the non-formal sector which has been neglected in the past should be developed and blended with the formal sector in an integrated fashion to create a new system of education which will have the advantages of both the sectors and also eliminate the weaknesses which arise when these sectors are developed in isolation.

The World Institution Building Programme (WIBP) has prepared more than 2500 instructional text books for the Bachelor's and Master's Degrees besides designing 2100 skill based courses for generating employment in India. Between 1974 and 2015 i.e. during the past 41 years, WIBP has done everything for strengthening the cause of distance, open and virtual education.

It was because of the untiring efforts of the WIBP that The Global Open University Nagaland was established under the State Legislation of the Government of Nagaland under the provisions of The Global Open University Nagaland Act 2006. It was for the first time in the country that the list of the courses to be launched by this University were included in the legislation.

Chapter 57

SCHEDULE OF ACADEMIC AND RESEARCH PROGRAMMES DEVELOPED BY THE CONFEDERATION OF INDIAN UNIVERSITIES

1. Faculty of Environmental Sciences

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature / Doctor of Science Emphasis: Ecology and Environment, Disaster Mitigation, Sustainable Development, Ecological Philosophy, Ecological Tourism, Bio-Informatics, Ornithology.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis: Ecology and Environment, Disaster Mitigation, Sustainable Development, Ecological Philosophy, Ecological Tourism, Bio-Informatics, Ornithology.
3.	M.Sc. / MA	Master of Science / Master of Arts (by research / distance learning / full time / part time / summer sequential prog). Areas of Specialisation : Ecology and Environment Disaster Management Sustainable Development Pollution Control Environmental Education Eco-Philosophy Eco-Tourism Environment Communication Ornithology Political Ecology
4.	B.Sc. / BA	Bachelor of Science / Bachelor of Arts (by distance learning / full time / part time). Areas of Specialisation : Ecology and Environment Disaster Management Sustainable Development Pollution Control Environmental Education Eco-Philosophy Eco-Tourism Environment Communication Ornithology
5.	PG Diploma / Diploma	Post Graduate Diploma (full time / part time / distance) Diploma (full time / part time / distance)

Areas of Specialisation :

Environmental Technologies
 Green Management
 Environmental Impact Assessment
 Pollution Monitoring and Control
 Environmental Laws

6. Certificate Certificate Courses (full time / part time / distance)

Areas of Specialisation :

Social Forestry

2. Faculty of Social Sciences

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature Emphasis : Human Rights, Duties Education, Conflict Resolution, Counselling, Peace Studies, Gandhian Studies, International Relations.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Human Rights, Duties Education, Conflict Resolution, Counselling, Peace Studies, Gandhian Studies, International Relations.
3.	M.Sc. / MA	Master of Science / Master of Arts (by distance learning / full time / part time / summer sequential prog). Areas of Specialisation : Human Rights Gandhian Studies / Thought Ambedkar Thought Heritage Management Criminology and Forensic Science Developmental Studies Prayojanmulak Hindi Police Administration Rural Development Entrepreneurship Development Child Care and Development Women's Studies Public Administration Archaeology Cartography Asian Civilisation African Civilisation American Civilisation European Civilisation World Civilisation Nehruvian Thought Intellectual Property Rights South Asian Studies

		West Asian Studies South East Asian Studies Central Asian Studies Asian Studies Canadian Studies Japanese Studies
4.	MSW	Master of Social Work
5.	B.Sc. / BA	Bachelor of Science / Bachelor of Arts (by distance learning / full time / part time). Areas of Specialisation : Human Rights Gandhian Studies / Thought Ambedkar Thought Heritage Management Criminology and Forensic Science Developmental Studies Prayojanmulak Hindi Police Administration Rural Development Entrepreneurship Development Child Care and Development Women's Studies
6.	BSW	Bachelor of Social Work
7.	PG Diploma / Diploma	Post Graduate Diploma (full time / part time / distance) Diploma (full time / part time / distance) Areas of Specialisation : Consumer Protection and Consumerism NGO Management Cosmetology Correctional Administration Development Administration
8.	Certificate	Certificate Courses (full time / part time / distance) Areas of Specialisation : Sports Journalism Sports Management Gender Justice

3. Faculty of Information Technology

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature / Doctor of Science Emphasis : Computer Science, Information Technology, Computer Applications, Information Science, Electronics and Telecommunication, Software Systems, Software Engg.

- | | | |
|----|----------------------|---|
| 2. | M.Phil | Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme).
Emphasis : Computer Science, Information Technology, Computer Applications, Information Science, Electronics and Telecommunication, Software Systems, Software Engg. |
| 3. | M.Sc. / MCA | Master of Science / Master of Arts (by distance learning / full time / part time / summer sequential prog).
Areas of Specialisation :
Master of Science (Information Technology)
Master of Science (Computer Sciences)
Master of Science (Software Engineering)
Master of Computer Applications |
| 4. | BCA / B.Sc. | Bachelor of Science / Bachelor of Arts (by distance learning / full time / part time).
Areas of Specialisation :
Bachelor of Computer Application
Bachelor of Science (Information Technology)
Bachelor of Science (Computer Sciences)
Bachelor of Science (Software Engineering) |
| 5. | PG Diploma / Diploma | Post Graduate Diploma (full time / part time / distance)
Diploma (full time / part time / distance)
Areas of Specialisation :
Information Technology
Computer Techniques and Informatics
Systems Analysis and Design
Database Management Systems
Database Administration
Web-Design and Management |
| 6. | Certificate | Certificate Courses (full time / part time / distance)
Areas of Specialisation :
Date Communication and Networking
C Language, C++
Visual Basic
JAVA |

4. Faculty of Management Studies

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature / Doctor of Science Emphasis : Management, Administration, Development, HRD, Entrepreneurship, Organisational Behaviour, Commerce, Marketing, Finance, Foreign Trade, Materials Management, Industrial Management, Bank Mgt.

2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Management, Administration, Development, HRD, Entrepreneurship, Organisational Behaviour, Commerce, Marketing, Finance, Foreign Trade, Materials Management, Industrial Management, Bank Mgt.
3.	MBA	Master of Business Administration (by distance learning / full time / part time / summer sequential prog). Areas of Specialisation : HRD, International Business, Marketing Management, Information Technology, Financial Management, Health Care and Hospital Administration, Rural Management, Cooperative Management, Insurance Mgt., Bank Mgt.
4.	MIB	Master of International Business
5.	MIns.B	Master of Insurance Business
6.	MFC	Master of Finance and Control
7.	MBE	Master of Business Economics
8.	M.Com	Master of Commerce
9.	MHRD	Master of Human Resource Development
10.	MHA	Master of Hospital Administration
11.	MTA	Master of Tourism Administration
12.	M.Sc. (Hotel Mgt.)	Master of Science (Hotel Management)
13.	BBA	Bachelor of Business Administration (by distance learning / full time / part time). Areas of Specialisation : HRD, HRM, Entrepreneurship, Insurance, Rural Marketing, Finance, Advertising, Tourism, Small Business Management, Bank Management.
14.	BHMCT	Bachelor of Hotel Management and Catering Technology
15.	BCAM	Bachelor of Computer Aided Management (full time / part time / distance) Areas of Specialisation : Computer Assisted Management, Software Systems and Management, Information Systems and Management, Computers Inn Management, e-Governance, Office Automation, Management Audit, Government in Business, Multinational and Transnational Corporations, Export Management, Financial Management, HRD.

16. PG Diploma / Diploma Post Graduate Diploma (full time / part time / distance)
Diploma (full time / part time / distance)
- Areas of Specialisation :**
Agricultural Marketing, Pharmaceutical Marketing, Export Marketing, Sales Management, Marketing Research, Public Relations Management, HRN, Insurance Management, Cooperative Management, Financial Analysis, e-Commerce.
17. Certificate Certificate Courses (full time / part time / distance)
- Areas of Specialisation :**
Business Process Outsourcing, Investment Analysis, Production Management, Supply Chain Management.

5. Faculty of Interfaith Studies

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. / Th.D / DD (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature / Doctor of Science / Doctor of Theology / Doctor of Divinity Emphasis : Inter-Religious Studies, Theological Studies, Divinity, Religion and Culture, Hinduism, Buddhism, Jainism, Islam, Christianity, Bahaism, Sikhism.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Inter-Religious Studies, Theological Studies, Divinity, Religion and Culture, Hinduism, Buddhism, Jainism, Islam, Christianity, Bahaism, Sikhism.
3.	MA	Master of Arts (by distance learning / full time / part time). Areas of Specialisation : Interfaith Vedic Studies Comparative Religion World Civilization Theology.
4.	BA	Bachelor of Arts (by distance learning / full time/part time). Areas of Specialisation : Eco-philosophy and Eco-dharma Inter-Religious Studies Theology
5.	PG Diploma / Diploma	Post Graduate Diploma (full time / part time / distance) Diploma (full time / part time / distance) Areas of Specialisation :

Vedanta Philosophy
Vedic Philosophy
Ancient Indian Culture
Christianity
Hinduism
Buddhism
Jainism
Bahaism
Zoroastrian
Sikhism
Confucians

6. Certificate
- Certificate Courses (full time / part time / distance)
Areas of Specialisation :
Christianity
Hinduism
Buddhism
Jainism
Bahaism
Zoroastrian
Sikhism
Confucians

6. Faculty of Engineering and Technology

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No. Abbreviation of the Degrees

1. Ph.D / D.Litt. / D.Sc.
(Full Time / Part Time /
External / Integrated)

Explanation of the Degrees

Doctor of Philosophy / Doctor of Literature /
Doctor of Science Emphasis : Engineering and
Technology, Architecture, Civil, Construction, Electrical,
Electronics, Environmental, Mechanical, Computer,
Information Sciences, Bio-Technology, Bio-Informatics, Bio-
Engineering, Chemical, Aeronautical, Dairy Technology,
Genetics, Leather, Marine, Paper and Pulp Technology,
Rubber, Textile, Polymer, Plastic, Petroleum, Oil Technology,
Software Engineering, Fuel Engineering, Metallurgical
Engineering, Mining Engineering, Nuclear Engineering /
Technology, Sugar Engineering and Technology, Quality
Engineering.

2. M.Phil

Master of Philosophy (by research / distance learning / part
time / full time / summer sequential programme).
Emphasis : Engineering and Technology, Architecture,
Civil, Construction, Electrical, Electronics, Environmental,
Mechanical, Computer, Information Sciences, Bio-Technology,
Bio-Informatics, Bio-Engineering, Chemical, Aeronautical,
Dairy Technology, Genetics, Leather, Marine, Paper and Pulp
Technology, Rubber, Textile, Polymer, Plastic, Petroleum, Oil
Technology, Software Engineering, Fuel Engineering,
Metallurgical Engineering, Mining Engineering, Nuclear
Engineering / Technology, Sugar Engineering and
Technology, Quality Engineering.

3. M.Tech / ME / M.Sc Engg. / M.Arch.
- Master of Technology / Master of Engineering / Master of Science (Engineering) / Master of Architecture (by full time / part time / DLP).
- Areas of Specialisation :**
- Engineering and Technology
 Architecture,
 Civil Engineering / Construction Engineering
 Electrical and / Electronics / Telecommunication Engg.
 Environmental Engineering
 Mechanical Engineering
 Computer / Information Sciences and Engineering
 Bio-Technology
 Bio-Informatics
 Bio-Engineering
 Chemical Engineering
 Aeronautical Engineering
 Dairy Technology
 Genetics
 Leather Technology
 Printing Technology
 Marine Engineering
 Paper and Pulp Technology
 Rubber Technology
 Textile Technology
 Polymer Engineering
 Plastic Engineering
 Petroleum Engineering
 Oil Technology
 Software Engineering
 Fuel Engineering
 Metallurgical Engineering
 Mining Engineering
 Nuclear Engineering / Technology
 Sugar Engineering and Technology
 Quality Engineering.
4. B.Tech / BE / B.Sc Engg.
- Bachelor of Technology, Bachelor of Engineering, Bachelor of Science Engineering (by distance learning / full time / part time).
- Areas of Specialisation :**
- Aeronautical Engineering
 Agricultural Engineering
 Architecture Engineering
 Automobile Engineering
 Bio-Medical Engineering
 Bio-Technology
 Chemical Engineering
 Civil Engineering
 Computer Engineering
 Dairy Technology
 Electronics and Telecommunication Engineering
 Energy Engineering
 Environmental Engineering

Fire Engineering
 Geo-Informatics
 Marine Engineering
 Pulp and Paper Technology
 Information Technology
 Mining Engineering
 Petroleum Engineering
 Production / Industrial Engineering
 Sugar Technology
 Textile Technology

5. PG Diploma / Diploma

Post Graduate Diploma (full time / part time / distance)
 Diploma (full time / part time / distance)

Areas of Specialisation :

Environment Friendly Architecture

Landscaping
 Regional Planning
 Transportation Engineering
 Automobile Engineering
 Earthquake Engineering
 Drilling Engineering
 Fermentation Technology
 Food Science and Technology
 Remote Sensing
 Geo-Informatics
 Hill Area Development
 Maintenance Engineering
 Embedded Technology

6. Certificate

Certificate Courses (full time / part time / distance)

Areas of Specialisation :

Geographical Information System
 Hydrology
 Internet and Website Management
 Jewellery Design and Manufacturing

7. **Faculty of Oriental Medicine**

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No. Abbreviation of the Degrees

Explanation of the Degrees

1. Ph.D / D.Litt. / D.Sc.
 (Full Time / Part Time /
 External / Integrated)

Doctor of Philosophy / Doctor of Literature /
 Doctor of Science
 Emphasis : Naturopathy, Ayurveda, Yoga, Unani, Siddha,
 Indian Systems of Medicine,
 Homeopathy, Alternative Complementary,
 Polypathic, Integrated and Energetic Medicine.

2. M.Phil

Master of Philosophy (by research / distance learning / part
 time / full time / summer sequential programme).
 Emphasis : Naturopathy, Ayurveda, Yoga, Unani, Siddha,
 Indian Systems of Medicine, Homeopathy, Alternative

- Complementary, Polypathic, Integrated and Energetic Medicine.
3. M.Sc
Master of Science (by full time / part time / DLP).
Areas of Specialisation :
Naturopathy, Ayurveda, Yoga, Unani, Siddha, Indian Systems of Medicine, Homeopathy, Alternative Complementary, Polypathic, Integrated and Energetic Medicine.
 4. MD
Doctor of Medicine
Ayurveda
Homeopathy
Naturopathy
 5. B.Sc.
Bachelor of Science (by distance learning / full time / part time).
Areas of Specialisation :
Naturopathy
Yogic Sciences
Ayurveda
Unani
 6. BAMS
Bachelor of Ayurvedic Medicine and Surgery
 7. PG Diploma / Diploma
Post Graduate Diploma (full time / part time / distance)
Diploma (full time / part time / distance)
Areas of Specialisation :
Absent Healing, Acupressure, Acupuncture, Agnihotra, Akabane, Alexander Technique (Better Posture), Aerial Therapy, Anthrosophical Medicine, Aromatherapy, Art Therapy, Astropathy, Aura Therapy, Auricular Therapy, Autogenic Training, Autosuggestion, Aversion Therapy, Ayurveda, Bach Remedies, Bates Method (Improving Eyesight), Behavioural Therapy, Biochemic, Bioenergetics Therapy, Biofeedback, Biorhythms, Bio-Transmission, Brahmini Chikitsa, Chandsi Chikitsa, Charismatic Healing (Prayer), Chiropractic (Pain Relieving), Cognitive Therapy, Colour Therapy, Cell Therapy, Copper Therapy, Co-Counselling, Cranial Osteopathy, Cupping, Cymatics, Cromopathy, Colonic Irrigation, Conybio FIR (Ear Infra Red), Dance Movement Therapy, Diet Therapy, Doctrine of Signatures, Douching, Dowsing, Electro Therapy, Electro-Convulsive Therapy, Eurhythmy, Erotic Healing, Electro Homeopathy, Ecological Medicine, Energetic Medicine, Faith Healing, Fasting, Feldenkrais Method, Feng-Shui, Floatation Therapy, Fluoridation, Folk Medicine, Fruits and Vegetable Therapy, Fired Therapy, Galacto Therapy, Gem Essence Therapy, Gestalt Therapy, Hair Transmission Therapy, Hellerwork, Herbal Medicine, Homeopathy, Humanistic Psychology, Hydro Therapy, Hypno Therapy, Harpatopathy, Helio Therapy, Holistic Medicine, Hilarious Laughter Therapy, Immunopathy, Inhalation Therapy, Iridology, Inner and Self Healing, Ionisation Therapy, Jogging, J J Dechane's Harbo Mineral Therapy, Kinesiology, Kirlian Photography,

Keni's Charismatic Karishma, Laughing, Liquorice, Light Therapy, Manipulative Therapy, Meditation, Megavitamin Therapy, Magneto Therapy, Mesmerism, Metamorphic Technique, Melos's Medicare, Miasm Theory, Moxibustion, Mud Therapy, Music Therapy, Massage Therapy, Naturopathy, Nyasa Healing, Orgone Therapy, Orthomolecular Medicine, Osteopathy l Skull Osteopathy, Polarity Therapy, Primal Therapy, Psionic Medicine, Poison Therapy, Positive Thinking Therapy, Psycho Therapy, Pyramid Power, Radio Therapy, Rakchhashi Chikitsa (Therapy), Reflexology, Reichian Therapy, Reiki, Rogerian Therapy, Rolfing, Sauna Bath, Sex Therapy, Shiatsu, Shruti Chikitsa, Silva Method, Somatography, Sound Therapy, Spas, Spiritual Healing, Stool Therapy, Sleep Therapy, Surgery, Sun Therapy, Tai-Chi-Chuan (Meditation in Motion), Theatre Therapy, Transmission Therapy, Turkish Bath, Thalassotherapy, Tanra Mantra Yantra Therapy, Tibetan Medicine, Transactional Therapy Touch Therapy, Urine Therapy, Unani or Tibbi Hikmat, Ultrasound Therapy, Visualisation Therapy, Voice Therapy, Vibration Therapy, Yoga, Zen/Zen Garden (Buddhist Path to Self-discovery), Zone Therapy.

8. Certificate

Certificate Courses (full time / part time / distance)

Areas of Specialisation :

Reiki, Rogerian Therapy, Rolfing, Sauna Bath, Sex Therapy, Shiatsu, Shruti Chikitsa, Silva Method, Somatography, Sound Therapy, Spas, Spiritual Healing, Stool Therapy, Sleep Therapy, Surgery, Sun Therapy, Tai-Chi-Chuan (Meditation in Motion), Theatre Therapy, Transmission Therapy, Turkish Bath, Thalassotherapy, Tanra Mantra Yantra Therapy, Tibetan Medicine, Transactional Therapy Touch Therapy, Urine Therapy, Unani or Tibbi Hikmat, Ultrasound Therapy, Visualisation Therapy, Voice Therapy, Zone Therapy

8. Faculty of Modern Medicine

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Science Emphasis : Medicine, Surgery, Dental Science, Hospital Administration.
2.	MD / MS / M.Sc.	Doctor of Medicine / Master of Surgery / Master of Science Emphasis : Anaesthesiology, Anatomy, Ayurved/Siddha, Bacteriology, Biochemistry, Biophysics, Blood Transfusion, Cardiology, Child Health Ophthalmology, Community Health Admn., Community Medicine, Dermatology (including Leprosy and Venereal Diseases), Dermatology and Venereology, ENT, Family Medicine, Forensic Medicine and Toxicology, General Medicine, General Med. and Therapeutics, Goriatric Medicine, General Surgery,

Homoeopathy, Hospital Admn., Human Physiology, Leprosy, Medical General Surgery, Medicine and Therapeutics, Microbiology, Microbiology (Physical), Midwifery, Midwifery and Gynae, Neurology, Nuclear Medicine, Obstetrics and Gynaecology and Diseases of New Born, Obstertrics and Gynaecology, Occupational Health, Otorhinotaryngology, Ophthalmology, Orthopaedics, Paediatrics, Pathology, Pathology and Bacteriology, Pharmacology, Physical Medicine and Rehabilitation, Pharmacology and Therapeutics, Physiology, Preventive and Social Medicine, Psychiatry, Psychological Medicine, Radio Diagnosis, Radiology, Radiopathy, Radio Therapy, Siddha, Skin and VD, Skin Diseases, Surgery, Transfusion Medicine, Tropical Medicine, Tuberculosis Tuberculosis and Chest Diseases, Tuberculosis and Respiratory Diseases, Unani, Venereology, Venereology and Leprosy, MD (Ay), MDs, MHA/MHM, MOth., MPharm, MPharm (Ay), Master of Public Health (MPH), Master of Physiotherapy (MPT)

3. Graduate
MBBS
BDS
B.Pharm

9. Faculty of Paramedical Studies

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Science Emphasis : Physiotherapy, Occupational Therapy, Radiology and Imaging Technology, Medical Laboratory Technology, Ophthalmology, Hospital Administration.
2.	MD / M.Sc.	Doctor of Medicine / Master of Science Emphasis : Anatomy, Applied Nutrition, Audiology and Speech Therapy, Bacterial, Biochem, Bio-Physics, Biostat, Biochem Clinical, Biotech, Communication, Dental Materials, Drug Assay, Embryology and Histology, Epidemiology, Genetics, Helminthology, Hospital Admn., Human Anatomy, Human Physiology, Medical Biotech, Medical Entomology, Medical Software, Medical Tech, Medical Biochem, Medicinal Plants, Medicine, Medical Lab Tech, Microbiol, Nursing, Occupational Therapy, Pathology, Pharmacology, Physical Therapy, Physiology, Psychiatric Nursing, Radiational Phy, Speech & Hearing, Sports Physiotherapy, Occupational Therapy, Optometry, Radiology.
3.	Graduate BMLT BMR BMRT BMRSc BNMT	

BNYS
 BOptomtry (Clinical)
 BOrth
 BPharm
 BSc/PT,OT/BPT/Physio/BOT
 BSc (Audiology & Speech Therapy)
 Rehabilitation
 BRTT
 BSLH
 BSc

Anaesthesia, Applied Audiology & Speech Rehabilitation, Ophthalmic Techniques, Physical Therapies, Allied Health Sciences, Anatomy, Biochem, Hearing & Speech, Hospital Admn, Human Biology, Medical Microbiol, Med. Tech. In Radiography, Paramedical, Medical Lab Tech, Medical Tech., Medical Tech. Radiotherapy, Medical Radiology, Nursing, Occupational Therapy /Physiotherapy, Operational Theatre Tech, Physician Asstt, Prosthetics & Orthotics.

10. Faculty of Law

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / LL.D (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature / Doctor of Laws Emphasis : Constitution and Administration Law, Labour Laws, Public Law and Governance, Human Rights Laws, Income Tax Laws, IPR Laws, Corporate Laws, Environmental Law, International Law.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Constitutional and Administrative Law, Labour Laws, Public Law and Governance, Human Rights Laws, Income Tax Laws, IPR Laws, Corporate Laws, Environmental Law, International Law.
3.	LLM	Master's Degree Master of Laws (by full time / part time / DLP).
4.	MBA, LLM	Master of Business Administration, Integrated with Master of Laws (by distance learning / full time / part time).
5.	LL.B	Bachelor's Degree Bachelor of Laws
6.	BA, LL.B	Bachelor of Arts integrated with Bachelor of Laws
7.	B.Sc., LL.B	Bachelor of Science integrated with Bachelor of Laws
8.	BBA, LL.B	Bachelor of Business Administration integrated with Bachelor of Laws.

9. PG Diploma / Diploma Post Graduate Diploma (full time / part time / distance)
Diploma (full time / part time / distance)
Areas of Specialisation :
Administrative Law, Environmental Law, Corporate Law, Constitutional Law, Tax Laws, Human Rights Law, Intellectual Property Law, Constitutional Law, Industrial Law, Business Laws, Labour Laws.

11. Faculty of Education

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature/ Doctor of Science Emphasis : Educational Planning and Administration, Physical Education, Educational Technology, Guidance and Counselling, Special Education, Sports Education, Vocational Education, Elementary Education, Pre-Nursery and Kindergarten Education, Child Education, Secondary Education, Technical Education, Yogic Education.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Educational Planning and Administration, Physical Education, Educational Technology, Guidance and Counselling, Special Education, Sports Education, Vocational Education, Elementary Education, Pre-Nursery and Kindergarten Education, Child Education, Secondary Education, Technical Education, Yogic Education.
3.	M.Ed	Master of Education (by full time / part time / DLP).
4.	MA (Edu.Planning & Admn.)	Master of Arts (Educational Planning & Administration) (by full time / part time / DLP).
5.	MPed	Master of Physical Education (by full time / part time / DLP).
6.	MSportsEd.	Master of Sports Education
7.	MSM	Master of Sports Management
8.	B.Ed	Bachelor of Education (by full time / part time / DLP).
9.	BA, B.Ed	Bachelor of Arts integrated with Bachelor of Education (by full time / part time / DLP).
10.	B.Sc., B.Ed	Bachelor of Science integrated with Bachelor of Education
11.	BBA, B.Ed	Bachelor of Business Administration integrated with Bachelor of Education.

12.	BPEd	Bachelor of Physical Education
13.	BA, BPEd	Bachelor of Arts integrated with Bachelor of Physical Education
14.	B.Sc., BPEd	Bachelor of Science integrated with Bachelor of Physical Education
15.	BBA, BPEd	Bachelor of Business Administration integrated with Bachelor of Physical Education.
16.	B.SportsEd.	Bachelor of Sports Education.

12. Faculty of Media Studies

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature / Doctor of Science Emphasis : Journalism and Mass Communication, News Reading and Broadcasting, Reporting, Public Relations, Corporate Communications, Cyber Journalism, Rural Communication, Technical Writing, Web Journalism, Photo Journalism.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Journalism and Mass Communication, News Reading and Broadcasting, Reporting, Public Relations, Corporate Communications, Cyber Journalism, Rural Communication, Technical Writing, Web Journalism, Photo Journalism.
3.	MA / M.Sc / MJMC / MMedS/ MPR	Master of Arts / Master of Science / Master of Journalism and Mass Communication / Master of Media Studies / Master of Public Relations (by full time / part time / DLP). Areas of Specialisation : Media Studies, Journalism and Mass Communication, Advertising and Public Relations, News Agency Journalism, Broadcast Journalism, Print Media Communication, Electronic Media, Web Media, Cyber Media, Photo Journalism, Acting, Directing, Anchoring, Editing, Production for Electronic Media, TV and Channel Production, Sports Journalism.
4.	BJMC / BA / B.Sc. / BPR / BMedS	Bachelor of Journalism and Mass Communication / Bachelor of Arts / Bachelor of Science / Bachelor of Public Relations / Bachelor of Media Studies (by distance learning / full time / part time).

Areas of Specialisation :

Media Studies, Journalism and Mass Communication, Advertising and Public Relations, News Agency Journalism, Broadcast Journalism, Print Media Communication, Electronic Media, Web Media, Cyber Media, Photo Journalism, Acting, Directing, Anchoring, Editing, Production for Electronic Media, TV and Channel Production, Sports Journalism.

13. Faculty of Dance, Drama and Music

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature Emphasis : Bharatnatyam, Kathak, Dramatics, Folk Music, Indian Classical Dance, Indian Music, Ballet, Kuchipudi Dance, Karnatak Music, Kathakali, Manipuri Dance, Music Appreciation, Mohiniyattam, Odissi Dance, Tabla, Vocal Music, Folklore, Instrumental Music, Performing Arts, Indian Theatre.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Bharatnatyam, Kathak, Dramatics, Folk Music, Indian Classical Dance, Indian Music, Ballet, Kuchipudi Dance, Karnatak Music, Kathakali, Manipuri Dance, Music Appreciation, Mohiniyattam, Odissi Dance, Tabla, Vocal Music, Folklore, Instrumental Music, Performing Arts, Indian Theatre, Ravindra Sangit, Sitar, Stringed Instrument, Flute, Computer Music.
3.	MMus	Master's Degree Master of Music
4.	MDance / MA (Dance)	Master of Dance / Master of Arts (Dance)
5.	Master of Drama/MA (Drama)	Master of Drama / Master of Arts (Drama)
6.	MPA	Master of Performing Arts
7.	BMus.	Bachelor's Degree Bachelor of Music
8.	BPA	Bachelor of Performing Arts
9.	BDance	Bachelor of Dance
10.	BDrama	Bachelor of Drama
11.	BA (Music / Dance / Drama)	Bachelor of Arts (Music / Dance / Drama)

14. Faculty of Fine Arts

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature / Doctor of Science Emphasis : Fine Arts, Painting, Sculpture, Visual Art, Critical Curation, Critical History in Art, Drawing and Painting, Graphic Arts, Interior Design, Plastic Arts, Textile Design, Exhibition Design, Event Management, Pottery.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Fine Arts, Painting, Sculpture, Visual Art, Critical Curation, Critical History in Art, Drawing and Painting, Graphic Arts, Interior Design, Plastic Arts, Textile Design, Exhibition Design, Event Management, Pottery.
3.	MFA	Master's Degree Master of Fine Arts
4.	MA (Fine Arts)	Master of Arts (Fine Arts)

15. Faculty of Fashion Technology and Cosmetology

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature / Doctor of Science Emphasis : Fashion Technology, Fashion Science, Beauty Science, Cosmetology, Cosmetics, Depolluting Technologies for Pollution Control in Textile Manu-facturing, Costume Designing, Jewellery Designing, Accessory Designing, Footwear Designing, Body Building, Beauty Care and Health Services, Gym Management, Fashion Development.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Fashion Technology, Fashion Science, Beauty Science, Cosmetology, Cosmetics, Depolluting Technologies for Pollution Control in Textile Manufacturing, Costume Designing, Jewellery Designing, Accessory Designing, Footwear Designing, Body Building, Beauty Care and Health Services, Gym Management, Fashion

Development, Computer Added Textile Design, Cosmetics and Perfumery Technology.

| 5. | BA / B.Sc. (Cosmetology) | Bachelor of Arts / Bachelor of Science (Cosmetology). |

16. Faculty of Agriculture

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No. Abbreviation of the Degrees

Explanation of the Degrees

- | | | |
|----|--|--|
| 1. | Ph.D / D.Litt. / D.Sc.
(Full Time / Part Time /
External / Integrated) | Doctor of Philosophy / Doctor of Literature /
Doctor of Science
Emphasis : Agricultural Business Management,
Agricultural, Engineering, Agricultural Bio-Technology,
Agricultural Economics, Agricultural Extension, Agricultural
Micro-Biology, Agricultural Meteorology, Agricultural
Statistics, Agricultural Marketing, Agronomy, Animal
Science, Animal Husbandry, Cooperative and Banking, Dairy
Technology, Horticulture, Food Science, Sericulture,
Entomology, Pomology, Fisheries Science, Genetic and Plant
Breeding, Medicinal Plants. |
| 2. | M.Phil | Master of Philosophy (by research / distance learning / part
time / full time / summer sequential programme).
Emphasis : Agricultural Business Management,
Agricultural, Engineering, Agricultural Bio-Technology,
Agricultural Economics, Agricultural Extension, Agricultural
Micro-Biology, Agricultural Meteorology, Agricultural
Statistics, Agricultural Marketing, Agronomy, Animal
Science, Animal Husbandry, Cooperative and Banking, Dairy
Technology, Horticulture, Food Science, Sericulture,
Entomology, Pomology, Fisheries Science, Genetic and Plant
Breeding, Medicinal Plants. |
| 3. | ME / M.Tech (Agri.Engg.) | Master's Degrees
Master of Engineering / Master of Technology (Agricultural
Engineering). |
| 4. | MVSc & AH | Master of Veterinary Science & Animal Husbandry |
| 5. | MFSc | Master of Fisheries Science |

6.	M.Sc	Master of Science with specialisation in Agricultural Business Management, Agricultural, Engineering, Agricultural Bio-Technology, Agricultural Economics, Agricultural Extension, Agricultural Micro-Biology, Agricultural Meteorology, Agricultural Statistics, Agricultural Marketing, Agronomy, Animal Science, Animal Husbandry, Cooperative and Banking, Dairy Technology, Horticulture, Food Science, Sericulture, Entomology, Pomology, Fisheries Science, Genetic and Plant Breeding, Medicinal Plants, Wood Science, Forestry.
7.	B.Tech (Agri.Engg.)	Bachelor's Degrees Bachelor of Technology (Agricultural Engineering).
8.	B.Sc. (Ag)	Bachelor of Science (Agriculture)
9.	BVSc & AH	Bachelor of Veterinary Science and Animal Husbandry
10.	B.Tech (Dairy Tech)	Bachelor of Technology (Dairy Technology)
11.	B.Sc.	Bachelor of Science with specialisation in Agricultural Business Management, Agricultural, Engineering, Agricultural Bio-Technology, Agricultural Economics, Agricultural Extension, Agricultural Micro-Biology, Agricultural Meteorology, Agricultural Statistics, Agricultural Marketing, Agronomy, Animal Science, Animal Husbandry, Cooperative and Banking, Dairy Technology, Horticulture, Food Science, Sericulture, Entomology, Pomology, Fisheries Science, Genetic and Plant Breeding, Wood Science, Forestry.

17. Faculty of Science

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature / Doctor of Science Emphasis : Actuarial Science, Agro-Chemicals and Fertilisers, Applied Nutrition, Astrology, Bio-Statistics, Bio-Technology, Botany, Child Care, Bio-Chemistry, Criminology, Defence Studies, Ecology and Environment, Energy, Floriculture, Food Science, Genetics, Geography, Geology, Geophysics, Home Science, Military Science, Paste Control, Petro Chemicals, Sanitary Science, Hygiene, Climatology, Bio-Informatics, Geo-Informatics, Oceanography, Museum Studies, Seeds Science and Technology, Sports Medicine, Sports Science, Tribal Development, Population Studies.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Actuarial Science, Agro-Chemicals and Fertilisers, Applied Nutrition, Astrology, Bio-Statistics, Bio-Technology, Botany, Child Care, Bio-Chemistry, Criminology, Defence Studies, Ecology and Environment, Energy, Floriculture, Food Science, Genetics, Geography, Geology,

Geophysics, Home Science, Military Science, Paste Control, Petro Chemicals, Sanitary Science, Hygiene, Climatology, Bio-Informatics, Geo-Informatics, Oceanography, Museum Studies, Seeds Science and Technology, Sports Medicine, Sports Science, Tribal Development, Population Studies.

3. M.Sc. Master's Degrees
Master of Science with specialisation in Actuarial Science, Agro-Chemicals and Fertilisers, Applied Nutrition, Astrology, Bio-Statistics, Bio-Technology, Botany, Child Care, Bio-Chemistry, Criminology, Defence Studies, Ecology and Environment, Energy, Floriculture, Food Science, Genetics, Geography, Geology, Geophysics, Home Science, Military Science, Paste Control, Petro Chemicals, Sanitary Science, Hygiene, Climatology, Bio-Informatics, Geo-Informatics, Oceanography, Museum Studies, Seeds Science and Technology, Sports Medicine, Sports Science, Tribal Development, Population Studies, Yogic Science, Wildlife, Toxicology.
4. B.Sc. Bachelor's Degrees
Bachelor of Science with specialisation in Actuarial Science, Agro-Chemicals and Fertilisers, Applied Nutrition, Astrology, Bio-Statistics, Bio-Technology, Botany, Child Care, Bio-Chemistry, Criminology, Defence Studies, Ecology and Environment, Energy, Floriculture, Food Science, Genetics, Geography, Geology, Geophysics, Home Science, Military Science, Paste Control, Petro Chemicals, Sanitary Science, Hygiene, Climatology, Bio-Informatics, Geo-Informatics, Oceanography, Museum Studies, Seeds Science and Technology, Sports Medicine, Sports Science, Tribal Development, Population Studies, Yogic Science, Wildlife, Toxicology.

18. Faculty of Emerging Science and Technology

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature / Doctor of Science Emphasis : Physiognomy, Strategic Studies, Forensic Science, Geographical Information System, Defence Studies, Genetics, Astrology, Futurology, Interior Decoration, Waste Management and Recycling, Tribal Development, Astronomy, Ecological Philosophy, Intellectual Property Rights, Polypathy, Printing and Publishing Science, Yoga and Naturopathy, Depolluting Technologies, Disaster Education, Sustainability, Total Quality Management, Aesthetics.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme).

Emphasis : Physiognomy, Strategic Studies, Forensic Science, Geographical Information System, Defence Studies, Genetics, Astrology, Futurology, Interior Decoration, Waste Management and Recycling, Tribal Development, Astronomy, Ecological Philosophy, Intellectual Property Rights, Polypathy, Printing and Publishing Science, Yoga and Naturopathy, Depolluting Technologies, Disaster Education, Sustainability, Total Quality Management, Aesthetics, Andragogy, Police Administration, Manuscriptology, Armament Technology, Bio-Fertilisers, Bio-Gas Development, Voluntary Action, Furniture Technology, Gem Testing and Art Lapidary, Larynology and Otology, Lexicography, Econography, Nano Technology.

Master's Degrees

3. M.Sc. / M.Tech Master of Science / Master of Technology in the above mentioned subjects and areas. Bachelor's Degrees
4. B.Sc. Bachelor of Science in the above mentioned subjects and areas.

19. Faculty of Language Studies

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature / Doctor of Science Emphasis : Linguistics, English, Spanish, French, Russian, German, Japanese, Arabic, Korean, Burmese, Cantonese, Portuguese, Dutch, Swiss, Swedish, Danish, Greek, Latin, Armenian, Italian, Persian, Syriac, Turkish, Bhasha Indonesia, Bulgarian, Czech, Slovak, Hungarian, Polish, Hebrew, Mongolian, Tibetan, Hindi, Sanskrit, Pali, Prakrit, Ao, Konyak, Angami, Sema, Lotha, Tamil, Telugu, Kannada, Urdu, Punjabi, Sindhi, Assamese, Bengali, Marathi, Oriya, Gujarati, Malayalam, Dogri, Kashmiri, Manipuri, Konkani, Nepali, Bhojpuri, Bodo, Garo, Khasi, Maithili, Mizo, Rajasthani, Santhali.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Linguistics, English, Spanish, French, Russian, German, Japanese, Arabic, Korean, Burmese, Cantonese, Portuguese, Dutch, Swiss, Swedish, Danish, Greek, Latin, Armenian, Italian, Persian, Syriac, Turkish, Bhasha Indonesia, Bulgarian, Czech, Slovak, Hungarian, Polish, Hebrew, Mongolian, Tibetan, Hindi, Sanskrit, Pali, Prakrit, Ao, Konyak, Angami, Seema, Lotha, Tamil, Telugu, Kannada, Urdu, Punjabi, Sindhi, Assamese, Bengali, Marathi, Oriya, Gujarati, Malayalam, Dogri, Kashmiri, Manipuri, Konkani, Nepali, Bhojpuri, Bodo, Garo, Khasi, Maithili, Mizo, Rajasthani, Santhali.

| 3. | MA | Master's Degree
Master of Arts with specialisation in the subjects mentioned above. |
| 4. | Bachelor's Degree
BA | Bachelor of Arts with specialisation in the subjects mentioned above. |
| 5. | PG Dip. / Diploma | Post Graduate Diploma / Diploma in the subjects mentioned above. |

20. Faculty of Library and Information Sciences

The following Post Doctoral, Doctoral, Master's, Bachelor's Degrees, Post Graduate Diplomas / Graduate Diplomas / Under Graduate Diplomas and Certificates will be conducted :

Sl.No.	Abbreviation of the Degrees	Explanation of the Degrees
1.	Ph.D / D.Litt. / D.Sc. (Full Time / Part Time / External / Integrated)	Doctor of Philosophy / Doctor of Literature/ Doctor of Science Emphasis : Library Science, Documentation, Information Science, Cataloguing, Library Management, Books and Periodicals Procurement, Book Reviews, Printing and Publications Research.
2.	M.Phil	Master of Philosophy (by research / distance learning / part time / full time / summer sequential programme). Emphasis : Library Science, Documentation, Information Science, Cataloguing, Library Management, Books and Periodicals Procurement, Book Reviews, Printing and Publications Research.
3.	MLSc / MLISc	Master's Degree Master of Library Science / Master of Library and Information Science
4.	BLSc / BLISc	Bachelor's Degree Bachelor of Library Science / Bachelor of Library and Information Science

CURRENT LIMITATIONS OF THE FACILITIES OF EDUCATION THROUGH DISTANCE LEARNING

The World Institution Building Programme (WIBP) has a wider experience of more than 41 years dedicated towards institutional mechanism in the areas of correspondence courses, open and distance education besides online and web-based virtual education while its subsidiary and associate Commonwealth of Distance Education (CODE) has more than 28 years of experience in designing and implementing need based open and distance learning packages. Based on a joint project commissioned by WIBP and CODE, the following evaluative conclusions have come out for the benefit of policymakers in the field of distance, open, online and virtual education :

1. Correspondence implies that two or more parties are in contact with one another in writing. Consequently correspondence teaching is taken to mean teaching through the printed lessons sent by the teacher to the student in the course of which the student and the teacher are in regular contact with each other.
2. Teaching by correspondence is a natural means of instruction if the instructor and the student are at a distance from each other. This distance is inevitable in the geo-economic context of India. A correspondence or distance educational study programme launched by a university thus fills the large gaps left unabridged by regular courses of study which presuppose the physical presence of the teachers and their students at a given place and time.
3. Correspondence education is not an entirely alien thing grafted on the time-hardened tree of traditional education. In the words of Renee F. Eroads, it can be traced back to Plato whose Epistles are the first concrete instance of teaching through the written word.
4. In the 19th century, the idea of using the genial agency of the post office for teaching European languages was put into active practice by Charles Touissant and Gustav Langenscheidt, a German and a Frenchman. They started a school in Germany for this purpose. In the U.S.A., the earliest pioneer of the Home Study Programme was Dr. William Rainey Harper in the Harvard University who authored the idea of starting a new project in 1892 for using the printed word as the medium of teaching. The project offered 39 different course by correspondence. The first enrolment was a total of 82; 5 students dropped in the very first month. Fourteen years later when Dr. Harper died, the enrolment in 297 different courses had gone up to 1587, and as many as 113 teachers were engaged in teaching by post.

5. By the middle of the twentieth century the experiment of correspondence education transcended the initial experimental stage and became a fundamental part of the educational edifice in the USA, Russia, Sweden, Japan, Australia, Great Britain, Germany and France.
6. Educational structure of the Russia, particularly since 1958, has developed an in-built and yet broad-based programme of correspondence education in addition to a network of evening schools and colleges ranging from secondary to university level and in all sectors of the educational pyramid including technical, specialised and vocational education. The total enrolment in correspondence courses in secondary education was 1,64,000 in 1960 which jumped to 2,00,700 in 1970. The universities and institutions of higher education have stable student population in correspondence courses, and students from as distant places as Siberia join courses offered by universities in Soviet Asian Republics.
7. While major universities have their own departments of correspondence education, there are a large number of institutions exclusively operating correspondence courses. The All Union Correspondence Polytechnical Institute, which provides courses in technical subjects, has a very large enrolment. Even in 1960 about 25 per cent of the student body was studying through correspondence courses or in the evening shifts. The famed Leningrad University in the same year had an enrolment of over 7,000 students for correspondence courses and about 8,000 as day-scholars and resident students. The University of Kiev enrolled over 5,000 for correspondence study programmes out of about 11,000 students enrolled with it.
8. A survey of student population studying through the correspondence medium reveals that seventy percent of the courses thus offered are devoted to teacher training and allied teaching skills. Tens of thousands of teachers working in Russian schools are the alumni of correspondence courses and evening institutions. Besides, there is a network of - what has been called - "accelerated courses", "condensed courses" and the projects of the "School of the Prolonged Day."
9. Today, teaching by correspondence has become an accepted thing. It has obtained for itself a position of power and prestige in the educational realm of the world. There have been thirtyfive international conferences on correspondence education conducted by the International Council on Correspondence Education (I.C.C.E.) between 1938 and 1976. The success of correspondence education has silenced even its critics, and according to W.R. Young, since 1934, the teaching by correspondence has "become generally accepted in a great many countries of the world."
10. The scene as it obtains at present in U.K. is as optimistic as in USSR or USA. The Council for the Accreditation of Correspondence Colleges has accredited 33

colleges and institutes which are its integral members. The Council is a voluntary organization which was set up in 1969 by the Government and Correspondence Colleges jointly. The total student enrolment in 1976 was between 350,000 and 410,000, the stable figure being something like 382,000. The courses offered by these colleges cover almost all areas and disciplines including technical, medical and engineering courses, besides courses in Arts, Sociology, General Education, Chartered Accountancy, Insurance, Civil Service, Law, Business Administration, Distributive Trades and Management, Agriculture, Journalism, Architecture, Interior Decoration, Salesmanship, Nursing, Home Science - both at the graduate and postgraduate levels. The college known for their high student response and quality of instruction include : Wolsey Hall, Oxford, The Chartered Insurance Institute, London, College of Law, Correspondence Tuition Service, Guildford, Surrey, H. Foulks Lynch & Co. Ltd., London, Metropolitan College and Metropolitan College of Law, St. Albans, Herts., The School of Accountancy and Business Studies, Glasgow, Medical Correspondence College, London, etc. etc.

11. Of these, to take one example, Wolsey Hall, Oxford, was started as far back as 1874. Besides the two G.C.E., 'O' and 'A' Examinations (advanced and lower level) which include hundreds of subjects, this college prepares students for degree courses in arts and science. Over a dozen professional courses are also offered to the students. The total number of students enrolled with Wolsey Hall, Oxford, range between twenty thousand and twenty-five thousand. About 55% students are from U.K. and the rest from overseas.
12. However, it is the Open University London which caught the imagination of many a planner in developing countries. The idea of a University in the Air was first mooted by Mr. Harold Wilson in a speech in Glasgow in 1963. The report of the Planning Committee was finalized in early 1969. Technically the university emerged into being at a ceremony in the building of the Royal Society on 23 July 1969 when the First chancellor of the University was installed in office. By January 1971, about 183 full-time teachers were in place and more than 400 others took care of the students' academic problems as part-time 'tutors'. The student population in the Open University courses includes housewives, armed forces personnel, administrators and managers, technicians, farmers, miners, shopkeepers and school dropouts.
13. Hermods, Malmo (Sweden) is a world-known institution started as a private school by two educationist-founders in 1898. It was only recently that status of an autonomous foundation was restored to it. It has no state aid and as such is the reverse of the Open University which is completely state-aided. The motto of Hermods is "progress or Perish". The annual budget is about 44 million Kronas (Sweden) i.e., about four million Sterling. It has a permanent faculty and a set of editors which number about 70. The institute offers about 500 courses, mostly preparing for school examinations but about half a dozen dealing with college studies. The University of Lund holds the examination for the college students

and awards degrees. The G.C.E. examinations are run and official certificates are issued by Hermods. The total number of students ranges between 65,000 to 100,000. While France does not occupy the leading most place in the fraternity of correspondence education programmes in the world, it has the pride of place in combining the printed word and the recorded word.

14. The Centre National De Tele-Enseignement, Vanves, Paris, has an enrolment of about 87,000 students with its head office, while the five provincial units at Grenoble, Lille, Rouen, Toulouse and Lyon have a total enrolment of about 75,000 students. The project is government-aided with a budget of fifty million new francs a year. About 50,000 records are sent free and as many as 14,000 tapes are supplied to the students on payment during their course of study. A record two million sheets are cyclostyled or photo-copied daily. The staff in the Centre at Paris has 502 full-time members in the administrative sector and 1480 regular and wholtime staff in the academic area. The staff in the other five centres has a strength of about 2200 members.
15. The scene in USA needs only one glance to know its rich content and large range. Chicago State College and North-Eastern Illinois State College are members of a 20-College consortium "University Without Walls" programme under a 415,000-dollars grant from the Department of Health, Education and Welfare. There are no degree requirements, no prescribed time for getting a degree and unlimited opportunities to learn outside the classroom and the campus. Each student designs his own individualized programme, with guidance of a faculty adviser based on his own interests. The programme is based on two central principles; (a) that relevant learning can take place in many locations, in the classroom, on the job, in individual work projects and in the give-and take of seminar discussions; and (b) that a variety of geographical locations can broaden a student's horizons and help him gain perspectives that are not possible without the confines of a single campus. University Without Walls (UWW) is a network of varied alternatives on different campuses which emerged from a proposal of some 100 professors attending Project Change over in the summers of 1967-69. Out of these, sessions emerged the plan of the 'University Without Walls' designed and fostered by the Union for Experimenting Colleges and Universities, financed by grants from the Government. The Ford Foundation also lent a helping hand in it.
16. Though a recent phenomenon, correspondence education in India is not something unusual or uncommon, Beginning its humble role in 1962 with Delhi University offering courses in B.A. arts, it has assumed a gigantic role for itself in the university education. More than 300 universities now offer courses in different disciplines of arts, commerce, education, laws, and languages. In addition to the accredited universities, institutes of national and regional standing offer various refresher and in-services courses by correspondence for their distant students. Like the degrees awarded by universities running correspondence courses, institutes with statutory control of the State or the Central Government, also

award their own degrees and diplomas to correspondence students and these are recognised by various employment agencies including Government departments.

17. Presently, both the Open Universities as well as the Conventional Universities have initiated hundreds of programmes through distance learning for helping the students. These universities run the correspondence courses through their directorates of correspondence courses or institutes / centres for distance education.

In order to run these centres successfully, the following points should be considered and remembered on a continuing basis for bringing efficiency and productivity :

- 1) Job oriented programmes.
- 2) User friendly lessons.
- 3) Publicity and public relations.
- 4) Proper counselling.
- 5) Periodical despatch of lessons and other materials.
- 6) Proper communication between the students and the institution.
- 7) Periodical assignments and progress monitoring.
- 8) Survey of credibility of the courses.
- 9) Timely examination and results.
- 10) Preparation of course materials and updating.
- 11) Seminars and workshops.
- 12) Contact programmes.
- 13) Website design and management.
- 14) Electronic mail.
- 15) Lessons and books on CD Rom.

The Global Open University Nagaland is the first university in the world to have launched for the first time in the world some unique off-beat and parallel Bachelor's and Master's Degrees which were recommended by the Federal or the Central or the State / Provincial Governments in different countries of the world, but no university took the risk of designing these new programmes. This has given results and now The Global Open University Nagaland is known all over the world for the new programmes launched between the year 2006 and 2015.

Now that The Global Open University Nagaland has entered the 10th year of its successful operations, it is high time that this university provides guidance to other universities under the umbrella of the Confederation of Indian Universities (CIU) established in the year 2004 at the behest of the then Member of the Planning Commission of India and the great educationist Dr. K. Venkatasubramanian with a view to having a confederative approach to higher and tertiary education by uniting all the university level institutions in the country for optimising its available resources.

The Confederation of Indian Universities (CIU) is the only national umbrella to have published the Indian Universities Directory every year since its inception in the year 2004. The 2017 Indian Universities Directory has the details of more than 890 university level institutions in our country. No other organization including the UGC or the AIU have brought out such an exhaustive list of university level institutions.

In the next chapter where we have discussed the emergence of universities in India as well as in other countries of the world, we have given the full list of the university level institutions in our country for the benefit of the students, researchers, faculty members, policy makers and others.

Chapter 59

WHAT DO WE MEAN BY THE WORD “UNIVERSITY”?

A University is an institution of higher or tertiary education and research which grants academic degrees in various subjects and typically provides undergraduate education and postgraduate education. The word "university" is derived from the Latin *universitas magistrorum et scholarium*, which roughly means "community of teachers and scholars."

The remains of Nalanda University established in 5th Century CE

The first university of the world is Nalanda University established during the 5th Century CE. The establishment of the ancient Nalanda as an undisputed seat of learning was a natural consequence of the time and place in which it was situated. Ancient Magadha was characterized by an intellectual ferment unlike any known to mankind. This heritage was divided into two parts – both Buddhist and non-Buddhist. This ability to meld multiple discourses and to embrace knowledge in its entirety is what made Nalanda uniquely attractive for all seekers of pure knowledge.

Historical sources indicate that the University had a long and illustrious life which lasted almost continually for 800 years from the Fifth to the Twelfth Century CE. It was a completely residential university with over 2,000 teachers and 10,000 students. The Nalanda ruins reveal through their architectural components the holistic nature of knowledge that was sought and imparted at this University. It suggests a seamless co-existence between nature and man and between living and learning.

The profound knowledge of the Nalanda teachers attracted scholars from places as distant as China, Korea, Japan, Tibet, Mongolia, Turkey, Sri Lanka and South East Asia. These scholars have left records about the ambience, architecture and learning of this unique university. The most detailed accounts have come from Chinese scholars and the best

known of these is Xuan Zang who carried back many hundred scriptures which were later translated into Chinese. Close to the end of the twelfth century Nalanda was destroyed by invaders. The period from which Nalanda ceased to exist was a time that the great universities of the western world came into being, marking the shift in knowledge production and dissemination from the East to the West. Only Al Azhar in Cairo (972 CE), Bologna in Italy (1088 CE) and Oxford in the United Kingdom (1167 CE)had been founded before the destruction of Nalanda.

Degree ceremony at the University of Oxford.

HISTORY

The University of Bologna is the oldest University of Europe founded in 1088.

DEFINITION

The original Latin word "*universitas*" refers in general to "a number of persons associated into one body, a society, company, community, guild, corporation, etc." At the time of the emergence of urban town life and medieval guilds, specialised "associations of students and teachers with collective legal rights usually guaranteed by charters issued by princes,

prelates, or the towns in which they were located" came to be denominated by this general term. Like other guilds, they were self-regulating and determined the qualifications of their members.

In modern usage the word has come to mean "An institution of higher education offering tuition in mainly non-vocational subjects and typically having the power to confer degrees," with the earlier emphasis on its corporate organization considered as applying historically to Medieval universities.

The original Latin word referred to degree-granting institutions of learning in Western and Central Europe, where this form of legal organisation was prevalent, and from where the institution spread around the world.

ACADEMIC FREEDOM

An important idea in the definition of a university is the notion of academic freedom. The first documentary evidence of this comes from early in the life of the first university. The University of Bologna adopted an academic charter, the *Constitutio Habita*, in 1158 or 1155, which guaranteed the right of a traveling scholar to unhindered passage in the interests of education. Today this is claimed as the origin of "academic freedom". This is now widely recognised internationally - on 18 September 1988 430 university rectors signed the *Magna Charta Universitatum*, marking the 900th anniversary of Bologna's foundation. The number of universities signing the *Magna Charta Universitatum* continues to grow, drawing from all parts of the world.

MEDIEVAL UNIVERSITIES

European higher education took place for hundreds of years in Christian cathedral schools or monastic schools (*Scholae monasticae*), in which monks and nuns taught classes; evidence of these immediate forerunners of the later university at many places dates back to the 6th century AD. The earliest universities were developed under the aegis of the Latin Church by papal bull as *studia generalia* and perhaps from cathedral schools. It is possible, however, that the development of cathedral schools into universities was quite rare, with the University of Paris being an exception. Later they were also founded by Kings (University of Naples Federico II, Charles University in Prague, Jagiellonian University in Kraków) or municipal administrations (University of Cologne, University of Erfurt). In the early medieval period, most new universities were founded from pre-existing schools, usually when these schools were deemed to have become primarily sites of higher education.

Many historians state that universities and cathedral schools were a continuation of the interest in learning promoted by monasteries.

The first universities in Europe with a form of corporate/guild structure were the University of Bologna (1088), the University of Paris (c. 1150, later associated with the Sorbonne), and the University of Oxford (1167).

The University of Bologna began as a law school teaching the *ius gentium* or Roman law of peoples which was in demand across Europe for those defending the right of incipient nations against empire and church. Bologna's special claim to *Alma Mater Studiorum* is based on its autonomy, its awarding of degrees, and other structural arrangements, making it the oldest continuously operating institution independent of kings, emperors or any kind of direct religious authority.

Meeting of doctors at the University of Paris.

The conventional date of 1088, or 1087 according to some, records when Irnerius commences teaching Emperor Justinian's 6th century codification of Roman law, the *Corpus Iuris Civilis*, recently discovered at Pisa. Lay students arrived in the city from many lands entering into a contract to gain this knowledge, organising themselves into 'Nationes', divided between that of the Cismontanes and that of the Ultramontanes. The students "had all the power ... and dominated the masters".

In Europe, young men proceeded to university when they had completed their study of the trivium—the preparatory arts of grammar, rhetoric and dialectic or logic—and the quadrivium: arithmetic, geometry, music, and astronomy.

All over Europe rulers and city governments began to create universities to satisfy a European thirst for knowledge, and the belief that society would benefit from the scholarly expertise generated from these institutions. Princes and leaders of city governments perceived the potential benefits of having a scholarly expertise develop with the ability to address difficult problems and achieve desired ends. The emergence of humanism was essential to this understanding of the possible utility of universities as well as the revival of interest in knowledge gained from ancient Greek texts.

The rediscovery of Aristotle's works - more than 3000 pages of it would eventually be translated - fuelled a spirit of inquiry into natural processes that had already begun to emerge in the 12th century. Some scholars believe that these works represented one of the most important document discoveries in Western intellectual history. Richard Dales, for instance, calls the discovery of Aristotle's works "a turning point in the history of Western thought." After Aristotle re-emerged, a community of scholars, primarily communicating in Latin, accelerated the process and practice of attempting to reconcile the thoughts of Greek antiquity, and especially ideas related to understanding the natural world, with those of the church. The efforts of this "scholasticism" were focused on applying Aristotelian logic and thoughts about natural processes to biblical passages and attempting to prove the viability of those passages through reason. This became the primary mission of lecturers, and the expectation of students.

Sapienza University of Rome is the largest university in Europe

The university culture developed differently in northern Europe than it did in the south, although the northern (primarily Germany, France and Great Britain) and southern universities (primarily Italy) did have many elements in common. Latin was the language of the university, used for all texts, lectures, disputations and examinations. Professors lectured on the books of Aristotle for logic, natural philosophy, and metaphysics; while Hippocrates, Galen, and Avicenna were used for medicine. Outside of these commonalities,

great differences separated north and south, primarily in subject matter. Italian universities focused on law and medicine, while the northern universities focused on the arts and theology. There were distinct differences in the quality of instruction in these areas which were congruent with their focus, so scholars would travel north or south based on their interests and means. There was also a difference in the types of degrees awarded at these universities. English, French and German universities usually awarded bachelor's degrees, with the exception of degrees in theology, for which the doctorate was more common. Italian universities awarded primarily doctorates. The distinction can be attributed to the intent of the degree holder after graduation – in the north the focus tended to be on acquiring teaching positions, while in the south students often went on to professional positions. The structure of northern universities tended to be modeled after the system of faculty governance developed at the University of Paris. Southern universities tended to be patterned after the student-controlled model begun at the University of Bologna. Among the southern universities, a further distinction has been noted between those of northern Italy, which followed the pattern of Bologna as a "self-regulating, independent corporation of scholars" and those of southern Italy and Iberia, which were "founded by royal and imperial charter to serve the needs of government."

Their endowment by a prince or monarch and their role in training government officials made these Mediterranean universities similar to Islamic madrasas, although madrasas were generally smaller and individual teachers, rather than the madrasa itself, granted the license or degree. Scholars like Arnold H. Green and Hossein Nasr have argued that starting in the 10th century, some medieval Islamic madrasahs became universities. George Makdisi and others, however, argue that the European university has no parallel in the medieval Islamic world. Other scholars regard the university as uniquely European in origin and characteristics.

Many scholars (including Makdisi) have argued that early medieval universities were influenced by the religious madrasahs in Al-Andalus, the Emirate of Sicily, and the Middle East (during the Crusades). Other scholars see this argument as overstated. Lowe and Yasuhara have recently drawn on the well-documented influences of scholarship from the Islamic world on the universities of Western Europe to call for a reconsideration of the development of higher education, turning away from a concern with local institutional structures to a broader consideration within a global context.

EARLY MODERN UNIVERSITIES

During the Early Modern period (approximately late 1400s to 1800), the universities of Europe would see a tremendous amount of growth, productivity and innovative research. At the end of the Middle Ages, about 400 years after the first university was founded, there were twenty-nine universities spread throughout Europe. In the 15th century, twenty-eight new ones were created, with another eighteen added between 1500 and 1625. This pace continued until by the end of the 18th century there were approximately 143 universities in Europe and Eastern Europe, with the highest concentrations in the German Empire (34), Italian countries (26), France (25), and Spain (23) – this was close to a 500% increase over the number of universities toward the end of the Middle Ages. This

number does not include the numerous universities that disappeared, or institutions that merged with other universities during this time. It should be noted that the identification of a university was not necessarily obvious during the Early Modern period, as the term is applied to a burgeoning number of institutions. In fact, the term "university" was not always used to designate a higher education institution. In Mediterranean countries, the term *studium generale* was still often used, while "Academy" was common in Northern European countries.

17th century classroom at the University of Salamanca

The propagation of universities was not necessarily a steady progression, as the seventeenth century was rife with events that adversely affected university expansion. Many wars, and especially the Thirty Years' War, disrupted the university landscape throughout Europe at different times. War, plague, famine, regicide, and changes in religious power and structure often adversely affected the societies that provided support for universities. Internal strife within the universities themselves, such as student brawling and absentee professors, acted to destabilize these institutions as well. Universities were also reluctant to give up older curricula, and the continued reliance on the works of Aristotle defied contemporary advancements in science and the arts. This era was also affected by the rise of the nation-state. As universities increasingly came under state control, or formed under the auspices of the state, the faculty governance model (begun by the University of Paris) became more and more prominent. Although the older student-controlled universities still existed, they slowly started to move toward this

structural organization. Control of universities still tended to be independent, although university leadership was increasingly appointed by the state.

Although the structural model provided by the University of Paris, where student members are controlled by faculty "masters," provided a standard for universities, the application of this model took at least three different forms. There were universities that had a system of faculties whose teaching addressed a very specific curriculum; this model tended to train specialists. There was a collegiate or tutorial model based on the system at University of Oxford where teaching and organization was decentralized and knowledge was more of a generalist nature. There were also universities that combined these models, using the collegiate model but having a centralized organization.

Early Modern universities initially continued the curriculum and research of the Middle Ages: natural philosophy, logic, medicine, theology, mathematics, astronomy (and astrology), law, grammar and rhetoric. Aristotle was prevalent throughout the curriculum, while medicine also depended on Galen and Arabic scholarship. The importance of humanism for changing this state-of-affairs cannot be underestimated. Once humanist professors joined the university faculty, they began to transform the study of grammar and rhetoric through the *studia humanitatis*. Humanist professors focused on the ability of students to write and speak with distinction, to translate and interpret classical texts, and to live honorable lives. Other scholars within the university were affected by the humanist approaches to learning and their linguistic expertise in relation to ancient texts, as well as the ideology that advocated the ultimate importance of those texts. Professors of medicine such as Niccolò Leonicensis, Thomas Linacre and William Cop were often trained in and taught from a humanist perspective as well as translated important ancient medical texts. The critical mindset imparted by humanism was imperative for changes in universities and scholarship. For instance, Andreas Vesalius was educated in a humanist fashion before producing a translation of Galen, whose ideas he verified through his own dissections. In law, Andreas Alciatus infused the *Corpus Juris* with a humanist perspective, while Jacques Cujas' humanist writings were paramount to his reputation as a jurist. Philipp Melanchthon cited the works of Erasmus as a highly influential guide for connecting theology back to original texts, which was important for the reform at Protestant universities. Galileo Galilei, who taught at the Universities of Pisa and Padua, and Martin Luther, who taught at the University of Wittenberg (as did Melanchthon), also had humanist training. The task of the humanists was to slowly permeate the university; to increase the humanist presence in professorships and chairs, syllabi and textbooks so that published works would demonstrate the humanistic ideal of science and scholarship.

Although the initial focus of the humanist scholars in the university was the discovery, exposition and insertion of ancient texts and languages into the university, and the ideas of those texts into society generally, their influence was ultimately quite progressive. The emergence of classical texts brought new ideas and led to a more creative university climate (as the notable list of scholars above attests to). A focus on knowledge coming from self, from the human, has a direct implication for new forms of scholarship and instruction, and was the foundation for what is commonly known as the humanities. This disposition toward knowledge manifested in not simply the translation and propagation of

ancient texts, but also their adaptation and expansion. For instance, Vesalius was imperative for advocating the use of Galen, but he also invigorated this text with experimentation, disagreements and further research. The propagation of these texts, especially within the universities, was greatly aided by the emergence of the printing press and the beginning of the use of the vernacular, which allowed for the printing of relatively large texts at reasonable prices.

Examining the influence of humanism on scholars in medicine, mathematics, astronomy and physics may suggest that humanism and universities were a strong impetus for the scientific revolution. Although the connection between humanism and the scientific discovery may very well have begun within the confines of the university, the connection has been commonly perceived as having been severed by the changing nature of science during the scientific revolution. Historians such as Richard Westfall have argued that the overt traditionalism of universities inhibited attempts to re-conceptualize nature and knowledge and caused an indelible tension between universities and scientists. This resistance to changes in science may have been a significant factor in driving many scientists away from the university and toward private benefactors, usually in princely courts, and associations with newly forming scientific societies.

Other historians find incongruity in the proposition that the very place where the vast number of the scholars that influenced the scientific revolution received their education should also be the place that inhibits their research and the advancement of science. In fact, more than 80% of the European scientists between 1450-1650 included in the Dictionary of Scientific Biography were university trained, of which approximately 45% held university posts. It was the case that the academic foundations remaining from the Middle Ages were stable, and they did provide for an environment that fostered considerable growth and development. There was considerable reluctance on the part of universities to relinquish the symmetry and comprehensiveness provided by the Aristotelian system, which was effective as a coherent system for understanding and interpreting the world. However, university professors still utilized some autonomy, at least in the sciences, to choose epistemological foundations and methods. For instance, Melancthon and his disciples at University of Wittenberg were instrumental for integrating Copernican mathematical constructs into astronomical debate and instruction. Another example was the short-lived but fairly rapid adoption of Cartesian epistemology and methodology in European universities, and the debates surrounding that adoption, which led to more mechanistic approaches to scientific problems as well as demonstrated an openness to change. There are many examples which belie the commonly perceived intransigence of universities. Although universities may have been slow to accept new sciences and methodologies as they emerged, when they did accept new ideas it helped to convey legitimacy and respectability, and supported the scientific changes through providing a stable environment for instruction and material resources.

Regardless of the way the tension between universities, individual scientists, and the scientific revolution itself is perceived, there was a discernible impact on the way that university education was constructed. Aristotelian epistemology provided a coherent framework not simply for knowledge and knowledge construction, but also for the training

of scholars within the higher education setting. The creation of new scientific constructs during the scientific revolution, and the epistemological challenges that were inherent within this creation, initiated the idea of both the autonomy of science and the hierarchy of the disciplines.

King's College London, established in 1829

Instead of entering higher education to become a "general scholar" immersed in becoming proficient in the entire curriculum, there emerged a type of scholar that put science first and viewed it as a vocation in itself. The divergence between those focused on science and those still entrenched in the idea of a general scholar exacerbated the epistemological tensions that were already beginning to emerge.

Ohio University, the first university in the American mid-west

The epistemological tensions between scientists and universities were also heightened by the economic realities of research during this time, as individual scientists, associations and universities were vying for limited resources. There was also competition from the formation of new colleges funded by private benefactors and designed to provide free education to the public, or established by local governments to provide a knowledge

hungry populace with an alternative to traditional universities. Even when universities supported new scientific endeavors, and the university provided foundational training and authority for the research and conclusions, they could not compete with the resources available through private benefactors.

By the end of the early modern period, the structure and orientation of higher education had changed in ways that are eminently recognizable for the modern context. Aristotle was no longer a force providing the epistemological and methodological focus for universities and a more mechanistic orientation was emerging. The hierarchical place of theological knowledge had for the most part been displaced and the humanities had become a fixture, and a new openness was beginning to take hold in the construction and dissemination of knowledge that were to become imperative for the formation of the modern state.

MODERN UNIVERSITIES

Heidelberg University is the oldest University in Germany established in 1386

By the 18th century, universities published their own research journals and by the 19th century, the German and the French university models had arisen. The German, or Humboldtian model, was conceived by Wilhelm von Humboldt and based on Friedrich Schleiermacher's liberal ideas pertaining to the importance of freedom, seminars, and laboratories in universities. The French university model involved strict discipline and control over every aspect of the university.

Until the 19th century, religion played a significant role in university curriculum; however, the role of religion in research universities decreased in the 19th century, and by the end of the 19th century, the German university model had spread around the world. Universities concentrated on science in the 19th and 20th centuries and became increasingly accessible to the masses. In Britain, the move from Industrial Revolution to modernity saw the arrival of new civic universities with an emphasis on science and engineering, a movement initiated in 1960 by Sir Keith Murray (chairman of the University Grants Committee) and Sir Samuel Curran, with the formation of the University of Strathclyde. The British also established universities worldwide, and higher education became available to the masses not only in Europe.

In 1963, the Robbins Report on universities in the United Kingdom concluded that such institutions should have four main "objectives essential to any properly balanced system: instruction in skills; the promotion of the general powers of the mind so as to produce not mere specialists but rather cultivated men and women; to maintain research in balance with teaching, since teaching should not be separated from the advancement of learning and the search for truth; and to transmit a common culture and common standards of citizenship."

NATIONAL UNIVERSITIES

A national university is generally a university created or run by a national state but at the same time represents a state autonomic institution which functions as a completely independent body inside of the same state. Some national universities are closely associated with national cultural or political aspirations, for instance the National University of Ireland in the early days of Irish independence collected a large amount of information on the Irish language and Irish culture. Reforms in Argentina were the result of the University Revolution of 1918 and its posterior reforms by incorporating values that sought for a more equal and laic higher education system.

INTERGOVERNMENTAL UNIVERSITIES

Universities created by bilateral or multilateral treaties between states are intergovernmental. An example is the Academy of European Law, which offers training in European law to lawyers, judges, barristers, solicitors, in-house counsel and academics. EUCLID (Pôle Universitaire Euclide, Euclid University) is chartered as a university and umbrella organisation dedicated to sustainable development in signatory countries, and the United Nations University engages in efforts to resolve the pressing global problems that are of concern to the United Nations, its peoples and member states. The European University Institute, a post-graduate university specialised in the social sciences, is officially an intergovernmental organisation, set up by the member states of the European Union.

*Campus universities with most buildings clustered closely together became especially widespread since the 19th Century.
A view of the Cornell University*

ORGANIZATION

The University of Sydney is Australia's oldest university.

Although each institution is organized differently, nearly all universities have a board of trustees; a president, chancellor, or rector; at least one vice president, vice-chancellor, or vice-rector; and deans of various divisions. Universities are generally divided into a number of academic departments, schools or faculties. Public university systems are ruled over by government-run higher education boards. They review financial requests and budget proposals and then allocate funds for each university in the system. They also approve new programs of instruction and cancel or make changes in existing programs. In addition, they plan for the further coordinated growth and development of the various institutions of higher education in the state or country. However, many public universities in the world have a considerable degree of financial, research and pedagogical autonomy. Private universities are privately funded and generally have broader independence from state policies. However, they may have less independence from business corporations depending on the source of their finances.

UNIVERSITIES AROUND THE WORLD

The funding and organization of universities varies widely between different countries around the world. In some countries universities are predominantly funded by the state, while in others funding may come from donors or from fees which students attending the university must pay. In some countries the vast majority of students attend university in their local town, while in other countries universities attract students from all over the world, and may provide university accommodation for their students.

CLASSIFICATION

The definition of a university varies widely, even within some countries. Where there is clarification, it is usually set by a government agency. For example:

In Australia, the Tertiary Education Quality and Standards Agency (TEQSA) is Australia's independent national regulator of the higher education sector. Students rights within University are also protected by the Education Services for Overseas Students law (ESOS).

In the United States there is no nationally standardized definition for the term 'University', although the term has traditionally been used to designate research

institutions and was once reserved for doctorate-granting research institutions. Some states, such as Massachusetts, will only grant a school "university status" if it grants at least two doctoral degrees.

In the United Kingdom, the Privy Council is responsible for approving the use of the word "university" in the name of an institution, under the terms of the Further and Higher Education Act 1992.

In India, a new designation deemed universities has been created for high-performing universities, giving them additional autonomy. Through this provision many universities that are commercial in nature and have been established just to exploit the demand for higher education have sprung up.

In Canada, "college" generally refers to a two-year, non-degree-granting institution, while "university" connotes a four-year, degree-granting institution. Universities may be sub-classified (as in the Macleans rankings) into large research universities with many PhD granting programs and medical schools (for example, McGill University); "comprehensive" universities that have some PhDs but aren't geared toward research (such as Waterloo); and smaller, primarily undergraduate universities (such as St. Francis Xavier).

COLLOQUIAL USAGE

Colloquially, the term *university* may be used to describe a phase in one's life: "When I was at university..." (in the United States and Ireland, *college* is often used instead: "When I was in college..."). In Australia, Canada, New Zealand, the United Kingdom, Nigeria, the Netherlands, Spain and the German-speaking countries *university* is often contracted to *uni*. In Ghana, New Zealand and in South Africa it is sometimes called "varsity" (although this has become uncommon in New Zealand in recent years). "Varsity" was also common usage in the UK in the 19th century. "Varsity" is still in common usage in Scotland.

COST

Many students look to get 'student grants' to cover the cost of university. In 2012, the average outstanding student loan balance per borrower in the United States was US\$23,300. In many US states, costs are anticipated to rise for students as a result of decreased state funding given to public universities. There are some big exceptions on tuition fees. In many European countries, it is possible to study without tuition fees. Public universities in Nordic countries were entirely without tuition fees until the latter part of the first decade of the 21st century.

Denmark, Sweden and Finland then moved to put in place tuition fees for foreign students. But still, citizens of EU and EEA member states and citizens from Switzerland are exempted from tuition fees, and the amount of public grants granted to promising foreign students was increased to offset some of the impact.

In the modern age, the first universities in India were the University of Calcutta, the University of Madras and the University of Bombay established during the year 1857 followed by the University of Allahabad in the year 1882 and the University of Punjab 1887 respectively. The University of Delhi was established during the year 1922.

The University of Calcutta established in 1857

The University of Mumbai established in 1857

The University of Madras established in 1857

The University of Allahabad established in 1882

The University of Punjab established in 1887

The University of Delhi established in 1922

The Confederation of Indian Universities (CIU) is thankful to its sisters organizations : The Educational Standards and Testing Council of India (TEST-COIN and Educational Consultancy Organisation of India (EDUCOIN) for providing the secretarial and logistics support for collecting information regarding different universities in the country. Accordingly the CIU has compiled the list of the Government of India recognized university level institutions and the same is reproduced below for the benefit of the readers, observers and others :

AAFT University of Media and Arts, Raipur
Abhilashi University, Mandi
Academy of Scientific and Innovative Research, Chennai
Adichunchanagiri University, Mandya, B.G. Nagara
Ajeenkya D.Y. Patil University, Pune
Akal University, Bathinda
AKS University, Satna
APG Shimla University, Shimla
APJ Abdul Kalam Technological University, Thiruvananthapuram
Academy of Maritime Education and Training University, Chennai
Academy of Scientific and Innovative Research, Ghaziabad
Acharya N.G. Ranga Agricultural University, Hyderabad
Acharya Nagarjuna University, Guntur
Adamas University, Kolkata
Adani University, Ahmedabad
Adesh University, Bathinda
Adikavi Nannaya University, Rajahmundry
Agriculture University, Jodhpur
Ahmedabad University, Ahmedabad
AIPH University, Bhubaneswar
AISECT University, Raisen
AISECT University, Hazaribagh
Alagappa University, Karaikudi
Allahabad State University, Allahabad
Al-Falah University, Faridabad
Al-Karim University, Katihar
Aliah University, Kolkata
Alipurduar University, Alipurduar
Aligarh Muslim University, Aligarh
All India Institute of Medical Sciences, New Delhi
All India Institute of Medical Sciences, Bhopal
All India Institute of Medical Sciences, Bhubaneswar
All India Institute of Medical Sciences, Jodhpur
All India Institute of Medical Sciences, Patna
All India Institute of Medical Sciences, Raipur
All India Institute of Medical Sciences, Rishikesh
Alliance University, Bangalore
Amity University, Manesar
Amity University, Gwalior
Amity University, Mumbai
Amity University, Jaipur
Amity University, Noida
Amity University, Raipur

Amity University, North 24 Parganas
 Amity University, Jharkhand
 Amity University, Patna
 Amity University
 Amrita Vishwa Vidyapeetham, Coimbatore
 Anand Agricultural University, Anand
 Anant National University, Ahmedabad
 Andhra University, Visakhapatnam
 Andhra Kesari University, Prakasam District, Andhra Pradesh
 Anna University, Chennai
 Annamalai University, Annamalainagar
 Anurag University, Telangana
 Apeejay Stya University, Gurgaon
 Apex Professional University, Pasighat
 Apex University, Jaipur
 ARKA Jain University, Kharshawn
 Arni University, Kangra
 Arunachal University of Studies, Namsai
 Arunachal Pradesh University, Pasighat, Arunachal Pradesh
 Arunodaya University, Itanagar
 Aryabhatta Knowledge University, Patna
 ASBM University, Bhubaneswar
 Ashoka University, Kundli
 Asian International University, Manipur
 Assam Agricultural University, Jorhat
 Assam Don Bosco University, Guwahati
 Assam Down Town University, Guwahati
 Assam Rajiv Gandhi University of Cooperative Management, Sivasagar
 Assam Science and Technology University, Guwahati
 Assam University, Silchar
 Assam Women's University, Jorhat
 Atal Bihari Vajpayee Medical University, Lucknow
 Atal Bihari Vajpai Vishwavidyalaya, Bilaspur
 Atal Medical and Research University, Mandi
 Atal Bihari Vajpai Hindi Vishwavidyalaya, Bhopal
 Atal Behari Vajpayee Indian Institute of Information Tech. & Management, Gwalior
 Atlas SkillTech University, Mumbai
 Atmiya University, Rajkot
 Atria University, ASKB Campus, Bengaluru, Karnataka
 AURO University of Hospitality and Management, Surat
 Aurora Higher Education & Research Academy, Hyderabad, Telangana
 Avantika University, Ujjain
 Avinashilingam Institute for Home Science & Higher Edu. for Women, Coimbatore
 Awadesh Pratap Singh University, Rewa
 Ayush and Health Sciences University of Chhattisgarh, Raipur
 Azim Premji University, Bangalore
 Banda University of Agriculture and Technology, Banda
 B.L.D.E. University, Bijapur
 B.S. Abdur Rahman Institute of Science and Technology, Chennai
 Baba Farid University of Health & Medical Sciences, Faridkot
 Baba Ghulam Shah Badshah University, Rajouri
 Baba Mast Nath University, Rohtak

Babasaheb Bhimrao Ambedkar Bihar University, Muzaffarpur
 Babasaheb Bhimrao Ambedkar University, Lucknow
 Babu Banarasi Das University, Lucknow
 Baddi University of Emerging Sciences and Technology, Solan
 Bahra University, Solan
 Banaras Hindu University, Varanasi
 Banasthali Vidyapith, Jaipur
 Bangalore University, Bangalore
 Bankura University, Bankura
 Barkatullah University, Bhopal
 Bareilly International University, Bareilly
 Bastar Vishwavidyalaya, Bastar
 Berhampur University, Berhampur

Chapter 60

MEDIEVAL UNIVERSITY

A Medieval University is an establishment organized during the High Middle Ages for the purposes of higher learning. The first Set of Universities established anywhere in the world were born in India namely : Puspagiri in the 3rd Century AD, Nalanda in the 5th Century AD, Takshashila in the 6th Century BC and other university level institutions like Telhara in Bihar (probably older than Nalanda, Odantapuri, in Bihar (circa 550 - 1040), Somapura, in Bangladesh (from the Gupta period to the Turkic Muslim conquest), Sharada Peeth, Pakistan, Jagaddala, in Bengal (from the Pala period to the Turkic Muslim conquest), Nagarjunakonda, in Andhra Pradesh, Vikramashila, in Bihar (circa 800-1040), Valabhi, in Gujarat (from the Maitrak period to the Arab raids), Varanasi in Uttar Pradesh (eighth century to modern times), Kanchipuram, in Tamil Nadu, Manyakheta, in Karnataka, Mahavihara, Abhayagiri Vihāra etc.

PUSPAGIRI

The university level institution in Puspagiri was established in the 3rd Century AD as present Odisha, India. As of 2007, the ruins of this Mahavihara had not yet been fully excavated. Consequently, much of the Mahavihara's history remains unknown. Of the three Mahavihara campuses, Lalitgiri in the district of Cuttack is the oldest. Iconographic analysis indicates that Lalitgiri had already been established during the Shunga period of the 2nd century BC, making it one of the oldest Buddhist establishments in the world. The Chinese traveller Xuanzang (Huiyen Tsang), who visited it in AD 639, as *Puphagiri Mahavihara*, as well as in medieval Tibetan texts. However, unlike Takshila and Nalanda, the ruins of Puspagiri were not discovered until 1995, when a lecturer from a local college first stumbled upon the site. The task of excavating Puspagiri's ruins, stretching over 143 acres (0.58 km²) of land, was undertaken by the Odisha Institute of Maritime and South East Asian Studies between 1996 and 2006. It is now being carried out by the Archaeological Survey of India (ASI). The Nagarjunakonda inscriptions also mention about this learning center.

NALANDA

Nalanda as a university level seat of learning was established in the 5th century AD in Bihar, India. Founded in 427 in northeastern India, not far from what is today the southern border of Nepal, it survived until 1197. It was devoted to Buddhist studies, but it also trained students in fine arts, medicine, mathematics, astronomy, politics and the art of war. The center had eight separate compounds, ten temples, meditation halls, classrooms, lakes and parks. It had a nine-story library where monks meticulously copied books and documents so that individual scholars could have their own collections. It had dormitories for students, perhaps a first for an educational institution, housing 10,000 students in the school's heyday and providing accommodation for 2,000 professors.

Nalanda attracted pupils and scholars from Sri Lanka, Korea, Japan, China, Tibet, Indonesia, Persia and Turkey.

TAKSHASHILA

Taxila or Takshashila, in ancient India (modern-day Pakistan), was an early Hindu and Buddhist centre of learning. According to scattered references that were only fixed a millennium later, it may have dated back to at least the fifth century BC. Some scholars date Takshashila's existence back to the 6th Century BC. The school consisted of several monasteries without large dormitories or lecture halls where the religious instruction was most likely still provided on an individualistic basis.

Takshashila is described in some detail in later Jātaka tales, written in Sri Lanka around the fifth century AD.

It became a noted centre of learning at least several centuries BC, and continued to attract students until the destruction of the city in the fifth century AD. Takshashila is perhaps best known because of its association with Chanakya. The famous treatise Arthashastra (Sanskrit for The knowledge of Economics) by Chanakya, is said to have been composed in Takshashila itself. Chanakya (or Kautilya), the Maurya Emperor Chandragupta and the Ayurvedic healer Charaka studied at Taxila.

Generally, a student entered Takshashila at the age of sixteen. The Vedas and the Eighteen Arts, which included skills such as archery, hunting, and elephant lore, were taught, in addition to its law school, medical school, and school of military science.

The first institutions generally considered to be universities were established in Italy, France, Spain, Portugal, and England in the late 11th 12th, and the 13th centuries for the study of Theology, Law, Medicine, and Arts. These universities evolved from much older Christian cathedral schools and monastic schools, and it is difficult to define the exact date at which they became true universities, although the lists of studia generalia for higher education in Europe held by the Vatican are a useful guide.

UNIVERSITIES IN THE WEST

"The word *universitas* originally applied only to the scholastic guild (or guilds)—that is, the corporation of students and masters—within the studium, and it was always modified, as *universitas magistrorum*, or *universitas scholarium*, or *universitas magistrorum et scholarium*. In the course of time, however, probably toward the latter part of the 14th century, the term began to be used by itself, with the exclusive meaning of a self-regulating community of teachers and scholars whose corporate existence had been recognized and sanctioned by civil or ecclesiastical authority."

From the early modern period onwards, this Western-style organizational form gradually spread from the medieval Latin west across the globe, eventually replacing all other

higher-learning institutions and becoming the preeminent model for higher education everywhere.

ANTECEDENTS

The university is generally regarded as a formal institution that has its origin in the Medieval Christian setting. Prior to the establishment of universities, European higher education took place for hundreds of years in Christian cathedral schools or monastic schools (*Scholae monasticae*), in which monks and nuns taught classes; evidence of these immediate forerunners of the later university at many places dates back to the 6th century AD.

With the increasing growth and urbanization of European society during the 12th and 13th centuries, a demand grew for professional clergy. Before the 12th century, the intellectual life of Western Europe had been largely relegated to monasteries, which were mostly concerned with performing the liturgy and prayer; relatively few monasteries could boast true intellectuals. Following the Gregorian Reform's emphasis on canon law and the study of the sacraments, bishops formed cathedral schools to train the clergy in Canon law, but also in the more secular aspects of religious administration, including logic and disputation for use in preaching and theological discussion, and accounting to more effectively control finances. Learning became essential to advancing in the ecclesiastical hierarchy, and teachers also gained prestige. However, demand quickly outstripped the capacity of cathedral schools, each of which was essentially run by one teacher. In addition, tensions rose between the students of cathedral schools and burghers in smaller towns. As a result, cathedral schools migrated to large cities, like Bologna, Rome and Paris.

Map of medieval universities of Europe

Some scholars such as Syed Farid Alatas have noted some parallels between Madrasahs and early European colleges and have thus inferred that the first universities in Europe were influenced by the Madrasahs in Islamic Spain and the Emirate of Sicily. Other scholars such as George Makdisi, Toby Huff and Norman Daniel, however, have

questioned this, citing the lack of evidence for an actual transmission from the Islamic world to Christian Europe and highlighting the differences in the structure, methodologies, procedures, curricula and legal status of the "Islamic college" (*madrassa*) versus the European university.

ESTABLISHMENT

*Teaching at Paris, in a late 14th Century
Grandes Chroniques de France:
the tonsured students sit on the floor*

Hastings Rashdall set out the modern understanding of the medieval origins of the universities, noting that the earliest universities emerged spontaneously as "a scholastic Guild, whether of Masters or Students... without any express authorisation of King, Pope, Prince or Prelate."

Among the earliest universities of this type were the University of Bologna (1088), University of Paris (teach. mid-11th century, recogn. 1150), University of Oxford (teach. 1096, recogn. 1167), University of Modena (1175), University of Palencia (1208), University of Cambridge (1209), University of Salamanca (1218), University of Montpellier (1220), University of Padua (1222), University of Toulouse (1229), University of Orleans (1235), University of Siena (1240), University of Coimbra (1288), University of Pisa (1343), Charles University in Prague (1348), University of Vienna (1365), Heidelberg University (1386) and the University of St Andrews (1413) begun as private corporations of teachers and their pupils. In many cases they petitioned secular power for privileges and this became a model. Emperor Frederick I in *Authentica Habita* (1158) gave the first privileges to students in Bologna. Another step was when Pope Alexander III in 1179 "forbidding masters of the church schools to take fees for granting the license to teach (*licentia docendi*), and obliging them to give license to properly qualified teachers". Hastings Rashdall considered that the integrity of a university was only preserved in such an internally regulated corporation, which protected the scholars from external intervention. This independently evolving organization was absent in the universities of southern Italy and Spain, which served the bureaucratic needs of monarchs and which Rashdall considered to be their artificial creations.

The University of Paris was formally recognized when Pope Gregory IX issued the bull *Parens scientiarum* (1231). This was a revolutionary step: *studium generale* (university) and *universitas* (corporation of students or teachers) existed even before, but after the issuing of the bull, they attained autonomy. "[T]he papal bull of 1233, which stipulated that anyone admitted to be a teacher in Toulouse had the right to teach everywhere without further examinations (*ius ubique docendi*), in time, transformed this privilege into the single most important defining characteristic of the university and made it the symbol of its institutional autonomy . . . By the year 1292, even the two oldest universities, Bologna and Paris, felt the need to seek similar bulls from Pope Nicholas IV."

Mob Quad, in Merton College, Oxford. This group of buildings was constructed in three phases and concluded in c. 1378.

By the 13th century, almost half of the highest offices in the Church were occupied by degreed masters (abbots, archbishops, cardinals), and over one-third of the second-highest offices were occupied by masters. In addition, some of the greatest theologians of the High Middle Ages, Thomas Aquinas and Robert Grosseteste, were products of the medieval university.

The development of the medieval university coincided with the widespread reintroduction of Aristotle from Byzantine and Arab scholars. In fact, the European university put Aristotelian and other natural science texts at the center of its curriculum, with the result that the "medieval university laid far greater emphasis on science than does its modern counterpart and descendent."

Although it has been assumed that the universities went into decline during the Renaissance due to the scholastic and Aristotelian emphasis of its curriculum being less popular than the cultural studies of Renaissance humanism, Toby Huff has noted the continued importance of the European universities, with their focus on Aristotle and other scientific and philosophical texts into the early modern period, arguing that they played a crucial role in the Scientific Revolution of the 16th and 17th centuries. As he puts it

"Copernicus, Galileo, Tycho Brahe, Kepler, and Newton were all extraordinary products of the apparently procrustean and allegedly Scholastic universities of Europe... Sociological and historical accounts of the role of the university as an institutional locus for science and as an incubator of scientific thought and arguments have been vastly understated."

CHARACTERISTICS

Diagrams, in a volume of treatises on natural science, philosophy, and mathematics. This 1300 manuscript is typical of the sort of book owned by medieval university students.

Initially medieval universities did not have physical facilities such as the campus of a modern university. Classes were taught wherever space was available, such as churches and homes. A university was not a physical space but a collection of individuals banded together as a *universitas*. Soon, however, universities began to rent, buy or construct buildings specifically for the purposes of teaching.

Universities were generally structured along three types, depending on who paid the teachers. The first type was in Bologna, where students hired and paid for the teachers. The second type was in Paris, where teachers were paid by the church. Oxford and Cambridge were predominantly supported by the crown and the state, a fact which helped them survive the Dissolution of the Monasteries in 1538 and the subsequent removal of all the principal Catholic institutions in England. These structural differences created other characteristics. At the Bologna university the students ran everything—a fact that often put teachers under great pressure and disadvantage. In Paris, teachers ran the school; thus Paris became the premiere spot for teachers from all over Europe. Also, in Paris the main subject matter was theology, so control of the qualifications awarded was in the

hands of an external authority - the Chancellor of the diocese. In Bologna, where students chose more secular studies, the main subject was law.

It was also characteristic of teachers and scholars to move around. There was often competition between universities to secure the best and most popular teachers, leading to the marketisation of teaching. Universities would publish their list of scholars, in a bid to entice students to study at their institution. Students of Peter Abelard followed him to Melun, Corbeil and Paris. Showing that popular teachers would bring with them students.

THE STUDENTS

Students attended the Medieval University at different ages, ranging from 14 if they were attending Oxford or Paris to study the Arts to their 30s if they were studying Law in Bologna. During this period of study students were often living far from home and unsupervised and as such developed a reputation, both among contemporary commentators and modern historians, for drunken debauchery. Students are frequently criticised in the Middle Ages for neglecting their studies for drinking, gambling and sleeping with prostitutes.

COURSE OF STUDY

Universitas Istropolitana : A former university building in present-day Bratislava

University level studies took six years for a Master of Arts degree (a Bachelor of Arts degree would be awarded after completing the third or fourth year). The studies for this were organized by the faculty of arts, where the seven liberal arts were taught: arithmetic, geometry, astronomy, music theory, grammar, logic, and rhetoric. All instruction was given in Latin and students were expected to be able to converse in that language. The trivium comprised the three subjects that were taught first: grammar, logic, and rhetoric. These three subjects were the most important of the seven liberal arts for medieval students. The curriculum came also to include the three Aristotelian philosophies: physics, metaphysics and moral philosophy.

Much of medieval thought in philosophy and theology can be found in scholastic textual commentary because scholasticism was such a popular method of teaching. Aelius Donatus' *Ars grammatica* was the standard textbook for grammar; also studied were the works of Priscian and *Graecismus* by Eberhard of Béthune. Cicero's works were used for the study of rhetoric. Studied books on logic included Porphyry's introduction to Aristotelian logic, Gilbert de la Porrée's *De sex principiis* and *Summulae Logicales* by Petrus Hispanus (later Pope John XXI). The standard work of astronomy was *Tractatus de sphaera*. Once a Master of Arts degree had been conferred, the student could leave the university or pursue further studies in one of the higher faculties, law, medicine, or theology, the last one being the most prestigious. A popular textbook for theological study was called the *Sentences* (*Quattuor libri sententiarum*) of Peter Lombard; theology students as well as masters were required to write extensive commentaries on this text as part of their curriculum. Studies in the higher faculties could take up to twelve years for a master's degree or doctorate (initially the two were synonymous), though again a bachelor's and a licentiate's degree could be awarded along the way. Courses were offered according to books, not by subject or theme. For example, a course might be on a book by Aristotle, or a book from the Bible. Courses were not elective: the course offerings were set, and everyone had to take the same courses. There were, however, occasional choices as to which teacher to use.

A university class, (1350s).

Students often entered the University at fourteen to fifteen years of age, though many were older. Classes usually started at 5:00 or 6:00 am.

LEGAL STATUS

Students were afforded the legal protection of the clergy. In this way no one was allowed to physically harm them; they could only be tried for crimes in an Ecclesiastical court, and

were thus immune from any corporal punishment. This gave students free rein in urban environments to break secular laws with impunity, a fact which produced many abuses: theft, rape and murder were not uncommon among students who did not face serious consequences. This led to uneasy tensions with secular authorities. Students would sometimes "strike" by leaving a city and not returning for years. This happened at the University of Paris strike of 1229 after a riot left a number of students dead; the University went on strike and they did not return for two years. As the students had the legal status of clerics which, according to the Canon Law, could not be held by women, women were not admitted into universities. Most universities in Europe were recognised by the Holy See as a Studium Generale, testified by a papal bull. Members of these institutions were encouraged to disseminate their knowledge across Europe, often lecturing at a different Studia Generales. Indeed, one of the privileges the papal bull confirmed was the right to confer the *Ius ubique docendi*, the right to teach everywhere.

Chapter 61

OLDEST UNIVERSITIES IN CONTINUOUS OPERATION

This is a list of the oldest existing universities in the world. To be included in this table, an educational institution must satisfy a traditional definition of university^[Note 1] *at the time of its founding*. Chronologically, it must have been founded before 1500 in Europe or be the oldest university derived from the medieval European model in a region. It must also be still in operation, with institutional continuity retained throughout its history, and so some early universities, most notably the University of Paris which was suspended from 1793 to 1896, are excluded.

The word *university* is derived from the Latin: *universitas magistrorum et scholarium*, roughly meaning "community of teachers and scholars". The term was coined by the Italian University of Bologna, which, with a traditional founding date of 1088, is considered the first university. The origin of many medieval universities can be traced to the Christian cathedral schools or monastic schools which appear as early as the 6th century and were run for hundreds of years as such before their formal establishment as university in the high medieval period.

Other institutions of higher learning, like those of ancient Greece, ancient Persia, ancient Rome, Byzantium, ancient China, ancient India and the Muslim world, are not included in this list due to their cultural, historical, structural and juristic dissimilarities from the medieval European university from which the modern university evolved.^{[Note 2][Note 3]} In lists based on broader definitions, Al-Karaouine, founded in 859 as a madrasa and in 1963 as a university, is sometimes considered as the "oldest university".

MEDIEVAL ORIGINS

The university as an institution was historically rooted in that medieval society which it in turn influenced and shaped: The university is a European institution; indeed, it is the European institution *par excellence*. There are various reasons for this assertion. As a community of teachers and taught, accorded certain rights, such as administrative autonomy and the determination and realisation of curricula (courses of study) and of the objectives of research as well as the award of publicly recognised degrees, it is a creation of medieval Europe, which was the Europe of papal Christianity...

MODERN SPREAD

From the early modern period onwards, the university gradually spread from the medieval Latin west across the globe, eventually replacing all other higher-learning institutions and becoming the preeminent institution for higher education everywhere. This process occurred in the following chronological order:

- Western Europe (since 11th or 12th century)
- Central and Eastern Europe (since 14th or 15th century)
- Americas (since 16th century)
- Australia (since 19th century)
- Asia and Africa (since 19th or 20th century), except in the Philippines where the University of Santo Tomas was established in the 17th century.

FOUNDED BEFORE 1500

The earliest and only universities before the colonisation of the Americas were established and run in medieval Europe.

Year	Name	Contemporaneous location	Current location	Notes
1088	University of Bologna	 Kingdom of Italy,  Holy Roman Empire	 Bologna, Italy	The first university in the sense of a higher-learning, degree-awarding institute, the word <i>university</i> (Latin: <i>universitas</i>) having been coined at its foundation. It received, in 1158, from the Emperor Frederick I Barbarossa the "Authentica habita" which settled rules, rights and privileges of Universities.
1096-1167 (charter granted in 1248)	University of Oxford	 Kingdom of England	 Oxford, United Kingdom	"Claimed to be the oldest university in the English speaking world, there is no clear date of foundation of Oxford University, but teaching existed at Oxford in some form in 1096 and developed rapidly from 1167, when Henry II banned English students from attending the University of Paris." Teaching suspended in 1209 (due to town execution of two scholars) and 1355 (due to the St. Scholastica Day riot), but was continuous during the English Civil War (1642–1651) - the University was Royalist. All Souls College and University College have repeatedly claimed that they own documents proving that teaching in Oxford started in the year 825, but these documents have never seen the public light (allegedly, John Speed dated his famous

Year	Name	Contemporaneous location	Current location	Notes
				1605 Oxford maps based on these documents). However, it was not until 1254 that Pope Innocent IV granted to Oxford the University charter by papal bull ("Querentes in agro").
1134 (charter granted in 1218)	University of Salamanca	 Kingdom of León	 Salamanca, Spain	It is the oldest university in operation in Spain. Although there are records of the University granting degrees many years before (James Trager's <i>People's Chronology</i> sets its foundation date in 1134), it only received the Royal chart of foundation as "Estudio General" in 1218, making it possibly the fourth or even the third oldest European university in continuous operation. However, it was the first European university to receive the title of " <i>University</i> " as such, granted by king of Castile and León Alfonso X and the Pope in 1254. Having been excluded from the University in 1852 by the Spanish government, the Faculties of Theology and Canon Law became the Pontifical University of Salamanca in 1940.
1209 (charter granted in 1231)	University of Cambridge	 Kingdom of England	 Cambridge, United Kingdom	Founded by scholars leaving Oxford after a dispute caused by the execution of two scholars in 1209, and royal charter was granted in 1231. The university takes 1209 as its official anniversary. Through one of Cambridge's alumni, John Harvard, it inspired the establishment of Cambridge, Massachusetts, United States with the first college in the United States, Harvard University.
1222 (probably older)	University of Padua	 Lombard League	 Padua, Italy	Founded by scholars and professors after leaving Bologna.

Year	Name	Contemporaneous location	Current location	Notes
1224 (1258)	University of Naples Federico II	 Kingdom of Sicily	 Naples, Italy	The first public university, founded by Frederick II, emperor of the Holy Roman Empire. The university moved to Salerno in 1253, and its return to Naples in 1258 is sometimes considered as a refoundation.
1240	University of Siena	 Republic of Siena	 Siena, Italy	Originally called <i>Studium Senese</i> , was founded by Commune of Siena in 1240. In 1321, the studium was able to attract a larger number of pupils due to a mass exodus from the prestigious University of Bologna. Closed temporarily in 1808–1815 when Napoleonic forces occupied Tuscany. On November 7, 1990 the university celebrated its 750th anniversary.
1241	University of Valladolid	 Kingdom of Castile, Crown of Castile	 Valladolid, Spain	One hypothesis is that its foundation is the result of the transfer of Palencia General Survey between 1208 and 1241 by Alfonso VIII, king of Castile, and Bishop Tello Téllez de Meneses.
1290	University of Macerata	 Papal States	 Macerata, Italy	The University of Macerata (Italian: Università degli Studi di Macerata) is a university located in Macerata, Marche, Italy. It was founded in 1290 and is organized into 7 faculties.
1290	University of Coimbra	 Kingdom of Portugal  Lisbon	 Coimbra, Portugal	Begun its existence in Lisbon with the name <i>Studium Generale</i> (<i>Estudo Geral</i>). <i>Scientiae thesaurus mirabilis</i> , the royal charter announcing the institution of the University, was dated 1 March of that year, although efforts had been made at least since 1288 to create this first university in Portugal. The papal confirmation was also given in 1290 (on 9 August of that year), during the papacy of Pope Nicholas IV.
1293	University of	 Crown of Castile	 Alcalá de	The University of Alcalá was

Year	Name	Contemporaneous location	Current location	Notes
	Alcalá		Henares, Spain	founded by King Sancho IV of Castile as Studium Generale in 1293 in Alcalá de Henares. It was granted Papal Bull in 1499, and quickly gained international fame thanks to the patronage of Cardinal Cisneros and the production of the Complutensian Polyglot Bible in 1517, which is the basis for most of the current translations. The University moved to Madrid in 1836 by Royal Decree as Universidad Central. The Moyano Law of 1857 established Central as the sole university in Spain authorized to confer the title of Doctor on any scholar. This law remained in effect until 1969. In 1970, Universidad Central de Madrid changed its name to Universidad Complutense de Madrid, the present name. On the other side, the Universidad de Alcalá was restored in Alcalá de Henares in 1977.
1303	Sapienza University of Rome	 Papal States	 Rome, Italy	Founded by Pope Boniface VIII, but became a state university in 1935.
1308	University of Perugia	 Papal States	 Perugia, Italy	Attested by the Bull of Pope Clement V.
1321	University of Florence	 Republic of Florence	 Florence, Italy	The University of Florence evolved from the Studium Generale, which was established by the Florentine Republic in 1321. The Studium was recognized by Pope Clement VI in 1349.
1336	University of Camerino	 Papal States	 Camerino, Italy	The great literate and jurist Cino from Pistoia, living in Marche in the years 1319-21, and in Camerino in the spring of 1321, remembers the territory blooming with juridical schools. Camerino has been a center of learning since no later than 1200, offering

Year	Name	Contemporaneous location	Current location	Notes
				degrees in civil law, canonical law, medicine, and literary studies. Gregory XI took the decision upon the request of Gentile III da Varano with the papal edict of 29 January 1377, directed to the commune and to the people, authorizing Camerino to confer (after appropriate examination) bachelor and doctoral degrees with apostolic authority.
1343	University of Pisa	 Republic of Pisa	 Pisa, Italy	It was formally founded on September 3, 1343 by an edict of Pope Clement VI, although there had been lectures on law in Pisa since the 11th century. Nowadays is one of the most important universities in Italy.
1348	Charles University of Prague	 Kingdom of Bohemia	 Prague, Czech Republic	Three of four faculties closed in 1419, joined with Jesuit university and renamed Charles-Ferdinand University in 1652, split into German and Czech part in 1882, Czech branch closed during Nazi occupation (1939–1945), German branch closed in 1945.
1361	University of Pavia	 Domain of the House of Visconti	 Pavia, Italy	Closed for short periods during the Italian Wars, Napoleonic wars, and Revolutions of 1848.
1364	Jagiellonian University	 Kingdom of Poland	 Kraków, Poland	Founded by Casimir the Great under the name Studium Generale, and was commonly referred to as the Kraków Academy. The institution's development stalled upon the king's death in 1370; primarily due to a lack of funding. Without a permanent location; lectures were held across the city at various churches and in the Kraków Cathedral School. Further development again resumed in the 1390s, by the initiative of King Władysław

Year	Name	Contemporaneous location	Current location	Notes
				Jagiello and his wife Jadwiga of Poland; at which point the school became a fully functioning university with a permanent location. The university was forcibly shut down during the German Occupation of Poland (1939–1945). The staff was deported to Nazi concentration camps, and many of its collections were deliberately destroyed by the occupying German authorities. Within a month after the liberation of the city, the university again re-opened; with some of the original pre-war staff who survived the occupation.
1365	University of Vienna	 Holy Roman Empire	 Vienna, Austria	Modelled on the University of Paris.
1386	Ruprecht Karl University of Heidelberg	 Holy Roman Empire	 Heidelberg, Germany	Founded by Rupert I, Elector Palatine. The oldest in contemporary Germany and third oldest Germanophone university.
1391	University of Ferrara	 House of Este	 Ferrara, Italy	Founded by Marquis Alberto d'Este.
1404	University of Turin	 Duchy of Savoy	 Turin, Italy	Founded by the prince "Louis of Piedmont" during the reign of Amadeus VIII.
1409	University of Leipzig	 Holy Roman Empire	 Leipzig, Germany	Founded when German-speaking staff left Prague due to the Jan Hus crisis.
1413	University of St. Andrews	 Kingdom of Scotland	 St. Andrews, United Kingdom	A school of higher studies was founded in 1410 and became a full university by the issue of a Papal bull in 1413.
1419	University of Rostock	 Holy Roman Empire	 Rostock, Germany	During the Reformation, "the Catholic university of Rostock closed altogether and the closure was long enough to make the refounded body feel a new institution".
1434	University of Catania	 Kingdom of Sicily	 Catania, Italy	The oldest in Sicily. Founded by Alfonso V of Aragon.
1450	University of Barcelona	 Crown of Aragon	 Barcelona, Spain	Founded by Alfonso V of Aragon as <i>Estudi general de Barcelona</i>

Year	Name	Contemporaneous location	Current location	Notes
			Spain	after the unification of all university education. For forty-nine years prior to that foundation, however, the city had had a fledgling medical school founded by King Martin of Aragon, and in the 13th century Barcelona already possessed several civil and ecclesiastical schools.
1451	University of Glasgow	 Kingdom of Scotland	 Glasgow, United Kingdom	Founded by a Papal bull.
1456	University of Greifswald	 Holy Roman Empire	 Greifswald, Germany	Teaching had started by 1436. Founded by initiative of Heinrich Rubenow, Lord Mayor of Greifswald (and first rector), with approval of Pope Callixtus III and Frederick III, Holy Roman Emperor, under the protection of Wartislaw IX, Duke of Pomerania. Teaching paused temporarily during the Protestant Reformation (1527–39).
1457	Albert Ludwigs University of Freiburg	 Holy Roman Empire	 Freiburg, Germany	Temporarily transferred to Constance in 1686–98 and 1713–15.
1460	University of Basel	 Holy Roman Empire	 Basel, Switzerland	Founded in 1460 (Schola Basiliensis), the University of Basel is the oldest university in Switzerland.
1472	Ludwig Maximilians University of Munich	 Holy Roman Empire	 Munich, Germany	Founded in Ingolstadt in 1459, transferred to Landshut in 1800, moved to Munich in 1826.
1477	Eberhard Karls University of Tübingen	 Holy Roman Empire	 Tübingen, Germany	
1477	Uppsala University	 Kingdom of Sweden within the  Kalmar Union	 Uppsala, Sweden	Uppsala's bull, which granted the university its corporate rights, was issued by Pope Sixtus IV in 1477, and established a number

Year	Name	Contemporaneous location	Current location	Notes
				of provisions. Among the most important of these was that the university was officially given the same freedoms and privileges as the University of Bologna.
1479	University of Copenhagen	 Kingdom of Denmark within the  Kalmar Union	 Copenhagen, Denmark	The University of Copenhagen is the oldest university in Denmark, and the second oldest in Scandinavia after Uppsala University in Sweden
1481	University of Genoa	 Republic of Genoa	 Genoa, Italy	Founded in 1481 (Genuense Athenaeum).
1495	University of Aberdeen	 Kingdom of Scotland	 Aberdeen, United Kingdom	King's College was founded by a Papal bull in 1495 and then Marischal College in 1593; they merged in 1860.
1495	University of Santiago de Compostela	 Galicia, Crown of Castile	 Santiago de Compostela, Spain	The university traces its roots to 1495, when a school was opened in Santiago. In 1504, Pope Julius II approved the foundation of a university in Santiago, and the bull for its creation was granted by Clement VII in 1526.
1499	University of Valencia	 Crown of Aragon	 Valencia, Spain	

OLDEST UNIVERSITIES BY COUNTRY OR REGION AFTER 1500 STILL IN OPERATION

The majority of European countries had universities by 1500. After 1500, universities began to spread to other countries all over the world. Oldest entity of each continent is indicated in bold:

AFRICA

- Algeria: University of Algiers, 1909
- Angola: Agostinho Neto University (as *Estudos Gerais Universitários de Angola*), 1962
- Cameroon: University of Yaoundé, 1962
- Cape Verde: Jean Piaget University of Cape Verde, 2001
- Egypt: Cairo University, 1908; The American University in Cairo, 1919 as a private university.
- Ethiopia: University of Addis Ababa, 1950
- Ghana: University of Ghana, 1948

- Kenya: Egerton University, 1939 (as *Egerton Farm School*)
- Liberia: Liberia College – University of Liberia, 1951, building on Liberia College founded in 1863.
- Libya: University of Libya, 1956; later divided to University of Benghazi and University of Tripoli, the names were changed again during Gaddafi's era, but now they have reinstated their original names
- Mauritius: University of Mauritius, 1965
- Morocco: University of Rabat, 1957, University of Hassan II Casablanca Ain Chok, 1975.
- Mozambique: Eduardo Mondlane University (as *Estudos Gerais Universitários de Moçambique*), 1962
- Nigeria: University of Ibadan, 1948
- Sierra Leone: Fourah Bay College - University of Sierra Leone, 1827
- Somalia: Somali National University, 1954 Gaheyra
- South Africa:
 - **University of Cape Town, 1829** (University status: 2 April 1918)
 - Stellenbosch University, 1866 (University status: 2 April 1918)
- Sudan: University of Khartoum, 1902 (renamed from Gordon Memorial College in 1956).
- Uganda: Makerere University, 1922
- Zimbabwe: University of Zimbabwe, 1952

ASIA

- Afghanistan:
 - Kabul Medical University, 1946
 - Kabul University, founded in 1931, formally opened 1932
- Bahrain: University of Bahrain, 1986
- Bangladesh:
 - Dhaka College, 1841 Dhaka College was established by Dr. James Taylor (Civil Surgeon at Dhaka) in 1835 as an English School (at present Dhaka Collegiate School).
 - Chittagong College, 1869
 - Rajshahi College, 1873
 - Dhaka University, 1921
- Cambodia:
 - Royal University of Fine Arts, 1918
 - Royal University of Law and Economics, 1948
 - Royal University of Phnom Penh, 1960
- China:^[Note 4]
 - Tianjin University, established in 1895 as Imperial Tientsin University.
 - Jiaotong University, founded in 1896 as Nanyang Public School
 - Peking University, founded in 1898 as Imperial Capital University or Imperial University of Peking
 - Shandong University, founded in 1901 as Shandong Imperial University

- Nanjing University (National Central University), established as Sanjiang Normal College in 1902, the first Chinese university providing doctoral degree (in 1927)
 - Tsinghua University, established in 1911 under the name "Tsinghua College"
- Hong Kong: The University of Hong Kong, founded as the Hong Kong College of Medicine for Chinese in 1887, incorporated as a university in 1911
- India:
 - University of Calcutta, 1857, first full-fledged multi-disciplinary university in South Asia in terms of foundation date although the University of Bombay and the University of Madras were subsequently established in the same year
 - University of Allahabd, established in 1882, University of Punjab in 1887 and University of Delhi established in 1922.
- Indonesia:
 - University of Indonesia, 1947, founded as the School of Javanese Doctor in 1851
 - Bandung Institute of Technology, 1959, founded as *Technische Hogeschool* in 1920
- Iraq: University of Baghdad, 1956 - Although the Iraqi Royal College of Medicine was established in 1928
- Iran: University of Tehran, 1934, founded by Rezā Shāh, incorporating portions of the Dar ul-Funun Polytechnic Institute (1851) and the Tehran School of Political Sciences (1899)
- Israel:
 - Hebrew University of Jerusalem, 1918
 - Technion - Israel Institute of Technology, founded in 1912, but formal teaching began in 1924
- Japan:
 - University of Tokyo, Its origins include a private college of Confucian studies founded by Hayashi Razan in 1630, Tenmonkata (The Observatory, 1684) and Shutōsho (Smallpox Vaccination Centre, 1849). It was later organised in 1867 as the Imperial University.
 - Keio University, 1858 as the oldest modern institute of higher education in Japan (To be noted, Japan's oldest academic institution is Ashikaga Gakko)
- Jordan:
 - University of Jordan, 1962
- Kazakhstan:
 - Al-Farabi Kazakh National University, 1933
- Lebanon:
 - American University of Beirut, 1866
 - Saint Joseph University (Universite Saint Joseph), 1872
 - Universite de la Sagesse, 1875
- Macau: University of Macau, established as University of East Asia in 1981, renamed 1991.
- Malaysia: University of Malaya, as Straits and Federated Malay States Government Medical School in 1905 in Singapore

- Mongolia:
 - Mongolian Academy of Sciences, 1921, as part of the Institute of Literature and Script
 - Institute of finance and economics of Mongolia, 1924 as the School of Custom's Officers in Ulaanbaatar.
 - National University of Mongolia, 1942
- Myanmar: Rangoon University, 1878
- Nepal: Tribhuvan University, 1959
- Pakistan:
 - King Edward Medical University, Lahore, 1860
 - Forman Christian College University, established as Forman Christian College in Lahore, 1864
 - Government College University, Lahore, established as Government College, Lahore, 1864
 - University of the Punjab, 1882 (Pakistan)
- Philippines:
 - **University of Santo Tomas, 1611** - founded on 28 April 1611, it is the oldest extant university charter in the Philippines and in Asia. It celebrated its 400th anniversary in 2011.
 - Colegio de San Juan de Letran, 1620
- Saudi Arabia: King Saud University, 1957
- Singapore: National University of Singapore, 1905 - Founded as Straits and Federated Malay States Government Medical School.
- South Korea: Listed according to the year when institutions became universities
 - Ewha Womans University, started higher education in 1910, and was reorganized as Ewha Womans University in 1946. It was established in 1886 as the first mission school to educate women in Korea.
 - Korea University, then Boseong School, was established in 1905, and was restructured as Korea University in 1946.
 - Sungkyunkwan University, was reorganized as Sungkyunkwan University in 1946. Sungkyunkwan, its origin, was established in 1398 as the royal institution for higher education of the Joseon Dynasty.
 - Yonsei University, Chosun Christian University which is established in 1915 was merged with a hospital named Jaejungwon(1885) in the name of Yonsei University in 1957.
 - Sogang University, The university was established in 1960 by the Wisconsin province of the Society of Jesus to provide education based on Catholic beliefs inspired by the Jesuit education philosophy.
- Sri Lanka:
 - University College Colombo, 1920 - Although the Ceylon Medical College was established in 1870
 - University of Ceylon, 1942 - First full-fledged multi disciplinary university in Sri Lanka
- Syria: University of Damascus was founded in 1923 through the merger of the School of Medicine (established 1903) and the Institute of Law (established 1913).

- Taiwan:
 - National Taiwan University, 1928, as Taihoku (Taipei) Imperial University.
 - National Taipei University of Technology, 1912, as School of Industrial Instruction
- Thailand:
 - Chulalongkorn University, 1917
 - Thammasat University, 1939
 - Kasetsart University, 1943
 - Mahidol University, 1943
 - Silpakorn University, 1943
- Vietnam:
 - Hanoi Medical University 1902
 - Vietnam National University, Hanoi 1904
 - Hanoi College of Fine Arts 1925

EUROPE

- Albania: University of Tirana, 1957.
- Armenia: Yerevan State University, 1919
- Austria
 - University of Graz, 1585.
 - University of Salzburg, 1622.
 - University of Innsbruck, 1669.
- Azerbaijan: Baku State University, 1919
- Belgium
 - Ghent University, 1817.
 - University of Liège, 1817.
 - Catholic University of Mechlin, 1834, then called Catholic University of Louvain, 1835, and then split into Dutch-speaking Katholieke Universiteit Leuven and French-speaking Université catholique de Louvain, 1968
 - Free University of Brussels, 1834
- Bosnia and Herzegovina: University of Sarajevo, 1949
- Bulgaria:
 - University of Sofia, 1888
 - University of National and World Economy, 1920
 - University of Economics Varna, 1920
- Croatia: University of Zagreb, 1669
- Czech Republic (apart from the Charles University 1348, see above)
 - Palacký University of Olomouc, 1573, as Olomouc Jesuit University
 - Czech Technical University, 1707, being the oldest *non-military* technical university in Europe
- Denmark: Technical University of Denmark, 1829
- Estonia: University of Tartu, 1632, the university was closed from 1710 to 1802
- Finland:
 - University of Helsinki, 1640, originally the Academy of Turku, but moved to Helsinki in 1827

- France: All French universities were suspended in 1793, and so do not meet the criteria for inclusion in the pre-1500 list above. However many modern French universities trace their origins to earlier foundations, including
 - University of Paris (*Sorbonne*), between 1160 and 1250
 - University of Toulouse, 1229
 - University of Montpellier, 1289 (probably earlier, and with the world's oldest medicine faculty still in operation)
- Germany:
 - University of Wittenberg, 1502
 - Philipps-Universität Marburg, 1527
 - University of Jena, 1558
 - Georg-August-Universität Göttingen, 1734
 - University of Erlangen-Nuremberg, 1742
- Georgia: Tbilisi State University, 1918
- Greece:
 - Ionian Academy, 1824
 - NTUA, 1836
 - University of Athens, 1837
- Hungary:
 - Eötvös Loránd University, 1635
 - Semmelweis University, 1769
 - Budapest University of Technology and Economics, 1782
- Iceland: University of Iceland, 1911
- Ireland
 - University of Dublin, 1592
 - National University of Ireland, Cork, 1845
 - National University of Ireland, Galway, 1845
 - University College Dublin, 1854
- Italy
 - Oldest universities founded after 1500 (so, excluding Italian universities listed above), by region:
 - Abruzzo: University of L'Aquila, 1596
 - Basilicata: University of Basilicata, 1982
 - Calabria: Mediterranean University of Reggio Calabria, 1962
 - Campania: Università degli Studi di Napoli "L'Orientale", 1732
 - Emilia-Romagna: none, all universities founded from the 12th to 14th centuries
 - Friuli-Venezia Giulia: University of Trieste, 1924
 - Lazio: University of Cassino and Tuscia University, both in 1979
 - Liguria: none, the only university was founded in the 15th century
 - Lombardia: Polytechnic University of Milan, 1863
 - Marche: University of Urbino, 1506
 - Molise: University of Molise, 1982
 - Piemonte: Polytechnic University of Turin, 1859
 - Puglia: University of Bari, 1925
 - Sardegna: University of Sassari, 1617

- Sicilia: University of Messina, 1548
- Toscana: Scuola Normale Superiore di Pisa, 1810
- Trentino-Alto Adige: University of Trento, 1962
- Umbria: University for Foreigners Perugia, 1921
- Veneto: Ca' Foscari University of Venice, 1868
- Latvia: Riga Technical University, 1862
- Liechtenstein: Hochschule Liechtenstein, 1992, successor to the Abendtechnikum Vaduz established in 1961
- Lithuania: University of Vilnius, 1579, successor to the Vilnius Academy 1570, although its operation was not continuous: the university was closed from 1832 to 1919 and again in 1943-44
- Luxembourg: University of Luxembourg, 2003
- Macedonia:
 - Ss. Cyril and Methodius University of Skopje, 1946
 - St. Clement of Ohrid University of Bitola, 1979
- Malta: University of Malta, 1768, first established as the Collegium Melitense by the Jesuits 1592
- Netherlands
 - University of Leiden, 1575
 - University of Groningen, 1614
 - University of Amsterdam, 1632, as Athenaeum Illustre
 - Utrecht University, 1636
- Norway: University of Oslo, 1811
- Poland:
 - University of Wrocław, 1701, re-founded 1811
 - University of Warsaw, 1816
- Portugal
 - University of Évora, second oldest university in Portugal, 1559–1759, resumed work in 1973
 - University of Lisbon, 1911
 - University of Porto, 1911
- Romania:
 - Alexandru Ioan Cuza University, Iași, 1860; successor to Vasilian College, 1640, Princely Academy, 1707, and Academia Mihăileană, 1834
 - University of Bucharest, Bucharest, 1864; successor to the Princely Academy, 1694, and Saint Sava College, 1822
 - Babeș-Bolyai University, Cluj-Napoca, 1872/1918; teaching existed in Cluj-Napoca since the Jesuits College, 1581, and the Jesuits Academy, 1688
- Russia
 - Moscow State University, 1755
 - Saint Petersburg State University, 1724–1803, 1819
 - Kant Russian State University, 1967 (claims continuity from University of Königsberg, 1544)
- Serbia: Belgrade University, founded in 1808 as the Belgrade Higher School, by 1838 it merged with the Kragujevac-based departments into a single university,

under current name from 1905; Orthodox Christian Lyceum in 1794; Teacher's college in 1778

- Slovakia: Comenius University in Bratislava 1919
- Slovenia: University of Ljubljana, 1919
- Spain
 - University of Seville, 1505
 - University of Granada, 1531
 - University of Zaragoza, 1542
 - University of Oviedo, 1608
- Sweden:
 - Lund University, 1666; a Franciscan Studium Generale was founded in Lund in 1425, as the first university in Northern Europe, but as a result of the Protestant Reformation the operations of the catholic university were suspended
- Switzerland:
 - Cantons University
 - University of Zürich, origin 1525; est. 1525. Switzerland's largest university (25,000 students)
 - University of Lausanne, 1537
 - University of Geneva 1559; founded by John Calvin
 - University of Fribourg origin 1582; est. 1889
 - University of Bern, 1834
 - University of Neuchâtel, 1838
 - University of Lucerne, 1851
 - University of St. Gallen, 1898
 - University of Lugano, 1996; Switzerland's newest university
 - Federal Institutes of Technology
 - Swiss Federal Institute of Technology Lausanne (EPFL) est. 1853; opened in 1869
 - Swiss Federal Institute of Technology Zurich (ETHZ) 1855
- Turkey:
 - Boğaziçi University Founded in 1863 as Robert College, transformed into a public research university in 1971.
 - Istanbul University Founded by Mehmed II, but became a state university in 1933.
 - Istanbul Technical University Founded in 1773 as Imperial School of Naval Engineering by Mustafa III, but became a state university in 1928.
 - Mimar Sinan Fine Arts University founded in 1882
 - Yıldız Technical University founded in 1911
- Ukraine
 - University of Lviv, operated from 1661-1773, 1784-1805, 1817-1848, 1850-
 - University of Kharkiv, 1804
- United Kingdom
 - England: with the exception of the short-lived University of Northampton, Oliver Cromwell's grant of letters patent to found Durham College and the

failed attempt to found a university at Stamford, Lincolnshire, no new universities were created in England until the 19th century.

- University College London (then the *London University*), 1826
- King's College London, 1829
- Durham University, 1832
- University of London created with UCL and King's College London merger, 1836
- Northern Ireland: Queen's University Belfast, 1845
- Scotland:
 - University of Edinburgh, 1583
- Wales: St David's College, Lampeter now University of Wales, Trinity Saint David, 1822

LATIN AMERICA AND THE CARIBBEAN

- Argentina: National University of Córdoba, 1613
- Belize: University of Belize, 2000
- Bolivia: Royal and Pontifical Major University of St. Francis Xavier of Chuquisaca, 1624
- Brazil:
 - Federal University of Amazonas (UFAM), 1909
 - Federal University of Paraná (UFPR), 1912
 - Federal University of Rio de Janeiro (UFRJ), 1920; successor to the Royal Academy of Artillery, Fortification and Design, 1792
- Chile:
 - Universidad de Chile, 1842 September 17; successor to the "Real Universidad de San Felipe", created in 1738 and installed in 1747
- Colombia:
 - Saint Thomas Aquinas University, 1580
 - Pontifical Xavierian University, 1623
 - Colegio Mayor de Nuestra Señora del Rosario - Universidad del Rosario, 1653
- Cuba: Universidad de La Habana, 1728
- Dominica: Ross University School of Medicine, 1978
- Dominican Republic: Universidad Autónoma de Santo Domingo, 1914; successor to the Universidad Santo Tomás de Aquino, 1558, which disappeared in 1823
- Ecuador: Central University of Ecuador, 1622, 19 May, as *Real y Pontificia Universidad de San Gregorio Magno*
- El Salvador: Universidad de El Salvador, 1841
- Grenada: St. George's University, 1976
- Guatemala: Universidad de San Carlos de Guatemala, 1676
- Guyana: University of Guyana, 1963
- Haiti: Université d'Etat d'Haiti, 1820 and Haitian Adventist University, 1921
- Honduras: Universidad Nacional Autónoma de Honduras, 1847
- Jamaica: University of the West Indies, Mona 1948 and University of Technology, Jamaica 1958
- Mexico:

- National Autonomous University of Mexico, September 22, **1551**, as Royal and Pontifical University of Mexico (in 1920 changed its name to National Autonomous University of Mexico, when it was given the freedom to define its own curriculum and manage its own budget without interference from the government)
- Universidad Michoacana de San Nicolás de Hidalgo, founded in 1540 as *Colegio de San Nicolás Obispo* (*St. Nicholas Bishop College*) and later in 1543 was appointed *Real Colegio de San Nicolás Obispo* (*Royal St. Nicholas Bishop College*) by King Carlos I of Spain; it was converted into a university on October 15, 1917.
- Benemérita Universidad Autónoma de Puebla, founded 1587 as *Colegio del Espíritu Santo* (it was sponsored by Jesuits until its conversion into a public college in 1825, and a public university in 1937)
- Universidad de Guadalajara, founded October 12, 1791; legally established October 12, 1925
- Panama: Universidad de Panamá, 1935
- Paraguay: Universidad Nacional de Asunción, 1889
- Peru:
 - **National University of San Marcos**, Lima, May 12, 1551, as the Royal and Pontifical University of the City of the Kings. Also known as the "Dean university of the Americas"; This is the first officially established (privilege by Charles V, Holy Roman Emperor) and the longest *continuously* operating university in the American continent.
 - National University of San Antonio Abad in Cuzco or *Universidad Nacional de San Antonio Abad del Cusco* - 1 June 1692
- Puerto Rico: University of Puerto Rico, Rio Piedras, 1903
- Surinam: Anton de Kom University, 1968
- Uruguay: Universidad de la República, 1849
- Venezuela: Central University of Venezuela, 1721

NORTH AMERICA

- Canada:
 - Université Laval, founded in 1663, chartered in 1852 (oldest post-secondary institution in Canada; founded as Séminaire de Québec)
 - University of New Brunswick, founded in 1785, chartered in 1827 (oldest English-language post-secondary institution in Canada; founded as College of New Brunswick)
 - University of King's College, founded in 1789, chartered in 1802 (oldest chartered university in Canada; founded as King's College)
- United States:
 - **Harvard University**, founded in **1636**, chartered in 1650
 - The College of William & Mary, chartered in 1693
 - Yale University, chartered in 1701, moved to current location in 1718
 - Princeton University, chartered in 1746

- Columbia University, chartered in 1754 as King's College, renamed Columbia College after American independence.
- University of Pennsylvania, founded in 1740, chartered in 1755

See also: First university in the United States and Oldest public university in the United States

OCEANIA

- Australia
 - **University of Sydney, 1850** (oldest in Australia and Oceania)
 - University of Melbourne, 1853 (oldest in Victoria)
 - University of Adelaide, 1874 (oldest in South Australia)
 - University of Tasmania, 1890 (oldest in Tasmania)
 - University of Queensland, 1909 (oldest in Queensland)
 - University of Western Australia, 1911 (oldest in Western Australia)
 - Australian National University, 1946 (oldest in Australian Capital Territory)
 - University of New England, 1954 (first established outside of a state capital)
 - Northern Territory University, 1989 (amalgamated as part of Charles Darwin University in 2004)
- New Zealand
 - University of Otago, 1869 (oldest in New Zealand and the South Island)
 - University of Canterbury, 1873 (oldest in Christchurch)
 - University of Auckland, 1883 (oldest in Auckland and the North Island)
 - Victoria University of Wellington 1899 (oldest in Wellington)

Chapter 62

MIDDLE AGES UNIVERSITIES IN EUROPE

The Middle Ages Universities comprises universities which existed in Europe during the Middle Ages. It also includes short-lived foundations and European educational institutions whose university status is a matter of debate. The degree-awarding university with its corporate organization and relative autonomy is a product of medieval Christian Europe. Before 1500 more than eighty universities were established in Western and Central Europe. During the subsequent Colonization of the Americas the university was introduced to the New World, marking the beginning of its worldwide spread as *the* center of higher learning everywhere.

Mob Quad, late medieval quarters of the University of Oxford

DEFINITION

There were many institutions of learning (*Studium*) in the Middle Ages in Latin Europe - cathedral schools, "schools of rhetoric" (law faculties), etc. Historians generally restrict the term "medieval university" to refer to an institution of learning that was referred to as *Studium Generale* in the Middle Ages.

There is no official strict definition of a *Studium generale*, the term having emerged from customary usage. The following properties were common among them, and are often treated as defining criteria:

- (1) that it received students from everywhere (not merely the local district or region);
- (2) That it engaged in higher learning, i.e. that it went beyond teaching the Arts, and had at least one of the higher faculties (Theology, Law or Medicine).

- (3) that a significant part of the teaching was done by Masters (teachers with a higher degree)
- (4) that it enjoyed the privilege of *jus ubique docendi*, i.e. masters of that school were entitled to teach in any other school without a preliminary examination.
- (5) that its teachers and students were allowed to enjoy any clerical benefices they might have elsewhere without meeting the mandatory residency requirements prescribed by Canon Law.
- (6) that it enjoyed some degree of autonomy from local civil and diocesan authorities.

Charters issued by the Pope or Holy Roman Emperor were often needed to ensure privileges (4)-(6). The fourth condition (teaching elsewhere without examination) was originally considered by scholars of the time to be the most important criterion, with the result that the appellation *Studium Generale* was customarily reserved to refer only to the oldest and most prestigious schools — specifically, Salerno, Bologna and Paris, and sometimes Oxford — until this oligopoly was broken by papal and imperial charters in the course of the 13th century. The fifth criterion (continued benefices) was the closest there was to an "official" definition of a *Studium Generale* used by the Church and academics from the 14th century onwards, although there were some notable exceptions (e.g. neither Oxford nor Padua received this right, but they were nonetheless universally considered "*Studium Generale* by custom").

Modern historians have tended to focus on the first three requirements (students from everywhere, at least one higher faculty, teaching by masters). This has led to contention in making lists of Medieval universities. Some Italian universities, for instance, were quick to obtain papal charters and thus the privileges and title of a *Studium Generale*, but their student catchment never went much beyond the local district or they had only a couple of masters engaged in teaching. Other comparable schools (notably the more prestigious cathedral schools of France), may have had wider student catchment and more masters, but neglected or failed to secure the chartered privileges and thus were never referred to as *Studium Generale*. It is common to include the former and exclude the latter from lists of "Medieval universities", but some historians have disputed this convention as arbitrary and unreflective of the state of higher learning in Europe.

Some historians have discarded the *Studium Generale* definition, and come up with their own criteria for a definition of a "university" — narrowing it by requiring, for instance, that a university have all three higher faculties (Theology, Law, Medicine) in order to be considered a "Medieval university" (very few had all three), whereas others widen it to include some of the more prestigious cathedral schools, palace schools and universities outside of Latin Europe (notably in the Greek and Islamic world).

There is also contention on the founding dates of many universities. Using the date of acquisition of a papal and royal/imperial charter is inadequate, as the older universities, believing their status and reputations sufficient and indisputable, refused or resisted asking for an official charter for a long time. Some historians trace the founding of a university to the first date when evidence of some kind of teaching was done in that locality, even if only local and limited. Others wait until there is evidence of higher

learning, a wide student catchment, the emergence of its masters teaching elsewhere or a more definitive mention of it as a *Studium generale*.

LIST

The list is sorted by the date of recognition. At places where more than one university was established, the name of the institution is given in brackets.

Ranking	Year	Name	Contemporaneous location	Current location	Notes
1	1088	University of Bologna	Holy Roman Empire	Bologna, Italy	The first university in the sense of a higher-learning, degree-awarding institute, the word university having been coined at its foundation.
2	1096-1167 (1248 charter granted)	University of Oxford	Kingdom of England	Oxford, United Kingdom	"Claimed to be the oldest university in the English speaking world, there is no clear date of foundation of Oxford University, but teaching existed at Oxford in some form in 1096 and developed rapidly from 1167." Teaching suspended in 1209 (due to town execution of two scholars) and 1355 (due to the St. Scholastica riot), but was continuous during the English Civil War (1642–1651) - the University was Royalist. All Souls College and University College have repeatedly claimed that they own documents proving that teaching in Oxford started in the year 825, but these documents have never seen the public light (allegedly, John Speed dated his famous 1605 Oxford maps based on these documents). However, it was not until 1254 that Pope Innocent IV granted to Oxford the University charter by papal bull ("Querentes in agro").
3	1170 (1200 Charter Granted)	University of Paris		France	The faculty and nation system of the University of Paris (along with that of the University of Bologna) became the model for all later medieval universities. The

					<p>university of Paris was known as a universitas magistrorum et scholarium (a guild of masters and scholars), by contrast with the Bolognese universitas scholarium.</p> <p>The university had four faculties: Arts, Medicine, Law, and Theology. The Faculty of Arts was the lowest in rank, but also the largest as students had to graduate there to be admitted to one of the higher faculties. The students were divided into four nationes according to language or regional origin: France, Normandy, Picardy, and England. The last came to be known as the Alemannian (German) nation. Recruitment to each nation was wider than the names might imply: the English-German nation included students from Scandinavia and Eastern Europe.</p>
4	1204	University of Vicenza	Commune of Vicenza	Vicenza, Italy	Laical studium generale, it was closed early, on 1209.
5	1209 (1231 charter granted)	University of Cambridge	Kingdom of England	Cambridge, United Kingdom	Founded by scholars leaving Oxford after a dispute caused by the execution of two scholars in 1209, and royal charter was granted in 1231. The university takes 1209 as its official anniversary.
6	1212	University of Palencia	Kingdom of León	Palencia, Spain	It was the oldest Studium Generale in the Iberian Peninsula. It disappeared ca. 1264, and its remains transferred to University of Valladolid.
7	1218 (probably older)	University of Salamanca	Kingdom of León	Salamanca, Spain	It is the oldest university in operation in Spain. Although there are records of the University granting degrees many years before (James Trager's People's Chronology sets its foundation date in 1134), it only received the Royal chart of foundation as "Estudio General" in 1218,

					making it possibly the fourth or even the third oldest European university in continuous operations. However, it was the first European university to receive the title of "University" as such, granted by king of Castile and León Alfonso X and the Pope in 1254. Having been excluded from the University in 1852 by the Spanish government, the Faculties of Theology and Canon Law became the Pontifical University of Salamanca in 1940.
8	1222 (probably older)	University of Padua	Commune of Padua	Padua, Italy	Founded by scholars and professors after leaving Bologna.
9	1224	University of Naples Federico II	Kingdom of Sicily	Naples, Italy	The first public university, founded by Frederick II, emperor of the Holy Roman Empire.
10	1229	University of Toulouse	County of Toulouse	Toulouse, France	
11	1235 1306	University of Orléans	Orléans, Duchy of Orléans, Orléanais, Kingdom of France	Orléans, France	In 1219, pope Honorius III forbids the teaching of Roman Law in the University of Paris. Then, a number of teachers and disciples took refuge in Orléans. In 1235 pope Gregory IX, in a bull, affirms that teaching Roman Law is not forbidden in Orléans. Later, pope Boniface VIII, in 1298, promulgated the sixth book of the Decretals, he appointed the doctors of Bologna and the doctors of Orléans to comment upon it. Pope Clement V also studied law and letters in Orléans and, by a Papal Bull published at Lyon, 27 January 1306, he endowed the Orléans institutes with the title and privileges of a University.
12	1240	University of Siena	Republic of Siena	Siena, Italy	Originally called Studium Senese, was founded by Commune of Siena in 1240. In 1321, the studium was able to attract a larger number of pupils due to a mass exodus

					from the prestigious neighbouring University of Bologna. Closed temporarily in 1808–1815 when Napoleonic forces occupied Tuscany. On November 7, 1990 the university celebrated its 750th anniversary.
12	1241	University of Valladolid	Kingdom of Castile	Valladolid, Spain	One hypothesis is that its foundation is the result of the transfer of Palencia General Survey between 1208 and 1241 by Alfonso VIII, king of Castile, and Bishop Tello Téllez de Meneses.
13	1261	University of Northampton	Kingdom of England	Northampton	The University of Northampton was founded in 1261 by King Henry III. Abolished in 1265.
14	1272	University of Murcia	Crown of Castile	Murcia, Spain	The University of Murcia was founded in 1272 by the King Alfonso X of Castile. It had no continuity after 14th century, until it was re-founded in 1915.
15	1289	University of Montpellier	Lordship of Montpellier, Kingdom of Majorca	Montpellier, France	A bull issued by Pope Nicholas IV in 1289, combines all the long-existing schools, since 1160, into a university.
16	1290	University of Macerata	Papal States	Macerata, Italy	The University of Macerata (Italian: Università degli Studi di Macerata) is a university located in Macerata, Marche, Italy. It was founded in 1290 and is organized into 7 faculties.
17	1290	University of Coimbra	Kingdom of Portugal	Coimbra, Portugal	Begun its existence in Lisbon with the name Studium Generale (Estudo Geral). Scientiae thesaurus mirabilis, the royal charter announcing the institution of the University, was dated 1 March of that year, although efforts had been made at least since 1288 to create this first university in Portugal. The papal confirmation was also given in 1290 (on 9 August of that year), during the papacy of Pope Nicholas IV.
18	1293	University of	Crown of Castile	Alcalá de	The University of Alcalá was

		Alcalá		Henares, Spain	founded by King Sancho IV of Castile as Studium Generale in 1293 in Alcalá de Henares. It was granted Papal Bull in 1499, and quickly gained international fame thanks to the patronage of Cardinal Cisneros and the production of the Complutensian Polyglot Bible in 1517, which is the basis for most of the current translations. The University moved to Madrid in 1836 by Royal Decree. The Moyano Law of 1857 established Complutense as the sole university in Spain authorized to confer the title of Doctor on any scholar. This law remained in effect until 1969.
19	1300	University of Lleida	Crown of Aragon	Lleida, Spain	Founded in 1300 as Estudi General (Studium Generale), after a 1297 granting Papal bull. It was closed down in 1717 along with the banning of the rest of Catalan universities and the original political institutions of Catalonia. Refounded on December 12, 1991.
20	1303	La Sapienza University of Rome	Papal States	Rome, Italy	Founded by Pope Boniface VIII, but became a state university in 1935. According to the Catholic Encyclopaedia, the university "remained closed during the entire pontificate of Clement VII".
21	1308	University of Perugia	Papal States	Perugia, Italy	Attested by the Bull of Pope Clement V. On May 19, 1355, the Emperor Charles IV, Holy Roman Emperor issued a Bull confirming the papal erection and raising it to the rank of an imperial university.
22	1321	University of Florence	Republic of Florence	Florence, Italy	The University of Florence evolved from the Studium Generale, which was established by the Florentine Republic in 1321. The Studium was recognized by Pope Clement VI in 1349.
23	1336	University of Camerino	Papal States	Camerino, Italy	The great literate and jurist Cino from Pistoia, living in

					<p>Marche in the years 1319-21, and in Camerino in the spring of 1321, remembers the territory blooming with juridical schools. Camerino has been a center of learning since no later than 1200, offering degrees in civil law, canonical law, medicine, and literary studies. Gregory XI took the decision upon the request of Gentile III da Varano with the papal edict of 29 January 1377, directed to the commune and to the people, authorizing Camerino to confer (after appropriate examination) bachelor and doctoral degrees with apostolic authority.</p>
24	1343	University of Pisa	Republic of Pisa	Pisa, Italy	<p>It was formally founded on September 3, 1343 by an edict of Pope Clement VI, although there had been lectures on law in Pisa since the 11th century. Nowadays is one of the most important universities in Italy.</p>
25	1348	Charles University of Prague	Kingdom of Bohemia	Prague, Czech Republic	<p>Three of four faculties closed in 1419, joined with Jesuit university and renamed Charles-Ferdinand University in 1652, split into German and Czech part in 1882, Czech branch closed during Nazi occupation (1939–1945), German branch closed in 1945.</p>
26	1349	University of Perpignan	Crown of Aragon	Perpignan, France	<p>Founded in 1349 by Peter IV of Aragon, it was closed in 1794. Refounded on 1971, and on 1979 as independent university with the name Université de Perpignan Via Domitia.</p>
27	1356	University of Angers	Charles V of France	Angers, France	<p>Founded in 1356, closed down in 1793, and reestablished in 1971. By 1080, the “Studium” or the School of Angers was already a renowned scholarly institution. It received the title “university” in 1356, and in 1364, Charles V granted the university its autonomy and privileges.</p>

28	1361	University of Pavia	House of Visconti	Pavia, Italy	Closed for short periods during the Italian Wars, Napoleonic wars, and Revolutions of 1848.
29	1364	Jagiellonian University	Kingdom of Poland	Kraków, Poland	Founded by Casimir the Great under the name Studium Generale, and was commonly referred to as the Kraków Academy. The institution's development stalled upon the king's death in 1370; primarily due to a lack of funding. Without a permanent location; lectures were held across the city at various churches and in the Kraków Cathedral School. Further development again resumed in the 1390s, by the initiative of King Władysław Jagiełło and his wife Jadwiga of Poland; at which point the school became a fully functioning university with a permanent location. The university was forcibly shut down during the German Occupation of Poland (1939–1945). The staff was deported to Nazi concentration camps, and many of its collections were deliberately destroyed by the occupying German authorities. Within a month after the city's liberation, the university again re-opened; with some of the original pre-war staff who survived the occupation.
30	1365	University of Vienna	Holy Roman Empire	Vienna, Austria	Modelled on the University of Paris.
31	1367	University of Pécs	Kingdom of Hungary	Pécs, Hungary	
32	1386	Ruprecht Karl University of Heidelberg	Holy Roman Empire	Heidelberg, Germany	Founded by Rupert I, Elector Palatine. The oldest in Germany.
33	1391	University of Ferrara	House of Este	Ferrara, Italy	Founded by Marquis Alberto d'Este.
34	1396	University of Zadar	House of Este	Zadar, Croatia	Founded by Raimund de Vineis.
35	1404	University of Turin	Duchy of Savoy	Turin, Italy	Founded by the prince "Louis of Piedmont" during the reign of Amadeus VIII.
36	1409	University of	Holy Roman Empire	Leipzig,	Founded when German-

		Leipzig		Germany	speaking staff left Prague due to the Jan Hus crisis.
37	1413	University of St Andrews	Kingdom of Scotland	St Andrews, UK	Founded by a Papal Bull
38	1419	University of Rostock	Holy Roman Empire	Rostock, Germany	During the Reformation, "the Catholic university of Rostock closed altogether and the closure was long enough to make the refounded body feel a new institution".
39	1425	University of Leuven	Duchy of Brabant	Leuven, Belgium	Founded by a Papal Bull.
40	1432	University of Caen	Kingdom of England	Caen, France	Founded by John of Lancaster, 1st Duke of Bedford during the period of English control of Normandy during the Hundred Years' War. When the French regained control of Normandy the University was recognized by French King Charles VII.
41	1434	University of Catania	Kingdom of Sicily	Catania, Italy	The oldest in Sicily. Founded by Alfonso V of Aragon.
42	1441	University of Bordeaux	Kingdom of England	Bordeaux, France	Founded by a Papal Bul.
43	1450	University of Barcelona	Crown of Aragon	Barcelona, Spain	Founded by Alfonso V of Aragon as Estudi general de Barcelona after the unification of all university education. For forty-nine years prior to that foundation, however, the city had had a fledgling medical school founded by King Martin of Aragon, and in the 13th century, Barcelona already possessed several civil and ecclesiastical schools.
44	1451	University of Glasgow	Kingdom of Scotland	Glasgow, UK	Founded by a Papal Bull
45	1456	University of Greifswald	Holy Roman Empire	Greifswald, Germany	Teaching had started by 1436. Founded by initiative of Heinrich Rubenow, Lord Mayor of Greifswald (and first rector), with approval of Pope Callixtus III and Frederick III, Holy Roman Emperor, under the protection of Wartislaw IX, Duke of Pomerania. Teaching paused temporarily during the Protestant Reformation (1527–39).

46	1457	Freiburg (im Breisgau)		Germany	Teaching starts 1460 (three weeks after the opening of the nearby University of Basel with which it was competing at the time (s. next entry).
47	1459	Basle	City of Basel, located in the Holy Roman Empire, part of the Swiss Confederation after 1501	Switzerland	Established by Papal bull in 1459, the university started teaching in 1460 and has never interrupted its activities since. The Protestant Reformation triggered a crisis during which the university lost part of the students and faculty to its neighbouring rival in Freiburg-im-Breisgau.
48	1459	Ingolstadt		Germany	
49	1460	Nantes		France	
50	1464	Bourges		France	
51	1465	Pressburg		Slovakia	
52	1470	Venice		Italy	
53	1471	Genoa		Italy	
54	1474	Zaragoza	Crown of Aragon	Spain	
55	1476	Mainz		Germany	
56	1476	Tübingen		Germany	
57	1477	Uppsala		Sweden	
58	1479	Copenhagen		Denmark	
59	1483	Palma, Majorca	Crown of Aragon	Spain	
60	1489	Sigüenza	Crown of Castile	Spain	
61	1495	Aberdeen		United Kingdom	
62	1498	Frankfurt on the Oder		Germany	
63	1499	Valencia	Crown of Aragon	Spain	

Chapter 63

EARLY MODERN UNIVERSITIES IN EUROPE

The Early Modern Universities in Europe comprises all universities which existed in the early modern age (1501–1800) in Europe. It also includes short-lived foundations and educational institutions whose university status is a matter of debate. The operation of the degree-awarding university with its corporate organization and relative autonomy, which had emerged in the Christian medieval world, was continued into the new era. The number of universities which had been in existence at one time during the period rose from around eighty medieval universities to nearly two hundred. While the *universitas* arrived in Eastern Europe as far as Moscow, many were established further west either by the new Protestant powers or the Catholic Counter-Reformation spearheaded by the Jesuits. At the same time, the Spanish founded colonial universities and the British colonial colleges in the New World, thus heralding the spread of the university as *the* center of higher learning around the globe.

The University of Altdorf, Germany, in 1714

DEFINITION

A short definition of the university and its defining characteristics as they evolved in the medieval and early modern era is offered by the multi-volume *History of the University in Europe* of the European University Association:

The university is a European institution; indeed, it is the European institution *par excellence*. There are various reasons for this assertion. As a community of teachers and taught, accorded certain rights, such as administrative autonomy and the determination and realization of curricula (courses of study) and of the objectives of research as well as the award of publicly recognized degrees, it is a creation of medieval Europe, which was the Europe of papal Christianity...

No other European institution has spread over the entire world in the way in which the traditional form of the European university has done. The degrees awarded by European universities – the bachelor's degree, the licentiate, the master's degree, and the doctorate – have been adopted in the most diverse societies throughout the world. The four medieval faculties of *artes* – variously called philosophy, letters, arts, arts and sciences, and humanities –, law, medicine, and theology have survived and have been supplemented by numerous disciplines, particularly the social sciences and technological studies, but they remain none the less at the heart of universities throughout the world.

Even the name of the *universitas*, which in the Middle Ages was applied to corporate bodies of the most diverse sorts and was accordingly applied to the corporate organization of teachers and students, has in the course of centuries been given a more particular focus: the university, as a *universitas litterarum*, has since the 18th century been the intellectual institution which cultivates and transmits the entire corpus of methodically studied intellectual disciplines.

LIST OF UNIVERSITIES EXISTING IN THE EARLY MODERN AGE, BUT CREATED BEFORE

The list is sorted by the date of recognition. At places where more than one university was established, the name of the institution is given in brackets.

11th century

Recognized	University	Modern country

Chapter 64

COLONIAL UNIVERSITIES IN LATIN AMERICA

The Colonial Universities in Latin America comprises all universities established by the Spanish Empire in Latin America from the Discovery of America in 1492 to the Wars of Independence in the early 19th century.

The transfer of the European university model to the American overseas colonies represented a decisive turning point in the educational history of the continent:

Nothing remotely resembling a university existed in the New World before Europeans arrived and settled there. Yet by the end of the eighteenth century, numerous universities and other institutions of higher education could be found in North, Central and South America. They had not been invented *de novo*; they were implants from the European university tradition and its stocks.

*Old campus of the colonial university
San Antonio Abad in Cusco, Peru*

The Christian mission of the Indians and the increasing demand for skilled hands in the administration of the rapidly growing colonial empire made the Spanish colonists realize the need to offer a university education on American soil. The foundation of a colonial university required, following the medieval tradition, either a papal bull (or papal brief) or a royal privilege granting the right to confer academic degrees to the students. Usually a bestowment from both clerical and secular authorities was sought and achieved. Universities were all subjected to the king's supervision, only San Nicolas in Bogotá held the status of a private university. The new foundations modeled their charters mainly on that of the University of Salamanca, the oldest and most venerable Spanish university. The curriculum of smaller universities was confined to the *artes*, a kind of basic studies, and Catholic theology (plus church law). A leading role was assumed by the gradually evolving full universities which additionally offered courses in medicine and jurisprudence, thus comprising all four classic faculties. The influential first universities were founded in the colonial centers Lima, Mexico City and Santo Domingo. When it became apparent that the vast distances of the Spanish realm required a greater geographical spread of universities, they contributed to the creation of further

foundations. A key role in the development of the university system was played by the Catholic orders, especially by the Jesuits, but also the Dominicans and Augustinians. The founding and operation of most universities resulted from the – usually local – initiative of one of these orders, which sometimes quarreled openly over the control of the campus and the curriculum. The (temporary) dissolution of the Jesuit order in the late 18th century proved to be a major setback for the university landscape in Latin America, several of the suppressed Jesuit universities were reopened only decades later.

The successful export of the university, a genuine European creation, to another continent demonstrated its "extraordinary effectiveness and adaptability" as the highest educational institution and marked the beginning of its universal adoption in the modern age (see also List of the oldest universities). Yet there is no denying that at the end of the colonial era the intellectual and academic life in the younger colonial colleges of the British territories appeared more vital. Nevertheless, the Spanish colonial universities fulfilled their primary task, the education of the clerical and secular colonial elite, and could thus assume an important function in aiding the development of the young republics after the separation from the motherland.

In Portuguese Brazil, by contrast, no university existed far beyond the colonial period (the first was established as late as 1912 in Curitiba as University of Paraná). The lower local demand for theological and legal specialists was largely met by Jesuit *colegios*, while students aspiring to higher education had to take up studies overseas at the University of Coimbra. Instead of universities for general studies, the Portuguese favored the creation of professional academies to respond to the local needs of technicians and skilled professionals, including creating the first school of higher studies in engineering of the Americas.

LIST

The list is sorted by the date of recognition. At places where more than one university was established, the name of the institution is given in brackets.

16th CENTURY

Recognized	University	Modern country

1791	Guadalajara, Jalisco	Mexico

19th century

Recognized	University	Modern country
1806	Mérida, Mérida	Venezuela
1812	Managua	Nicaragua

Chapter 65

HISTORY OF EUROPEAN RESEARCH UNIVERSITIES

European Research Universities date from the founding of the University of Bologna in 1088 or the University of Paris (c. 1160–70). In the 19th and 20th centuries, European universities concentrated upon science and research, their structures and philosophies having shaped the contemporary university. The original medieval universities arose from the Roman Catholic Church schools that became “the university.” Their purposes included training professionals, scientific investigation, improving society, and teaching critical thinking and research. External influences, such as Renaissance humanism (c. mid-14th century), the Age of Enlightenment (18th century), the Protestant Reformation (1517), political revolution, and the discovery of the New World (1492) added human rights and international law to the university curricula.

Logotype of the University of Bologna

By the 18th century, universities published academic journals; by the 19th century, the German and the French university models were established. The French established the Ecole Polytechnique in 1794 by the mathematician Gaspard Monge during the French Revolution, and it became a military academy under Napoleon I in 1804. The German university — the Humboldtian model — established by Wilhelm von Humboldt was based upon Friedrich Schleiermacher’s liberal ideas about the importance of freedom, seminars, and laboratories, which, like the French university model, involved strict discipline and control of every aspect of the university. In the 19th and 20th centuries, the universities concentrated upon science, but were not open to the general populace until after 1914. Moreover, until the 19th century’s end, religion exerted a significant, limiting influence upon academic curricula and research, by when the German university model had become the world standard. Elsewhere, the British also had established universities world-wide, thus making higher education available to the world’s populaces.

Friedrich Daniel Ernst Schleiermacher

THE FIRST EUROPEAN UNIVERSITIES

Historically, the University of Bologna, founded in 1088, is considered the “mother of European universities.” However, this claim was made as symbolic of Italian national unity, leading some to question the legitimacy of Bologna's claim to be the first university proper. If the term "university" requires that a single corporate body be made up of students and professors of different disciplines, rather than that a corporate body simply exists, the University of Paris, founded in 1208, can be considered the first university.

Representation of a university class, 1350s.

The rediscovery of ancient Græco–Roman knowledge (e.g. Aristotle’s works and Roman law), led to the development of universitates (student guilds), and thus the establishment of the university in the contemporary sense. In turn, the traditional medieval universities — evolved from Catholic church schools — then established specialized academic structures for properly educating greater numbers of students as professionals. Prof. Walter Rüegg, editor of *A History of the University in Europe*, reports that universities then only trained students to become clerics, lawyers, civil servants, and physicians. Yet rediscovery of Classical-era knowledge transformed the university from the practical arts to developing “knowledge for the sake of knowledge”, which, by the 16th century, was considered integral to the civil community’s practical requirements. Hence, academic research was effected in furtherance of scientific investigation, because science had become essential to university curricula via “openness to novelty” in the search for the means to control nature to benefit civil society.

THE STRUCTURE AND SPREAD OF EARLY EUROPEAN UNIVERSITIES

The European University proliferated in part because groups decided to secede from the original universities to promote their own ideals; the University of Paris fostered many universities in Northern Europe, while the University of Bologna fostered many in the South. Some leaders also created universities in order to use them to increase their political power and popularity. For example, Frederick II, Holy Roman Emperor founded the University of Naples in 1224 to train lawyers and administrators who could rival the University of Bologna's influence, which served the hostile Lombard League.

The structure of these early classes involved a master reading from texts and commenting on the readings, as well as students learning by teaching other students. Masters also offered disputed questions to their classes for discussion. Moving into the 18th century, professors became less focused on simply training university teachers and more focused on “forming the minds of the elite” of a larger society.

PHILOSOPHIC AND EXTERNAL INFLUENCES

By the 16th century, the humanist ideas of the Renaissance (14th–16th century) were slowly accepted; France had propagated them first to Germany, then to England, during the Protestant Reformation (1517). In that intellectual humanist mode, university education began including preparing the student for a civilized life — of culture and civility — and concern for society’s public affairs. To achieve that, the curriculum comprised the liberal arts Trivium (grammar, rhetoric, logic), and the Quadrivium (arithmetic, geometry, astronomy, music) meant to prepare students for further specialized education in either theology, the law, or medicine. In 1492, the socio-political consequences of the discovery of the New World expanded European university curricula, as human rights and international law became contemporarily relevant matters. The Spanish enslavement of the native (aboriginal) populaces they conquered in the “New World” of the Americas eventually raised ethico-moral questions in Europe about the human rights of the American aboriginals — questions of cultural tolerance evinced by Renaissance humanism, the Bible, and mediæval theories of natural law. In analogy to the

ancient world's works, Rüegg relates the “New World” idea to the idea of “new knowledge”. In the mid-16th century, scholarly and scientific journals made it feasible to “spread innovations among the learned”; by the 18th century, universities published their own research journals. In the 18th century, the Age of Enlightenment also encouraged education's transition, from the “preservation and transmission of accepted knowledge” to the “discovery and advancement of new knowledge”; the newer universities effected that change more quickly, and adapted Enlightenment ideas about the harmfulness of monarchic Absolutism more readily than did the older universities.

EUROPEAN UNIVERSITY MODELS IN THE 19TH AND 20TH CENTURIES

MODERN UNIVERSITIES

BME, The oldest University of Technology, founded in Hungary in 1782

Wilhelm von Humboldt

Moving into the 19th century, the objective of universities evolved from teaching the “regurgitation of knowledge” to “encourag[ing] productive thinking.” Two new university models, the German and the post-Revolutionary French *Grandes écoles*, arose and made an impact on established models such as the Russian and Britain - especially the newer foundations of University College London and King's College London. Both have been connected with the dawn of the Age of Enlightenment, the rise of the bourgeoisie during industrialization and the decline of classical medieval Scholasticism but used rather different approaches. Such free thinking and experimentation had notably already

begun in Britain's oldest universities beginning in the seventeenth century at Oxford with the fathers of British scientific methodology Robert Hooke and Robert Boyle, and at Cambridge where Isaac Newton was Lucasian Professor of Mathematics & Physics. The situation in Germany, or rather the various German states, was different. The specific German Bildungsbürgertum, which emerged in starting from the mid-18th century with an educational ideal based on idealistic values and classical antiquity had failed in gaining political power and in its aims for nationalist movement. The Bildungsbürger turned to education as means to construct a common national culture and strived for freedom against the nobility in power. Only when Prussia and its absolutist government had been utterly defeated by the Napoleonic armies in 1806, the weakness of the defeated government allowed for the Prussian reforms of the countries institutions. Wilhelm von Humboldt was appointed Geheimer Staatsrat (not minister as intended) of education 1809 and held office for just one year. He however achieved to draft a complete reform of a country's educational system as a whole, starting from the primary Prussian education system in the de:Königsberger Schulplan and laid out and founded the Berlin university. Based on Friedrich Schleiermacher's and his own liberal ideas; the goal was to demonstrate the process of the discovery of knowledge and to teach students to "take account of fundamental laws of science in all their thinking." Thus, seminars and laboratories started to evolve. Humboldt envisioned the university education as a student-centered activity of research:

Just as primary instruction makes the teacher possible, so he renders himself dispensable through schooling at the secondary level. The university teacher is thus no longer a teacher and the student is no longer a pupil. Instead the student conducts research on his own behalf and the professor supervises his research and supports him in it.

Early 19th-century American educators were also fascinated by German educational trends. The Prussian approach was used for example in the Michigan Constitution of 1835, which fully embraced the overall Prussian system by introducing a range of primary schools, secondary schools, and the University of Michigan itself, all administered by the state and supported with tax-based funding. However, some of the concepts in the Prussian reforms of primordial education, *Bildung* and its close interaction of education, society and nation-building are in conflict with American state-sceptical libertarian thinking.

The Old College at Aberystwyth University.

Freedom was an important concept in the German university model, and the system of professors was based on competition and freedom: although professors served as state functionaries, they had the freedom to choose between several states, and their identity and prestige arose from the specialization of scientific disciplines.

The French University model lacked the freedom of the German model, consisting of severe discipline and control over the curriculum, awarding of degrees, conformity of views, and personal habits (for example, there was a ban on beards in 1852). French university professors trained at the *École Normale Supérieure*, and much of their prestige depended on their schools' reputations. By 1866, though, the German model had begun to influence the strict French model. Polytechnique was established in 1794 by the mathematician Gaspard Monge during the French Revolution, and became a military academy under Napoleon I in 1804. Today, the institution still runs under the supervision of the French ministry of Defence.

The German university model was also used in Russian universities, which hired lecturers trained in Germany and which dedicated themselves to science. At the same time, Russian universities were meant to train the bureaucracy in the same way as the French *grandes écoles*. Throughout the 19th and 20th centuries, Russian universities underwent much variation in their degrees of strictness and control.

British universities of this period adopted some approaches familiar to the German universities, but as they already enjoyed substantial freedoms and autonomy the changes there had begun with the Age of Enlightenment, the same influences that inspired Humboldt. The Universities of Oxford and Cambridge emphasized the importance of research, arguably more authentically implementing Humboldt's idea of a university than even German universities, which were subject to state authority.

Overall, science became the focus of universities in the 19th and 20th centuries. Students could conduct research in seminars or laboratories and began to produce doctoral theses with more scientific content. According to Humboldt, the mission of the University of Berlin was to pursue scientific knowledge. The German university system fostered professional, bureaucratically regulated scientific research performed in well-equipped laboratories, instead of the kind of research done by private and individual scholars in Great Britain and France. In fact, Rüegg asserts that the German system is responsible for the development of the modern research university because it focused on the idea of "freedom of scientific research, teaching and study."

PROFESSORS AND STUDENTS

Schleiermacher posits that professors, had to "reproduce [their] own realization[s]" so that students could observe the "act of creation" of knowledge. That they serve as models of how to "intelligently produce knowledge". Professorship was awarded to distinguished scholars, and was rescindable only if guilty of a serious crime. From the perspective of James McCain, president emeritus of Kansas State University, professors in 20th-century Europe were more prestigious and well respected than university professors in the US, for

having much academic freedom, whilst keeping to formal relationships with the students. Moreover, the professors' professional role expanded from lecturing to investigating, thus research became "an integral part of the professor's task".

The London University, by Thomas Hosmer Shepherd (1827–28)

Popular access to higher education slowly began after 1914, yet the principal remaining obstacle was its expense. For most of the 19th century, the UK continued affording a university education only to aristocrats, and not until the early 20th century, featuring new universities, such as the University of London, was higher education available to the mass populace. Moreover, it was not until the mid-19th century that universities admitted women students, who confronted great difficulties, such as having no civil rights and societal-institutional sexism doubting their intellectual capacities and their right to participate in a university education. In the event, the entrance of common students to the universities challenged the ideology of the German model, because their varied middle- and working-class backgrounds, hence different expectations, resulted in a less concretely Humboldtian university.

In the 19th and 20th centuries, European university students were mostly responsible for their educations; they selected courses of study, professors did not register attendance, and only gave examinations at course's end. Rüegg suggests that student propensity to developing student movements, based upon contemporary politics, parallels their attitudes of intellectual freedom and social responsibility.

Progressive educational and political philosophies changed religion's role in the education imparted. During the 18th century, most universities were strongly connected to either a Catholic or a Protestant church, thus the professors' and the students' religion determined employment and matriculation. In the 19th century, religion was deleted from the "compulsory curriculum"; in France, Napoleon's secular *Université de France* troubled Roman Catholics, because it threatened their educational monopoly. To wit, the *Loi Falloux* (Falloux Law) of 1850 attempted to reinstate some educational power to the Roman Catholic Church, but, by then, the *Université de France* had *de facto* substantive control of French higher education. Like-wise, in the UK, the new universities (i.e. the University of London), were non-denominational, and the Oxford Act of 1854 rid Oxford

and Cambridge universities of required religion with a concomitant decline in chapel attendance, and of religion as integral to a university education.

THE EUROPEAN UNIVERSITY LEGACY

Ultimately, European research universities established the intellectual and academic traditions of university education world-wide; by the 19th century's end, the Humboldtian university model was established in Europe, the US, and Japan. In the Americas, first the Spanish, then the British, and then the French founded universities in the lands they had conquered early in the 16th century, meant to professionally educate their colonists and propagate monotheistic religion to establish formal, administrative rule of their American colonies; like-wise, the British in Canada, Australia, and the Cape Colony; and like-wise Japan, the Near East, and Africa. Those universities disseminated Western European science and technology and trained the local population (foremost the local elite) to develop their countries resources; and, although most promoted the social, political, economic, and cultural aims of the imperial rulers, some promoted revolutionary development of the colonial societies. In the 20th century, urbanization and industrialization made a university education available to the mass populace. Throughout, the basic structure and research purposes of the universities have remained constant; per Clark Kerr, they "are among the least changed of institutions".

Chapter 66

MODERN UNIVERSITIES IN EUROPE (1801–1945)

The Modern Universities in Europe (1801–1945) contains all universities which existed in Europe between the French Revolution and the end of World War II. Universities are regarded as comprising all institutions of higher education recognized as universities by the public or ecclesiastical authorities in charge and authorized to confer academic degrees in more than one faculty. Temporary foundations are also included.

At the outset of the 19th century, European universities had been severely affected by the Napoleonic Wars, their number falling in the brief span of time between 1789 and 1815 by sixty to 83. By 1840 their number recovered to 98 universities with approximately 80,000 students and 5,000 professors. Notwithstanding the trend towards specialized institutions of higher learning – in France, for instance, the universities had been suppressed and replaced by Grandes écoles –, the size of the student and professor bodies multiplied over the next hundred years, attaining a size of 600,000 and 32,000 members respectively at around two hundred universities. In total, the period saw about 220 universities in existence that are listed below.

Humboldt University, founded in Berlin in 1810, was a much emulated model of a modern university in the 19th century (photochrom from 1900)

The list is sorted by the date of recognition. At places where more than one university was established, the name of the institution is given in brackets.

Chapter 67

COLLEGE LEVEL EDUCATION AND TRAINING

A College is an educational institution or a constituent part of one. Usage of the word *college* varies in English-speaking nations. A college may be a degree-awarding tertiary educational institution, a part of a collegiate university, or an institution offering vocational education.

In the United States and Italy, "college" formally refers to a constituent part of a university, but generally "college" and "university" are used interchangeably, whereas in Oceania and South Asia "college" may refer to a secondary or high school, a college of further education, a training institution that awards trade qualifications, or a constituent part of a university. (See this comparison of British and American English educational terminology for further information.)

King's College, one of the constituent colleges of the University of Cambridge

In ancient Rome a *collegium* was a club or society, a group of people living together under a common set of rules (*con-* = "together" + *leg-* = "law" or *lego* = "I choose" or "I read").

OVERVIEW

HIGHER EDUCATION

Within higher education, the term can be used to refer to:

- a constituent part of a collegiate university, for example King's College, Cambridge
- a college of further education, for example Belfast Metropolitan College
- a college of further education but also a constituent part of a federal university, for example King's College London, one of the founding colleges of University of London

In some national education systems, secondary schools may be called "colleges" or have "college" as part of their title.

In Australia the term "college" is applied to any private or independent (non-government) primary and, especially, secondary school as distinct from a state school. Melbourne Grammar School, Cranbrook School, Sydney and The King's School, Parramatta are considered colleges.

King's College London, established in 1829

SECONDARY EDUCATION

Scotch College, Melbourne is an independent secondary school

There has also been a recent trend to rename or create government secondary schools as "colleges". In the state of Victoria, some state high schools are referred to as *secondary colleges*. Interestingly, the pre-eminent government secondary school for boys in Melbourne is still named Melbourne High School. In Western Australia, South Australia and the Northern Territory, "college" is used in the name of all state high schools built since the late 1990s, and also some older ones. In New South Wales, some high schools, especially multi-campus schools resulting from mergers, are known as "secondary colleges". In Queensland some newer schools which accept primary and high school students are styled *state college*, but state schools offering only secondary education are called "State High School". In Tasmania and the Australian Capital Territory, "college" refers to the final two years of high school (years 11 and 12), and the institutions which

provide this. In this context, "college" is a system independent of the other years of high school. Here, the expression is a shorter version of *matriculation college*.

In a number of Canadian cities, many government-run secondary schools are called "collegiates" or "collegiate institutes" (C.I.), a complicated form of the word "college" which avoids the usual "post-secondary" connotation. This is because these secondary schools have traditionally focused on academic, rather than vocational, subjects and ability levels (for example, collegiates offered Latin while vocational schools offered technical courses). Some private secondary schools (such as Upper Canada College, Vancouver College) choose to use the word "college" in their names nevertheless. Some secondary schools elsewhere in the country, particularly ones within the separate school system, may also use the word "college" or "collegiate" in their names.

In New Zealand the word "college" normally refers to a secondary school for ages 13 to 17 and "college" appears as part of the name especially of private or integrated schools. "Colleges" most frequently appear in the North Island, whereas "high schools" are more common in the South Island.

St John's College, Johannesburg

In South Africa, some secondary schools, especially private schools on the English public school model, have "college" in their title. Thus no less than six of South Africa's Elite Seven high schools call themselves "college" and fit this description. A typical example of this category would be St John's College.

Private schools that specialize in improving children's marks through intensive focus on examination needs are informally called "cram-colleges".

In Sri Lanka the word "college" (known as *Vidyalyaya* in *Sinhala*) normally refers to a secondary school, which usually signifies above the 5th standard. During the British colonial period a limited number of exclusive secondary schools were established based on English public school model (Royal College Colombo, S. Thomas' College, Mount Lavinia, Trinity College, Kandy) these along with several Catholic schools (St. Joseph's College, Colombo, St Anthony's College) traditionally carry their name as colleges.

Following the start of free education in 1931 large group of central colleges were established to educate the rural masses. Since Sri Lanka gained Independence in 1948, many schools that have been established have been named as "college".

OTHER

Royal College Colombo

As well as an educational institution, the term can also refer, following its etymology, to any formal group of colleagues set up under statute or regulation; often under a Royal Charter. Examples are an electoral college, the College of Arms, a college of canons, and the College of Cardinals. Other collegiate bodies include professional associations, particularly in medicine and allied professions. In the UK these include the Royal College of Nursing and the Royal College of Physicians. Examples in the United States include the American College of Physicians, the American College of Surgeons, and the American College of Dentists. An example in Australia is the Royal Australian College of General Practitioners.

COUNTRY BY COUNTRY

AUSTRALIA

In Australia a college may be an institution of tertiary education that is smaller than a university, run independently or as part of a university. Following a reform in the 1980s many of the formerly independent colleges now belong to a larger universities. Referring to parts of a university, there are *residential colleges* which provide residence for students, both undergraduate and postgraduate, called university colleges. These colleges often provide additional tutorial assistance, and some host theological study. Many colleges have strong traditions and rituals, so are a combination of dormitory style accommodation and fraternity or sorority culture. Most technical and further education institutions (TAFEs), which offer certificate and diploma vocational courses, are styled "TAFE colleges" or "Colleges of TAFE".

CANADA

In Canada, the term "college" usually refers to a technical, applied arts, applied science school or community college. These are post-secondary institutions granting certificates,

diplomas, associate's degree, and bachelor's degrees. In Quebec, the term is seldom used; the French acronym for public colleges, CEGEP (*Collège d'enseignement général et professionnel*, "college of general and professional education"), is colloquially, yet incorrectly, used as an umbrella term to refer to all collegiate level institutions specific to the Quebec education system, a step that is required to continue onto university (unless one applies as a "mature" student, meaning 21 years of age or over, and out of the educational system for at least 2 years), or to learn a trade. In Ontario, British Columbia and Alberta, there are also institutions which are designated university colleges, as they only grant undergraduate degrees. This is to differentiate between universities, which have both undergraduate and graduate programs and those that do not. In contrast to usage in the United States, there is a strong distinction between "college" and "university" in Canada. In conversation, one specifically would say either "They are going to university" (i.e., studying for a three- or four-year degree at a university) or "They are going to college" (suggesting a technical or career college).

The Royal Military College of Canada, a full-fledged degree-granting university, does not follow the naming convention used by the rest of the country, nor does its sister school Royal Military College Saint-Jean or the now closed Royal Roads Military College.

The term "college" also applies to distinct entities within a university (usually referred to as "federated colleges" or "affiliated colleges"), to the residential colleges in the United Kingdom. These colleges act independently, but in affiliation or federation with the university that actually grants the degrees. For example, Trinity College was once an independent institution, but later became federated with the University of Toronto, and is now one of its residential colleges (though it remains a degree-granting institution through its Faculty of Divinity). In the case of Memorial University of Newfoundland, located in St. John's, the Corner Brook campus is called Sir Wilfred Grenfell College. Occasionally, "college" refers to a subject specific faculty within a university that, while distinct, are neither *federated* nor *affiliated*—College of Education, College of Medicine, College of Dentistry, College of Biological Science among others.

There are also universities referred to as art colleges, empowered to grant academic degrees of BFA, Bdes, MFA, Mdes and sometimes collaborative PhD degrees. Some of them have "university" in their name (NSCAD University, OCAD University and Emily Carr University of Art and Design) and others do not.

Online and distance education (E-learning) use "college" in the name in the British sense, for example : Canada Capstone College.

One use of the term "college" in the American sense is by the Canadian Football League (CFL), which calls its annual entry draft the Canadian College Draft. The draft is restricted to players who qualify under CFL rules as "non-imports"—essentially, players who were raised in Canada. Because a player's designation as "non-import" is not affected by where he plays post-secondary football, the category includes former players at U.S. college football programs ("universities" in the Canadian sense) as well as CIS football programs at Canadian universities.

CHILE

In Chile, the term "college" is usually used in the name of some bilingual schools, like Santiago College, Saint George's College etc.

GEORGIA

International Association of "Tourists and Travelers" College. International association "tourists and travelers" is a non-commercial, non political and non industrial organization, which is created to develop tourism in Georgia.

GREECE

The Centers of Postsecondary Education (abbreviated KEME in Greek) or *Colleges* belong to the Greek Post-secondary Education and are principally private. The word 'college' is also used to describe some [private] non-tertiary schools.

HONG KONG

In Hong Kong, the term 'college' is used by tertiary institutions as either part of their names or to refer to a constituent part of the university, such as the colleges in the collegiate The Chinese University of Hong Kong; or to a residence hall of a university, such as St. John's College, University of Hong Kong. Many older secondary schools have the term 'college' as part of their names.

INDIA

The modern system of education was heavily influenced by the British starting in 1835.

In India, the term "college" is commonly reserved for institutions that offer degrees at year 12 ("*Junior College*", similar to American *high schools*), and those that offer the Bachelor's Degree. Generally, colleges are located in different parts of a state and all of them are affiliated to a regional university.

The colleges offer programmes under that university. Examinations are conducted by the university at the same time for all colleges under its affiliation. There are several hundred universities and each university has affiliated colleges. The first liberal arts and sciences college in India was C. M. S. College Kottayam, Kerala, established in 1817, and the Presidency College, Kolkata, also 1817, initially known as Hindu College. The first Missionary institution to impart Western style education in India was the Scottish Church College, Calcutta (1830).

IRELAND

In Ireland the term "college" is normally used to describe an institution of tertiary education. University students often say they attend "college" rather than "university".

Until 1989, no university provided teaching or research directly; they were formally offered by a constituent college of the university.

Parliament Square, Trinity College, Dublin

There are number of secondary education institutions that traditionally used the word "college" in their names: these are either older, private schools (such as Belvedere College, Gonzaga College and St. Michael's College) or what were formerly a particular kind of secondary school. These secondary schools, formerly known as "technical colleges," were renamed "community colleges," but remain secondary schools.

The country's only ancient university is the University of Dublin. Created during the reign of Elizabeth I, it is modelled on the collegiate universities of Cambridge and Oxford. However, only one constituent college was ever founded, hence the curious position of Trinity College, Dublin today; although both are usually considered one and the same, the University and College are completely distinct corporate entities with separate and parallel governing structures.

Among more modern foundations, the National University of Ireland, founded in 1908, consisted of constituent colleges and recognised colleges until 1997. The former are now referred to as constituent universities – institutions that are essentially universities in their own right. The National University can trace its existence back to 1850 and the creation of the Queen's University of Ireland and the creation of the Catholic University of Ireland in 1854. From 1880, the degree awarding roles of these two universities was taken over by the Royal University of Ireland, which remained until the creation of the National University in 1908 and the Queen's University Belfast.

The state's two new universities Dublin City University and University of Limerick were initially National Institute for Higher Education institutions. These institutions offered university level academic degrees and research from the start of their existence and were awarded university status in 1989 in recognition of this. These two universities now follow the general trend of universities having associated colleges offering their degrees.

Third level technical education in the state has been carried out in the Institutes of Technology, which were established from the 1970s as Regional Technical Colleges. These institutions have *delegated authority* which entitles them to give degrees and diplomas from the Higher Education and Training Awards Council in their own name.

A number of Private Colleges exist such as DBS, providing undergraduate and postgraduate courses validated by HETAC and in some cases by other Universities.

Other types of college include Colleges of Education, such as National College of Ireland. These are specialist institutions, often linked to a university, which provide both undergraduate and postgraduate academic degrees for people who want to train as teachers.

A number of state funded further education colleges exist - which offer vocational education and training in a range of areas from business studies, I.C.T to sports injury therapy. These courses are usually 1, 2 or less often 3 three years in duration and are validated by FETAC at levels 5 or 6 or for the BTEC Higher National Diploma award - validated by Edexcel which is a level 6/7 qualification. There are numerous private colleges (particularly in Dublin and Limerick) which offer both further and higher education qualifications. These degrees and diplomas are often certified by foreign universities/international awarding bodies and are aligned to the National Framework of Qualifications at level 6, 7 and 8.

ISRAEL

In Israel, any non university higher-learning facility is called a college. Institutions accredited by the Council for Higher Education in Israel (CHE) to confer a bachelor's degree are called "Academic Colleges." These colleges (at least 4 for 2012) may also offer master's degrees and act as Research facilities. There are also over twenty teacher training colleges or seminaries, most of which may award only a Bachelor of Education (B.Ed.) degree.

- Academic colleges: Any educational facility that had been approved to offer at least bachelor's degree is entitled by CHE to use the term academic college in its name.
- Engineering academic college: Any academic facility that offer at least bachelor's degree and most of it faculties are providing an Engineering degree and Engineering license.
- Educational academic college: After an educational facility that had been approved for "Teachers seminar" status is then approved to provide a Bachelor of Education, its name is changed to include "Educational Academic college."
- Technical college: A "Technical college" is an educational facility that is approved to allow to provide P.E degree (14'th class) or technician (13) (טכנאי'th class) diploma and licenses.
- Training College: A "Training College" is an educational facility that provides basic training for person that would allow to a person to receive a working permit in a field such as alternative medicine, cooking, Art, Mechanical, Electrical and other professions. A trainee could receive the right to work in certain professions as apprentice (j. mechanic, j. Electrician etc.). After working in the training field for enough time an apprentice could have a license to operate (Mechanic, Electrician) . This educational facility is mostly used to provide basic training for low tech jobs

and for job seekers without any training that are provided by the nation's Employment Service.

MACAU

The term "college" (colégio) in Macau has traditionally been used in the names for private (and non-governmental) pre-university educational institutions, which correspond to form one to form six levels. Such schools are usually run by the Roman Catholic church or missionaries in Macau. Examples include Chan Sui Ki Perpetual Help College, Yuet Wah College, and Sacred Heart Canossian College.

NEW ZEALAND

The University of Otago

The constituent colleges of the former University of New Zealand (such as Canterbury University College) have become independent universities. Some halls of residence associated with New Zealand universities retain the name of "college", particularly at the University of Otago (which although brought under the umbrella of the University of New Zealand, already possessed university status and degree awarding powers). The institutions formerly known as "Teacher-training colleges" now style themselves "College of education".

Some universities, such as the University of Canterbury, have divided their University into constituent administrative "Colleges" – the College of Arts containing departments that teach Arts, Humanities and Social Sciences, College of Science containing Science departments, and so on. This is largely modelled on the Cambridge model, discussed above.

Like the United Kingdom some professional bodies in New Zealand style themselves as "colleges", for example, the Royal Australasian College of Surgeons, the Royal Australasian College of Physicians.

Secondary school is often referred to as college and the term is used interchangeably with high school. This is reflected in the names of many secondary schools such as Rangitoto College, New Zealand's largest secondary.

PHILIPPINES

In the Philippines, colleges usually refer to institutions of learning that grant degrees but whose scholastic fields are not as diverse as that of a university (University of Santo Tomas, University of the Philippines, Ateneo de Manila University, and De La Salle University), such as the San Beda College which specializes in law and the Central Colleges of the Philippines which specializes in engineering, or to component units within universities that do not grant degrees but rather facilitate the instruction of a particular field, such as a College of Science and College of Engineering, among many other colleges of the University of the Philippines.

A state college may not have the word "college" on its name, but may have several component colleges, or departments. Thus, the Eulogio Amang Rodriguez Institute of Science and Technology is a state college by classification.

Usually, the term "college" is also thought of as a hierarchical demarcation between the term "university", and quite a number of colleges seek to be recognized as universities as a sign of improvement in academic standards (Colegio de San Juan de Letran, San Beda College), and increase in the diversity of the offered degree programs (called "courses"). For private colleges, this may be done through a survey and evaluation by the Commission on Higher Education and accrediting organizations, as was the case of Urios College which is now the Fr. Saturnino Urios University. For state colleges, it is usually done by a legislation by the Congress or Senate. In common usage, "going to college" simply means attending school for an undergraduate degree, whether it's from an institution recognized as a college or a university.

When it comes to referring to the level of education, *college* is the term more used to be synonymous to tertiary or higher education. A student who is or has studied her undergraduate degree at either an institution with *college* or *university* in its name is considered to be going to or have gone to *college*.

SINGAPORE

The term "college" in Singapore is generally only used for pre-university educational institutions called "Junior Colleges", which provide the final two years of secondary education (equivalent to sixth form in British terms or grades 11–12 in the American system). Since 1 January 2005, the term also refers to the three campuses of the Institute of Technical Education with the introduction of the "collegiate system", in which the three institutions are called ITE College East, ITE College Central, and ITE College West respectively.

The term "university" is used to describe higher-education institutions offering locally conferred degrees. Institutions offering diplomas are called "polytechnics", while other institutions are often referred to as "institutes" and so forth.

SOUTH AFRICA

Although the term "college" is hardly used in any context at any university in South Africa, some non-university tertiary institutions call themselves colleges. These include teacher training colleges, business colleges and wildlife management colleges.

SRI LANKA

There are several professional and vocational institutions that offer post-secondary education without granting degrees that are referred to as "colleges". This includes the Sri Lanka Law College, the many Technical Colleges and Teaching Colleges.

UNITED KINGDOM

Leyton Sixth Form College

SIXTH FORM

A Sixth form college or College of further education is an educational institution in England, Wales, Northern Ireland, Belize, The Caribbean, Malta, Norway, Brunei Southern Africa, among others, where students aged 16 to 19 typically study for advanced school-level qualifications, such as A-levels, BTEC and the International Baccalaureate Diploma, or school-level qualifications such as GCSEs. In Singapore and India, this is known as a junior college. The municipal government of the city of Paris uses the phrase "sixth form college" as the English name for a lycée. In the United Kingdom, "college" can refer to either sixth form in the context of secondary education, or university in the context of higher education.

HIGHER EDUCATION

In higher education a college is usually part of a university; such colleges do not award degrees. Universities with constituent colleges are collegiate universities. A college may

also be a grouping of faculties or departments, notably in the University of Edinburgh, the University of Salford, the University of Birmingham and the University of Leicester.

In the University of Oxford, University of Cambridge, and University of the Arts London (and formerly in the University of Wales), colleges provide accommodation, tuition and other facilities to students of the university: the university conducts examinations and grants degrees. However the colleges of the University of London are now *de facto* universities in their own right.

In the other collegiate universities, including the University of Lancaster, University of York, University of Kent, University of St Andrews and University of Durham, the colleges only provide accommodation and pastoral care.

A university college is an independent institution which prepares students to sit as external candidates at other universities or has the authority to run courses that lead to the degrees of those universities. It may also be an independent higher education institution with the power to award degrees, but does not have university status, although it is usually working towards it.

Historically, some universities originated as university colleges. For example, the University of Reading was an external college of the University of Oxford, as University College, Reading. The University is now faculty based.

UNITED STATES

City College of New York

Saint Anselm College

Agnes Scott College

Boston College

Occidental College

SUNY Purchase College

In the United States, there are over 7,021 colleges and universities. A "college" in the US formally denotes a constituent part of a university, but in popular usage, the word "college" is the generic term for any post-secondary undergraduate education. Americans "go to college" after high school, regardless of whether the specific institution is formally a college or a university. Some students choose to dual-enroll, by taking college classes while still in high school. The word and its derivatives are the standard terms used to describe

the institutions and experiences associated with American post-secondary undergraduate education.

Students must pay for college before taking classes. Some borrow the money via loans, and some students fund their educations with cash, scholarships, or grants, or some combination of any two or more of those payment methods. In 2011, the state or federal government subsidized \$8,000 to \$100,000 for each undergraduate degree. For state-owned schools (called "public" universities), the subsidy was given to the college, with the student benefiting from lower tuition. The state subsidized on average 50% of public university tuition.

Colleges vary in terms of size, degree, and length of stay. Two-year colleges, also known as junior or community colleges, usually offer an associate's degree, and four-year colleges usually offer a bachelor's degree. Often, these are entirely undergraduate institutions, although some have graduate school programs.

Four-year institutions in the U.S. that emphasize a liberal arts curriculum are known as liberal arts colleges. Until the 20th century, liberal arts, law, medicine, theology, and divinity were about the only form of higher education available in the United States. These schools have traditionally emphasized instruction at the undergraduate level, although advanced research may still occur at these institutions.

While there is no national standard in the United States, the term "university" primarily designates institutions that provide undergraduate and graduate education. A university typically has as its core and its largest internal division an undergraduate college teaching a liberal arts curriculum, also culminating in a bachelor's degree. What often distinguishes a university is having, in addition, one or more graduate schools engaged in both teaching graduate classes and in research. Often these would be called a School of Law or School of Medicine, (but may also be called a college of law, or a faculty of law). An exception is Vincennes University, Indiana, which is styled and chartered as a "university" even though almost all of its academic programs lead only to two-year associate degrees. Some institutions, such as Dartmouth College and The College of William & Mary, have retained the term "college" in their names for historical reasons. In one unique case, Boston College and Boston University, both located in Boston, Massachusetts, are completely separate institutions.

Usage of the terms varies among the states. In 1996 for example, Georgia changed all of its four-year institutions previously designated as colleges to universities, and all of its vocational technology schools to technical colleges.

The terms "university" and "college" do not exhaust all possible titles for an American institution of higher education. Other options include "institute" (Massachusetts Institute of Technology), "academy" (United States Military Academy), "union" (Cooper Union), "conservatory" (New England Conservatory), and "school" (Juilliard School). In colloquial use, they are still referred to as "college" when referring to their undergraduate studies.

The term *college* is also, as in the United Kingdom, used for a constituent semi-autonomous part of a larger university but generally organized on academic rather than residential lines. For example, at many institutions, the undergraduate portion of the university can be briefly referred to as the college (such as The College of the University of Chicago, Harvard College at Harvard, or Columbia College at Columbia) while at others, such as the University of California, Berkeley, each of the faculties may be called a "college" (the "college of engineering", the "college of nursing", and so forth). There exist other variants for historical reasons; for example, Duke University, which was called Trinity College until the 1920s, still calls its main undergraduate subdivision Trinity College of Arts and Sciences. Some American universities, such as Princeton, Rice, and Yale do have residential colleges along the lines of Oxford or Cambridge, but the name was clearly adopted in homage to the British system. Unlike the Oxbridge colleges, these residential colleges are not autonomous legal entities nor are they typically much involved in education itself, being primarily concerned with room, board, and social life. At the University of Michigan, University of California, San Diego and the University of California, Santa Cruz, however, each of the residential colleges does teach its own core writing courses and has its own distinctive set of graduation requirements.

ORIGIN OF THE U.S. USAGE

The founders of the first institutions of higher education in the United States were graduates of the University of Oxford and the University of Cambridge. The small institutions they founded would not have seemed to them like universities – they were tiny and did not offer the higher degrees in medicine and theology. Furthermore, they were not composed of several small colleges. Instead, the new institutions felt like the Oxford and Cambridge colleges they were used to – small communities, housing and feeding their students, with instruction from residential tutors (as in the United Kingdom, described above). When the first students came to be graduated, these "colleges" assumed the right to confer degrees upon them, usually with authority—for example, The College of William & Mary has a Royal Charter from the British monarchy allowing it to confer degrees while Dartmouth College has a charter permitting it to award degrees "as are usually granted in either of the universities, or any other college in our realm of Great Britain."

The leaders of Harvard College (which granted America's first degrees in 1642) might have thought of their college as the first of many residential colleges that would grow up into a New Cambridge university. However, over time, few new colleges were founded there, and Harvard grew and added higher faculties. Eventually, it changed its title to university, but the term "college" had stuck and "colleges" have arisen across the United States.

In U.S. usage, the word "college" embodies not only a particular type of school, but has historically been used to refer to the general concept of higher education when it is not necessary to specify a school, as in "going to college" or "college savings accounts" offered by banks.

In a survey of more than 2,000 college students in 33 states and 156 different campuses, the U.S. Public Interest Research Group found the average student spends as much as \$1,200 each year on textbooks and supplies alone. By comparison, the group says that's the equivalent of 39 percent of tuition and fees at a community college, and 14 percent of tuition and fees at a four-year public university.

MORRILL LAND-GRANT ACT

In addition to private colleges and universities, the U.S. also has a system of government funded, public universities. Many were founded under the Morrill Land-Grant Colleges Act of 1862. When the Morrill Act was established, the original colleges on the east coast, primarily those of the Ivy League and several religious based colleges, were the only form of higher education available, and were often confined only to the children of the elite. A movement had arisen to bring a form of more practical higher education to the masses, as "...many politicians and educators wanted to make it possible for all young Americans to receive some sort of advanced education." The Morrill Act "...made it possible for the new western states to establish colleges for the citizens." Its goal was to make higher education more easily accessible to the citizenry of the country, specifically to improve agricultural systems by providing training and scholarship in the production and sales of agricultural products, and to provide formal education in "...agriculture, home economics, mechanical arts, and other professions that seemed practical at the time."

The act was eventually extended to allow all states that had remained with the Union during the American Civil War, and eventually all states, to establish such institutions. Most of the colleges established under the Morrill Act have since become full universities, and some are among the elite of the world.

BENEFITS OF COLLEGE

Selection of a four-year college as compared to a two-year junior college, even by marginal students such as those with a C+ grade average in high school and SAT scores in the mid 800s, increases the probability of graduation and confers substantial economic and social benefits.

ZIMBABWE

The term college is mainly used by private or independent secondary schools with Advanced Level (Upper 6th formers) and also Polytechnic Colleges which confer diplomas only. A student can complete secondary education (International General Certificate of Secondary Education, IGCSE) at 16 years and proceed straight to a poly-technical college or they can proceed to Advanced level (16 to 19 years) and obtain a General Certificate of Education (GCE) certificate which enables them to enrol at a University provided they have good grades alternatively with lower grades the GCE certificate holders will have an added advantage over their GCSE counterparts if they choose to enrol at a Poly-technical College. Some schools in Zimbabwe choose to offer the International Baccalaureate studies as an alternative to the IGCSE and GCE.

Chapter 68

TUITION PAYMENTS

Tuition Payments, usually known as tuition in American English and as tuition fees in Commonwealth English, are fees charged for instruction during higher education.

Tuition payments are charged by educational institutions in some countries to assist with funding of staff and faculty, course offerings, lab equipment, computer systems, libraries, facility upkeep and to provide a comfortable student learning experience. In most countries, especially non-English-speaking countries, there are no or only nominal tuition fees for all forms of education, including university and other higher education.

PAYMENT METHODS

Some of the methods used to pay for tuition include:

- Scholarship
- Bursary
- Company sponsorship and/or funding
- Grant
- Government loan
- Educational loan (private)
- Family (parental) money
- Savings

BY LOCATION

Countries such as Chile, the Netherlands, South Africa, the United States and the United Kingdom have “up-front tuition policies.” These policies generally include a tuition fee that is large enough to give parents and/or guardians “a responsibility to cover some portion of their children’s higher education costs.” This responsibility can make it difficult for a low-income student to attend college without requiring a grant or one or more loans.

Tuition fees in the United Kingdom were introduced in 1998, with a maximum permitted fee of £1,000. Since then, this maximum has been raised to £9,000 in most of the United Kingdom, while Scotland has abolished tuition.

Tuition in the United States is expensive, and it is common for students to enter into extensive debts to pay for it. Tuition is one of the costs of a post-secondary education. The total cost of college is called the cost of attendance (or, informally, the “sticker price”) and, in addition to tuition, it can include room and board and fees for facilities such as books, transport and/or commuting provided by the college.

French tuition fees are capped based on the level of education pursued, from 183 Euros per year for undergraduate up to 388 for doctorates. Some public universities have autonomous status, meaning that they can charge much higher tuition, and all private universities charge tuition.

BY INSTITUTION

Tuition is charged at different rates from one type of institution to the next. Net tuition indices mark an increase in the “relative real burden” for payments at various types of institutions for higher education; in the period between 1980 and 1995, for example, this burden increased by approximately 80 percent for students at public universities and by 148 percent for students at private universities.

Most students and/or their families who pay for tuition and other education costs don't have enough savings to pay in full while they are in school. Some students must work and/or borrow money to afford an education. In the United States, student financial aid is available to defray the cost of a post-secondary education: “Financial aid is typically thought to exert the most influence in [attendance], when admitted students consider whether to enroll in a particular institution.” It is often the case that the lower the cost of the school, the more likely a student is to attend.

Developed countries have adopted a dual scheme for education: while basic (i.e. high-school) education is supported by taxes rather than tuition, higher education usually requires tuition payments and/or fees.

People may purchase tuition insurance to protect themselves from fees related to involuntary withdrawal (illness, death of a parent or guardian, etc.)

HISTORY

Study comparing college revenue per student by tuition and state funding in 2008 dollars.

In medieval Europe, universities were mainly institutions of the Catholic Church. As they mainly trained clergy, most of these universities did not have any need to exact fees from the students with one notable exception: during the 12th century, while under the supervision of Pierre le Mangeur, the University of Paris began collecting two sous weekly in tuition.

Later, the main duty of universities in most Protestant countries was the training of future civil servants. Again, it was not in the interest of the state to charge tuition fees, as this would have decreased the quality of civil servants. On the other hand, the number of students from the lower classes was usually kept in check by the expenses of living during the years of study, although as early as the mid-19th century there were calls for limiting the university entrance by middle-class persons. A typical family, however, could not afford educating a child or young adult, even if the education itself was free. A similar situation exists today in many Third World countries, where the expenses of "free" schooling (food, books, school uniform, etc.) prevent some children from attending any school.

After World War II, an enhanced standard of living and the existence of free university education in many countries enabled more working-class youths to receive a degree, resulting in the inflation of education and enlarged middle classes. In countries with tuition fees, similar progress was effected with state study loans, grants, scholarships, the G.I. Bill, and other financial instruments. It has been proposed that the strong class separations visible in British society result from the fact that the expansion of education there has been less efficient than in continental Europe.

Since the early 1970s, the average cost of tuition has steadily outpaced the growth of the average American household. Likewise, there has been a steady decrease in federal funding for grants and a rise in the interest rates of most major student loans, leaving many students struggling to pay debt for years after graduation.

COLLEGE TUITION FOR UNDOCUMENTED STUDENTS

The Development, Relief, and Education for Alien Minors (DREAM) Act is a piece of legislation that is under the Senate floor. The DREAM Act will allow the estimated 50,000 to 65,000 undocumented students in America gain in-state tuition as well as a path towards citizenship. This law will only be applied to those students who have physical proof of being in the United States before the age of 18. This Act has been a large debate for numerous groups, the senate itself, institutions, and families.

As of March 2013, undocumented students are required to pay in between \$20,000 and \$35,000 for their local public university. Due to their families' economic status, these tuition amounts have not allowed many of those 50,000 to 65,000 students to receive secondary education. In addition to higher tuition, these students are also unable to receive any federal assistance as they are denied Social Security numbers.

Chapter 69

CONFEDERATIVE APPROACH TO HIGHER EDUCATION : CIU's CONTRIBUTION

Viewing the urgent need for uniting all the university level institutions in India and also to strengthen the cause of internationalization of higher and tertiary education besides introducing a confederative approach, the Confederation of Indian Universities (CIU) was inaugurated by the then Member of the Planning Commission of India (now NITI AYO), Prof. K. Venkatasubramanian on 15th April 2004. Since its inception, Dr. Priya Ranjan Trivedi is contributing his optimized knowledge to the CIU in the capacity of the President. He is credited to have given a new dimension to the CIU as more than 250 books and encyclopaedias have been brought out by CIU besides conducting many applied research and implementing national as well as international consultancy assignments.

It has often been taken for granted that universities are international. The universal nature of knowledge, a long tradition of international collegiality and cooperation in research, the comings and goings of faculty and students since Antiquity have all served to create this impression. Conscious that this impression only partially reflects the day to day reality of higher education institutions and noting that internationalisation of higher education is today more than ever a worthy goal, there is an urgent need to reaffirm the commitment and to urge all stakeholders to contribute to its realisation.

As we have entered the 21st Century, a number of major challenges face women and men as they interact with one another as individuals, groups, and with nature. Globalisation of trade, of production, and of communications has created a highly interconnected world. Yet the tremendous gaps between the rich and the poor continue to widen both within, and between nations. Sustainable development remains an elusive long-term goal, too often sacrificed for short-term gains.

It is imperative that higher education offers solutions to existing problems and innovate to avoid problems in the future. Whether in the economic, political, or social realms, higher education is expected to contribute to raising the overall quality of life. To fulfil its role effectively and maintain excellence, higher education must become far more internationalised; it must integrate an international and intercultural dimension into its teaching, research, and service functions.

Preparing future leaders and citizens for a highly interdependent world, requires a higher education system where internationalisation promotes cultural diversity and fosters intercultural understanding, respect, and tolerance among peoples. Such internationalisation of higher education contributes to building more than economically competitive and politically powerful regional blocks; it represents a commitment to international solidarity, human security and helps to build a climate of global peace.

Technological advances in communications are powerful instruments, which can serve to further internationalisation of higher education and to democratise access to opportunities. However, to the extent that access to new information technologies remains unevenly distributed in the world, the adverse side effects of their widespread use can threaten cultural diversity and widen the gaps in the production, dissemination, and appropriation of knowledge.

Highly educated manpower at the highest levels are essential to increasingly knowledge-based development. Internationalisation and international cooperation can serve to improve higher education by increasing efficiency in teaching and learning as well as in research through shared efforts and joint actions.

The CIU at this point of time thinks it proper to define the principle of Institutional Autonomy as the necessary degree of independence from external interference that the University requires in respect of its internal organisation and governance, the internal distribution of financial resources and the generation of income from non public sources, the recruitment of its staff, the setting of the conditions of study and, finally, the freedom to conduct teaching and research.

The CIU wishes to further define the principle of Academic Freedom as the freedom for members of the academic community that is, scholars, teachers and students to follow their scholarly activities within a framework determined by that community in respect of ethical rules and international standards, and without outside pressure.

Rights confer obligations. These obligations are as much incumbent on the individuals and on the University of which they are part, as they are upon the State and the Society.

Academic Freedom engages the obligation by each individual member of the academic profession to excellence, to innovation, and to advancing the frontiers of knowledge through research and the diffusion of its results through teaching and publications. Academic Freedom also engages the ethical responsibility of the individuals and the academic community in the conduct of research, both in determining the priorities of that research and in taking account of the implications, which its results may have for Humanity and Nature.

For its part, the University has the obligation to uphold and demonstrate to Society that it stands by its collective obligation to quality and ethics, to fairness and tolerance, to the setting and the upkeep of standards - academic when applied to research and teaching, administrative when applied to due process, to the rendering of accounts to Society, to self-verification, to institutional review and to transparency in the conduct of institutional self-government.

For their part, organising powers and stakeholders public or private, stand equally under the obligation to prevent arbitrary interference, to provide and to ensure those conditions necessary, in compliance with internationally recognised standards, for the exercise of

Academic Freedom by individual members of the academic profession and for University Autonomy to be exercised by the institution.

In particular, the organising powers and stakeholders public or private, and the interests they represent, should recognise that by its very nature the obligation upon the academic profession to advance knowledge is inseparable from the examination, questioning and testing of accepted ideas and of established wisdom. And that the expression of views, which follows from scientific insight or scholarly investigation may often be contrary to popular conviction or judged as unacceptable and intolerable.

Hence, agencies which exercise responsibility for the advancement of knowledge as to particular interests which provide support for, or stand in a contractual relationship with, the University for the services it may furnish, must recognise that such expressions of scholarly judgement and scientific inquiry shall not place in jeopardy the career or the existence of the individual expressing them nor leave that individual open to pursuit for *delit d'opinion* on account of such views being expressed.

If the free range of inquiry, examination and the advance of knowledge are held to be benefits Society derives from the University, the latter must assume the responsibility for the choices and the priorities it sets freely. Society for its part, must recognise its part in providing means appropriate for the achievement of that end.

Resources should be commensurate with expectations - especially those which, like fundamental research, demand a long-term commitment if they are to yield their full benefits.

The obligation to transmit and to advance knowledge is the basic purpose for which Academic Freedom and University Autonomy are required and recognised. Since knowledge is universal, so too is this obligation.

In practice, however, Universities fulfil this obligation primarily in respect of the Societies in which they are located. And it is these communities, cultural, regional, national and local, which establish with the University the terms by which such responsibilities are to be assumed, who is to assume them and by what means and procedures.

Responsibilities met within the setting of 'national' society, extend beyond the physical boundaries of that society. Since its earliest days, the University has professed intellectual and spiritual engagement to the principles of 'universalism' and to 'internationalism' whilst Academic Freedom and University Autonomy evolved within the setting of the historic national community.

For Universities to serve a world society requires that Academic Freedom and University Autonomy form the bedrock to a new Social Contract - a contract to uphold values common to Humanity and to meet the expectations of a world where frontiers are rapidly dissolving.

In the context of international cooperation, the exercise of Academic Freedom and University Autonomy by some should not lead to intellectual hegemony over others. It should, on the contrary, be a means of strengthening the principles of pluralism, tolerance and academic solidarity between institutions of higher learning and between individual scholars and students. At a time when the ties, obligations and commitments between Society and the University are becoming more complex, more urgent and more direct, it appears desirable to establish a broadly recognised Charter of mutual rights and obligations governing the relationship between University and Society, including adequate monitoring mechanisms for its application.

The Confederation of Indian Universities (CIU), being founded to promote cooperation among higher education institutions, notes that despite the universality of knowledge, which has always served to affirm the nature of higher education, the level of internationalisation remains low and uneven. Furthermore, cooperation has had relatively little impact of global wealth and resource distribution even in the realm of higher education. Worse, the external brain drain and other negative consequences of poorly designed cooperative activities have, at times, even exacerbated the conditions in developing nations.

In more recent times, commercial and financial interests have gained prominence in the internationalisation process and threaten to displace the less utilitarian and equally valuable aspects of this enriching and necessary transformation of higher education.

CHARTER OF THE CONFEDERATION OF INDIAN UNIVERSITIES (CIU)

DECLARATION OF NAME

The name of the organisation shall be "Confederation of Indian Universities. It shall be a self-governing body having non-political, non-governmental and non-profit making character.

REGISTERED OFFICE

The Registered Office will presently be situated at A 14 Paryavaran Complex, South of Saket, New Delhi - 110030. The Registered Office may be changed in future but will remain in the NCT of Delhi.

MASTERPLAN ENVISAGED BY THE CONFEDERATION OF INDIAN UNIVERSITIES (CIU)

INTRODUCTION

1. There is an unprecedented demand for and a great diversification in higher education, as well as an increased awareness of its vital importance for sociocultural and economic development, and for building the future, for which the younger generations will need to be equipped with new skills, knowledge and ideals.

2. Higher education includes 'all types of studies, teaching, training and research at the post-secondary level, provided by universities or other educational establishments that are approved as institutions of higher education by the Competent Authorities.
3. Everywhere higher education is faced with great challenges and difficulties related to financing, equity of conditions at access into and during the course of studies, improved staff development, skills-based training, enhancement and preservation of quality in teaching, research and services, relevance of programmes, employability of graduates, post-graduates and doctorates, establishment of efficient co-operation agreements and equitable access to the benefits of international co-operation.
4. At the same time, higher education is being challenged by new opportunities relating to technologies that are improving the ways in which knowledge can be produced, managed, disseminated, accessed and controlled. Equitable access to these technologies should be ensured at all levels of education systems.
5. The initial years of this century and the last 50 years of the twentieth century will go down in the history of higher education as the period of its most spectacular expansion: an over sixfold increase in student enrolments worldwide. But it is also the period which has seen the gap between the industrially developed, the developing countries and in particular the least developed countries with regard to access and resources for higher learning and research, already enormous, becoming even wider. It has also been a period of increased socio-economic stratification and greater difference in educational opportunity within countries, including in some of the most developed and wealthiest nations.
6. Without adequate higher education and research institutions providing a critical mass of skilled and educated people, no country can ensure genuine endogenous and sustainable development and, in particular, developing countries and the least developed countries cannot reduce the gap separating them from the industrially developed ones. Sharing knowledge, international co-operation and new technologies can offer new opportunities to reduce this gap.
7. Higher education has given ample proof of its viability over the centuries and of its ability to change and to induce change and progress in society. Owing to the scope and pace of change, society has become increasingly knowledge-based so that higher learning and research now act as essential components of cultural, socio-economic and environmentally sustainable development of individuals, communities and nations.
8. Higher education itself is confronted, therefore, with formidable challenges and must proceed to the most radical change and renewal it has ever been required to undertake, so that our society, which is currently undergoing a profound crisis of

values, can transcend mere economic considerations and incorporate deeper dimensions of morality and spirituality.

9. It is with the aim of providing solutions to these challenges and of setting in motion a process of in-depth reform in higher education worldwide that the Confederation of Indian Universities (CIU) is being established with a view to designing a Masterplan Paradigm for introducing development systems for strengthening the cause of higher education in the third millennium.

CIU'S DECLARATION ON HIGHER EDUCATION

We, the University level Institutions in India assembled at New Delhi on 15 April 2004;

10. Recalling the Universal Declaration of Human Rights which states in Article 26, paragraph 1, that 'Everyone has the right to education' and that 'higher education shall be equally accessible to all on the basis of merit', and endorsing the basic principles of the Convention against Discrimination in Education (1960), which, by Article 4, commits the States Parties to it to 'make higher education equally accessible to all on the basis of individual capacity'.
11. Convinced that education is a fundamental pillar of human rights, democracy, sustainable development and peace, and shall therefore become accessible to all throughout life and that measures are required to ensure co-ordination and co-operation across and between the various sectors, particularly between general, technical and professional secondary and post-secondary education as well as between universities, colleges and technical institutions.
12. Believing that, in this context, the solution of the problems faced in the twenty-first century will be determined by the vision of the future society and by the role that is assigned to education in general and to higher education in particular.
13. Aware that at the beginning of a new millennium it is the duty of higher education to ensure that the values and ideals of a culture of peace prevail and that the intellectual community should be mobilized to that end.
14. Considering that a substantial change and development of higher education, the enhancement of its quality and relevance, and the solution to the major challenges it faces, require the strong involvement not only of governments and of higher education institutions, but also of all stakeholders, including students and their families, teachers, business and industry, the public and private sectors of the economy, legislatures, the media, the community, professional associations and society as well as a greater responsibility of higher education institutions towards society and accountability in the use of public and private, national or international resources;

15. Emphasizing that higher education systems should enhance their capacity to live with uncertainty, to change and bring about change, and to address social needs and to promote solidarity and equity; should preserve and exercise scientific rigour and originality, in a spirit of impartiality, as a basic prerequisite for attaining and sustaining an indispensable level of quality; and should place students at the centre of their concerns, within a lifelong perspective, so as to allow their full integration into the global knowledge society of this new century; and
16. Also believing that international co-operation and exchange are major avenues for advancing higher education throughout the world.

Proclaim the following:

MISSIONS AND FUNCTIONS OF THE CONFEDERATION OF INDIAN UNIVERSITIES (CIU)

MISSION TO EDUCATE, TO TRAIN AND TO UNDERTAKE RESEARCH

We affirm that the core missions and values of higher education, in particular the mission to contribute to the sustainable development and improvement of society as a whole, should be preserved, reinforced and further expanded, namely, to:

17. Educate highly qualified graduates and responsible citizens able to meet the needs of all sectors of human activity, by offering relevant qualifications, including professional training, which combine high-level knowledge and skills, using courses and content continually tailored to the present and future needs of society.
18. Provide opportunities for higher learning and for learning throughout life, giving to learners an optimal range of choice and a flexibility of entry and exit points within the system, as well as an opportunity for individual development and social mobility in order to educate for citizenship and for active participation in society, with a worldwide vision, for endogenous capacity-building, and for the consolidation of human rights, sustainable development, democracy and peace, in a context of justice.
19. Advance, create and disseminate knowledge through research and provide, as part of its service to the community, relevant expertise to assist societies in cultural, social and economic development, promoting and developing scientific and technological research as well as research in the social sciences, the humanities and the creative arts.
20. Help understand, interpret, preserve, enhance, promote and disseminate national and regional, international and historic cultures, in a context of cultural pluralism and diversity.

21. Help protect and enhance societal values by training young people in the values which form the basis of democratic citizenship and by providing critical and detached perspectives to assist in the discussion of strategic options and the reinforcement of humanistic perspectives; and
22. Contribute to the development and improvement of education at all levels, including through the training of teachers.

ETHICAL ROLE, AUTONOMY, RESPONSIBILITY AND ANTICIPATORY FUNCTION

Higher education institutions and their personnel and students should :

23. Preserve and develop their crucial functions, through the exercise of ethics and scientific and intellectual rigour in their various activities.
24. Be able to speak out on ethical, cultural and social problems completely independently and in full awareness of their responsibilities, exercising a kind of intellectual authority that society needs to help it to reflect, understand and act.
25. Enhance their critical and forward-looking functions, through continuing analysis of emerging social, economic, cultural and political trends, providing a focus for forecasting, warning and prevention.
26. Exercise their intellectual capacity and their moral prestige to defend and actively disseminate universally accepted values, including peace, justice, freedom, equality and solidarity.
27. Enjoy full academic autonomy and freedom, conceived as a set of rights and duties, while being fully responsible and accountable to society.
28. Play a role to help identify and to address issues that affect the well-being of communities, nations and global society.

SHAPING A NEW VISION OF HIGHER EDUCATION

Equity of Access

29. In keeping with Article 26.1 of the Universal Declaration of Human Rights, admission to higher education should be based on the merit, capacity, efforts, perseverance and devotion, showed by those seeking access to it, and can take place in a lifelong scheme, at any time, with due recognition of previously acquired skills. As a consequence, no discrimination can be accepted in granting access to higher education on grounds of race, gender, language or religion, or economic, cultural or social distinctions, or physical disabilities.

30. Equity of access to higher education should begin with the reinforcement and, if need be, the reordering of its links with all other levels of education, particularly with secondary education. Higher education institutions must be viewed as, and must also work within themselves to be a part of and encourage, a seamless system starting with early childhood and primary education and continuing through life. Higher education institutions must work in active partnership with parents, schools, students, socio-economic groups and communities.
31. Secondary education should not only prepare qualified candidates for access to higher education by developing the capacity to learn on a broad basis but also open the way to active life by providing training on a wide range of jobs. However, access to higher education should remain open to those successfully completing secondary school, or its equivalent, or presenting entry qualifications, as far as possible, at any age and without any discrimination.
32. As a consequence, the rapid and wide-reaching demand for higher education requires, where appropriate, all policies concerning access to higher education to give priority in the future to the approach based on the merit of the individual.
33. Access to higher education for members of some special target groups, such as indigenous peoples, cultural and linguistic minorities, disadvantaged groups, peoples living under occupation and those who suffer from disabilities, must be actively facilitated, since these groups as collectivities and as individuals may have both experience and talent that can be of great value for the development of societies and nations. Special material help and educational solutions can help overcome the obstacles that these groups face, both in accessing and in continuing higher education.

ENHANCING PARTICIPATION AND PROMOTING THE ROLE OF WOMEN

34. Although significant progress has been achieved to enhance the access of women to higher education, various socio-economic, cultural and political obstacles continue in many places in the world to impede their full access and effective integration. To overcome them remains an urgent priority in the renewal process for ensuring an equitable and non-discriminatory system of higher education based on the principle of merit.
35. Further efforts are required to eliminate all gender stereotyping in higher education, to consider gender aspects in different disciplines and to consolidate women's participation at all levels and in all disciplines, in which they are under-represented and, in particular, to enhance their active involvement in decision-making.
36. Gender studies (women's studies) should be promoted as a field of knowledge, strategic for the transformation of higher education and society.

37. Efforts should be made to eliminate political and social barriers whereby women are under-represented and in particular to enhance their active involvement at policy and decision-making levels within higher education and society.

ADVANCING KNOWLEDGE THROUGH RESEARCH IN SCIENCE, THE ARTS AND HUMANITIES AND THE DISSEMINATION OF ITS RESULTS

38. The advancement of knowledge through research is an essential function of all systems of higher education, which should promote postgraduate studies. Innovation, interdisciplinarity and transdisciplinarity should be promoted and reinforced in programmes with long-term orientations on social and cultural aims and needs. An appropriate balance should be established between basic and target-oriented research.
40. Institutions should ensure that all members of the academic community engaged in research are provided with appropriate training, resources and support. The intellectual and cultural rights on the results of research should be used to the benefit of humanity and should be protected so that they cannot be abused.
41. Research must be enhanced in all disciplines, including the social and human sciences, education (including higher education), engineering, natural sciences, mathematics, informatics and the arts within the framework of national, regional and international research and development policies. Of special importance is the enhancement of research capacities in higher education research institutions, as mutual enhancement of quality takes place when higher education and research are conducted at a high level within the same institution. These institutions should find the material and financial support required, from both public and private sources.

LONG-TERM ORIENTATION BASED ON RELEVANCE

42. Relevance in higher education should be assessed in terms of the fit between what society expects of institutions and what they do. This requires ethical standards, political impartiality, critical capacities and, at the same time, a better articulation with the problems of society and the world of work, basing long-term orientations on societal aims and needs, including respect for cultures and environmental protection. The concern is to provide access to both broad general education and targeted, career-specific education, often interdisciplinary, focusing on skills and aptitudes, both of which equip individuals to live in a variety of changing settings, and to be able to change occupations.
43. Higher education should reinforce its role of service to society, especially its activities aimed at eliminating poverty, intolerance, violence, illiteracy, hunger, environmental degradation and disease, mainly through an interdisciplinary and transdisciplinary approach in the analysis of problems and issues.

44. Higher education should enhance its contribution to the development of the whole education system, notably through improved teacher education, curriculum development and educational research.
45. Ultimately, higher education should aim at the creation of a new society - non-violent and non-exploitative - consisting of highly cultivated, motivated and integrated individuals, inspired by love for humanity and guided by wisdom.

STRENGTHENING CO-OPERATION WITH THE WORLD OF WORK AND ANALYSING AND ANTICIPATING SOCIETAL NEEDS

46. In economies characterized by changes and the emergence of new production paradigms based on knowledge and its application, and on the handling of information, the links between higher education, the world of work and other parts of society should be strengthened and renewed.
47. Links with the world of work can be strengthened, through the participation of its representatives in the governance of institutions, the increased use of domestic and international apprenticeship/work-study opportunities for students and teachers, the exchange of personnel between the world of work and higher education institutions and revised curricula more closely aligned with working practices.
48. As a lifelong source of professional training, updating and recycling, institutions of higher education should systematically take into account trends in the world of work and in the scientific, technological and economic sectors. In order to respond to the work requirements, higher education systems and the world of work should jointly develop and assess learning processes, bridging programmes and prior learning assessment and recognition programmes, which integrate theory and training on the job. Within the framework of their anticipatory function, higher education institutions could contribute to the creation of new jobs, although that is not their only function.
49. Developing entrepreneurial skills and initiative should become major concerns of higher education, in order to facilitate employability of graduates who will increasingly be called upon to be not only job seekers but also and above all to become job creators. Higher education institutions should give the opportunity to students to fully develop their own abilities with a sense of social responsibility, educating them to become full participants in democratic society and promoters of changes that will foster equity and justice.

DIVERSIFICATION FOR ENHANCED EQUITY OF OPPORTUNITY

50. Diversifying higher education models and recruitment methods and criteria is essential both to meet increasing international demand and to provide access to various delivery modes and to extend access to an ever-wider public, in a lifelong

perspective, based on flexible entry and exit points to and from the system of higher education.

51. More diversified systems of higher education are characterized by new types of tertiary institutions: public, private and non-profit institutions, amongst others. Institutions should be able to offer a wide variety of education and training opportunities: traditional degrees, short courses, part-time study, flexible schedules, modularized courses, supported learning at a distance, etc.

INNOVATIVE EDUCATIONAL APPROACHES: CRITICAL THINKING AND CREATIVITY

52. In a world undergoing rapid changes, there is a perceived need for a new vision and paradigm of higher education, which should be student-oriented, calling in most countries for in-depth reforms and an open access policy so as to cater to ever more diversified categories of people, and of its contents, methods, practices and means of delivery, based on new types of links and partnerships with the community and with the broadest sectors of society.
53. Higher education institutions should educate students to become well informed and deeply motivated citizens, who can think critically, analyse problems of society, look for solutions to the problems of society, apply them and accept social responsibilities.
54. To achieve these goals, it may be necessary to recast curricula, using new and appropriate methods, so as to go beyond cognitive mastery of disciplines. New pedagogical and didactical approaches should be accessible and promoted in order to facilitate the acquisition of skills, competencies and abilities for communication, creative and critical analysis, independent thinking and team work in multicultural contexts, where creativity also involves combining traditional or local knowledge and know-how with advanced science and technology. These recast curricula should take into account the gender dimension and the specific cultural, historic and economic context of each country. The teaching of human rights standards and education on the needs of communities in all parts of the world should be reflected in the curricula of all disciplines, particularly those preparing for entrepreneurship. Academic personnel should play a significant role in determining the curriculum.
55. New methods of education will also imply new types of teaching-learning materials. These have to be coupled with new methods of testing that will promote not only powers of memory but also powers of comprehension, skills for practical work and creativity.

HIGHER EDUCATION PERSONNEL AND STUDENTS AS MAJOR ACTORS

56. A vigorous policy of staff development is an essential element of higher education institutions. Clear policies should be established concerning higher education

teachers, who nowadays need to focus on teaching students how to learn and how to take initiatives rather than being exclusively founts of knowledge. Adequate provision should be made for research and for updating and improving pedagogical skills, through appropriate staff development programmes, encouraging constant innovation in curriculum, teaching and learning methods, and ensuring appropriate professional and financial status, and for excellence in research and teaching. Furthermore, in view of the role of higher education for lifelong learning, experience outside the institutions ought to be considered as a relevant qualification for higher educational staff.

57. Clear policies should be established by all higher education institutions preparing teachers of early childhood education and for primary and secondary schools, providing stimulus for constant innovation in curriculum, best practices in teaching methods and familiarity with diverse learning styles. It is vital to have appropriately trained administrative and technical personnel.
58. National and institutional decision-makers should place students and their needs at the centre of their concerns, and should consider them as major partners and responsible stakeholders in the renewal of higher education. This should include student involvement in issues that affect that level of education, in evaluation, the renovation of teaching methods and curricula and, in the institutional framework in force, in policy-formulation and institutional management. As students have the right to organize and represent themselves, students' involvement in these issues should be guaranteed.
59. Guidance and counselling services should be developed, in co-operation with student organizations, in order to assist students in the transition to higher education at whatever age and to take account of the needs of ever more diversified categories of learners. Apart from those entering higher education from schools or further education colleges, they should also take account of the needs of those leaving and returning in a lifelong process. Such support is important in ensuring a good match between student and course, reducing drop-out. Students who do drop out should have suitable opportunities to return to higher education if and when appropriate.

FROM VISION TO ACTION

Qualitative Evaluation

60. Quality in higher education is a multidimensional concept, which should embrace all its functions, and activities: teaching and academic programmes, research and scholarship, staffing, students, buildings, facilities, equipment, services to the community and the academic environment. Internal self-evaluation and external review, conducted openly by independent specialists, if possible with international expertise, are vital for enhancing quality. Independent national bodies should be established and comparative standards of quality, recognized at international level, should be defined. Due attention should be paid to specific institutional, national and regional contexts in order to take into account diversity and to avoid

uniformity. Stakeholders should be an integral part of the institutional evaluation process.

61. Quality also requires that higher education should be characterized by its international dimension: exchange of knowledge, interactive networking, mobility of teachers and students, and international research projects, while taking into account the national cultural values and circumstances.
62. To attain and sustain national, regional or international quality, certain components are particularly relevant, notably careful selection of staff and continuous staff development, in particular through the promotion of appropriate programmes for academic staff development, including teaching/learning methodology and mobility between countries, between higher education institutions, and between higher education institutions and the world of work, as well as student mobility within and between countries. The new information technologies are an important tool in this process, owing to their impact on the acquisition of knowledge and know-how.

THE POTENTIAL AND THE CHALLENGE OF TECHNOLOGY

63. The rapid breakthroughs in new information and communication technologies will further change the way knowledge is developed, acquired and delivered. It is also important to note that the new technologies offer opportunities to innovate on course content and teaching methods and to widen access to higher learning. However, it should be borne in mind that new information technology does not reduce the need for teachers but changes their role in relation to the learning process and that the continuous dialogue that converts information into knowledge and understanding becomes fundamental. Higher education institutions should lead in drawing on the advantages and potential of new information and communication technologies, ensuring quality and maintaining high standards for education practices and outcomes in a spirit of openness, equity and international co-operation by:
64. Engaging in networks, technology transfer, capacity-building, developing teaching materials and sharing experience of their application in teaching, training and research, and making knowledge accessible to all;
65. Creating new learning environments, ranging from distance education facilities to complete virtual higher education institutions and systems, capable of bridging distances and developing high-quality systems of education, thus serving social and economic advancement and democratization as well as other relevant priorities of society, while ensuring that these virtual education facilities, based on regional, continental or global networks, function in a way that respects cultural and social identities;

66. Noting that, in making full use of information and communication technology (ICT) for educational purposes, particular attention should be paid to removing the grave inequalities which exist among and also within the countries of the world with regard to access to new information and communication technologies and to the production of the corresponding resources;
67. Adapting ICT to national, regional and local needs and securing technical, educational, management and institutional systems to sustain it;
68. Facilitating, through international co-operation, the identification of the objectives and interests of all countries, particularly the developing countries, equitable access and the strengthening of infrastructures in this field and the dissemination of such technology throughout society;
69. Closely following the evolution of the 'knowledge society' in order to ensure high quality and equitable regulations for access to prevail;
70. Taking the new possibilities created by the use of ICTs into account, while realizing that it is, above all, institutions of higher education that are using ICTs in order to modernize their work, and not ICTs transforming institutions of higher education from real to virtual institutions.

STRENGTHENING HIGHER EDUCATION MANAGEMENT AND FINANCING

71. The management and financing of higher education require the development of appropriate planning and policy-analysis capacities and strategies, based on partnerships established between higher education institutions and state and national planning and co-ordination bodies, so as to secure appropriately streamlined management and the cost-effective use of resources. Higher education institutions should adopt forward-looking management practices that respond to the needs of their environments. Managers in higher education must be responsive, competent and able to evaluate regularly, by internal and external mechanisms, the effectiveness of procedures and administrative rules.
72. Higher education institutions must be given autonomy to manage their internal affairs, but with this autonomy must come clear and transparent accountability to the government, legislature, students and the wider society.
73. The ultimate goal of management should be to enhance the institutional mission by ensuring high-quality teaching, training and research, and services to the community. This objective requires governance that combines social vision, including understanding of global issues, with efficient managerial skills. Leadership in higher education is thus a major social responsibility and can be significantly strengthened through dialogue with all stakeholders, especially teachers and students, in higher education. The participation of teaching faculty in the governing bodies of higher education institutions should be taken into account,

within the framework of current institutional arrangements, bearing in mind the need to keep the size of these bodies within reasonable bounds.

74. The promotion of North-South co-operation to ensure the necessary financing for strengthening higher education in the developing countries is essential.

FINANCING OF HIGHER EDUCATION AS A PUBLIC SERVICE

The funding of higher education requires both public and private resources. The role of the government remains essential in this regard.

75. The diversification of funding sources reflects the support that society provides to higher education and must be further strengthened to ensure the development of higher education, increase its efficiency and maintain its quality and relevance. Public support for higher education and research remains essential to ensure a balanced achievement of educational and social missions.
76. Society as a whole must support education at all levels, including higher education, given its role in promoting sustainable economic, social and cultural development. Mobilization for this purpose depends on public awareness and involvement of the public and private sectors of the economy, legislature, the media, governmental and non-governmental organizations, students as well as institutions, families and all the social actors involved with higher education.

SHARING KNOWLEDGE AND KNOW-HOW ACROSS BORDERS AND CONTINENTS

77. The principle of solidarity and true partnership amongst higher education institutions worldwide is crucial for education and training in all fields that encourage an understanding of global issues, the role of democratic governance and skilled human resources in their resolution, and the need for living together with different cultures and values. The practice of multilingualism, faculty and student exchange programmes and institutional linkage to promote intellectual and scientific co-operation should be an integral part of all higher education systems.
78. The principles of international co-operation based on solidarity, recognition and mutual support, true partnership that equitably serves the interests of the partners and the value of sharing knowledge and know-how across borders should govern relationships among higher education institutions in both developed and developing countries and should benefit the least developed countries in particular. Consideration should be given to the need for safeguarding higher education institutional capacities in regions suffering from conflict or natural disasters. Consequently, an international dimension should permeate the curriculum, and the teaching and learning processes.

79. Regional and international normative instruments for the recognition of studies should be ratified and implemented, including certification of the skills, competencies and abilities of graduates, making it easier for students to change courses, in order to facilitate mobility within and between national systems.

FROM 'BRAIN DRAIN' TO 'BRAIN GAIN'

80. The 'brain drain' has yet to be stemmed, since it continues to deprive the developing countries and those in transition, of the high-level expertise necessary to accelerate their socio-economic progress. International co-operation schemes should be based on long-term partnerships between institutions in the South and the North, and also promote South-South co-operation. Priority should be given to training programmes in the developing countries, in centres of excellence forming regional and international networks, with short periods of specialized and intensive study abroad.
81. Consideration should be given to creating an environment conducive to attracting and retaining skilled human capital, either through national policies or international arrangements to facilitate the return - permanent or temporary - of highly trained scholars and researchers to their countries of origin. At the same time, efforts must be directed towards a process of 'brain gain' through collaboration programmes that, by virtue of their international dimension, enhance the building and strengthening of institutions and facilitate full use of endogenous capacities.

PARTNERSHIP AND ALLIANCES

82. Partnership and alliances amongst stakeholders - national and institutional policy-makers, teaching and related staff, researchers and students, and administrative and technical personnel in institutions of higher education, the world of work, community groups - is a powerful force in managing change. Also, non-governmental organizations are key actors in this process. Henceforth, partnership, based on common interest, mutual respect and credibility, should be a prime matrix for renewal in higher education.

The Confederation of Indian Universities (CIU) adopts this Declaration and reaffirms the right of all people to education and the right of access to higher education based on individual merit and capacity.

The Confederation of Indian Universities (CIU) pledges to act together within the frame of our individual and collective responsibilities, by taking all necessary measures in order to realize the principles concerning higher education contained in the Universal Declaration of Human Rights and in the Convention against Discrimination in Education.

The Confederation of Indian Universities (CIU) solemnly reaffirms the commitment to peace. To that end, CIU is determined to accord high priority to education for reducing peacelessness, unemployment, pollution and intolerance.

The Confederation of Indian Universities (CIU) adopts, therefore, this Declaration on Higher Education and Development. To achieve the goals set forth in this Declaration and, in particular, for immediate action, CIU agrees on the following Framework for Priority Action for Change and Development of Higher Education.

FRAMEWORK FOR PRIORITY ACTION FOR CHANGE AND DEVELOPMENT OF HIGHER EDUCATION

Priority Actions at National Level

States, including their governments, legislatures and other decision-makers, should:

83. Establish, where appropriate, the legislative, political and financial framework for the reform and further development of higher education, in keeping with the terms of the Universal Declaration of Human Rights, which establishes that higher education shall be 'accessible to all on the basis of merit'. No discrimination can be accepted, no one can be excluded from higher education or its study fields, degree levels and types of institutions on grounds of race, gender, language, religion, or age or because of any economic or social distinctions or physical disabilities;
84. Reinforce the links between higher education and research;
85. Consider and use higher education as a catalyst for the entire education system;
86. Develop higher education institutions to include lifelong learning approaches, giving learners an optimal range of choice and a flexibility of entry and exit points within the system, and redefine their role accordingly, which implies the development of open and continuous access to higher learning and the need for bridging programmes and prior learning assessment and recognition;
87. Make efforts, when necessary, to establish close links between higher education and research institutions, taking into account the fact that education and research are two closely related elements in the establishment of knowledge;
88. Develop innovative schemes of collaboration between institutions of higher education and different sectors of society to ensure that higher education and research programmes effectively contribute to local, regional and national development;
89. Fulfil their commitments to higher education and be accountable for the pledges adopted with their concurrence, at several forums, particularly over the past decade, with regard to human, material and financial resources, human development and education in general, and to higher education in particular;
90. Have a policy framework to ensure new partnerships and the involvement of all relevant stakeholders in all aspects of higher education: the evaluation process, including curriculum and pedagogical renewal, and guidance and counselling

services; and, in the framework of existing institutional arrangements, policy-making and institutional governance;

91. Define and implement policies to eliminate all gender stereotyping in higher education and to consolidate women's participation at all levels and in all disciplines in which they are under-represented at present and, in particular, to enhance their active involvement in decision-making;
92. Recognize students as the centre of attention of higher education, and one of its stakeholders. They should be involved, by means of adequate institutional structures, in the renewal of their level of education (including curriculum and pedagogical reform), and policy decision, in the framework of existing institutional arrangements;
93. Recognize that students have the right to organize themselves autonomously;
94. Promote and facilitate national and international mobility of teaching staff and students as an essential part of the quality and relevance of higher education;
95. Provide and ensure those conditions necessary for the exercise of academic freedom and institutional autonomy so as to allow institutions of higher education, as well as those individuals engaged in higher education and research, to fulfil their obligations to society.
96. States in which enrolment in higher education is low by internationally accepted comparative standards should strive to ensure a level of higher education adequate for relevant needs in the public and private sectors of society and to establish plans for diversifying and expanding access, particularly benefiting all minorities and disadvantaged groups.
97. The interface with general, technical and professional secondary education should be reviewed in depth, in the context of lifelong learning. Access to higher education in whatever form must remain open to those successfully completing secondary education or its equivalent or meeting entry qualifications at any age, while creating gateways to higher education, especially for older students without any formal secondary education certificates, by attaching more importance to their professional experience. However, preparation for higher education should not be the sole or primary purpose of secondary education, which should also prepare for the world of work, with complementary training whenever required, in order to provide knowledge, capacities and skills for a wide range of jobs. The concept of bridging programmes should be promoted to allow those entering the job market to return to studies at a later date.
98. Concrete steps should be taken to reduce the widening gap between industrially developed and developing countries, in particular the least developed countries, with regard to higher education and research. Concrete steps are also needed to

encourage increased co-operation between countries at all levels of economic development with regard to higher education and research. Consideration should be given to making budgetary provisions for that purpose, and developing mutually beneficial agreements in order to sustain co-operative activities and projects through appropriate incentives and funding in education, research and the development of high-level experts.

PRIORITY ACTIONS AT THE LEVEL OF SYSTEMS AND INSTITUTIONS

99. Each higher education institution should define its mission according to the present and future needs of society and base it on an awareness of the fact that higher education is essential for any country or region to reach the necessary level of sustainable and environmentally sound economic and social development, cultural creativity nourished by better knowledge and understanding of the cultural heritage, higher living standards, and internal and international harmony and peace, based on human rights, democracy, tolerance and mutual respect. These missions should incorporate the concept of academic freedom.

In establishing priorities in their programmes and structures, higher education institutions should:

100. Take into account the need to abide by the rules of ethics and scientific and intellectual rigour, and the multidisciplinary and transdisciplinary approach;
101. Be primarily concerned to establish systems of access for the benefit of all persons who have the necessary abilities and motivations;
102. Use their autonomy and high academic standards to contribute to the sustainable development of society and to the resolution of the issues facing the society of the future. They should develop their capacity to give forewarning through the analysis of emerging social, cultural, economic and political trends, approached in a multidisciplinary and transdisciplinary manner, giving particular attention to:

high quality, a clear sense of the social pertinence of studies and their anticipatory function, based on scientific grounds;

knowledge of fundamental social questions, in particular related to the elimination of poverty, to sustainable development, to intercultural dialogue and to the shaping of a culture of peace;

the need for close connection with effective research organizations or institutions that perform well in the sphere of research; and

fundamentals of human ethics, applied to each profession and to all areas of human endeavour.

103. Ensure, especially in universities and as far as possible, that faculty members participate in teaching, research, tutoring students and steering institutional affairs.
104. Take all necessary measures to reinforce their service to the community, especially their activities aimed at eliminating poverty, intolerance, violence, illiteracy, hunger and disease, through an interdisciplinary and transdisciplinary approach in the analysis of challenges, problems and different subjects.
105. Set their relations with the world of work on a new basis involving effective partnerships with all social actors concerned, starting from a reciprocal harmonization of action and the search for solutions to pressing problems of humanity, all this within a framework of responsible autonomy and academic freedom.
106. Ensure high quality of international standing, consider accountability and both internal and external evaluation, with due respect for autonomy and academic freedom, as being normal and inherent in their functioning, and institutionalize transparent systems, structures or mechanisms specific thereto.
107. As lifelong education requires academic staff to update and improve their teaching skills and learning methods, even more than in the present systems mainly based on short periods of higher teaching, establish appropriate academic staff development structures and/or mechanisms and programmes.
108. Promote and develop research, which is a necessary feature of all higher education systems, in all disciplines, including the human and social sciences and arts, given their relevance for development are needed to ensure continued progress towards such key national objectives as access, equity, quality, relevance and diversification.
109. Remove gender inequalities and biases in curricula and research, and take all appropriate measures to ensure balanced representation of both men and women among students and teachers, at all levels of management.
110. Provide, where appropriate, guidance and counselling, remedial courses, training in how to study and other forms of student support, including measures to improve student living conditions.
111. While the need for closer links between higher education and the world of work is important worldwide, it is particularly vital for the developing countries and especially the least developed countries, given their low level of economic development. Governments of these countries should take appropriate measures to reach this objective through appropriate measures such as strengthening institutions for higher/professional/vocational education. At the same time, international action is needed in order to help establish joint undertakings between higher education and industry in these countries. It will be necessary to give

consideration to ways in which higher education graduates could be supported, through various schemes, following the positive experience of the micro-credit system and other incentives, in order to start small- and medium-size enterprises. At the institutional level, developing entrepreneurial skills and initiative should become a major concern of higher education, in order to facilitate employability of graduates who will increasingly be required not only to be job-seekers but to become job-creators.

112. The use of new technologies should be generalized to the greatest extent possible to help higher education institutions, to reinforce academic development, to widen access, to attain universal scope and to extend knowledge, as well as to facilitate education throughout life. Governments, educational institutions and the private sector should ensure that informatics and communication network infrastructures, computer facilities and human resources training are adequately provided.

INSTITUTIONS OF HIGHER EDUCATION SHOULD BE OPEN TO ADULT LEARNERS:

113. By developing coherent mechanisms to recognize the outcomes of learning undertaken in different contexts, and to ensure that credit is transferable within and between institutions, sectors and states.
114. By establishing joint higher education/community research and training partnerships, and by bringing the services of higher education institutions to outside groups.
115. By carrying out interdisciplinary research in all aspects of adult education and learning with the participation of adult learners themselves.
116. By creating opportunities for adult learning in flexible, open and creative ways.

ACTIONS TO BE TAKEN AT INTERNATIONAL LEVEL

117. Co-operation should be conceived of as an integral part of the institutional missions of higher education institutions and systems. Intergovernmental organizations, donor agencies and non-governmental organizations should extend their action in order to develop inter-university co-operation projects in particular through twinning institutions, based on solidarity and partnership, as a means of bridging the gap between rich and poor countries in the vital areas of knowledge production and application. Each institution of higher education should envisage the creation of an appropriate structure and/or mechanism for promoting and managing international co-operation.
118. The intergovernmental organizations and non-governmental organizations active in higher education, the states through their bilateral and multilateral co-operation programmes, the academic community and all concerned partners in society should

further promote international academic mobility as a means to advance knowledge and knowledge-sharing in order to bring about and promote solidarity as a main element of the global knowledge society of tomorrow, including through strong support a the joint work plan 2004-2010 on the recognition of studies, degrees and diplomas in higher education and through large-scale co-operative action involving, inter alia, the establishment of an educational credit transfer scheme, with particular emphasis on South-South co-operation, the needs of the least developed countries and of the small states with few higher education institutions or none at all.

119. Institutions of higher education in industrialized countries should strive to make arrangements for international co-operation with sister institutions in developing countries and in particular with those of poor countries. In their co-operation, the institutions should make efforts to ensure fair and just recognition of studies abroad. Initiatives should be taken to develop higher education throughout the world, setting itself clear-cut goals that could lead to tangible results. One method might be to implement projects in different regions renewing efforts towards creating and/or strengthening centres of excellence in developing countries relying on networks of national, regional and international higher education institutions.
120. All concerned parts of society, should also undertake action in order to alleviate the negative effects of 'brain drain' and to shift to a dynamic process of 'brain gain'. An overall analysis is required in all regions of the world of the causes and effects of brain drain. A vigorous campaign should be launched through the concerted effort of the international community and on the basis of academic solidarity and should encourage the return to their home country of expatriate academics, as well as the involvement of university volunteers - newly retired academics or young academics at the beginning of their career - who wish to teach and undertake research at higher education institutions in developing countries. At the same time it is essential to support the developing countries in their efforts to build and strengthen their own educational capacities.

WITHIN THIS FRAMEWORK, INTERNATIONAL ORGANISATIONS SHOULD:

121. Promote better co-ordination among intergovernmental, supranational and non-governmental organizations, agencies and foundations that sponsor existing programmes and projects for international co-operation in higher education. Furthermore, co-ordination efforts should take place in the context of national priorities. This could be conducive to the pooling and sharing of resources, avoid overlapping and promote better identification of projects, greater impact of action and increased assurance of their validity through collective agreement and review. Programmes aiming at the rapid transfer of knowledge, supporting institutional development and establishing centres of excellence in all areas of knowledge, in particular for peace education, conflict resolution, human rights and democracy, should be supported by institutions and by public and private donors.

122. Jointly with the various intergovernmental and non-governmental organizations, become a forum of reflection on higher education issues aiming at:
- (i) preparing update reports on the state of knowledge on higher education issues in all parts of the world;
 - (ii) promoting innovative projects of training and research, intended to enhance the specific role of higher education in lifelong education;
 - (iii) reinforcing international co-operation and emphasizing the role of higher education for citizenship education, sustainable development and peace; and
 - (iv) facilitating exchange of information and establishing, when appropriate, a database on successful experiences and innovations that can be consulted by institutions confronted with problems in their reforms of higher education.
123. Take specific action to support institutions of higher education in the least developed parts of the world and in regions suffering the effects of conflict or natural disasters.
124. Make renewed efforts towards creating or/and strengthening centres of excellence in developing countries.
125. Take the initiative to draw up an international instrument on academic freedom, autonomy and social responsibility.

Ensure follow-up of this Declaration jointly with other inter-governmental and non-governmental organizations and with all higher education stakeholders. It should have a crucial role in promoting international cooperation in the field of higher education in implementing this follow-up under the aegis of the Confederation of Indian Universities (CIU) and in the light of the following context :

126. At the start of the twenty-first century, universities nationwide and worldwide, though their circumstances differ, face important and common challenges.
127. The phenomenon of globalisation which affects diverse sectors - the economy, the media, etc. - also has its impact on higher education throughout the world. It demands change and an explicit policy of internationalisation by universities.
127. The unprecedented development of information and communication technologies is an important vehicle in the processes of globalisation and technological acceleration which carry with them opportunities and challenges that are specific to universities and to the way they fulfil their missions.
128. More than ever, the creation of knowledge, access to knowledge and its development are central to the development of societies. The knowledge society requires a new

generation of skilled people. In this context, demand for more differentiated higher and continuing education, including professional development as well as open and distance learning, is in all countries expanding and, in some regions, overwhelming.

129. The rapid production of knowledge and technological development spur on the quest for quality, excellence and relevance. The university has a special responsibility to ensure that attention is paid to solving ethical questions. In this setting, the university's critical role towards society assumes a new urgency.
130. The preconditions for universities and other types of higher education institutions to cope successfully with new challenges such as these remain, however, basically unchanged. These preconditions include autonomy of action, academic freedom and adequate human and financial resources.
131. For higher education of quality to be today and in the future a motor of social, cultural and economic development, other conditions are required, amongst which effective dialogue with external partners and responsible university governance.

As a social institution, the university cannot be replaced. Hence, it must continue to adapt and change if the challenges are to be met. It will remain an institution central to societies throughout the world as long as its activities make a difference to better the condition of humankind.

AIMS AND OBJECTS

1. To encourage links between institutions of higher education throughout the country.
2. To base the mission of the Confederation on the fundamental principles for which every university should stand, namely the right to pursue knowledge for its own sake, to follow wherever the search for truth may lead, the tolerance of divergent opinion and freedom from political interference.
3. To aim to give expression to the obligation of universities to promote, through teaching and research, the principles of freedom and justice, of human dignity and solidarity, and to contribute through regional, national and international cooperation to the development of national and moral assistance for the strengthening of higher education generally.
4. To link up its members, offer them quality services and provide a forum for the universities from all over the country to work together and to speak on behalf of universities, and of higher education in general, and to represent their concerns and interests in public debate and to outside parties.

5. To pursue its goals through future oriented collective action including information services, informed policy discussion, research and publications.
6. To facilitate the exchange of experience and learning.
7. To restate and defend the values that underlie and determine the proper functioning of universities in the Indian subcontinent.
8. To uphold and contribute to the development of a long term vision of universities' role and responsibility in society.
9. To voice the concerns for higher education with regard to policies of national and international bodies.
10. To contribute to a better understanding of current trends and developments through analysis, research and debate.
11. To provide comprehensive and authoritative information on higher education systems, institutions and qualifications worldwide.
12. To act as a cooperation and service-oriented organisation to promote the exchange of information, experience and ideas to facilitate academic mobility and mutual, technical, national and international collaboration among universities, and to contribute through research and meetings to informed higher education policy debate.
13. To organise congress, conferences, seminars, round tables and workshops.
14. To conduct comparative studies and higher education policy research.
15. To strengthen cooperation and clearing-house activities.
16. To establish national information networks.
17. To provide consultancy, credential evaluation and advice.
18. To invite university level degree granting institutions whose main objective is higher education and research, irrespective of whether or not they carry the name of university.
19. To maintain and preserve university autonomy, academic freedom and mutual understanding.
20. To stand for the right to pursue knowledge for its own sake.

21. To remain free from political and economic interference, and give, room for divergent opinion.
22. To work for the advancement of ethical values in the work of the Confederation and its members as well as in society and respect for diversity.
23. To remember the responsibility of universities and academies as guardians of free intellectual activity.
24. To stand for the universities' obligation as social institutions to deliver education, research and service to the community, and, in connection with this, to advance the principles of freedom and of justice, of sustainable development, human dignity and of solidarity.
25. To conserve the obligation of universities to foster constructive criticism and intellectual independence in the research for truth.
26. To contribute to the development of the long term vision of the university's role and responsibilities in society.
27. To strengthen solidarity and to contribute to reducing inequalities amongst universities, while keeping alive their cultural differences.
28. To promote access to higher education and equal opportunities for students.
29. To encourage quality and excellence worldwide, through sharing, knowledge, know-how and experience, through collaboration and through networking.
30. To help universities to become better learning organisations (for students, for teachers, for administrators).
31. To contribute to a better understanding of developments in higher education, through analysis, research and debate, as well as through the provision of information services on higher education.
32. To design and implement programmes for its members in partnership with other organisations working in the same field.
33. To pledge itself to be an open, inclusive and transparent organisation, the common voice of the university level institutions.
34. To provide a centre of cooperation among the universities and similar institutions of higher education, as well as organisations in the field of higher education generally, and to be an advocate for their concerns.

35. To facilitate the interchange of students and academic staff, and develop means for the better distribution and exchange of laboratory material, books and other equipment for university study and research.
36. To formulate the basic principles and higher education values for which the CIU will stand for.
37. To establish a strong structural relationship with the national as well as regional associations of universities and seek their direct involvement in the life and work of CIU.
38. To focus its activities on institutional examples regarding the use of new information and communication technologies in teaching and learning.
39. To encourage sustainability to be considered as being central to teaching, research, outreach and operations at universities and to identified exemplary practices and strategies.
40. To prepare comprehensive assessments periodically on how the principles of sustainable development can best be pursued and promoted by higher education institutions.
41. To identify the key issues of a future-oriented higher education policy debate, as well as concrete needs for support in academic exchange, knowledge transfer, and capacity building through international cooperation.
42. To assess our respective capacities to respond to such needs, the complementarity and uniqueness of our respective possibilities and responsibilities, as compared with what can be better done by others, bilaterally or multi-laterally, on the institutional, national, regional or international level.
43. To establish appropriate networking structures and facilities that will allow to serve better, through shared efforts, the needs and interests of our common higher education constituency.
44. To translate into action the services set out by CIU more clearly in terms of support to concrete cooperation needs, both of individual universities and of partner organisations, and to identify new services as best corresponding to the Confederation's vocation and possibilities; and to give expression to its internal and external missions through a strengthened confederative life, including a broader interaction with other university organisations.
45. To disseminate relevant information on the world of higher education in an international perspective, on missions, policies and strategies, in the form of concise briefs and overviews, easily accessible and usable for higher education policy and decision-makers.

46. To have a similar approach in relation to issues of research and debate, comparison of experiences, publications or conjointly organised special meetings and seminars for university leaders and administrators.
47. To provide a link to consultancy, second opinions and referee networks for universities, particularly in developing countries, who wish to have access to independent advice, for example on directives from Governments and different agencies or on institutional development plans.
48. To maintain a pool of independent advisors to be made available for special tasks, third party assessments, legal advice, management advice, helping with analysis, formulation of strategic plans, governance strategies, and codes related to academic freedom, etc.
49. To offer consultancy to agencies related to university cooperation.
50. To evaluate the institutional impact of university links and collaborative programmes, independent from the usual evaluation by sponsors to be pointed to practical and ethical guidelines for collaboration and codes of good practice, which could serve universities in their interaction.
51. To benefit from academic freedom and institutional autonomy with regard to the Central Mission of research and teaching.
52. To assume, in carrying out the tasks, its responsibility to society and to promote the principles of freedom, justice, human dignity and solidarity.
53. To reduce the tensions arising within the universities between the requirements of technological and economic globalisation and the specificities of cultural and national roots.
54. To contribute to the production and dissemination of information and knowledge concerning facts, trends and developments in higher education.
55. To help contribute to the production and dissemination of reflection, research and debate concerning the universities.
56. To help clarify, disseminate and refine a vision of the university and of its value base.
57. To pay particular attention to strengthening solidarity and reducing inequalities between universities of different backgrounds, resources and capacities.

58. To express a common voice of the universities, on national as well as global level, vis-a-vis partners like national and international statutory bodies and UN agencies as well as the public opinion.
59. To catalyse the cooperation of universities and university organisations amongst themselves and with other partners, with regard to major questions of society, which are national as well as international in nature and to which universities must make an important contribution, such as: the construction of peace and democracy; sustainable development; the challenges and stakes of globalisation and accelerated change in society; the commitment to ethical standards in the conduct of science and technology.
60. To offer to other national and international university and higher education organisations a preferential platform for information, contacts and networking, and to participate itself in such international networks.
61. To stipulate the indissociable principles for which every university should stand, including the right to pursue knowledge for its own sake and to follow wherever the search for truth may lead; the tolerance of divergent opinion and freedom from political interference; the obligation as social institutions to promote, through teaching and research, the principles of freedom and justice, of human dignity and to develop mutually material and moral aid on both national as well as international levels.
62. To collect data regarding the new forms of higher education over the ensuing half century with special reference to the number of universities, of academic staff, of students, of the emergence of a world economy, of its benefits and its dangers with a view to locating the required practical nature of the university's historic and abiding commitment to universalism, pluralism and humanism.
63. To evaluate whether in the course of the twentieth century, which has seen an unparalleled growth in knowledge, in research and their diffusion, the universities have shouldered the responsibilities in the common endeavour of human development, social, economic, technical and cultural advancement, and in responding to the major planetary problems such as environmental protection and poverty eradication, violence and social exclusion.
64. To promote the philosophy that human development and the continued extension of knowledge depend upon the freedom to examine, to enquire, and that academic freedom and university autonomy are essential to that end.
65. To urge universities to seek, establish and disseminate a clearer understanding of Sustainable Development - "development which meets the needs of the present without compromising the needs of future generations" - and encourage more appropriate sustainable development principles and practices at the local, national and global levels, in ways consistent with their missions.

66. To utilise resources of the university to encourage a better understanding on the part of the Central and the State Governments and the public at large of the inter-related physical, biological and social dangers facing the planet Earth, and to recognise the significant interdependence and international dimensions of sustainable development.
67. To emphasise the ethical obligation of the present generation to overcome those practices of resource utilisation and those widespread disparities which lie at the root of environmental unsustainability.
68. To enhance the capacity of the university to teach and undertake research and action in society on sustainable development principles, to increase environmental literacy, and to enhance the understanding of environmental ethics within the university and with the public at large.
69. To cooperate with one another and with all segments of society in the pursuit of practical and policy measures to achieve sustainable development and thereby safeguard the interests of future generations.
70. To encourage universities to review their own operations to reflect best sustainable development practices.
71. To make an institutional commitment to the principle and practice of sustainable development within the academic milieu and to communicate that commitment to its students, its employees and to the public at large.
72. To promote sustainable consumption practices in its own operations.
73. To develop the capacities of its academic staff to teach environmental literacy.
74. To encourage among both staff and students an environmental perspective, whatever the field of study.
75. To utilise the intellectual resources of the university to build strong environmental education programmes.
76. To encourage interdisciplinary and collaborative research programmes related to sustainable development as part of the institution's central mission and to overcome traditional barriers between disciplines and departments.
77. To emphasise the ethical obligations of the university community - current students, faculty and staff - to understand and defeat the forces that lead to environmental degradation, and the inter-generational inequities; to work at ways that will help its academic community, and the graduates, and the governments that support it, to accept these ethical obligations.

78. To promote interdisciplinary networks of environmental experts at the local, national and international levels in order to disseminate knowledge and to collaborate on common environmental projects in both research and education.
79. To promote the mobility of staff and students as essential to the free trade of knowledge.
80. To forge partnerships with other sectors of society in transferring innovative and appropriate technologies that can benefit and enhance sustainable development practices.
81. To devote its activities to the study of systems, institutions and processes in higher education to specially focus on the historical role of higher education in society, contemporary policy problems, and how universities and colleges can change to meet the growing educational, research, and public service needs of a "knowledge" society.
82. To promote public confidence that quality of provision and standards of awards in higher education are being safeguarded and enhanced.
83. To help other confederal bodies of universities and higher education institutions in other countries aimed at providing quality education and at supporting synergistic ventures in teaching, examination, research and community service programmes.
84. To seek to make a significant contribution to the understanding of policy-making, governance and management of universities and other higher education institutions.
85. To emphasise equity and access and the improvement of educational experiences of people of all age levels and backgrounds.
86. To include partnerships with other like minded organisations to address a wide array of problems, drawing upon the insights of academic disciplines and professional perspectives.
87. To meet the widely felt need in the Indian subcontinent for a centre for policy research and cooperation in education in the Indian perspective, with the sole purpose to contribute to policy analysis in education and training, to carry out evaluation of systems, reforms, programmes and institutions, and to provide technical assistance and support to all interested actors in this field.
88. To help the member universities in designing new information and communications technologies for heralding as a revolution for the world of learning and to fulfil the promise of better and cheaper higher education for more students.

89. To review the open and distance learning in the context of present challenges and opportunities, describe relevant concepts and contribution, outline significant current global and regional trends, suggest policy and strategy considerations and identify CIU's role in capacity building, national as well international cooperation.
89. To maintain an inventory of successful strategies to increase the participation of women in higher education and promote the principle of gender equity, and to increase access and retention as well as to improve the quality of education for all women in universities.
90. To serve as a clearing house of information for providing regular opportunities for the discussion on university development in general and on academic development in particular with a view to assisting the member universities in the recruitment and placement of faculty and staff, exchange of teachers and students and in the development of cooperative arrangements.
91. To establish relations with significant players and opinion makers from education, business, culture, law, and government sectors in order to facilitate strategic alliances with other organisations.
92. To support preparation, production and widespread distribution of educational materials on higher education with a view to strengthen the employment generation movement.
92. To help promote such new Central and State legislation or amendments as may be deemed necessary for the development of higher education.
93. To encourage the students of all universities to be active, to emphasize the personal nature of learning, to accept that difference is desirable, to recognise student's right to make mistakes, to tolerate imperfection, to encourage openness of mind and trust in self, to make feel respected and accepted, to facilitate discovery, to put emphasis on self evaluation in cooperation, to permit confrontation of ideas.
94. To promote the hypothesis that learning is primarily controlled by the learner, is unique and individual, is affected by the total state of the learner, is cooperative and collaborative, is a consequence of experience, is not directly observable, is both an emotional and intellectual process, is evolutionary process, is development oriented, and, is quite sustainable.
95. To collaborate, affiliate and federate with the Central and the State Governments, agencies and bodies for implementing the projects on higher education.
96. To raise and borrow money for the purpose of the Confederation in such a manner as may be decided from time to time and to prescribe the membership fees, charges, grants in aid etc.

97. To purchase, take on lease or exchange, hire or otherwise acquire properties, movable or immovable and rights and privileges all over the world, which may be deemed necessary or convenient for the benefit of the Confederation and to sell, lease, mortgage, dispose or otherwise deal with all or any part of the property of the Confederation.
98. To open branches, chapters and constituent centres in different parts of the country and get them registered with appropriate authorities if needed and felt conducive for the attainment of the aims and objects of the Confederation.
99. To invest the money of the Confederation not immediately required in such securities and in such manner as may be decided from time to time, the money especially collected through subscriptions, advertisements, sponsorship, sale of publications, fees, gifts, endowments, donations, grants etc.
100. To finally provide information, knowledge, wisdom, and education that prepares every body for educational leadership and social responsibility enabling to think and communicate effectively and to develop a global awareness and sensitivity for a better global understanding, world peace and unity.
101. To motivate the Member Universities and Organisations to maintain integrity, honesty, fairness and impartiality in all the dealings and treat others with dignity and respect, care and curtesy.
102. To guide the Member Universities and Organisations for using University's funds, equipment, buildings, information and other resources with care and responsibility.
103. To educate the Member Universities and Organisations regarding their obligations to maintain confidentiality of information.
104. To train the Member Universities and Organisations to be fair and honest in their relationship with the suppliers and purchasers of the Univeristy's goods and services.
105. And to generally do all that is incidental and conducive to the attainment of the aims and objects mentioned above.

INCOME OF CONFEDERATION OF INDIAN UNIVERSITIES

The income and the property of the Confederation of Indian Universities (CIU) shall be utilized only for the purpose of the aims and objects as set forth above and no portion of the fund shall be directly or indirectly diverted to any other organisation(s) or person(s). This would identify the CIU as a Non Profit Making Organisation.

Accordingly the registration taking place by the name of the "CONFEDERATION OF INDIAN UNIVERSITIES (CIU)" will be applying from time to time to the Income Tax Department for seeking exemption under different sections and provisions of the Income Tax Act of the Government of India.

POWERS AND FUNCTIONS OF THE CONFEDERATON OF INDIAN UNIVERSITIES (CIU)

Without prejudice to the generality of the foregoing powers of the management and control, the CIU shall have the following functions it may consider necessary or desirable:

- a)* To purchase, hire, take on lease, land, movable or immovable properties and assets anywhere in the world, accept gifts, grants or loans on such terms and conditions and subjects to the payment of interest or otherwise as the CIU may consider necessary.
- b)* To enter into contracts, agreements and arrangements with any including the Government authorities, municipal, local and others for the purpose of obtaining concessions, privileges or other benefits or which may seem conducive to carrying out all the objects and purposes of the CIU or any of them to obtain and carry out, exercise and comply with any such contracts, agreements or arrangements.
- c)* To borrow or receive money with or without security or secured by bonds, mortgages, or other securities charged on the undertaking of all or any of the assets of the CIU.
- d)* To deal with, sell, mortgage, charge, lease, invest, open bank accounts, advance loans against adequate security and generally deal with the fund or any part thereof as the CIU may decide and consider desirable or necessary.
- e)* To invest money of the CIU in such a manner and in such investments as the CIU may in their absolute discretion from time to time deem fit so to be in conformity with any law or provision of the relevant acts of the Government.
- f)* To open, operate and close such accounts with any bank or banks as the CIU may deem necessary.
- g)* To manage the CIU's fund and to collect and recover interest, dividends and income thereof and to pay the expenses for collection and other outgoings if any.
- h)* To pay or utilise the balance of such interest and dividends and income of the CIU and if the CIU so desires, to utilise the corpus of the CIU's Fund if any or part thereof for the CIU's purposes.
- i)* To maintain separate accounts of the CIU for facilities like provident funds, pension funds, or any other fund for the support or relief or maintenance of any employee or class of employees either full time or part time or their dependents or any other person/persons.

- j)* To institute, defend, compound, compromise or abandon any legal proceedings by or against the CIU or its officers or otherwise concerning the assets of the CIU and also to compound and allow time for payment or satisfaction of any debt due to be paid and claim or demands by or against the CIU.
- k)* To refer matters to arbitration.
- l)* To engage the services of any person or persons upon such remuneration and terms as the CIU may deem fit, to take disciplinary action against them and also to terminate their services.
- m)* The CIU may incur all costs and expenses considered necessary for the due and efficient management of the affairs and properties of the CIU.
- n)* To sign, endorse, transfer and negotiate all kinds of documents relating to the investment of the funds of the CIU.
- o)* To receive money and to grant receipts and discharge thereof.
- p)* To delegate to any person or persons all or any of the foregoing powers conferred on the CIU in so far as they may lawfully do, subject however to the CIU retaining the ultimate control and descretion over the delegated action and conduct.
- q)* To transfer any funds or property of the CIU with objects or purposes similar to those of the CIU and whose income is exempt from any liability by virtue of different sections related to the non profit making organisation.
- r)* To frame and implement from time to time rules and regulations for the administration of the CIU fund and carrying out of all/any of the CIU purposes.
- s)* To help organise full time, part time, weekend, correspondence and distance learning educational programmes for conferring secondary, post secondary, bachelor's, master's and doctoral level degrees, diplomas and certificates in different areas and subjects through the insitutions including universities, colleges and schools already existing anywhere in the world or established / to be established with the assistance/approval of the CIU.
- t)* To empanel the institutions, colleges and universities offering recognised degrees, diplomas and certificates.
- u)* To establish branch offices and campuses of CIU for educational planning, publication, study, training, research and consultancy as may be required for the benefit of regional, national as well as global society.
- v)* To do all such things as may be necessary for the effective functioning of the CIU.

Chapter 70

CONFEDERATION OF INDIAN UNIVERSITIES : CONTRIBUTION TOWARDS EMPLOYMENT GENERATION

Since the inception of the Confederation of Indian Universities (CIU) through the Central Act 2 of 1882 during the year 2004, the main stress of the university has been on employment generation with a view to reducing and mitigating the disastrous effects of peacelessness, unsurgency, unemployment, poverty etc.

The generation of productive and adequately remunerated employment is an indispensable component in the fight against poverty. While this task presents a major challenge for all the States and the UTs in India, it is by no means an insurmountable one. However, success depends on a number of key factors. It requires first and foremost, a restoration of higher and more stable rates of economic growth. But this will not be sufficient. It also requires that supporting policies and programmes be put in place to deliberately stimulate employment in all sectors of the economy which hold the greatest promise for employment and income generation on one hand, and on the other, the implementation of strategies which can, among other things, improve the access of all groups to education and training and income generating activities in a sustainable manner.

MASTER PLAN OF THE CONFEDERATION OF INDIAN UNIVERSITIES (CIU) REGARDING EMPLOYMENT GENERATION

The task of employment generation requires concerted action by several ministries and departments of government both at the national as well as the state level. But it is not a task for governments alone. Employers' and workers' organizations, as well as other members of civil society must play an increasingly active role in the process. The support of the international community is also critical, not only in terms of resource flows, but in changing the rules of international economic systems in favour of poor producers and consumers. Let us know the present state of affairs regarding creation of employment opportunities :

1. Many labour market mechanisms and patterns are closely associated with poverty and give insights into the pattern and intensity of poverty and into the factors concentrating it among particular groups. Labour market policies, as well as those related to employment, labour institutions, social protection and human resource development must therefore be given prominence in poverty eradication strategies.
2. In attempting to analyze the labour market situation in the Indian Subcontinent and its impact on poverty, a distinction may be made between poverty due to exclusion from access to jobs and poverty associated with the nature of employment and the levels of income which it generates. Exclusion from regular income opportunities appears as open unemployment or as marginality in one form or

another. But it can also be hidden, if particular groups do not appear on the labour market, because their opportunities are limited, as is often true of women and persons with disabilities. The degree to which labour market exclusion is directly linked to poverty depends on the extent to which state or community safety nets or family support systems exist or whether it affects particular members of households like younger persons where there is another income source.

3. Exclusion may also operate within the labour market with respect to constraints on access to the more desirable jobs, or sectors. This may give rise to poverty because of the emergence of labour market segments in which jobs are irregular, insecure and low paid. These characteristics lead to poverty which then persists because individuals are trapped in these segments. Mobility between different segments is difficult, because of the credentials, contacts, capital or skills required to move up. Thus many groups are excluded from regular, protected jobs. So entry to low-end jobs virtually precludes subsequent career development. Because of the insecure and irregular nature of the work, workers in these segments are also particularly vulnerable to unemployment. These patterns show up in the casualization of employment relationships, in marginal self-employment and in various types of unprotected wage employment.
4. At the other extreme, there is the phenomenon of overemployment i.e. excessive work, because low productivity or low wages imply that very long hours have to be worked to achieve a subsistence income. This is the most frequent situation of the poor which cause them to be classified as working poor. Overemployment also involves labour force participation by groups for which it is undesirable, child labour for example, with subsequent consequences for personal development or health.
5. The way in which these relationships affect poverty depends on at least two additional factors. First, labour market outcomes usually refer to individuals, and the link with poverty depends on the pattern of earning, dependency and distribution in the income-sharing unit. Larger households with single earners are more vulnerable to poverty regardless of labour market characteristics. Also within the household, income may not be equitably shared. Secondly, relative deprivation may be closely related to labour market patterns: labour market inequality may be a primary element in felt deprivation, as some attain social integration and regular income through the market, while others survive in casual, precarious employment. If poverty is defined in relation to what societies regard as decent minima for all their citizens, then the labour market situation is likely to be an important element in the definition of poverty and, as indicated above, labour market policies a fundamental means of combating poverty.
6. Economic conditions overall and employment conditions in particular have deteriorated in India, as a consequence of, inter alia, the debt crises, declining commodity prices, and subsequent stabilization and adjustment problems. This has contributed to the increase in the extent and severity of poverty observed in a number of States in India. The broad issues to be detailed here relate to

unemployment and underemployment, informalization and casualization of labour, and low wage and income levels. Issues related to the particular situation of women, youth, the disabled, and working children are highlighted. Finally, the issue of HIV/AIDS in the workplace is also raised. The discussion necessarily touches on the respective roles of the Central and the State Governments, trade unions and employers' organizations and other members of a civil society. As would be expected, the issues raised have varying degrees of relevance. However, they have been selected because they represent some of the most serious labour market problems confronting the in the Indian subcontinent and they have adverse effects, thereby contributing to poverty.

Unemployment remains a seemingly intractable problem for India. Unemployment rates have been high historically because of a complex of both internal and external factors. Crucial factors have been the small size and structure (industrial specialization) and openness of most of these economies, which render them highly vulnerable to external shocks. The volume of employment generated has been insufficient generally to keep pace with continuing increases in the labour force resulting from population pressure. At the same time, investments in education and training systems, often unrelated to national labour market needs, have not produced the desired results, thereby reducing labour market access for some, while leaving critical skill requirements unfilled.

8. But, given the ease of entry and minimal start-up capital required, the informal sector has also attracted other groups in the recent past, as a number of skilled, formal sector employees have started to operate informal sector businesses, as secondary activities to supplement their incomes. Some persons have quit their jobs in the formal sector to undertake activities in the informal sector which offers them better remuneration. Additionally, the process of industrial restructuring in the formal sector has resulted in a greater decentralization of production through subcontracting. The pressure to reduce costs and to find more flexible production methods implies that fewer jobs are being created in large-scale modern enterprises and that an increasing number of operations are carried out by subcontractors in small and micro-enterprises, many in the informal sector. Some of these activities are economically viable, and provide higher incomes than in the formal sector. The poverty eradication strategy must include efforts to fully exploit the potential of these more dynamic components of the sector, while simultaneously reducing the sponge components.
9. There have been concerns about the increased incidence of part-time and temporary jobs and contract and home work. While some of this development may be voluntary, reflecting personal preference, much of it appears to be involuntary. The concerns arise because persons who work under these types of arrangements have limited, if any, social protection in the form of wage protection, employment security, health or pension benefits, which increases their vulnerability and in some cases makes their situation very precarious, with obvious links to poverty.

10. In order to target policies to the most vulnerable, it is important to identify the groups which are in a particularly disadvantaged position in the labour market. Such disadvantage relates to gaining labour market access and hence getting work; and once in the labour market, in finding work with reasonable remuneration and security, acceptable working conditions and opportunities for upward mobility. The position of three traditionally disadvantaged groups in the sub-region, namely, women, youth, and persons with disability, as well as a newly emerging one, working children needs to be studied. This does not imply that other groups are not important in poverty eradication strategies. Neither does it imply that the selected groups are homogenous in terms of their poverty status, for while virtually all face various forms of inequality and discrimination, not all members are poor. The situation of these groups is typically influenced by a complex of factors including macro-economic and labour market conditions and policies; labour market institutions; availability of social safety nets; family structure and the strength of the extended family; levels of education and human capital; degree of formalization of the labour market and the size of the informal sector; size of government and its ability to fund labour market programmes and enforce labour laws and regulations.
11. While women are not a minority group and are extremely heterogeneous with respect to poverty, they warrant designation as a target group with respect to poverty eradication strategies. Higher proportions of the poor are found among the unemployed, the very young, indigenous people, the new poor, youth and the rural population, and that women profile highest in many of these categories. Research findings reveal that single female-headed households rank high among those household groups living in poverty. However female-headed households should not be considered as being synonymous with poor households. Women's access to and ownership of land, capital and productive resources are less than men's, their earning levels are lower, while their unemployment levels are higher. Women's economic empowerment is therefore critical to any effort aimed at eradicating poverty. Moreover, women tend to have more socially positive expenditure patterns regarding overall household welfare and its distribution among household members resulting in better health, education, nutrition, and clothing. Assuming the same holds true, then acting to improve the situation of women in the labour market will have a positive impact on the status of women equity in the society, the welfare of households and the improvement of human development in the sub-region.
12. The position of women in the labour market, and their exclusion from it, must be examined within both the historical and current socio-economic contexts. The historical role of women as labourers in the sub-region should not be forgotten. Hence, their entry into the labour force is not new; and in fact women have had high participation rates in many States of the subcontinent for decades. Despite this reality, the position of women in the labour market has been vulnerable, less protected, less secure, less valued than that of men. This vulnerability appears to have been increased by structural adjustment and stabilization processes. Although, to date, no comprehensive study has been done on the precise gender impact of such processes, preliminary research suggests that they have imposed a

heavy burden on women, not only with respect to their productive roles as reflected in unemployment, increased informal sector activity, and multiple jobs, decline in real income, but also with respect to their reproductive roles. With the declining role of governments in the economy, there have been cutbacks on public services such as health and education. As the role of care provision for children and the elderly tends to fall on women, they have had to spend more of their earnings on previously subsidized services or face greater demands on their time in order to provide these services themselves. For poor women, they have no choice but to increase their only productive resource, their labour, in performing both productive and reproductive tasks. These developments appear then to have exacerbated the already vulnerable position of women in the labour market.

13. Women continue to have the primary responsibility for child-rearing, food preparation, household cleaning, shopping and other aspects of family care. Child-care services remain below demand levels. Many of those in existence inadequately respond to the needs of working parents in terms of their hours of operation and their location. The inadequacy of support services puts working women under extreme pressures, and even discourages some from entering or remaining in the labour market. The location of job opportunities and the limited transportation services in India increase the pressures. In many cases, a woman may be compelled to trade off her time with the family for the financial security that an inconveniently located job can provide. In other cases, women vendors, for example, are forced to work with their children at their sides.
14. As with other socio-economic groups, open unemployment rates alone do not fully reflect the nature and magnitude of the employment problem of women. There is also disguised unemployment, as women who wish to work are unable to do so because of limited availability of and access to adequate child care and other family support facilities. These include cultural/religious factors and traditional values about the role of women in the society which is a fairly ethnically and racially diverse one, as well as the presence of a fairly large agricultural sector where women's economic participation tends to be largely under-counted either because of a definitional issue related to the concept and measurement of work, or because of the perception of women themselves about their economic status vis a vis that of men in this sector. The low participation rate, together with the migrant/refugee problems, in part explain why, despite relatively low open unemployment and visible underemployment rates, the incidence of poverty is among the highest in the subregion.
15. Labour market statistics also do not reflect the actual extent of women's economic contribution, which remains undervalued everywhere. Much of women's work, such as in subsistence production, the informal sector, domestic and household labour and related production remains invisible and is therefore not targeted for policy assistance.

16. Both men and women have suffered the consequences of downsizing, enterprise closures, staff reductions through terminations, layoffs and a lack of recruitment opportunities. The extent to which a disproportionate burden has fallen on either sex is difficult to assess without the adequate gender sensitive data. With respect to hours worked, statistics show that a higher percentage of women are found working shorter hours in their formal employment than men. The extent to which this pattern reflects choice or is imposed is not revealed by the figures.
17. Given the inadequate formal employment opportunities and wage levels, and despite constraints, women are increasingly seeking or falling into income generation through other activities such as micro and small businesses and to a lesser extent entrepreneurship. Women, especially poor women, face particular difficulties in this area due to their lack of property ownership, primary family and household responsibilities, inadequate transportation, time constraints, inadequate education or skill base, lack of self confidence and declining levels of support from family and community members.
18. High unemployment and underemployment levels and low wage rates and income levels among women is of great welfare significance in this subregion, since many women are primary workers with strong and continuous attachment to the labour market, a high percentage of them are heads of households, and even where they are not characterized as household heads, household income and welfare is very much dependent on their contribution.
19. Youth unemployment stems, in part, from the problems which they face in accessing the labour market, related to inappropriate education and training, low skill levels, lack of work experience, absence of vocational guidance and counselling, the absence of well-functioning job placement mechanisms and inadequate demand. Their situation has been exacerbated by the cutbacks in social expenditure, especially on education in India, which have left public schools less equipped to perform their traditional functions, and even less capable of preparing students to adapt to the changes taking place in the job market. When this is combined with challenges faced by students like high costs for meals, transportation, books and other supplies, the result is that many students are leaving school even less equipped to enter employment, or to participate effectively in further education or training. At the same time, successful graduates of secondary schools and universities face difficulty in finding employment, thereby adding to their frustration.
20. Youth unemployment has become couched in a new context, that presented by the growing globalization of labour markets and the increased flexibility of labour market relations with traditional patterns of school-work-retirement giving way to more varied patterns. It is important to examine how such developments have influenced, or will influence, either directly or indirectly, the recruitment practices of employers and enterprises in relation to young persons and have impacted or will impact on their job entry and training experiences. It is also necessary to assess the

extent to which, once employed, their relative lack of experience have made them particularly vulnerable to the kinds of precariousness.

21. The problem of youth unemployment is a particularly worrisome and sensitive socio-economic one for the sub-region, with potentially undesirable consequences for society and young people. One such consequence has been the emergence of a large and growing group of young persons who are becoming increasingly detached from the economic and social mainstream.
22. The situation of male youth is of significant concern, requiring specific interventions. Attention has been drawn to the difficulty which many face in finding employment because they leave school with very few skills. With only limited opportunities, many succumb to pressure to be involved in gangs, drugs and criminal activities.
23. The situation of young women is also of specific concern. They are at even greater disadvantage in the labour market than male youth, this greater vulnerability arising from the combined effect of age and sex. As youth, they face the particular constraints that young persons have in accessing the labour market, which were mentioned above. As women, they face the challenges associated with their double burden. The result is that they are at even greater risk with respect to poverty, with teenage mothers facing the greatest risk. Given that this age group is the most fertile, and given the relationship between poverty and fertility, the increase in poverty could put unwanted pressure on fertility levels. The consequences of higher fertility levels for both individuals and societies would be enormous in India, and would serve to reinforce poverty. Specific strategies must be directed at this group, and must include those aimed at empowering them through among other things, improving their access to quality education and training, thereby facilitating their fuller integration in the job market and into productive and remunerative wage or self employment opportunities. As is the case for other groups and as will be discussed later, these strategies will need to be supplemented by demand-side approaches which stress a more direct and explicit approach to employment generation.
24. There are important links between disability and poverty; on average, disabled persons are poorer, although there is even less empirical evidence on this than for other groups. The linkage is bi-directional. Poverty helps cause disability, to the extent that it is more likely that poor households are not able to provide mothers, their unborn and children with appropriate nourishment to ensure healthy and strong children. It has been estimated that twenty-two per cent of causes of all disabilities result from lack of adequate nutrition of mothers and children. Additionally, it is more likely that poor households do not have access to health care systems nor the knowledge to detect a disability at an early stage so that individuals with disability can enjoy the highest level of functioning and independence later on in life. Disability thus helps cause poverty for families with a disabled member unless income transfers or other assistance is received. However,

as with other vulnerable groups, disabled persons are a very heterogeneous group. While poorer on average, there is much variation in their situation. Thus, as with other groups, it is important to keep this heterogeneity in mind to avoid stereotyping and labelling, and to devise appropriate targeted policies.

25. One option being pursued increasingly by a number of disabled youth and adults, who want to work and earn an income is self-employment. Despite problems being encountered, such self-employment initiatives appear to be an effective means for some to earn a livelihood. Policies designed to promote the development of small and micro-enterprises therefore must address the specific needs of disabled persons. The main emphasis of all policies has to be on integrating disabled persons into education and training activities and subsequently into the labour market with efforts made to enable them to work along-side non-disabled persons, rather than emphasizing separate workshops barring the severely disabled persons.
26. Other options also have to be given consideration to ease the integration of disabled youth and adults into the labour market. These include on the job training, supported employment, and semi-sheltered employment.
27. The issue of child labour is one which is attracting increased attention in the subregion, mainly because of the more visible presence of street children. While limited information is available on its incidence, the phenomenon nevertheless appears to be growing in significance and hence needs to be addressed. The apparent growth is not surprising given the rise in poverty, since poverty is considered to be the single greatest force which influences child labour not only by forcing many children to work for their own survival, but also by making it nearly impossible for families to invest in alternative activities such as education. The acute need of poor households to keep many family members working to ensure income security impedes investing in their children's education. In this regard, it is often asserted that poverty and child economic participation are mutually reinforcing, with poverty generating child labour and child labour perpetuating poverty.
28. In an ILO study in India for example, it was found that female-headed households, especially those with single female heads, are most likely to have working children. The likelihood of children working declines with the increase in the educational level of the head of household. Parents considered that their child's work was very important for supplementing the household income. Given the high incidence of poverty in some, the large proportion of female-headed and single-parent households, among other factors, and even discounting for cultural differences, these findings suggest cause for some concern.
29. In assessing the magnitude of the problem, a distinction may be made between child labour and child work. The former is concerned with certain types of unacceptable work in industries and occupations that are hazardous and/or exploitative work in mines or heavy industry; and work done by especially young

children less than 12 years old which precludes school. The latter consists of all other labour force activity and could be extended to include non-labour force work such as housework and child-care. Not only do children spend considerable time in these activities but, their positive and negative aspects are gender-related. Young girls are known to spend much more time on these activities as compared with young boys. Indeed, young girls are often responsible for the care of infants and siblings. In poor households, especially, girls are often the main caregivers because their mothers need to earn money for family survival. However, household work and child-care should be considered as child labour when it prevents girls from attending school and/or gaining useful market and income-related skills.

30. Infection with the Human Immunodeficiency Virus (HIV) and the acquired immunodeficiency syndrome (AIDS) represents a significant regional problem with broad social, cultural, economic, political, ethical and legal dimensions and impact.
31. Economic impoverishment may come before sickness sets in, when employers, coworkers or clients learn of the HIV virus and the infected person loses his or her job or loses the chance of getting a job. In the workplace, fear generated by AIDS may account for an increasingly irrational behavior towards those infected or suspected of being infected. But the reasons behind a dismissal or refusal to hire may also be economic, involving the additional costs of future responsibility for a worker who has AIDS or who is likely to contract the disease. The reasons can also include the apprehension that work colleagues feel about an infected worker or the desire to protect the image of an enterprise against clients who harbour prejudices.
32. The rights of HIV positive persons or persons with AIDS, especially in the labour and employment field, need to be protected. This is not only a moral imperative, but a public health principle: discrimination and stigmatization drive infected people away from the income, support, care, and information they need, thus encouraging the spread of the infection and increasing the likelihood of their fall into poverty.
33. Thus, there is a need to ensure that HIV/AIDS infected persons are sheltered from discriminatory practices in employment. Information campaigns as well as affirmative strategies aimed specifically at preventing and counteracting discriminatory practices are necessary as shown by experiences elsewhere.
34. The developments, outlined above, have taken place against a growing trend of technological change and integration of the world economy through trade and investment flows, which will no doubt continue. The creation of a global market offers the potential for achieving higher growth of output and employment worldwide but is also a source of growing dislocation and insecurity. Indeed, there is growing anxiety over the job destroying effects of new technologies, the speed of information flows and the risks of job loss and job relocation in the wake of intensifying competitive pressures. It is therefore imperative to translate the potential benefits of rapid technological change and globalization into reality and to distribute these benefits widely.

35. The impact and implications of technological change for men and women are likely to be different. In industry and services, there could be at least three differences.

One, employment opportunities for women could increase where technology makes possible greater out-sourcing and sub-contracting. This has happened in industries ranging from printing and publishing to clothing and footwear both within and across the country. Telework, electronic homework, offshore data processing and office administration services are other possibilities. On the other hand, automation and advances in robotics makes technological unemployment a possibility for women, although probably less so than for men.

Two, the skill and job structure will continue to change with the introduction of modern technologies in industrial enterprises. There is a trend towards skill polarization, with the elite of technically-skilled, polyvalent, high status specialist workers coupled with a larger mass of technically, semi-skilled, flexible casual workers requiring minor training. Women are much more likely than men to be found in the latter group. Since little training or on-the-job learning and experience is required, employers are able to resort to using temporary workers, to job rotation or to expanding the number of tasks associated with a job. This breeds job insecurity as well as income and employment insecurity.

Three, technological innovations imply changing skill requirements, and it is here where women could be displaced by men. Because women tend to be concentrated in a small number of lower-skilled, labour-intensive jobs, they are usually disproportionately vulnerable to the quantitative and qualitative impact of technological change.

36. On the supply-side, the demographic pressure on labour supply is likely to continue, as projections indicate that the working age population will increase significantly up to the year 2020. Barring any significant changes in labour force participation, which are unlikely, this will translate into continuing increases in the labour force. More fundamentally, given the links between population issues and the crucial relationships which underlie poverty, increased attention will have to be given to the design and implementation of population policies.
37. The extent to which emigration will continue to provide a safety-valve in easing population and labour force pressure will be influenced by the immigration policies. Some movement is already taking place with respect to certain types of unskilled/manual labour, for specific skills in the professional and technical levels and in the sphere of arts and culture, and this should be greatly facilitated by the appropriate changes in immigration/work permit requirements for some of these categories. Beyond this, any significant and immediate change in the flow is likely to be constrained by limited employment opportunities currently available within most of the States and UTs in the subcontinent.

38. The ageing of the population will continue to impact on societies within the region, and specifically on their labour markets. This will generate opportunities by creating additional demand for goods and services required by the aged. But it will also pose challenges. The welfare of the elderly has been severely affected by the weakening of traditional family support, inability to provide for their upkeep due to inflationary trends, absence of pensions/social security benefits and costly medical care. Many will need to keep working to support themselves. Over time, the full impact of some of the casualization of employment mentioned earlier will be felt, as even more persons will reach “retirement age” without provision for their upkeep. Retirement policy in India will therefore need to be reviewed to take account of the interplay of several factors including skill shortages and the extent of youth unemployment, as well as considerations relating to the cost and method(s) of financing old-age pension schemes in order to ensure an adequate standard of living for the growing elderly population.
39. The situation of older women is, and will be, of particular concern, since with their higher life-expectancy, they are outliving men. However, few women have pension rights either from occupational or community status, and few can depend on widows pensions. This means that the majority of women are potentially dependent in old-age on their offspring. Women’s need for security and the lack of it from their occupational roles has important demographic implications and also calls attention to the need to review the laws and practices relating to social security schemes.
40. Increasing urbanization in India will continue to place pressure on the labour markets of cities. It will also add to problems related to the provision of education facilities and housing and transportation, and waste disposal, and water and power supply. Indeed, the inability to cope with these problems has already led to the increase in squatter settlements, thereby aggravating the poverty situation. The concentration of many unemployed youth in the urban areas has also contributed to the rising crime situation in urban areas. Efforts will therefore need to be intensified to reverse the rural/urban movement, which will need to involve more balanced regional development, with an emphasis both on agricultural and on rural non-farm employment. Within this context, there is need to address the critical issues of land tenure and ownership. This emphasis appears warranted in light of the high proportion of the poor in rural areas, and the need therefore to generate more income-earning opportunities for both men and women.
41. Policies are complementary and not alternatives. Micro-interventions will be needed to raise labour capability and access, but these will be ineffective without a good macro-economic strategy that generates adequate labour demand. Similarly, programmes designed to directly reduce poverty in particular target groups can contribute to successful structural change in the distribution of assets and opportunities; but structural change may be itself necessary for targeted interventions to have more than marginal effects. There is therefore need for multi-dimensional and integrated approaches including policy reform, institutional development and direct interventions.

42. National action against poverty is essential but the financial capacity for action in India is tightly constrained. International support is also needed, not only in terms of resource flows, but also by changing the rules of international economic systems in favour of poor producers and consumers.
43. There is an indispensable role for the State in the redistribution of incomes and the reduction of poverty. Yet actions by the State alone will be insufficient. There is need for strategic alliances at the national level, involving the State, the private sector, trade unions, community-based organizations, other NGOs, and members of the civil society for promoting employment and combating poverty.
44. There is a crucial role for pressure groups and organizations of the poor in influencing priorities, forging alliances and sustaining results.
45. One major priority in reversing the deterioration in labour market conditions which has occurred, is to restore higher and more stable rates of growth. High economic growth and financial stability provide the only pre-conditions for a sufficiently high rate of productive employment. However, most States and UTs of the subcontinent still face considerable challenges in implementing economic reforms in order to move towards more open and market-oriented economies. Successfully implemented and enforced by appropriate programmes and policies, such reforms should lead to higher growth and an increased pace of productive job creation. Experience elsewhere suggests that successful reform has to be the cornerstone of efforts to put developing economies firmly on the path to achieving full employment.
46. Pursuing the coordination of macroeconomic policies so that they are mutually reinforcing and conducive to broad-based economic growth and sustainable development, as well as to substantial increases in productive employment”.
47. However, as the experience in the India, as elsewhere, has shown, there is a high social cost associated with the reform process. Jobs in uncompetitive activities, which may be high status jobs are likely to be destroyed faster than new jobs, which may be worse paid, can be created in competitive sectors. For India, the costs and the adjustment period have proved to be much more painful and prolonged than at first expected. There is therefore need for a balanced and sustainable approach to be adopted in the move towards economic liberalization and any resulting labour force restructuring so as to mitigate any worsening of unemployment and poverty. The pace of progress towards market reform will vary from State to State, but experience shows that earlier success can be achieved where there is a high degree of social consensus.
48. While market reforms are essential for sustainable employment growth and poverty alleviation, they will not be sufficient. It is necessary for supporting policies and programmes to be designed. Such policies and programmes include those geared towards developing, among other things, access to education, especially at the

primary level, and to training at all stages, rural infrastructure, especially transport and communications, credit schemes, extension services and public works programmes. Outside the rural sector, programmes to promote the growth of labour-intensive small enterprises are also important. These need to be extended to micro-enterprises and self-employment activities in the informal sector. Programmes to take children out of work and into training and education and to create employment opportunities for their parents also need to be developed. Programmes are also needed to assist women, and other vulnerable groups to overcome the barriers preventing them from finding productive and freely-chosen employment. In addition, the capacity to design and implement programmes to compensate for the adverse effects of economic reform and structural adjustment programmes needs to be strengthened.

49. In light of its specific economic, social and cultural characteristics, endowments and circumstances India must find its own path to the creation of productive and remunerative jobs in full respect of the basic rights of workers. But, whatever path is taken, there is need to put the issue of the generation of productive and remunerative employment at the centre of national strategies and policies. The adoption of this approach would represent a significant departure from current practice since they tend to treat the issue of employment generation in a subsidiary manner. Employment is expected to follow growth, but as pointed out earlier, this has not been the experience, as employment generation has been persistently weak, certainly too weak to cope with continued labour force growth as well as to reduce the existing pool of unemployed and the share of low productivity jobs which is necessary for poverty eradication.
50. There also seems to be a perception on the part of many policymakers that acting on the supply side only, through education, training, health and physical infrastructure together with income transfer and nutritional support to the poor will be sufficient to relieve poverty in a sustainable manner. While these actions are, of course, indispensable to the poverty eradication efforts, they nevertheless need to be supplemented by efforts on the demand side to revitalize the cycle of production, income and investment. This involves examining the conditions under which various underproductive sectors can be revitalized to contribute both to production and to employment and income generation which in turn can increase the internal demand and generate a cycle of investment and production. This represents the only sustainable means in the medium to long-term for creating opportunities for quality employment and for enabling the poor to gain access to services beyond the minimum provided through safety-net programmes.
51. Promoting patterns of economic growth that maximize employment creation requires:
 - a) encouraging, as appropriate, labour-intensive investments in economic and social infrastructure;

- b) promoting technological innovations and industrial policies that have the potential to stimulate short-term and long-term employment creation and considering their impact on vulnerable and disadvantaged groups.
52. India will need to adopt deliberate policies to enhance productivity and employment opportunities in sectors which hold most promise for employment and income-generation in both traditional and non-traditional areas. The particular areas with potential for growth and employment will vary from State to State, but specific mention may be made of rural farm and non-farm production, including animal husbandry, forestry, fisheries, agro-processing; the conservation and management of natural resources, promotion of alternative livelihoods in fragile eco-systems, rehabilitation and regeneration of critically affected and vulnerable land areas and natural resources; economic and social infrastructure in both rural and urban areas. There is also scope to exploit the potential of activities related to information technology and sports, culture and entertainment. There are several community-based initiatives which are ongoing in several States and UTs in India which are illustrative of the types of potential which currently exists in the subregion which can provide a basis for future action.
 53. What will be critical is for India to recognize the linkage between poverty eradication and the broader production and employment generation capability of its economy and hence the linkage between the strategies for poverty eradication and those of macro-economic and sectoral policies. This will not only reduce the vulnerability of India's economy but will contribute to employment growth and poverty eradication as well.
 54. The policies promoting productive employment, are an immediate way of addressing high levels of unemployment and underemployment and the worst manifestations of poverty.
 55. Labour-intensive public works programmes have been used effectively to create infrastructure and services, create employment and reduce poverty. The strategy rests first on employment-intensive methods of providing basic infrastructure and services development, and secondly, on improved productivity and working conditions within the informal sector. Infrastructure provides a foundation for sustainable employment once it is in place, but also represents an untapped potential for increasing its impact on employment during its construction, rehabilitation and maintenance through the use of labour-based delivery systems.
 56. Labour-based methods cannot be applied in all situations. For many types of infrastructure investments, labour based methods are not appropriate. For example, for major infrastructure projects such as paved highways, power plants and airports, technical standards dictate that labour-based methods are not an alternative. However, these methods are appropriate and viable under some circumstances for drainage erosion control, roads, community-water supply and upgrading of informal settlements. These categories of infrastructure carry a triple

advantage in terms of poverty eradication. They directly benefit the poor, they can be undertaken using employment-intensive methods thereby creating additional employment; and they have a beneficial impact on the environment.

57. Part of the reluctance in using these methods is that labour-intensive projects are often associated in the minds of policymakers with second-rate quality, and with politicized make work programmes. However, labour-intensive infrastructure programmes and therefore employment can be sustainable, if emphasis is placed on:
- (a) the creation of high quality, cost-effective durable products and assets.
 - (b) the use of an appropriate mix of labour and light equipment to ensure that labour is productive.
 - (c) the adoption of a community-based approach to the selection process.
 - (d) the provision of an opportunity through which training and income generation for the development of small-scale contractors can take place.
 - (e) the provision of a positive policy environment in public agencies and the creation of new technical and managerial capacities in public and private sector agencies to cope with such tasks.
58. Beyond its immediate impact on unemployment, there have been benefits for the larger society, through the infrastructure constructed, which has had multiplier effects leading to secondary employment in other industries. Despite the continued public perception that this is a make work scheme, independent evaluations indicate that special initiatives of the Central Government has succeeded in creating some socially useful infrastructure, of relatively high technical standards and realized at competitive costs and with high labour productivity. Nonetheless, there are some issues to be addressed if the programme is to move beyond being a safety-net to generating sustainable employment. This is an imperative, since the country would be hardpressed to continue financing the safety-nets required to provide relief to growing numbers, not only of the unemployed, but also of the underemployed.
59. The establishment of a national umbrella organization to coordinate and provide a central thrust to the activities of the many players in the sector is essential. The harmonization of fragmented regulations, programmes and institutions is critical to the support of the sector. Fragmentation has been occurring at several levels in the Indian subcontinent at the local as well as national level, where policies affecting micro-and small enterprises involve a number of government departments dealing with issues such as industrial promotion, training, or export promotion; several NGOs with independent programmes and many international donor programmes and agencies have parallel schemes with different working modalities. The challenge is how to make best use of all these initiatives so that together they

support and reinforce micro and small enterprise development rather than inhibit or stifle it.

60. Investments in education and training are a potentially powerful instrument for reducing inequality in the size and distribution of income and for raising the productivity and earnings of the poor. The human capital base of the poor can be improved through the spread of literacy and basic education. This raises capabilities because:
 - a) It raises productivity by enhancing the willingness to innovate and the capacity to absorb information on new techniques of production;
 - b) It offers an access route to training and through this to better jobs, and higher incomes.
61. Policy interventions are required at several levels:
 - a) At the macro level, policies are required to ensure that adequate provisions are made for expenditures in education and training and that these are allocated equitably. It is particularly important to ensure universal access to good basic education since this is most beneficial from the standpoint of poverty eradication;
 - b) At the meso level, policy interventions are required to ensure that school fees, books, and other cost-recovery measures do not prevent access to the poor to education and training. Positive measures are also required to promote greater school enrolment and attendance by the poor, and to remove barriers to the access of the poor to training opportunities;
 - c) At the micro-level, direct interventions are required to provide training to upgrade production among the poor especially in peasant agriculture and the informal sector. Such interventions serve to promote new income-generating activities among the poor.
62. Beyond the poor, all groups could benefit from the improvements in the content and delivery of training, since it remains the sine qua non of growth.
63. Establishment of closer linkages between training and the needs of the job-market requires continuous labour market analysis and the development and strengthening of labour market information systems.
64. Targeting training to a much wider audience than can be accommodated through pre-employment training in formal institutions. Greater outreach is needed to the informal sector, and greater emphasis needs to be placed on training for self-employment. The objective of this training should be to develop greater self-sufficiency among poor groups, thereby reducing their reliance on the government help.

65. Linking training programmes with other support measures, since training, by itself, will rarely succeed in raising the incomes of the poor. Also important will be occupational guidance and counselling services for enterprises, particularly small enterprises.
66. Placing greater emphasis on skill-upgrading and retraining for displaced and retrenched workers, new and revitalized partnerships between education, and other government departments, NGOs, the private sector, trade unions, and local communities.
67. The role of employment services, both public and private, can be spelled out in terms of:
- a) registering jobseekers' applications and employers' vacancies, and facilitating employment by reducing information and transaction costs for both sides;
 - b) improving access of marginalized groups, including women, to the labour market;
 - c) providing skills/aptitude testing, vocational guidance and counselling, and job-search skills for workers;
 - d) reducing employers' search and hiring costs;
 - e) developing human resources planning systems and ascertain their skill requirements so as to bring better focus to public and private training programmes;
 - f) organizing job fairs or career days to increase the flow of information on job applicants to the employers;
 - g) screening or identifying job candidates by aptitude and ability testing.
68. Public Employment Services in the subregion face a number of internal and external constraints. With respect to the former, these are usually related to low staffing and funding levels, poor physical surroundings, as well as limited technical expertise. As a result very few job seekers and employers are aware of the existence of this facility and even fewer make use of it.
69. The Programme calls for the strengthening of labour market information systems, particularly through development of appropriate data and indicators on employment, underemployment, unemployment and earnings, as well as dissemination of information concerning labour markets, including, as far as possible, work situations outside formal markets. All such data should be disaggregated by gender in order to monitor the status of women relative to men.

70. The dearth of reliable data and indicators on the labour market has often been much lamented, but bridging the gap remains a seeming elusive objective. Yet, the changes taking place both globally and nationally prescribe greatly stepped-up activity in this area as an urgent necessity. The absence of empirical work including on several aspects of regulation and their impact on the performance of the labour market like maternity leave, minimum wages, severance pay leaves policymaking at too speculative a level, and needs to be addressed. This should by no means be taken to suggest that action, particularly in relation to the poor, should be held back until accurate data are available, but it should be taken as suggesting that reasonably accurate data provide a better basis for targeting and monitoring programmes. Tracking trends in poverty, their relationship with labour market trends and the effectiveness of policy efforts would provide powerful support for national and international action.
71. New ways needs to be explored in order to provide useful information for planning. Low cost ways of providing quick information especially for poverty monitoring are appealing in light of budgetary constraints. However, investments need to be made in new and emerging technology which can facilitate the collection, processing and analysis of data. Above all, investments need to be made in the development of data collection agencies so that they can undertake meaningful programmes of activities.
72. Finally, India needs to develop more of a culture of research work on labour market issues in the public and private sectors, and working in collaboration with universities and regional and international organizations.
73. With the current trend towards flexible and indirect forms of employment, discriminatory barriers and practices are harder to identify and address. Women with casual labour status, extended probationary or trainee status, part-time workers, contract workers or household workers may not be covered by existing legislation. Discrimination in recruitment could take the form of segregating women into these non-standard forms of employment. Legislative reform, including the elimination of restrictive provisions against women such as prohibitions against night work for women, therefore needs to be accompanied by legal literacy campaigns such as those being conducted to educate women at the community levels on the laws concerning employment and violence against women. Greater attention should be given to information and sensitization campaigns focusing on the forms of discrimination, their impact, the rationale for overcoming the prejudice and the means of doing so.
74. The establishment and functioning of a labour market information system that is gender sensitive would help in the elaboration of labour market policies which would improve women's access to employment. The types of policies required to help poor women must take account of the problems which they face in the labour market. This implies a focus on specific sub-target groups including household heads; unemployed women; women working in female-dominated occupations and

industries which have low pay/income; women's family responsibilities and policies directed at the following issues/factors:

- a) the so-called double (triple) burden which women face;
- b) discrimination in human capital and technology acquisition;
- c) damaging misconceptions and stereotypes regarding women and their need for income;
- d) occupational stereotyping of women and men;
- e) undervaluation of women's work;

- 75. Changing those policies and attitudes that reinforce the division of labour based on gender, and providing institutional support, such as social protection for maternity, parental leave, technologies that facilitate the sharing and reduce the burden of domestic chores, and flexible working arrangements, including parental voluntary part-time employment and work-sharing, as well as accessible and affordable quality child-care facilities, to enable working parents to reconcile work with family responsibilities, paying particular attention to the needs of single-parent households.
- 76. Action to reduce gender segregation with respect to both exclusion and concentration in the labour market and to enhance occupational choice is important to addressing women's high unemployment and low pay levels in the subregion. The importance is two-fold; first, women should be able to enter sectors where job opportunities exist in order to move out of the ranks of the unemployed and to find employment; and secondly, women often find higher paying jobs in male dominated sectors and female dominated sectors often benefit from the entrance of males in terms of increasing the value of the job.
- 77. Improving women's access to technologies that facilitate their occupational and domestic work, encourage self-support, generate income, transform gender-prescribed roles within the productive process and enable them to move out of stereotyped, low-paying jobs.
- 78. Breaking down labour market segregation by gender includes skill development and facilitating policies as well as sensitization and the changing of biased preconceived notions of appropriate roles and abilities of male and female workers. To effectively implement this strategy, detailed occupational information is needed including the gender composition of occupations and changes in those compositions. Education, guidance, training and development of human capital needs to be stressed equally for boys and girls early in their lives.

79. Labour market policies also need to stress skill development and training in order to increase women's productivity and thus provide them with an equal chance in the labour market. This would include basic literacy courses where necessary, courses in how to be more effective self-employed businesswomen, introduction to use and acquisition of appropriate technology, and vocational training for non-traditional occupations. Monitoring and evaluation are needed to determine to what extent traditional patterns of labour market inequalities such as occupational segregation are being reinforced or broken down and how effective any of these efforts are in reaching the lowest economic group of women.
80. While women are being encouraged to take up traditionally male professions in order to tap into new job opportunities, the value of female dominated occupations must also be enhanced, in pay and status. Very low minimum wages could be revised and enforcement of minimum wage legislation could be enhanced. One known method of ensuring a more equitable valuation of women's waged work is through undertaking an objective job evaluation based on objective analytical job related criteria. These evaluations are intended, among other things, to reduce gender bias in job classifications and pay scales.
81. Action on the demand side of the labour market to increase jobs and employment for women may take many forms such as through subsidizing private sector schemes, public sector employment, direct wage employment creation schemes and self-employment, entrepreneurship development and small business support. The first type is not recommended nor feasible for this subregion. The second type, public sector employment, is already largely female-dominated due to expenditure cuts and male flight; and adjustment measures dictate against future increases rendering this option feasible for only demonstration effect such as by high level decision-making appointments of women. Direct wage employment schemes may be especially important for seriously disadvantaged groups of women as a means of addressing high levels of unemployment and underemployment, as well as the worst manifestations of poverty.
82. The greatest potential for women in the subregion may lie in terms of job creation in self-employment, entrepreneurship and small and micro business development. However, particularly in the case of low-income women, the approach taken should not be welfare-based, but should aim instead at developing self-sufficiency by building on their existing skills. They should also be encouraged to improve their productivity through cooperative efforts, technological innovation or the new application of an old skill. Overcoming the undervaluation of existing skills in the subregion, particularly those held by women, is a vital link to enhancing women's, and the subregion's, competitiveness in export markets.
83. The role of employment services has not been given adequate attention by policy-makers. Efficiently run employment services provide information, bring potential workers and employers together and help to improve the access of marginalized groups, including women, to job vacancies. Gender sensitive employment services

could help guard against employers restricting the range of opportunities to applicants by making assumptions about abilities on the basis of a particular group or sex.

84. Other measures to help women gain equal access in employment should begin in the home with parental advice and encouragement, followed by informal and formal guidance and counselling to avoid limiting options for economic activity. It is also important to ensure non-discrimination, both direct and indirect, in advertising, selection criteria, interviews and actual recruitment in jobs. At the enterprise level, there is a need to conduct gender sensitive surveys to assess employers perceptions, preferences and practices in respect of recruitment, hiring, promotion and termination of women and men to determine the impact of labour laws such as maternity benefits, collective bargaining provisions and the provision or lack of social services such as child care.
85. Action to empower women in the formal sector should also focus on improving their representation in labour market institutions and especially in decision-making and collective bargaining structures. Women's membership in trade unions lags behind that of men and their proportional numbers in the workforce. A few strong women are currently found in leadership positions throughout the subregion but they are a minority. At present, the trade unions remain male dominated in terms of membership, leadership, focus and culture. While many trade unions remain in the traditional mold of negotiating for bread and butter issues, important to all their workers, they must be credited for having successfully fought over the years for maternity protection in their collective agreements.
86. There has been very few systematic attempts made to assess the impact of such initiatives on the youth employment problems that they are intended to address. Such assessments appear warranted, given the persistent and changing nature of the problem. Experience drawn from successful initiatives suggest that there is need for the kind of comprehensive and coordinated approach as advocated in the Copenhagen Programme.. This approach requires the full participation of a number of actors including workers and employers organizations, as well as youth organizations in decisions regarding policies and programmes. The full participation of these groups, especially employer organizations is also indispensable to success.
87. While it is crucial to take steps to improve the access of youth to employment it is also important to act on the demand side to increase the overall demand for labour. Thus, youth programmes need to be considered within the context of an overall employment promotion strategy. In this regard, youth need to be considered specifically in employment promotion programmes, including those designed to stimulate micro and small enterprise development.
88. Designing a national plan of action against child labour has to be one of the priority areas of the Central and the State Governments. Actions to combat child labour must form part of an overall national plan. The problem of child labour will not be

solved overnight, since it is one of the many facets of poverty and underdevelopment. Resources available to reduce its extent and damaging effects are by definition scarcest in the country which needs them the most. Priorities must therefore be set.

89. Working children cannot be viewed simply within the context of labour law which requires the immediate dismissal or withdrawal from work of under-age children, as such action may in fact work against the children's immediate welfare. A broader approach is required. National plans of action must provide for suitable alternatives, including schools and vocational training facilities.
90. Besides the immediate measures required for the protection of child workers, the plan should include measures against the underlying causes of child labour and form an integral part of employment strategies that create viable income opportunities for the poor through poverty alleviation programmes.
91. Hard information is lacking on how many children are working, what they are doing, where and in what conditions. Without such data, it is virtually impossible to develop effective policies and programmes. Establishing, in some cases improving, data collection systems on child labour is an essential first step.
92. The centrality of strategies for employment, labour markets, labour institutions, social protection and human resource development for poverty eradication should become one of the central themes for national development.
93. The imperative for multi-dimensional and integrated approaches involving policy reform, institutional development and direct interventions should be recognised at all levels of planning.
94. The indispensable role of public policy in setting the agenda, creating the supportive policy environment and framework for productive employment growth and poverty eradication should be incorporated in the agenda for employment generation.
95. The extensive changes in political, economic, and social spheres, including the globalization of trade, finance and technology, and growing flexibilization of labour markets not only impact on the incidence and characteristics of poverty, but require a fresh consideration of strategies and new thinking about effective policies and mechanisms for its eradication.
96. Two fundamental objectives will be important for the future.
 - a) forging strategic alliances among different groups at the national and international levels for the promotion of productive employment and poverty eradication;

- b) monitoring changes, analyzing new trends and appraising new dimensions of social injustice and developing new responses.
- 97. Political resolve in addressing these problems needs to be strengthened at the national levels.
- 98. the information base needs to be considerably strengthened to facilitate more effective monitoring of trends.
- 99. More information on successful initiatives related to employment generation and poverty eradication in the Indian Subcontinent needs to be documented and widely disseminated.
- 100. The major long-term activities for national employment generation should be :
 - a) creating a favourable climate within the country so as to include the whole population in establishing national goals and priorities;
 - b) working out a purposeful government policy for productivity improvement on the national scale, and coordinating policies for optimal use of national resources;
 - c) establishing the government statistical bodies which deal with data collection and analysis at the sectoral and macro-economic levels;
 - d) strengthening legislation on the relation between enterprises and between enterprises and government institutions;
 - e) increasing the role of such financial incentives as taxes, credit and incomes policy.

STEP BY STEP METHODOLOGY FOR EMPLOYMENT GENERATION ADOPTED BY THE GLOBAL OPEN UNIVERSITY NAGALAND

There is an urgent need for creating an environment where there will be more number of job givers rather than job seekers by providing training and guidance in the areas of entrepreneurial leadership and managerial competence. Let us consider the following step by step methodologies for employment generation :

1. To collect data and information related to the existing publications including newspapers, journals and periodicals providing information and news regarding employment opportunities besides facilities regarding academic and professional training and research in different vocational fields.
2. To bring out daily, weekly, fortnightly, monthly, bimonthly, quarterly, six-monthly and yearly newspapers, journals, periodicals and other publications related to

employment and training with a view to generating employment specially among the weaker sections of the society.

3. To publish books, encyclopaedias, directories and dictionaries on different topics related to entrepreneurship development including self-employment.
4. To connect the association with the labour market mechanisms and patterns to give into the pattern and intensity of poverty and into the factors concentrating it among particular groups.
5. To give prominence to labour market policies, as well as those related to employment, labour institutions, social protection and human resource development and poverty eradication strategies.
6. To distinguish between poverty due to exclusion from access to jobs and poverty associated with the nature of employment and the levels of income which it generates while attempting to analyze the labour market situation in the Indian Subcontinent and its impact on poverty.
7. To assess the degree to which labour market exclusion is directly linked to poverty and the extent to which state or community safety nets or family support systems exist or whether it affects particular members of households (younger persons, for example) where there is another income source.
8. To place the creation of employment at the centre of national strategies and policies, with the full participation of employers and trade unions and other parts of civil society.
9. To help and assist in the formulation of policies to expand work opportunities and increase productivity in both rural and urban sectors.
10. To provide education and training that enable workers and entrepreneurs to adapt to changing technologies and economic conditions.
11. To help generate quality jobs, with full respect for the basic rights of workers.
12. To give special priority, in the design of policies, to the problems of structural, long-term employment and underemployment of youth, women, persons with disabilities and all other disadvantaged groups and individuals.
13. To empower the women for gender balance in decision-making processes at all levels and gender analysis in policy development to ensure equal employment opportunities and wage rates for women and to enhance harmonious and mutually beneficial partnerships between women and men in sharing family and employment responsibilities.

14. To also empower members of vulnerable and disadvantaged groups through the provisions of proper and appropriate education and training.
15. To look for a broader recognition and understanding of work and employment and greater flexibility in working time arrangements for both men and women.
16. To assist in alleviating poverty and unemployment: either by focusing on the members of economically weaker sections of the society and other groups directly affected by the economic reform and adjustment policies such as retrenched workers, or more generally by addressing chronic and structural poverty and unemployment.
17. To strengthen the social acceptability and the political viability of adjustment and reform programmes.
18. To help in creating a new approach and culture of social service delivery based on a flexible institutional mechanism circumventing the bureaucratic structure and encouraging participatory and decentralized development with the participation of local groups and associations.
19. To develop strategies to assist the formation and strengthening of collective action in the informal sector by developing relations with trade associations.
20. To raise awareness on the importance of good working conditions and social security by extending workers' education programmes to the informal sector.
21. To assist in improving working conditions of their subcontractors in the informal sector with a view to enabling them to create more employment opportunities for trained and skilled persons.
22. To assist informal sector operators to take part in trade fairs.
23. To assist informal sector operators to organize themselves effectively.
24. To integrate issues on occupational safety and health and social security in programmes to raise productivity.
25. To assist informal sector self-help associations to integrate awareness raising on occupational safety and health into their activities.
26. To establish innovative market services for the development of adult workers, by expanding the role of employers and organized employees in the planning and delivery of services, including training, retraining, job search, placement, skills identification and counseling.

27. To increase the capacity of the private sector to perform its role in the training and development of the young men and women to acquire techno-managerial as well as entrepreneurial skills.
28. To improve the existing employment market information system.
29. To help adult workers to acquire new skills at the technical and supervisory levels in order to make them eligible for higher level jobs at higher wages in occupations essential to economic growth or in their own businesses.
30. To reduce the transition time to new jobs for displaced workers.
31. To accelerate the entry of female workers into skilled technician, master craftsperson or supervisory positions.
32. To establish a permanent private sector mechanism to fund a variety of workforce development activities and create a forum for workers and employers to collaborate in implementing human resource development strategies and programmes.
33. To provide skill and interests assessment and career and employment counselling to determine the training, placement or business development support, the employable persons need to acquire the job, promotion or suitable income generating activity.
34. To provide a comprehensive package of services to include brokering and referral of workers to jobs, on-the-job training, business development support services and specialized training at the craftsperson, artisan, supervisory or managerial level and appropriate entrepreneurial training to place workers in new jobs, better jobs or self-employment opportunity.
35. To promote the concept of establishing learning laboratories which would provide computer assisted training e.g. literacy, numeracy and workplace basics such as problem solving, oral communication and planning and organizing work.
36. To establish Employment and Training Market Services Centres to introduce innovative approaches in human resource development.
37. To establish the principle of equality between men and women as a basis for employment policy and promoting gender-sensitivity training to eliminate prejudice against the employment of women.
38. To eliminate gender discrimination, including by taking positive action, where appropriate, in hiring, wages, access to credit, benefits, promotion, training, career development, job assignment, working conditions, job security and social security benefits.

39. To encourage various actors to join forces in designing and carrying out comprehensive and coordinated programmes that stimulate the resourcefulness of youth, preparing them for durable employment or self-employment, providing them with guidance, vocational and managerial training, social skills, work experience and education in social values.
40. To cause research on the underlying factors which are most important in differing national contexts in determining the levels of youth unemployment.
41. To evaluate all types of policies and programmes tried in different five year plans with a view to designing a foolproof and long-term strategy for employment generation.
42. To locate the factors which influence the success or failure of specific policies and programmes relating to employment and training.
43. To prepare a Policy and Programme Manual for policy makers to aim primarily at national capacity building for the design, implementation and evaluation of policies and programmes for countering youth unemployment.
44. To help analyse the national background characteristics, financial constraints, current educational efforts and effects and present conditions of societal development in different States and UTs of India.
45. To help the Central Government establish appropriate targets for employment generation and derive suitable strategies for implementing policies and programmes to meet the needs of the educated unemployed.
46. To establish a Life and Career Advising Centre - a single point of contact for student counselling on academic, personal and career issues.
47. To create a learning environment all over the country that encourages students to become actively involved in their own education.
48. To help reduce unemployment in the country by assisting the Central and the State Governments and public institutions in the initiation of professional and job oriented courses and by introducing the urban as well as rural entrepreneurship programmes for self employment.
49. To encourage an employment policy that is free of prejudice and party politics which promotes new ideas relating to sustainability.
50. To strengthen the voluntary as well as non governmental organisations in order to make them available for the organisation and implementation of programmes

having a positive, social, economic and educational content with a view to having more number of job givers than job seekers.

51. To serve as a centre of ideas and experience and dissemination of employment and training information on national as well as global job markets and its availabilities, reach, awareness, policy, law, research promotion, and preparedness in particular.
52. To help the Central and the State Governments in organising formal and non formal training programmes in attitudinal and behavioural change for bringing productivity and efficiency with the help of the trained employers and employees.
53. To publicize through the media an international network instances of successful policies, programmes and demonstrations regarding employment promotion and bring these success stories to the attention of policy makers.
54. To establish a national network of like minded NGOs with the ability to publicise the activities related to employment generation.
55. To strengthen international scientific organisations so that they can play a larger part in shaping and coordinating the research agenda on vocationalisation of careers.
56. To work closely with policy research centres focussing on global scale resource and development issues to bridge the gap between basic research and policy on employability.
57. To evaluate the existing curricula of the undergraduate, graduate and postgraduate level courses and propose necessary changes for making these programmes fit for helping the alumnis to find self employment opportunities by acquiring entrepreneurial leadership techniques.
58. To address the universal shortage of trained personnel in new and emerging job oriented areas through a sharp increase in funds to be sanctioned to universities and institutions.
59. To advise the younger generation for acquiring appropriate knowledge and technologies from the aged persons and senior citizens and to popularise their proven ideas and experiences.
60. To use restructured educational and training programmes to reorient vocational education for creating jobs in the new and emerging fields.
61. To help initiate training cum production cum rehabilitation centres in the rural as well as urban areas for the benefit of the younger generation.

62. To create employment generation environment by updating the existing vocational training programmes in the polytechnics, institutions, colleges and universities.
63. To strengthen with adequate study materials the existing distance learning programmes for enabling the working persons to strengthen their qualification and encouraging earning while learning.
64. To prepare instructional texts including audio and video lessons on employment and training to be distributed through the existing institutions as well as through the new outfits in the country.
65. To use and popularise the existing and new satellite channels for teaching and training through the air for the benefit of the citizenry.
66. To aid in organising conferences, seminars, meetings, discussions, debates, study courses, collection of statistics, exhibitions, shows, tour trips and to establish endowments and scholarships for the promotion and furtherance of programmes related to popularising higher education programmes related to vocational and job oriented education for employment generation.
67. To organise employment museums for displaying the available vacancies besides the types of advertisements in the print and the electronic media.
68. To conduct sponsored as well as non sponsored research programmes with the support of Central and State Governments and publish such reports and case books.
69. To arouse in teachers and other educators a full awareness of our responsibilities in moulding future generations for a peaceful employment and work culture.
70. To promote that kind of education that will help each individual from earliest years to develop full human potential for constructive, peaceful living in the expanding communities in which one grows; family, neighbourhood, school, local community, country, in fact, the whole human world.
71. To seek to enable individuals through constant educational and career improvement to deal with and resolve misunderstanding, personal as well as social, in the spirit of wisdom, charity and duty.
72. To support production and wide spread distribution of educational materials for the furtherance of social progress, international understanding, and worldly stability.

73. To make the full use of mass media for the cause of education especially in the proper communication of controversial views and issues, local and global, so as to maximize cooperation and conciliation.
74. To make everybody aware regarding the need for national as well as international integration and cooperation.
75. To invite representatives of different countries including the universities, NGOs and regulatory bodies for discussing issues like labour, employment, entrepreneurship and education.
76. To seek support of the educational and scientific organisations for using their facilities and infrastructure for conducting different programmes related to clean as well as green jobs.
77. To help design courses on subjects and topics generally not covered by existing institutions but are of great importance viewing the changes in the societal systems.
78. To continue to be open in ideas, methods, systems, places with no cloisters.
79. To help people through appropriate training to lead a way of life that can be sustained by our Mother Earth.
80. To justify the creation of a Citizens Apex Body by uniting all the professionals of the country in order to influence the power structure through their function as counselling centres, and by placing them, whenever possible, in areas of conflict for equalizing the flow of knowledge, for reducing aggression and for generating attitudes of fraternization.
81. To suggest to the national and international leaders alternative approaches to the solution of problems relating to health, education, unemployment, pollution and peacelessness.
82. To encourage the establishment of institutions for learning that serves the spirit of employment generation and also by stimulating existing colleges and universities to implement courses of study related to virtual education for employment opportunities in the cyber related fields.
83. To cooperate with authorities at various levels in implementing the Universal Declaration of Human Rights and reminding the employers and the employees regarding their human rights as well as human duties.

84. To collaborate in the work of existing and functional organizations that have stated goals and purposes with a view to creating more employment opportunities in the country.
85. To propose to other developmental associations, programmes on peace problems that are flexible in nature and capable of being adopted and modified according to cultural background, environment, and changing needs of people.
86. To update educational means for the reciprocal dissemination of culture and the elimination of illiteracy.
87. To disseminate information in the form of advertisements and/or articles regarding selection and recruitment in public as well as private sector organisations in the publications to be brought out by the Government and the Non-Government Organisations.
88. To conduct periodical analysis of employment and unemployment data at both State level and all India level and projections of labour force, workforce, and unemployment in the country.
89. To suggest strategies and programmes for creating gainful employment opportunities and to look into sectoral issues and policies having a bearing on employment generation.
90. To identify gaps and to suggest necessary approach / strategies and the need based policies and programmes in the fields of occupational safety and health, skill development, social security, employment planning and policy.
91. To help provide opportunities for individuals seeking a green or ecologically responsible career available in many diverse categories on the international, national, state and local levels; in private, public, and non-profit sectors; within different fields; and in different job functions.
92. To introduce responsible business practices fostering a competitive edge through efficiency in production, minimum generation of waste, and a more productive and healthy work force.
93. To advise the Government of India and the State Governments to constitute People's Commission on Employment Generation with a view to having immediate solution regarding unemployment as well as unemployability.
94. To collaborate, affiliate and federate with the Central and the State Governments, agencies and bodies for implementing the projects of employment generations.

95. 95. To raise and borrow money for the purposes of generating employment in such a manner as may be decided from time to time and to prescribe the membership fees, charges, grants in aid etc.
96. To purchase, take on lease or exchange, hire or otherwise acquire properties, movable or immovable and rights and privileges all over the world, which may be deemed necessary or convenient for the benefit of the unemployed as well as unemployable communities.
97. To open branches, chapters and constituent centres of employment promotion programmes and projects in different parts of the country and get them registered with appropriate authorities if needed and felt conducive for the attainment of the milestone of employment generation.
98. To invest the surplus money available from employment generation bodies not immediately required in such securities and in such manner as may be decided from time to time, the money especially collected through subscriptions, advertisements, sponsorship, fees, gifts, endowments, donations, grants etc.
99. To finally provide information, knowledge, wisdom, and education that prepares every body for leadership and social responsibility enabling to think and communicate effectively and to develop a global awareness and sensitivity for a better global understanding, world peace and unity.
100. And to generally do all that is incidental and conducive to the attainment of the milestone of generating employment in all the 602 Districts of our country.

We should ask ourselves regarding the burning problems of our country and find suitable solution by providing inputs through higher education. The problems are first : peacelessness, second : unemployment, third : pollution, fourth : obsolete educational system, and fifth : population explosion. The problem of peacelessness is because of unemployment and pollution. The solution lies in having a marriage of unemployment with pollution by creating environment friendly and sustainable jobs. We must vocationalise our existing careers by incorporating new and emerging subjects in higher education for employment generation and for protecting our mother earth by teaching subjects like environmental education as per the orders of the Hon'ble Supreme Court. We must control our population size with a view to optimising our budgets and for providing education, food, shelter and health facilities for all.

Chapter 71

CHILD CARE AND DEVELOPMENT RELATED POLICIES ADOPTED BY THE CONFEDERATION OF INDIAN UNIVERSITIES (CIU)

As we know that child is the father of man, so we at the Confederation of Indian Universities (CIU) have dedicated ourselves for the cause of the overall development of the child by adopting the slogan “Catch Them Young” in order to prepare the children as didactics so that they may finally educate their fathers, mothers, guardians, teachers, colleagues, rather the entire neighbourhood.

With full hope and optimism, the 101 Point Agenda of Confederation of Indian Universities (CIU), a People's Charter for the survival, protection and development of children in the twentyfirst century is being presented on the auspicious occasion of the compilation of the book titled “2017 Indian Universities Handbook and Directory” in the form of a GUIDE to private and public action in the interests of the children with the assertion that mankind owes to the child the best it has to give and that this Agenda will be treated as a moral framework for children's rights today and tomorrow for the emergence of an international consensus for strengthened cooperation focussing on children that could be a development of far reaching significance for creating the conditions in which children may take an active and creative part in the social and political life of their countries.

1. To provide a healthy and safe environment, access to medical care, and minimum standards of food, clothing and shelter for the development of the intellectual, moral and spiritual capacities of the children.
2. To establish the right of a child to be an actor in his or her own development, to express opinions and to have them taken into account in the making of decision relating to his or her life.
3. To acknowledge the primary role of the family and parents in the care and protection of children and the obligation of the government(s) to help them in carrying out these duties.
4. To promote the principle that every child has the inherent right to life and that the child survival and development must be ensured to the maximum.
5. To see that every child gets the right to a name and a nationality from birth.
6. To ensure that each child enjoys full rights without discrimination or distinctions of any kind.

7. To promote the practice that the children are not separated from their parents, unless by competent authorities for their well being.
8. To facilitate reunification of families by permitting travel into, or out of, their territories.
9. To fix the primary responsibility for a child's up-bringing with the parents with appropriate assistance of the Government(s), International Organisations, Public, Private and Independent Sectors for developing child-care institutions.
10. To protect the children from physical or mental harm and neglect including sexual abuse or exploitation.
11. To provide parentless children with suitable alternative care.
12. To provide special treatment, education and care to the disabled children.
13. To place emphasis on preventive measures for attaining the highest standard of health, health education and reduction of infant mortality.
14. To ensure that the discipline in schools respects the child's dignity and that education prepares the child for life in a spirit of understanding, peace and tolerance.
15. To provide facilities and time for enabling the children to rest and play and to further provide equal opportunities for cultural and artistic activities.
16. To protect the children from economic exploitation and work that may interfere with education or be harmful to health and well-being.
17. To protect the children from the illegal use of drugs and involvement in drug production or trafficking.
18. To eliminate the abduction and trafficking of children.
19. To provide facilities to separate the children from adults while in detention so that they are not tortured and that they must not suffer cruel and disregarding treatment.
20. To offer special protection to children exposed to armed conflict by also ensuring that no child under the age of 15 should take any part in hostilities.
21. To let the children of minority and indigenous populations enjoy their own culture, religion and language.

22. To enable the children, who have suffered maltreatment, neglect or detention, receive appropriate treatment or training for recovery and rehabilitation.
23. To treat the children involved in infringements of the penal law, for promoting their sense of dignity and worth that aims at reintegrating them into society.
24. To identify dangers to the well-being of the world's children.
25. To look for practical answers to the growing problems of the children.
26. To mobilize the human and financial resources for overall development of children.
27. To raise the level of public awareness and concern for the protection and promotion of children's rights.
28. To recognise that the child, for the full and harmonious development of his or her personality, should grow up in a family environment, in an atmosphere of happiness, love and understanding.
29. To consider that the child should be fully prepared to live an individual life in society and brought up in the spirit of peace, dignity, tolerance, freedom, equality and solidarity.
30. To bear in mind that the child, by reason of his physical and mental immaturity, needs special safeguards and care, including appropriate legal protection, before as well as after birth.
31. To take due account of their importance of the traditions and cultural values of each people for the protection and harmonious development of the child.
32. To take all appropriate measures to promote physical and psychological recovery of a child victim of any form of neglect, exploitation or abuse, torture or any other form of cruelty, inhuman or degrading treatment or punishment.
33. To prevent the abduction of the sale of or traffic in children for any purpose or in any form.
34. To protect the children from inducement or coercion for engaging them in any unlawful sexual activity.
35. To protect the children from the exploitative use in prostitution or other unlawful sexual practices.
36. To take suitable measures for protecting the children from the exploitative use in pornographic performances and materials.

37. To take appropriate steps including legislative, administrative, social and educational steps, for protecting the children from the illicit use of narcotics and psychotropic substances.
38. To provide for a minimum age for admission to employment, appropriate regulation for the working houses and conditions of employment and penalties or other sanctions to ensure the effective enforcement relating to employment of children after attaining the required age.
39. To develop the child's personality, talents and mental abilities to their fullest potential.
40. To ensure that the education of the child be directed to the development of the respect for the child's parents, his or her own cultural identity, language and values, for the national values of the country in which the child is living, the country from which he or she may be originating and for civilizations different from his or her own.
41. To prepare the child for responsible life in a free society in the spirit of understanding, equality of sexes and friendships among all peoples, ethnic, national and religious groups.
42. To make the children educated with a view to developing among them the respect for the natural environment.
43. To make primary education free as well as compulsory for all.
44. To encourage the development of different forms of secondary education, including general and vocational education, make them available and accessible to every child.
45. To make higher education accessible to all children on the basis of capacity by every appropriate means.
46. To make educational and vocational information and guidance available and accessible to all children.
47. To take measures to encourage regular attendance at schools and the reduction of drop-out rates among children.
48. To recognise the right of every child to a standard of living adequate for the child's physical, mental, spiritual, moral and social development.
49. To make the parent(s) responsible for securing, within their abilities and financial capabilities the conditions of living necessary for the child's development.

50. To assist the parents for providing material assistance, particularly with regard to nutrition, clothing and housing for the children.
51. To recognise the right of children to benefit from social security, including insurance, and to take the necessary measures to achieve the full realisation of this right for their optimum development.
52. To enable the children to enjoy the highest attainable standard of health and the facilities for the treatment of illness and rehabilitation of health.
53. To take suitable measures for diminishing infant and child mortality.
54. To ensure the provision of necessary medical assistance to all children with emphasis on the development of primary health care.
55. To combat disease and malnutrition, including within the framework of primary health care, through, inter alia, the application of readily available technology and through the provision of adequate nutritious food and clean drinking water, taking into consideration the damages and risks of environmental pollution.
56. To ensure appropriate pre-natal and post-natal health care of mothers.
57. To ensure that all segments of society, in particular parents and children, are informed, have access to education and are supported in the use of basic knowledge of child health and nutrition. The advantages of breast feeding, hygiene and environmental sanitation and the prevention of accidents be more popularised and made common.
58. To develop preventive health care, guidance for parents and family planning education and services.
59. To take all effective measures with a view to abolishing traditional practices prejudicial to the children's health.
60. To recognise that a mentally or physically disabled child should enjoy a full and decent life, in conditions which ensure dignity, promote self reliance and facilitate the child's active participation in the community.
61. To accord special care to the disabled children with all assistance which is appropriate to the children's conditions and to the circumstances of the parents or others caring for the child.
62. To ensure that the disabled children have effective access to receiving education, training, health care services, rehabilitation services, preparation for employment and recreation opportunities in a manner conducive to achieving the fullest possible

social integration and individual development, including their cultural and spiritual development.

63. To promote the spirit of international cooperation, the exchange of appropriate information in the field of preventive health care and of medical, psychological and functional treatment of disabled children, including dissemination of and access to information concerning methods of rehabilitation, education and vocational services.
64. To take appropriate measures to ensure that a child who is seeking refugee status or who is considered a refugee whether unaccompanied or accompanied by his or her parents or by any other person, receives appropriate protection and humanitarian assistance.
65. To ensure that the adoption of a child is authorized only by the competent authorities who determine, in accordance with the applicable laws and procedures and on the basis of all pertinent and reliable information, that the adoption is permissible in view of the child's status concerning parents, relatives and legal guardians and that, if required, the persons concerned have given their consent to the adoption on the basis of such counselling as may be necessary.
66. To recognise that inter-country adoption may be considered as an alternative means of child's care, if the child cannot be placed in a foster or an adoptive family or cannot, in any suitable manner, be cared for in the child's country of origin.
67. To ensure that the child concerned by the inter-country adoption enjoys safeguards and standards equivalent to those existing in the case of national adoption.
68. To take all appropriate measures to ensure that, in inter-country adoption the placement does not result in improper financial gains for those involved in it.
69. To ensure special protection and assistance to all children temporarily or permanently deprived of their family environment or whose own best interests cannot be allowed to remain in that environment.
70. To include special care for the children like foster placement, Kafalah of Islamic law, adoption or if necessary placement in suitable institutions for the case of children viewing the desirability of the country their upbringing and to their ethnic, religious, cultural and linguistic backgrounds.
71. To take social and educational measures to protect the child from all forms of physical or mental violence, injury or abuse, neglect or negligent treatment, maltreatment or exploitation, including sexual abuse, while in the care of parent(s), legal guardian(s) or any other person who has the care of the child.

72. To establish social programmes for providing necessary support for the child and for those who have the care of the child, as well as for other forms of prevention and for identification, reporting, referral, investigation, treatment and follow-up of instances of child maltreatment.
73. To recognise the principle that both parents have common responsibilities for the upbringing and development of the child.
74. To render appropriate assistance to parents and legal guardians in the performance of their child-rearing responsibilities and to ensure the development of institutions, facilities and services for the care of children.
75. To ensure that children of working parents have the right to benefit from child-care and facilities for which they are eligible.
76. To ensure that children have the access to information and material from a diversity of national and international sources, especially those aimed at the promotion of their social and moral well being, physical and mental health.
77. To encourage the mass media to disseminate information and material of social and cultural benefit to the child.
78. To encourage international cooperation in the production, exchange and dissemination of such information and material from a diversity of cultural, national and international sources.
79. To encourage the production and dissemination of children's books.
80. To encourage the mass-media to have regard for the linguistic needs of the children who belong to the minority or indigenous groups.
81. To encourage the development of appropriate guidelines for the protection of children from information and material injurious to their well-being.
82. To ensure that children are not subjected to arbitrary or unlawful interference with their privacy, family, home or correspondence, nor to unlawful attacks on their honour and reputation.
83. To recognise the rights of the children to freedom of associations and to freedom of peaceful assembly.
84. To respect the right of the children to freedom of thought, conscience and religions.
85. To respect the rights and duties of the parents and, when applicable, legal guardians, to provide direction to the children in the exercise of their rights in a manner consistent with the evolving capacities of the children.

86. To ensure the children's right to freedom of expressions including freedom to seek, receive and impart information and ideas of all kinds, regardless of frontiers either orally, in writing or in print, in the form of art, or through any other media of their choice with due respect of the rights or reputations of others and for the protection of national security or of public order, or of public health or morals.
87. To assure to the children who are capable of forming their own views the rights to express those views freely in all matters affecting the children, the views of the children being given due weight in accordance with the age and maturity of the child.
88. To take measures to combat the illicit transfer and non-return of children abroad.
89. To ensure the right of the children to maintain on a regular basis, direct contacts and personal relations with both parents in case they reside in different countries.
90. To ensure that children are not separated from their parents against their will, except when competent authorities subject to judicial review determine in accordance with applicable law, that such separation is necessary in the best interests of the children.
91. To respect the right of the child who is separated from one or both parents to maintain personal relations and direct contact with both parents on a regular basis except if it is contrary to the child's best interests.
92. To respect the right of the children to preserve their identity including nationality, name and family relations as recognised by law without unlawful interference.
93. To ensure that the children are registered immediately after birth and that they have the right from birth to a name, and as far as possible, the right to know and be cared for by their parents.
94. To respect the responsibilities, rights and duties of parents or, where applicable, the members of the extended family or community as provided for by local custom, legal guardians or other persons legally responsible for the child to provide in a manner consistent with the evolving capacities of the child, appropriate direction and guidance in the exercise by the child of their rights.
95. To take all appropriate steps to ensure that children are protected against all forms of discrimination or punishment on the basis of status, activities, expressed opinions, or beliefs of the child parents, legal guardians, or family members.
96. To ensure that all children have equal and same rights without discrimination of any kind, irrespective of the their own or their parents' or legal guardians' race,

colour, sex, language, religion, political or other opinion, national, ethnic or social origin, property, disability, birth or other status.

97. To take due account of the importance of the traditions and cultural values of each people for the protection and harmonious development of the children.
98. To recognise that in all countries in the world, there are children living in exceptionally difficult conditions, and that such children need special consideration.
99. To bear in mind that the children, by reason of their physical and mental immaturity, need special safeguards and care, including appropriate legal protection before as well as after birth.
100. To recognise that the children, for the full and harmonious development of their personality, should grow up in a family environment, in an atmosphere of happiness, love and understanding.
101. To finally promote the philosophy that the family as the fundamental group of society and the natural environment for the growth and well being of all its members and particularly children, should be afforded the necessary protection and assistance so that it can fully assume its responsibilities within the community.

THE SCHEME OF TEACHING PEACE, MERCY AND TOLERANCE ADVOCATED BY CIU

EMPLOYMENT BASED EDUCATION THROUGH THE CONFEDERATION OF INDIAN UNIVERSITIES BY TEACHING PEACE, MERCY AND TOLERANCE

Let us, first of all, try to discuss and diagnose intolerance among members of the society for locating respective critical paths for being merciful and tolerant for bringing peace on earth in the twentyfirst century and the third millennium. Viewing the growing peacelessness and intolerance all over the world, let us also discuss the need for disaster education including disaster preparedness, mitigation and management.

Educating the children and young people with a sense of openness and comprehension towards other people, their diverse culture and histories and their fundamental shared humanity; teaching them the importance of refusing violence and adopting peaceful means for resolving disagreements and conflicts; forging in the next generation feelings of altruism, openness and respect towards others, solidarity and sharing based on a sense of security in one's own identity and a capacity to recognise the many dimensions of being human in different cultural and social context should be the main thrust during the deliberations on peace, mercy and tolerance. Let us discuss these matters in a greater detail :

1. The manifestations of violence, racism, xenophobia, aggressive nationalism and violations of human rights, by religious intolerance, by the upsurge of terrorism in all its forms and manifestations and by the growing gap separating wealthy countries from poor countries, phenomena which threaten the consolidation of peace, tolerant behaviour and democracy both nationally and internationally and which are all obstacles to development are matters of deep concern.
2. The educational plans and policies have to contribute to the development of understanding, solidarity and tolerance among individuals and among ethnic, social, cultural and religious groups and sovereign nations. Education should promote knowledge, values, attitudes and skills conducive to respect for human rights and to an active commitment to the defence of such rights and to the building of a culture of peace, tolerance and mercy.
3. We are aware of the great responsibility incumbent not only on parents, but on society as a whole, to work together with all those involved in the educational system, and with non-governmental organisations, so as to achieve full implementation of the objectives of education for peace, human rights and civil liberty and to contribute in this way to sustainable development and to a culture of peace.

4. We understand the need to seek synergies between the formal education system and the various sectors of non-formal education, which are helping to make a reality of education that is in conformity with the aims of "Education for All". We know of the decisive role that also falls to non-formal educational organisations in the process of forming the personalities of young people.
5. Accordingly we should strive resolutely to base education on principles and methods that contribute to the development of the personality of pupils, students and adults who are respectful of their fellow human beings and determined to promote peace, non violence, mercy, compassion and tolerance; to take suitable steps to establish in educational institutions an atmosphere contributing to the success of education for international understanding, so that they become ideal places for the exercise of tolerance, respect for the rights, the practice of democracy and learning about the diversity and wealth of cultural identities.
6. Action should be taken to eliminate all direct and indirect discrimination against girls and women in education systems and to take specific measures to ensure that they achieve their full potential.
7. There is an urgent need to give special attention to improving curricula, the content of textbooks, and other educational materials including new technologies, with a view to educating caring and responsible citizens open to other cultures, able to appreciate the value of freedom, respectful of human dignity and differences, and able to prevent conflicts or resolve them by non-violent means.
8. Measures must be adopted to enhance the role and status of educators in formal and non-formal education and to give priority to pre-service and in-service training as well as the retraining of educational personnel, including planners and managers, oriented notably towards professional ethics, civic and moral education, cultural diversity, national codes and internationally recognised standards of human rights and fundamental freedoms.
9. The development of innovative strategies adapted to the new challenges of educating responsible citizens committed to peace, human rights, democracy and sustainable development, and to apply appropriate measures of evaluation and assessment of these strategies should be encouraged.
10. In a period of transition and accelerated change marked by the expression of intolerance, manifestations of racial and ethnic hatred, the upsurge of terrorism in all its forms, discrimination, war, violence and the growing disparities between rich and poor, at international and national levels alike, action strategies must aim both at ensuring fundamental freedoms, peace, human rights, and democracy and at promoting sustainable and equitable economic and social development, all of which have an essential part to play in building a culture of peace. This calls for a transformation of the traditional styles of educational action.

11. The ultimate goal of education for peace, mercy and tolerance is the development in every individual of a sense of universal values and types of behaviour on which a culture of peace is predicated. It is possible to identify even in different socio-cultural context values that are likely to be universally recognised.
12. Education must develop the ability to value freedom and the skills to meet its challenges. This means preparing citizens to cope with difficult and uncertain situations and fitting them for personal autonomy and responsibility. Awareness of personal responsibility must be linked to recognition of the value of civic commitment, of joining together with others to solve problems and to work for a just, peaceful and democratic community.
13. Education must develop the ability to recognise and accept the values which exist in the diversity of individuals, genders, peoples and cultures and develop the ability to communicate, share and co-operate with others. The citizens of a pluralist society and multicultural world should be able to accept that their interpretation of situations and problems is rooted in their personal lives, in the history of their society and in their cultural traditions; that, consequently, no individual or group holds the only answer to problems; and that for each problem there may be more than one solution. Therefore, people should understand and respect each other and negotiate on an equal footing, with a view to seeking common ground. Thus education must reinforce personal identity and should encourage the convergence of ideas and solutions which strengthen peace, friendship and solidarity between individuals and people.
14. Education must develop the ability of non-violent conflict-resolution. It should therefore promote also the development of inner peace in the minds of learners so that they can establish more firmly the qualities of tolerance, compassion, sharing and caring.
15. Education must cultivate in citizens the ability to make informed choices, basing their judgements and actions not only on the analysis of present situations but also on the vision of a preferred future.
16. Education must teach citizens to respect the cultural heritage, protect the environment, and adopt methods of production and patterns of consumption, which lead to sustainable development. Harmony between individual and collective values and between immediate basic needs and long-term interests is also necessary. Education should cultivate feelings of solidarity and equity at the national and international levels in the perspective of a balanced and long-term development.
17. Strategies relating to education for peace, mercy, tolerance and disaster education must (a) be comprehensive and holistic, which means addressing a very broad range of factors; (b) be applicable to all types, levels and forms of education; (c) involve all educational partners and various agents of socialisation, including NGOs and community organisations; (d) be implemented locally, nationally, regionally and

world-wide; (e) entail modes of management and administration, co-ordination and assessment that give greater autonomy to educational establishments so that they can work out specific forms of action and linkage with the local community, encourage the development of innovations and foster active and democratic participation by all those concerned in the life of the establishment; (f) be suited to the age and psychology of the target group and take account of the evolution of the learning capacity of each individual; (g) be applied on a continuous and consistent basis. Results and obstacles have to be assessed, in order to ensure that strategies can be continuously adapted to changing circumstances; (h) include proper resources for education as a whole and specially for marginalised and disadvantaged groups.

18. To strengthen the formation of values and abilities such as solidarity, creativity, civic responsibility, the ability to resolve conflicts by non-violent means, and critical acumen, it is necessary to introduce into curricula, at all levels, true education for citizenship which includes an international dimension. Teaching should particularly concern the conditions for the construction of peace; the various forms of conflict, their causes and effects; the ethical, religious and philosophical bases of human rights, their historical sources, the way they have developed and how they have been translated into national and international standards, such as in the Universal Declaration of Human Rights, the Convention on the Elimination of All Forms of Discrimination against Women and the Convention on the Rights of the Child; the bases of democracy and its various institutional models; the problem of racism and the history of the fight against sexism and all the other forms of discrimination and exclusion. Particular attention should be devoted to culture, the problem of development and the history of every people, as well as to the role of the United Nations and international institutions. There must be education for peace, conflict resolution, non violence, mercy, compassion and tolerance. It cannot, however, be restricted to specialised subjects and knowledge. The whole of education must transmit this message and the atmosphere of the institution must be in harmony with the application of democratic standards. Likewise, curriculum reform should emphasise knowledge, understanding and respect for the culture of others at the national and global levels and should link the global interdependence of problems to local action. In view of religious and cultural differences, every country may decide which approach to ethical education best suits its cultural context.
19. All people engaged in educational action must have adequate teaching materials and resources at their disposal. In this connection, it is necessary to make the required revisions to textbooks to remove negative stereotypes and distorted views. International co-operation in producing textbooks could be encouraged. Whenever new teaching materials, textbooks and the like are to be produced, they should be designed with due consideration of new situations. The textbooks should offer different perspectives on a given subject and make transparent the national or cultural background against which they are written. Their content should be based on scientific findings. It would be desirable for the documents of United Nations institutions to be widely distributed and used in educational establishments,

especially in countries where the production of teaching materials is proving slow owing to economic difficulties. Distance education technologies and all modern communication tools must be placed at the service of education for peace, non violence, mercy, compassion and tolerance.

20. It is essential for the development of education for peace, non violence, mercy, compassion and tolerance that reading and verbal and written expression programmes should be considerably strengthened. A comprehensive grasp of reading, writing and the spoken word enables citizens to gain access to information, to understand clearly the situation in which they are living, to express their needs, and to take part in activities in the social environment. In the same way, learning foreign languages offers a means of gaining a deeper understanding of other cultures, which can serve as a basis for building better understanding between communities and between nations.
21. Proposals for educational change find their natural place in schools and classrooms. Teaching and learning methods, forms of action and institutional policy lines have to make peace, non violence, mercy, compassion and tolerance both a matter of daily practice and something that is learned. With regard to methods, the use of active methods, group work, the discussion of moral issues and personalised teaching should be encouraged. As for institutional policy lines, efficient forms of management and participation must promote the implementation of democratic school management, involving teachers, pupils, parents and the local community as a whole.
22. The reduction of failure must be a priority. Therefore, education should be adapted to the individual student's potential. The developments of self-esteem, as well as strengthening the will to succeed in learning, are also basic necessities for achieving a higher degree of social integration. Greater autonomy for schools implies greater responsibility on the part of teachers and the community for the results of education. However, the different development levels of education systems should determine the degree of autonomy in order to avoid a possible weakening of educational content.
23. The training of personnel at all levels of the education system: teachers, planners, managers, teacher educators has to include education for peace, non violence, mercy, compassion and tolerance. This pre-service and in-service training and retraining should introduce and apply *in situ* methodologies, observing experiments and evaluating their results. In order to perform their tasks successfully, schools, institutions of teacher education and those in charge of non-formal education programmes should seek the assistance of people with experience in the fields of peace, non violence, mercy, compassion and tolerance (politicians, jurists, sociologists and psychologists) and of the NGOs specialised in human rights, environment and disaster education. Similarly, pedagogy and the actual practice of exchanges should form part of the training courses of all educators.

24. Teacher education activities must fit into an overall policy to upgrade the teaching profession. International experts, professional bodies and teachers' unions should be associated with the preparation and implementation of action strategies because they have an important role to play in promoting a culture of peace among teachers themselves.
25. Specific strategies for the education of vulnerable groups and those recently exposed to conflict or in a situation of open conflict are required as a matter of urgency, giving particular attention to children at risk and to girls and women subjected to sexual abuse and other forms of violence. Possible practical measures could include, for example, the organisation outside the conflict zone of specialised forums and workshops for educators, family members and mass media professionals belonging to the conflicting groups and an intensive training activity for educators in post-conflict co-operation with governments whenever possible.
26. The organisations of education programmes for abandoned children, street children, refugee and displaced children and economically and sexually exploited children are a matter of urgency. It is equally urgent to organise special youth programmes laying emphasis on participation by children and young people in solidarity actions and environmental protection. In addition, efforts should be made to address the special needs of people with learning difficulties by providing them with relevant education in a non- exclusionary and integrated educational setting.
27. Furthermore, in order to create understanding between different groups in society, there must be respect for the educational rights of persons belonging to national or ethnic, religious and linguistic minorities, as well as indigenous people, and this must also have implications in the curricula and methods and in the way education is organised.
28. New problems require new solutions. It is essential to work out strategies for making better use of research findings, to develop new teaching methods and approaches and to improve co-ordination in choosing research themes between research institutes in the social sciences and education in order to address in a more relevant and effective way the complex nature of education for peace, non violence, mercy, compassion and tolerance. The effectiveness of educational management should be enhanced by research on decision-making by all those involved in the educational process (government, teachers, parents, etc.). Research should also be focused on finding new ways of changing public attitudes towards human rights, in particular towards women, and environmental issues. The impact of educational programmes may be better assessed by developing a system of indicators of results, setting up data banks on innovative experiments, and strengthening systems for disseminating and sharing information and research findings, nationally and internationally.
29. Tertiary / higher education institutions can contribute in many ways to education for peace, non violence, mercy, compassion and tolerance. In this connection, the

introduction into the curricula of knowledge, values and skills relating to peace, human rights, justice, the practice of democracy, professional ethics, civic commitment and social responsibility should be envisaged. Educational institutions at this level should also ensure that students appreciate the interdependence of nations in an increasingly global society.

30. The education of citizens cannot be the exclusive responsibility of the education sector. If it is to be able to do its job effectively in this field, the education sector should closely co-operate, in particular, with the family, the media, including traditional channels of communication, the world of voluntary organisations and NGOs.
31. Concerning co-ordination between school and family, measures should be taken to encourage the participation of parents in school activities. Furthermore, education programmes for adults and the community in general in order to strengthen the school's work are essential.
32. The influence of the media in the socialisation of children and young people is increasingly being acknowledged. It is, therefore, essential to train teachers and prepare students for the critical analysis and use of the media, and to develop their competence to profit from the media by a selective choice of programmes. On the other hand, the media should be urged to promote the values of peace, respect for human rights, democracy and tolerance, in particular by avoiding programmes and other products that incite hatred, violence, cruelty and disrespect for human dignity.
33. Young people who spend a lot of time outside school and who often do not have access to the formal education system, or to vocational training or a job, as well as young people doing their military service, are a very important target group of education programmes for peace, non violence, mercy, compassion and tolerance. While seeking improved access to formal education and vocational training, it is therefore essential for them to be able to receive non-formal education adapted to their needs, which would prepare them to assume their role as citizens in a responsible and effective way. In addition, education for peace, human rights and respect for the law has to be provided for young people in prisons, reformatories or treatment centres.
34. Adult education programmes where NGOs have an important role to play should make everyone aware of the link between local living conditions and world problems. Basic education programmes should attach particular importance to subject matter relating to peace. All culturally suitable media such as folklore, popular theatre, community discussion groups and radio should be used in mass education.
35. The promotion of peace will require regional co-operation, international solidarity and the strengthening of co-operation between international and governmental

bodies, non-governmental organisations, the scientific community, business circles, industry and the media. This solidarity and co-operation must help the developing countries to meet their needs for promoting education for peace.

36. In the light of the information provided relating peace, mercy, tolerance and disaster education we must the following resolve :

- i) Alarmed by the current rise in acts of intolerance, violence, terrorism, xenophobia, aggressive nationalism, racism, anti-semitism, exclusion, marginalisation and discrimination directed against national, ethnic, religious and linguistic minorities, refugees, migrant workers, immigrants and vulnerable groups within societies, as well as acts of violence and intimidation committed against individuals exercising their freedom of opinion and expression - all of which threaten the consolidation of peace, mercy, tolerance and disaster management efforts both nationally and internationally, and are obstacles to development.
- ii) Resolving to take all positive measures necessary to promote peace, mercy and tolerance in our societies, because these are not only the cherished principles, but also a necessity for peace and for the economic and social advancement of all peoples.
- iii) Mercy and Tolerance are respect, acceptance and appreciation of the rich diversity of our world's cultures, our forms of expression and ways of being human. It is fostered by knowledge, openness, communication, and freedom of thought, conscience and belief. Mercy and Tolerance are harmony in difference. These are not only a moral duty, but are also political and legal requirements. Mercy and Tolerance, the virtues that make peace possible, contribute to the replacement of the culture of war by a culture of peace.
- iv) Mercy and Tolerance are not concession, condescension or indulgence. Mercy and Tolerance are, above all, active attitudes prompted by recognition of the universal human rights and fundamental freedoms of others. In no circumstance can these be used to justify infringements of these fundamental values. Mercy and Tolerance are to be exercised by individuals, groups and nations.
- v) Mercy and Tolerance are the responsibility that upholds human rights, pluralism (including cultural pluralism), democracy and the rule of law. It involves the rejection of dogmatism and absolutism and affirms the standards set out in international human rights instruments.
- vi) Consistent with respect for rights, the practice of mercy and tolerance does not mean toleration of social injustice or the abandonment or weakening of one's convictions. It means that one is free to adhere to one's own convictions and accepts that others adhere to theirs. It means accepting the fact that

human beings, naturally diverse in their appearance, situation, speech, behaviour and values, have the right to live in peace and to be as they are. It also means that one's views are not to be imposed on others.

- vii) Mercy and Tolerance require just and impartial legislation, law enforcement, judicial and administrative processes. It also requires that economic and social opportunities be made available to each person without any discrimination. Exclusion and marginalisation can lead to frustration, hostility and fanaticism.
- viii) In order to achieve a more tolerant society, nations should ratify existing international human rights conventions, and draft new legislation where necessary to ensure equality of treatment and of opportunity for all groups and individuals in society.
- ix) It is essential for international harmony that individuals, communities and nations accept and respect the multicultural character of the human family. Without mercy and tolerance there can be no peace, and without peace there can be no development.
- x) Intolerance may take the form of marginalization of vulnerable groups and their exclusion from social and political participation, as well as violence and discrimination against them. Declaration on Race and Racial Prejudice confirms 'All individuals and groups have the right to be different'.
- xi) In the modern world, mercy and tolerance are more essential than ever before. It is an age marked by the globalisation of the economy and by rapidly increasing mobility, communication, integration and inter-dependence, large-scale migrations and displacement of populations, urbanisation and changing social patterns. Since every part of the world is characterised by diversity, escalating intolerance and strife potentially menaces every region. It is not confined to any country, but is a global threat.
- xii) Mercy and Tolerance are necessary between individuals and at the family and community levels. Tolerance promotion and the shaping of attitudes of openness, mutual listening and solidarity should take place in schools and universities and through non-formal education, at home and in the workplace. The communication media are in a position to play a constructive role in facilitating free and open dialogue and discussion, disseminating the values of tolerance, and highlighting the dangers of indifference towards the rise in intolerant groups and ideologies.
- xiii) Appropriate scientific studies and networking should be undertaken to co-ordinate the international community's response to this global challenge, including analysis by the social sciences of root causes and effective

- countermeasures, as well as research and monitoring in support of policy-making and standard-setting action by different countries
- xiv) Education is the most effective means of preventing intolerance. The first step in mercy and tolerance education is to teach people what their shared rights and freedoms are, so that they may be respected, and to promote the will to protect those of others.
 - xv) Education for mercy and tolerance should be considered an urgent imperative; that is why it is necessary to promote systematic and rational mercy and tolerance teaching methods that will address the cultural, social, economic, political and religious sources of intolerance which are the major roots of violence and exclusion. Education policies and programmes should contribute to development of understanding, solidarity and tolerance among individuals as well as among ethnic, social, cultural, religious and linguistic groups and nations.
 - xvi) Education for mercy and tolerance should aim at countering influences that lead to fear and exclusion of others, and should help young people to develop capacities for independent judgement, critical thinking and ethical reasoning.
 - xvii) It is time to pledge to really support and implement programmes of social science research and education for mercy, tolerance, compassion, human rights and non-violence. This means devoting special attention to improving teacher training, curricula, the content of textbooks and lessons, and other educational materials including new educational technologies, with a view to educating caring and responsible citizens open to other cultures, able to appreciate the value of freedom, respectful of human dignity and differences, and able to prevent conflicts or resolve them by non-violent means.
 - xviii) It is essential that we commit ourselves to promoting mercy, tolerance as well as non-violence through programmes and institutions in the fields of education, science, culture and communication.
 - xix) In order to generate public awareness, emphasise the dangers of intolerance and disastrous actions and react with renewed commitment and action in support of tolerance promotion and education, pledge to design tailor made training programmes of short as well as long duration in the areas of peace, mercy, tolerance, compassion, disaster education and related subjects.
 - xx) People should commit themselves to promote tolerance and non-violence through programmes and institutions by developing a neological as well as neocratic approach to governance and by designing a masterplan paradigm for peace on earth.

World Society, having emerged from the decades of the cold war, enjoyed for a short time the hopes that the end of this struggle was the beginning of an era in which the destructive consequences of that conflict and the deep divisions imposed by global economic inequities might be addressed. These hopes were sorely tested, however, by the eruption of regional conflicts and the hostilities between people which fragmented nations and drastically changed the political map of the world as it had been for nearly half a century. All over the globe, intergroup tensions, religious hostilities and ethnic conflicts have been erupting. Many long-standing conflicts previously overlooked have come to world attention.

Deep hatreds, some of which had previously healed over through reconciliations that permitted ethnic groups to live together in peace and cooperation have surfaced in social behaviour and political movements, and are voiced in the media and at conferences; communities exploded into warfare. The process of settling the disputes, reconciling the hostilities and reconstructing the societies will be one of the most difficult human society has ever undertaken. It may be one of the greatest challenges ever faced by those who seek to educate for peace. Educators should not shrink from facing the realities of history, nor can they avoid the responsibility to taking up the challenge posed by the reconciliation process to those who plan and carry out the social learning process.

Mercy and Tolerance are but the beginning, the first stage in a longer, deeper process of developing a culture of peace. It is the minimal essential quality of social relations that eschew violence and coercion. Without mercy and tolerance, peace is not possible. With mercy and tolerance, a panoply of positive human and social possibilities can be pursued, including the evolution of a culture of peace and the convivial communities that comprise it.

Religion has been a significant factor in the evolution of cultures, peace and nonviolence providing behavioural and social codes. Sadly, it has also been the basis of divisions, intolerance, war and conflict. As we have seen many man made disasters during last few years, teaching for religious tolerance has become an urgent necessity. We must identify a range of strategies and services to help both the perpetrators of violence and victims.

This will require of religious people repentance and humility : a recognition that we have hurt one another, we have misused religion to seek power over others, we have allowed institutional self-interest to hide the spiritual heritage entrusted to our care. Too easily we have passed fine resolutions, but failed to live by them ourselves. In this gathering it is we ourselves who need to change. This Global Assembly is a celebration and a thanks giving for all who have pioneered this work and enthused us with their dreams; but it is also a time of dedication, when strengthened by each other's encouragement, we shall commit ourselves to be used in the building of the new and spiritual world home, in which all people enjoy a fully human life.

It is hard to assess the impact that religious people can have on political processes, especially as politicians seldom acknowledge those who have influenced them. Modern communications have given added weight to popular opinion. Religious leaders may play

an important role in forming public opinion. They can insist on the relevance of spiritual and moral considerations. They have helped to maintain public alarm at the enormous stockpile of nuclear weapons and other means of mass destruction. They have voiced public outrage at the starvation of millions of people, as a result of hunger, war, injustice and an unfair pattern of international trade. They have upheld human dignity and protested against torture and racism. They have underpinned efforts to develop internationally agreed standards of human rights and have helped to monitor their application.

In all religions there is an increase of extremism, which also alienates others from any religious allegiance. Religious differences sometimes enflame political and economic divisions and sometimes religion is exploited by the powerful as an instrument of social control.

It is easy to deplore intolerance – especially in others. It is harder to understand its causes, which may be psychological or related to a group feeling politically, culturally or economically marginalised. Intolerance may be caused by fear or ignorance or it may be based on exclusive claims to truth.

The educational task is still far from complete. Increasingly formal and non-formal training, teaching and research will become more practical with an emphasis on ways of cooperating to face urgent problems and to seek a global ethic or consensus on moral values. We should be trying to show that people of all religions and races can agree on the importance of peace, mercy, compassion and tolerance. Only together will prejudice and discrimination be removed, violence and injustice ended, poverty relieved and the planet preserved. In our contemporary world, we are very conscious of the persistence of injustice, war, hunger and environmental damage; and we are conscious too of the many ways in which religions can be used to perpetuate division and misunderstanding. Why not long for a world where men and women of faith strive to know and respect one another's beliefs and ways of life, to work together for the common good of all, to build up a true world community from our diverse communities.

World Peace can be restored at the earliest if we propose the creation of an "Inter-religious Spiritual Forum for Cooperation with United Nations" with a view to having all the important religious leaders of different faiths for discussing and resolving to be compassionate, tolerant, humanitarian and good to others.

The Global Open University Nagaland has launched Master's level Degree Programmes in the areas of Peace and Global Security, Disarmament Studies, Diplomacy, Intellectual Property Rights, Geriatric Care, Spirituality, Ethics etc. for bringing peace on our mother earth in the third millennium.

Let us remember what we read in Upnishad – "From the unreal, lead me to the Real; From darkness, lead me to the Light; From death, lead me to Immortality".

SUGGESTIONS FROM THE CONFEDERATION OF INDIAN UNIVERSITIES (CIU) TO THE PRIME MINISTER OF INDIA FOR MODIFYING THE DEVELOPMENTAL POLICIES

The Confederation of Indian Universities (CIU) has worked day and night for diagnosing the weaknesses in the different developmental systems and working methodology of the Government of India as well as the different States / Union Territories. Based on the survey conducted among five million persons for collecting their views, the following suggestions have been formulated under the dynamic leadership of Dr. Priya Ranjan Trivedi for the perusal of the Hon'ble Prime Minister of India :

FOR OVERALL DEVELOPMENT OF YOUNG PEOPLE

1.1 Principles

We want the Central Government to believe that the key issues for India's young people are:

- a) access to secure, affordable and appropriate long term housing;
- b) meaningful work and a competency based wage system;
- c) access to education and training;
- d) a clean and healthy environment;
- e) access to diverse cultural and recreational facilities;
- f) access to reliable and affordable transport;
- g) access to a living environment which is free from the threat of physical or emotional abuse or discrimination of any kind; and
- h) access to health services which focus on the social, economic and environmental factors that impact on the lives of young people.

Information about services available to young people must be accessible and comprehensible.

We oppose all forms of ageism, and support initiatives to counter this, including public education and affirmative action.

Youth interests must be included in public policy decision-making, and this requires greater input from young people themselves.

Recognising that young people have a positive contribution to make to society, we support representation from young people at all levels of Government. Young people must not only play a central role in formulating those policies which affect them, but they should be included more widely in general policy formulation.

1.2 Goals

We want the Central Government to believe that we will:

- a) facilitate processes which allow young people to express their needs and aspirations at all levels of Government, as well as in their own communities;
- b) listen to young people through regionally based Youth Advisory Committees comprising representative groups of young people with a range of interests and skills, who will meet to discuss ideas, initiatives and solutions to problems, as well as provide feedback and advice on Government programmes. These Advisory Committees will have input at both state and national levels, to assist with greater coordination of national, state and local initiatives;
- c) support the right of people from the age of 16 years to vote and to hold public office, in recognition of the increasing awareness of and responsibility towards current issues of young people.

1.3 Short Term Targets

1.3.1 Unemployment

We will work towards the implementation of a national employment strategy for young people, to be administered at a local level with a focus on facilitating community development.

Local Employment Committees will be established. They will provide vocational training, financial support and the development of job opportunities which address needs within local communities and promote green jobs.

We also support greater representation of young people on regional economic organisations and greater recognition of community-based organisations which will finally generate environment friendly and sustainable as well as socially useful employment opportunities.

All labour market and training programmes must be developed in consultation with young people and should not be discriminatory on any grounds, including age.

1.3.2 Education

Our education system must be able to provide the intellectual and social skills necessary for confronting the social and environmental problems now facing India. The skills and knowledge of indigenous as well as non-indigenous ancestry and culture must be shared with our young people to give them an understanding of the basic solutions to our cultural crisis.

We are committed to:

- a) diverse and inclusive curricula at the school level;
- b) supportive school environments that cater for social and academic development and raise self-esteem ;
- c) support for early intervention programme;
- d) more flexible pathways to employment and training;
- e) increased emphasis on training in life skills;
- f) ensuring that training programmes are relevant and accessible, and that they are directly connected to ongoing employment opportunities; and
- g) civic education to enable greater understanding of and participation in all spheres of Government.

1.3.3 Youth Justice

The recognition of young people's issues and needs is inadequate in India's legal system. Young people often feel regulated by the law but without adequate access to and support from the legal system or their legal rights. Young people should be protected from violence, discrimination and exploitation.

We support:

- a) immediately establishing a Children's Bureau including a Commission for Children as well as a Children's Ombudsperson; and
- b) the development of a Children and Youth Justice Strategy which would include community legal education and an advocacy programme for young people.

1.3.4 Health

There are many serious health issues facing young people in India. Good health is closely connected to lifestyle. While young people should be encouraged to take responsibility for their own health, we recognise that physical and emotional wellbeing is often compromised by inadequate access to appropriate housing, income support, meaningful work, creative or recreational opportunities as well as by degradation of the environment.

An integrated and holistic approach to health policy is necessary.

Recognising the urgency of the problem, we support the development of strategies to deal with youth suicide and mental health problems among young people.

We also support increased HIV/AIDS education and more preventive programme targeted to young people with eating disorders.

1.3.5 Housing

The number of homeless youth in India is increasing and projections suggest this situation will worsen in the future. Adequate housing and especially secure long term housing are fundamental to young people working towards their chosen lifestyle.

We support facilitation of community housing and housing cooperatives in urban areas as a means to servicing the young homeless.

We support co-housing and all other forms of multiple occupancy.

Young people should be involved in the planning and development of housing appropriate to their needs.

1.3.6 The Environment

Young people have a clear interest and concern in the wellbeing of the planet. Respect for the environment is essential to the security and wellbeing of future generations.

We support community-based employment, housing and cultural activities which increase the quality of life and empower young people without consuming vast amounts of resources and generating excessive waste.

We encourage Government support and facilitation of innovative environmental projects including urbanised community farms as well as gardens, alternative housing construction, design, energy conservation and alternative energy generation, recycling and secondary resource management.

POLICIES FOR OLDER PEOPLE

2.1 Principles

In recent years, political parties have been primarily concerned with economic indicators of value. They have devoted scant interest to quality of life issues. When the value of people is measured by their productive capacity inside the market place, older people tend to be disregarded, considered only when their votes are needed at election time.

We consider it fundamental that older people be accorded the same consideration and respect as everyone else. The experiences, skills, wisdom and memories of older people are assets for the whole community. We oppose all forms of ageism, and support initiatives to counter this, including public education and affirmative action.

2.2 Goals

We aim to give older people control over their own social situation, enabling them to realise their potential as fully participating members of society.

This means that they should have the power to take part in designing the institutions that will affect their well-being.

The exercise of choice to determine how to live, and what kind of care is needed, is as important for older people as for everyone else.

2.3 Short Term Targets

We are working towards:

- a) promoting a supportive environment for older people;
- b) giving everybody the right of early retirement;
- c) ensuring that the right to work is not governed by age;
- d) adequate health services;
- e) ensuring that older people have access to a range of suitable accommodation including quality public sector housing;
- f) personal care for all older people;
- g) providing sufficient home and institutional care so that older people who need assistance can be assured of living out their lives in comfortable and dignified surroundings that are appropriate to their individual conditions and capacities;

h) easing the problems of transport for older people;

POLICIES FOR THE DEVELOPMENT OF WOMEN

3.1 Principles

We are committed to the following:

- a) the protection of women's rights to equal respect, opportunity and responsibility in society;
- b) basing policies on ensuring equal access by women to all areas of political, social, intellectual and economic endeavour;
- c) increased and equitable participation by women in all decision-making processes;
- d) infrastructure changes to protect women from inequality, exploitation, poverty and violence; and to enable them to reach their full potential;
- e) the right of women to make informed choices about their lives - lifestyle, sexual identity, health, whether to bear children, their reproductive process, etc. Discriminatory laws against women must be repealed. Women and men should be able to choose whether they participate in the areas of paid work and/or domestic responsibility.
- f) women having equal access to all forms of education and training.

3.1.1 Women and Violence

All women have a right to safety at home, on the street and in the workplace, but violence against women is not only a women's problem. Breaking the cycle of domestic violence in particular is a societal problem and the provision of shelter and refuge should be considered only a short-term solution. Any act of violence should be condemned publicly and privately as unacceptable. Our long-term objective is to create an environment of nonviolence, and to provide care and protection for victims in the interim.

3.1.2 Women and Pornography

We oppose the production, performance, display and distribution of pornographic material which depicts women and children as suitable objects for violence and sexual exploitation.

3.1.3 Women and Education

We seek to ensure educational experience and outcomes for girls and women that enable full and equal participation in all aspects of economic and social life.

3.1.4 Women and the Environment

The environmental decision-making process has, to date, largely excluded women.

Some environmental planning and decision-making needs to be decentralised and devolved to local communities in such a way that the concerns of all people are heard.

The domestic sector and those industries where women predominate should have equal representation in environmental planning and decision-making.

3.1.5 Women and the Arts

We support greater recognition of women's contribution to arts and acknowledge the role of women in shaping and representing cultural norms.

We will work towards ensuring that the views of women are represented, for example, through such avenues as representation of women on Arts Advisory Boards.

3.1.6 Women and Sport

We support equal access for women and men to recreation facilities, coaching, sports education, competition, media coverage and funding. The need for programme which encourage girls to continue sporting and recreational pursuits beyond early secondary schooling is a priority.

3.2 Goals

3.2.1 Political and Public Participation

We will work towards:

- a) ensuring that any reform is consistent with India's commitment to the UN Convention on the Elimination of all forms of Discrimination Against Women (UN-CEDAW);
- b) ensuring equal representation of women in decision-making processes in the organisations of at all levels, local, state and national; and
- c) ensuring that all public boards and committees will have a statutory requirement for equal representation of women and men.

3.2.2 Women and Violence

We will work towards:

- a) a review of all relevant laws which have bearing on violence against women, treatment of victims and perpetrators; and

b) ensuring women's access to safe and secure accommodation through a comprehensive housing policy and the provision of adequate emergency housing.

3.2.3 Women and Pornography

We will work towards promoting the use of legal complaints procedures and processes.

3.2.4 Women and Health

We will work towards:

- a) ensuring research and development funds are allocated both to women researchers and into women's health problems;
- b) ensuring changes to the education of health providers with regard to women's health issues;
- c) improving women's access to information regarding their health in order that appropriate personal decisions can be made;
- d) preventive health strategies targeting women and girls, including those which reduce the incidence of smoking amongst females;
- e) providing strategies for more women medical practitioners to enter those specialisations where women are currently under-represented.

3.2.5 Women and the Workforce

We will work towards:

- a) ensuring equal opportunities for people employed in the paid work force with family responsibilities;
- b) ensuring the provision of adequate child care facilities in the workplace;
- c) encouraging flexible working conditions to enable workers with family responsibilities (eg. parents minding young children, and adult children minding ageing parents) to fully participate in the workforce, and avail themselves of opportunities equally with those who do not have those responsibilities;
- d) providing centres for continuing education and training for workers, including training and promotion opportunities for part-time and temporary workers;
- e) taking steps to facilitate re-entry, without loss of occupational status, of people who leave the workforce for parental leave or family responsibilities leave;

f) ensuring changes brought about by strategies relating to the elimination of sexual discrimination will not place undue and unequal responsibility upon women and add to women's workload;

g) ensuring that award restructuring includes the specific aim of upgrading and broadening the low-paid, low-status positions that have traditionally been work for a majority of women, particularly migrant women; and

h) ensuring that women enjoy the full benefits of enterprise bargaining arrangements, particularly in the traditional work areas such as the service industry, where there is low union representation.

3.2.6 Women and Education

We will work towards:

a) ensuring that a National Policy for the Education of Girls in Indian Schools is implemented at all levels, until national indicators on education outcomes are relatively equal for women and men;

b) the elimination of gender-based harassment in school and educational institutions and the establishment of Equal Opportunity offices to assess and consult about the effectiveness of programme and policies to achieve this;

c) ensuring that teacher training for new and continuing teachers critically examines the patterns of sex role stereotyping that occur in our society;

d) continuing Territory / State / Central programme to promote girls' and women's greater participation in access to school, and university education, especially in science and technology disciplines;

e) promoting policies to achieve a higher retention rate of women at higher degree level in universities; and

f) promoting policies to encourage a higher representation of women academics in all faculties of universities, and a higher proportion of women in senior academic positions.

3.2.7 Women and the Law

We will work towards:

a) remedying existing discrimination by ensuring a higher representation of women on legislative and judicial bodies;

b) examining ways women could be encouraged to enter private practice and the bar;

- c) encouraging women to enter all areas of the legal profession,
- d) reviewing all laws which have a bearing on violence against women;
- e) developing further options for the protection of victims, and for the naming of perpetrators;
- f) addressing the myth of 'victim-blaming' by promoting change in societal attitudes to violence;
- g) removing sexist language from existing laws, and ensure future legislation is non-sexist and does not assume assignment of roles according to sex ;
- h) repealing laws relating to sex work.

3.2.8 Women and the Environment

We will work towards:

- a) implementing strategies and programmes to ensure that all environmental assessments include consideration of impact on health, community and women; and
- b) implementing strategies to ensure that women's needs and advice are considered in the area of urban planning.

3.2.9 Women and Sport

We will work towards:

- a) developing monitoring strategies for equal opportunity and anti-discrimination principles to be applied to the administration of all sporting organisations; and
- b) ensuring allocation of funding and awards will not be discriminatory and will allow equal opportunity for women.

3.3 Short Term Targets

3.3.1 Political and Public Participation

We will work towards developing programmes and strategies to provide women with the skills to be effective candidates and members of parliament and to actively promote women to stand as candidates for election.

3.3.2 Women and Violence

We will work towards:

- a) establishing a national enquiry into sexual assault and uniform sexual assault laws. Specifically, the Party want recognition of sexual assault within marriage and relationships;
- b) providing education from early primary school level on non-violent conflict resolution;
- c) addressing the health effects, both physical and emotional, of violence against women, through adequately funded, appropriate health and education programme;
- d) using publicity and educational campaigns to bring about a change in the way violence is viewed in our society, which includes a strategy to educate men that violence against women is a crime;
- e) expanding crisis services for women, with and without children. These include refuges, and services in areas such as rape crisis, abortion counselling, incest and domestic violence. Special provision needs to be made for geographically remote locations.

3.3.3 Women and Pornography

We will work towards:

- a) extending classification systems to include video games, live performances and other leisure technologies;
- b) strengthening regulation on the display of advertising of material which includes violence against and sexual exploitation of women and children;
- c) instituting an education programme to encourage critical examination of the role that the entertainment industry and the media play in the portrayal of women and children as victims of violent and sexual exploitation;

3.3.4 Women and Health

We will work towards:

- a) ensuring access to safe contraception on demand for all women, and information on options available;
- b) ensuring that women have a choice of where and how to give birth and information on available options;
- c) repealing all laws which restrict the right of women to choose abortion and which restrict access to services; and
- d) ensuring access to legal, affordable, humane and safe abortion for all women, and provision of counselling pre and post-termination.

3.3.5 Women and the Workforce

We will work towards:

- a) ensuring that apprenticeships and training programmes have positive discrimination towards women to ensure that opportunities are not denied to women because of inaccurate evaluation of women's ability;
- b) giving the provision of maternity and paternity leave equal status in order to encourage the sharing of the parenting roles and equality of gender in the workplace;
- c) undertaking programmes to raise awareness on issues of gender equity in the workplace and in education;
- d) ensuring that women have access to adequate retirement income, including superannuation; and
- e) ensuring continuation of superannuation during parental leave.

3.3.6 Women and Education

We will work towards:

- a) providing adequate funding for the support structures and the support personnel necessary to implement national policy;
- b) ensuring that affirmative action is practised in schools to overcome the attitudes inherent in our society that result in different expectations for girls and boys. Such action would include changing school curricula and increasing girls' participation in areas of maths, science, technology and trades;
- c) the application of affirmative action to increase the number of women in senior, policy and decision-making positions in educational systems;
- d) providing bridging courses for women to facilitate their entry into the formal education arena;
- e) expanding women's participation in science and technology to ensure that the introduction of new technology does not further the advantage of men; and
- f) increasing women's access to training and education in the use and understanding of computers and computer technology.

3.3.7 Women and the Law

We will work towards:

- a) applying affirmative action to ensure that more women hold senior level positions within the Public Service departments responsible for policy, administration and enforcement of the law;
- b) applying affirmative action to ensure that more women hold senior faculty positions within Schools of Law;
- c) strengthening laws which prohibit portrayal of women or children as objects of violence or sexual exploitation; and

3.3.8 Women and the Environment

We will work towards:

- a) ensuring equal and proportionate representation of women on environmental decision-making bodies; and
- b) applying affirmative action principles to ensure women are able to participate at all levels of planning, implementation and assessment of environmental policy.

3.3.9 Women and Sport

We will work towards:

- a) providing public education to raise awareness of women's rights to equal recreation and the importance of this; and
- b) providing public education to change attitudes towards women in sport.

POLICIES FOR HEALTH

1.1 Principles

We believe that good health is dependent upon:

- a) the environmental, social, political, economic, cultural and spiritual context of life;
- b) protection of the biosphere and Earth's ecosystem, and ecological sustainability;
- c) peace and nuclear disarmament, freedom from war, freedom from violence in the community and in the home;
- d) social justice and community participation in decision-making;
- e) the provision of equal access to affordable, appropriate health services, which emphasise care as well as cure;

- f) an emphasis on community-based and community-controlled primary health care, available from a comprehensive range of service providers;
- g) the placement of greater emphasis on health promotion, disease prevention and education for optimum health;
- h) research which encompasses traditional and alternative/ complementary treatment modalities;
- i) an intersectoral approach to policy-making with health-outcomes criteria affecting decisions made across a range of portfolios, such as transport, housing, environmental protection, employment, local community services and education;
- j) the availability of a universal health fund covering not only medical and hospital, but including the full range of appropriate health services and also including dental and nursing services; and
- k) forms of treatment which have been developed in an ethical framework which acknowledges true environmental and social cost/benefits.

1.2 Goals

We aim to:

- a) develop and implement a national environmental health strategy which supports a public health approach to health enhancement, and identifies clear national health priorities;
- b) reduce high hospital admission rates by re-orienting health service provisions to a public health focus which is preventive, and to a primary care approach concerned with maintenance of optimum health status;
- c) phase out the use of animals for medical research;
- d) instigate a parliamentary inquiry into iatrogenic deaths in hospital;
- e) develop, with widespread community consultation, a Health Bill of Rights and Responsibilities;
- f) ensure that India fulfils international obligations to address environmental issues which impact on health;
- g) ban the use of hormones and drugs on farm animals, other than those medications which are therapeutic and individually prescribed by veterinarians;
- h) restrict the use of chemical food additives and the practice of irradiating food;

- i) consider the effects of fluoridation of drinking water ;
- j) expand the network of multi-disciplinary community health centres which will provide a range of treatment options, with community-based control of resource allocation;
- k) expand the availability of birthing centres, where midwives provide primary management;
- l) expand the availability of mobile women's health centres in remote and rural areas;
- m) initiate programme aimed at reducing suicide rates, particularly among young people and people in rural areas;
- n) reintroduce dental care as a service claimable under Medicare.

1.3 Short Term Targets

We support:

- a) the maintaining of Medicare;
- b) an increase in the Medicare levy on the basis that such funds (i.e. those derived from the increase) be directed specifically to primary and public health care (i.e. to maintenance of optimum health) rather than to reactive disease management interventions;
- c) the proposal that all pharmaceutical drugs be sold under their generic name as well as under their commercial one and that the generic name appear in all advertising for a particular drug;
- d) the implementation of legislation whereby Medicare rebates are available across a wider range of therapeutic interventions;
- e) the development and implementation of social policies to address the widespread over-use of medications.

POLICIES FOR IMPROVING THE STATE OF EDUCATION AND TRAINING

2.1 Principles

We support :

- a) a vision of education as a life-long process of intellectual, physical, emotional, ethical and cultural development, taking place in a variety of formal and informal settings, and aimed at empowering people to live purposeful, satisfying lives, to help develop

communities that are peaceful, just and ecologically sustainable, and to extend that ethical commitment to the other peoples of the world. Lifelong education can enable all citizens to make a lifelong constructive and creative social contribution;

b) a vision of lifelong education, within which each person may be called on to become a teacher sharing skills, knowledge and insights with others;

c) the right of all people to have access to educational experiences appropriate to their needs, abilities and aspirations, and to adequate financial support while undertaking formal educational programme;

d) the right of all children to an education;

e) the right of all people who are committed to home-schooling to choose to educate their children at home;

f) major programme to create jobs, and the development of a rational approach to workforce planning at the national level, so that all people may participate in socially useful and satisfying forms of work;

g) the maintenance and strengthening of a quality public schooling sector;

h) the right of parents and citizens organisations, community groups and academic and student unions to play a significant role in setting directions, priorities, curricula and the running of the public education system. This will assist the development of an education system appropriate to a multicultural India, which places more value on a sense of community and enriching personal relationships than on motives of competition and profit which presently permeate our society; and

i) the important roles played by professional associations, private providers, community groups and business in providing educational opportunities.

Recognising that in a technological society, empowerment of the individual relies on his/her ability to effectively use communication technology and information systems, we will support education policies to enhance the opportunity for all Indians to become scientifically and technologically literate.

2.2 Goals

2.2.1 General

We will work to:

a) provide a quality public education system with guaranteed access for all;

- b) develop a national work-force planning capacity based on sound research, and reflecting national industry and employment objectives which are built on the fundamental principles of social justice, sustainability and increasing national self-reliance;
- c) develop lifelong education and training options which enable people to change occupations as they mature and grow older;
- d) provide additional incentives and provision for a continuous cycle of in-service training for teachers at all levels of education, including tertiary teaching;
- e) develop the associationist principle, leading over time to a diminution in the role, authority and scale of centralised educational bureaucracies, and an increased level of democratic and responsible community involvement and authority in setting the educational objectives and curriculum content of our schools; and
- f) increase emphasis in education on such aspects as:

understanding human relationships and psychological processes,

- physical and emotional health and well-being,
- dignity and self esteem,
- the development of an ethical commitment and of caring attitudes to other people and to the planet,
- the importance of cooperation and social benefit rather than competition and profits as social goals,
- a sense of responsibility for the well-being of future generations, and
- adaptability and flexibility.

2.2.2 Tertiary Schooling

We will work to:

- a) implement a policy of free tertiary education;
- b) extend access to tertiary education through development of more decentralised campuses, through the use of distance delivery modes and through open access programmes;
- c) conduct environmental audits and environmental development plans in all tertiary institutions; and
- d) encourage all tertiary institutions to include environmental programmes among their courses.

2.2.3 Primary and Secondary Schooling

We will work to:

a) review the current National Statements in the key learning areas to ensure that:

- there is a balanced concern in school curricula for all dimensions of human development - intellectual, physical, emotional, ethical and cultural;
- there is a balance between such emphases as personal development, intellectual understanding, technical and technological competence, vocational skills and learning for democratic citizenship;
- critical perspectives and processes are integral to all areas of the curriculum in schools;
- there is emphasis on global interdependence;
- all curriculum areas reflect a commitment to the development of a more peaceful, just, democratic and ecologically sustainable world for all people; and

b) increase democratic participation in the decision-making processes within schools and within home-based and community-based educational settings;

c) guarantee the right of all children to education which promotes freedom of thought;

d) guarantee the right of parents to choose to educate their children at home or in other settings without being bound by compulsory registration, provided they can demonstrate a commitment to ensuring a balanced education for their children; and

e) encourage the development of local, community-based and democratically controlled public schools, through provision of capital and recurrent funding to such schools on a demonstrated needs basis, provided those schools reflect the principles of the national education policy.

2.2.4 Ethical Commitment to other Peoples of the World

We will work to:

a) extend the funding available through international organisation for educational projects aimed at enhancing international cooperation and understanding, and at promoting social justice and sustainability within communities and countries overseas through the unconditional funding of projects devised by and for the people of those communities and countries;

b) ensure that educational links with other societies, through such appropriate development means as training schemes, exchanges, admission of overseas students, development projects and consultancies, are characterised by justice, equity and cultural sensitivity;

- c) develop educational material and methods for future-vision building; and
- d) provide increased financial support for the activities of Development Education Centres.

2.3 Short Term Targets

2.3.1 General

We will work to:

- a) allocate increased resources to all levels of formal education, but with particular attention to supporting the renovation of the primary sector;
- b) extend Open Learning opportunities so that people of various ages in all locations may have access to quality educational programmes of formal and informal study;
- c) retain appropriate centralised conditions of employment for teachers, including the principle of tenure;
- d) extend funding and other support to community groups, non-government organisations, business, private providers and others offering appropriate community education programmes and facilities, including those catering for interest areas and segments of the population not catered for by conventional and formal educational provision;
- e) provide additional funding for students who are physically and/or intellectually disabled, or who are disadvantaged by location and/or distance.

2.3.2 Tertiary Schooling

We will:

- a) work to increase democratic participation in the decision-making processes within tertiary institutions;
- b) allow the collection of fees from students for amenities and services, provided any fees collected are under the democratic control of the student body.

2.3.3 Primary and Secondary Schooling

We will support a review of the Profiles developed in each area of the National Curriculum to ensure that they reflect the intentions of the National Statements, are supportive of sound educational principles, and are not used to promote an unwarranted technical, vocationally-driven notion of educational attainment.

2.3.4 People Requiring Special Consideration

We consider that the following groups of people should receive special consideration:

- people in remote areas; and
- people from economically disadvantaged backgrounds.

We will work to:

- a) raise awareness within the community of the educational needs of these special groups;
- b) guarantee equity of access as well as participation in appropriate curricula;
- c) establish and maintain conducive as well as educational environments;
- d) guarantee equitable resource allocation;
- e) provide specialist support services; and
- f) actively encourage such specialists to take up teaching and other positions within educational institutions.

2.3.5 Education for Sustainability

We will work to:

- a) develop a national strategy for environmental education which addresses the complete range of environmental education in the formal and informal education sectors, with some emphasis on locally based action;
- b) encourage Indian industry to ensure that its vocational practices are environmentally sound, and that vocational training (and other education) are to world best practice standards and to the best available environmental standards (which may be in advance of existing world best practice); and
- c) provide support for schools which develop organisational practices to minimise their environmental impacts (for example, energy use), and ensure that maintenance and refurbishment of infrastructure is environmentally sound.

HOUSING POLICY FOR ONE AND ALL

3.1 Principles

We will support initiatives which ensure that:

- a) new urban developments are environmentally sound, respect human scale and facilitate community interaction; and
- b) the community is able to participate fully in urban planning and in the assessment of development proposals.

3.2 Goals

We will work to:

- a) ensure that people unable to provide for their own housing are given assistance to do so by the Government;
- b) eliminate housing-related poverty by increased provision of public housing;
- c) increase tenant participation in decisions about services to be provided;
- d) review building codes so that houses are constructed in accordance with energy efficient design criteria and so that building materials are selected for their low environmental impact;
- e) regulate the materials used by the building industry so that the environment is protected from both over-exploitation and toxic processes;
- f) encourage the development of urban villages in consultation with local communities to allow people to live in ecologically and socially satisfying ways within cities; and
- h) ensure that the facilities that promote healthy communities (recreational, cultural and social amenities) receive priority in town planning.

3.3 Short Term Targets

3.3.1 General Planning

We propose that:

- a) any future urban development be based on environmental and social planning principles by
 - ensuring that house blocks are correctly aligned for maximum solar access;
 - landscaping for rainwater trapping and waste water recycling;
 - maintenance of privacy and noise controls;
 - provision of adequate public open space;
 - designing integrated cycleway networks across urban areas; and
 - lowering residential speed limits.

b) town centres be planned to contain a greater mix of commercial activities with

- introduction of more residential activity; and
- re-humanising of the centres through more public open space and attractive urban design;

c) different types of housing be available to cater for diverse social needs, including

- youth;
- non-family groups;
- the disabled; and
- older people;

d) the community's reliance on private motor vehicles be reduced through

- improvements in public transport;
- concentration of residential, educational and small-scale commercial development around neighbourhood shopping centres;
- the introduction and expansion of commuter cycling systems; and
- strategic location of carparking spaces.

3.3.2 Urban Development

The public transport system must be energy-efficient, economic and convenient, e.g. light rail integrated with other express and normal bus services to other parts of the cities.

We propose:

a) that planning of urban developments focus on the concept of urban villages based on environmental and social principles;

b) that public housing be well integrated with other types of housing;

c) that continued funding of community housing programmes be supported; and

d) that certificates with gradings be issued to owner-builders in remote areas so people can live in "unfinished" houses if they choose to do so.

3.3.3 Building Design

We propose:

a) mandatory provisions requiring new buildings to meet minimum standards of energy-efficiency, noise insulation and water conservation;

- b) encouragement of local wastewater recycling, composting toilets and rainwater collection systems;
- c) adequate car parking requirements for buildings; and
- d) a system of solar access rights to facilitate the passive solar design of new residences.

EFFICIENT TRANSPORT POLICY

4.1 Principles

Our transport policy is based on:

- a) enabling people to obtain access to a wide range of destinations, goods and services in a safe, timely and energy-efficient manner which has low environmental impact;
- b) the recognition that urban form and design are crucial aspects of transforming transport policy;
- c) using integrated transport and urban planning, and incorporating environmental and social costs, so that energy-efficient modes of transport (walking, cycling, public transport, rail, coastal shipping) and non-transport solutions are able to compete for funding with the provision of facilities for cars and trucks;
- d) empowering local communities so that they can make informed choices;
- e) getting the most out of existing facilities by managing demand, rather than continually building facilities to meet projected demands; and
- f) favouring walking, cycling and public transport as the preferred modes of “passenger” transport.

4.2 Goals

We aim to:

- a) dramatically reduce per capita and overall use of fossil fuels for transport, making the system sustainable into the future;
- b) reduce car ownership and use for urban commuting while improving the quality of service provided by public transport, especially in relation to frequency, speed and convenience;
- c) increase recognition that access to an adequate level of public transport services is a community right and that these services should remain under public control and not be subjected to full cost recovery;

- d) make users of private transport aware of, and ultimately pay for, the full costs of their transport choices;
- e) increase opportunities for the community to participate in integrated transport and urban planning;
- f) shift urban form towards the development of urban villages, to bring people and jobs together in areas well-serviced by public transport;
- g) reduce the direct impacts of transport infrastructure (e.g. noise, air pollution) on urban neighbourhoods and provide fair compensation for those affected by new transport infrastructure;
- h) improve the safety of roads, especially for pedestrians and cyclists, and of airways and sea-lanes;
- i) provide improved access to transport services for residents of rural India;
- j) improve services for those with special needs, including people with disabilities, youth and older people; and
- k) encourage the cycling and walking amenity of the streets by supporting, for example, lower urban speed limits on residential roads.

4.3 Short Term Targets

4.3.1 Overall

We will work to:

- a) ensure the adoption of national standards for ambient air quality equal to or better than world best practice;
- b) ensure the adoption of national noise and emissions standards for petrol and diesel vehicles equal to or better than world best practice; these standards will include requirements for testing; and
- c) develop targets for self-containment levels in urban planning; that is, measures of the degree to which jobs, retailing and local services are located with residential developments.

4.3.2 Land Transport

We will work to:

- a) in each major city, double the market share (in passenger kilometres) held by public transport compared with private cars by 2020;
- c) ensure the adoption of targets for the average fuel efficiency of new additions to the national car fleet of 5.0 litres per 100 km by 2020, reducing to 4.0 litres per 100 km by 2025;
- d) ensure the adoption of mandatory fuel-efficiency labelling of new cars;
- e) make all central funding or approvals for transport projects contingent on the achievement of specified environmental and social criteria; these criteria will include air quality standards (including greenhouse emissions), environmental protection benchmarks and public participation;
- f) ensure that in planning any new road construction, thorough consideration is given to the need for the road, viable public transport alternatives, destructive impact on local communities as well as the external costs to the environment.

4.3.3 Ports and Shipping

We will work to:

- a) cap the number of port sites at the present number;
- b) amend rules to expose oil tankers to strict and unlimited liability when travelling within Indian waters, bringing India into line with the world best practice embodied in the United States Oil Pollution Act 1990 ; and
- c) institute strict and mandatory controls on ballast water discharges and on other practices that put the Indian marine environment at risk.

4.3.4 Air Transport

Recognising that air transport causes considerable environmental damage and is also less fuel efficient by a large factor than ground transport, particularly in comparison to transport by rail or by sea, we consider it important that the environmental costs of air transport are taken into account openly and incorporated into the cost of air travel.

We believe there are many unexplored possibilities for decreasing the dependence on air travel. One of these is the expansion of teleconferencing. In general, we will support measures such as tax incentives which will encourage people to fly less.

We recognise that bad planning in a number of cases has caused housing areas near airports to have an unacceptable noise level and support moves to remedy such mistakes, for example through modifying flying patterns and airport operations and compensating residents in the most affected areas.

INFORMATION TECHNOLOGY POLICY TO BE USER FRIENDLY

5.1 Principles

Our Information Technology (IT) policy flows from the basis that we must adopt lifestyles and development paths that respect and work within the ecological limits. Developments in IT need to be subject to community scrutiny and the benefits of IT need to be shared amongst all members of the community and not be used to increase power and privilege for a few.

We want the debate about technological choice brought out of the back-rooms of Government and industry and into the public arena. There must be appropriate public IT planning to ensure integration of IT into the broader social and economic objectives and to avoid the adoption of IT products becoming supplier-driven and piecemeal.

Full implementation of on-line services envisaged in some “Information Superhighway” proposals will be very expensive and the extent to which Government should fund such proposals requires further analysis. We will support sufficient Government funding to enable no- or low-cost access to e-mail, the Internet and other electronic information resources for schools, libraries and public sector organisations, in a context where the provision of such services is important to full participation in society.

We support direct measures, rather than tax incentives, which tend to be less equitable, to help organisations convert their systems to avoid the millennium bug.

5.2 Goals

Real opportunities exist for India, with a relatively educated and skilled population, to make a large contribution to developments in software, multimedia and intellectual property.

We support universal access to the fullest range of information and communication services.

5.3 Short Term Targets

We propose:

a) the establishment of an independent Information Technology Assessment Board (ITAB), to continually assess both new and existing information technologies and to recommend Governmental action. Economic assessment would run alongside checks on health, safety, environmental and cultural impact, risks, and job satisfaction. The ITAB would have a statutory obligation to keep the public informed of its work in a clear and accessible way;

b) the encouragement of significant value-added operations in IT, such as Research and Development (R&D).

c) in the practices of Government Departments and in private business, the enforcement of the principles of:

- privacy - maintaining the confidentiality of personal information; and
- freedom of information - enabling public access to statistics and decision-making processes;

d) the encouragement of the adoption of codes of ethics or practice for which members of practising professional bodies can be suspended or “struck off” if the code is contravened ? preventing or restricting their ability to practise;

e) to make Government set an example of open and responsible use of IT in its own systems;

f) the promotion of the development of networking standards for global operation in order to boost international communication, understanding and trade;

g) support for a democratic, egalitarian operation of the Internet with appropriate regulation based on wide public discussion;

h) support for the growth in “telecommuting” whereby office staff can work from home, reducing the demand for physical commuting, whilst ensuring protection for employees’ conditions;

i) support the growth of teleconferencing in order to decrease the dependence on air travel

j) support for the growth of remote “work centres” or “tele- villages” in order to reduce depopulation and increase employment opportunities in rural areas;

k) support for the growth of “tele-conferencing” in order to decrease the need for travelling;

l) to prevent the emergence of monopoly in telecommunications, computing or IT;

m) to identify and list sensitive applications/systems (i.e. with safety or security implications) and restrict their design to qualified professionals holding a valid licence to practise;

n) to achieve greater public review of the development of Government computer systems, requiring proposals for new or amended Government systems to be widely published with adequate if reasonable objections are recorded;

o) to support universities as well as other research establishments in research free of external direction by industry or Government;

- p) to support the full and frequent flow of information from researchers to the professions and the media regarding research progress and its implications;
- q) support for an industry free to develop hardware, software and services commensurate with ethical business practices;
- r) the encouragement of flexible approaches in industrial relations responses to changes in organisations, working conditions, job definitions and skill boundaries - all affected by IT;
- s) the imposition of a rating and censorship system (similar to film) for computer games and related leisure services;
- t) the improvement of women's access to training and education in the use and understanding of computers and IT;
- u) to ensure that the education system promotes children's access to, and ability to use, information and technology;
- v) facilitating access to Internet and e-mail services for rural residents by providing local call cost access through a Government-managed and/or funded rural internet provider service.
- w) enabling the trained IT professionals to get neological training in the field of entrepreneurship for establishing more and more training centres all over the country with a view to having a competent cadre of young men and women having expert knowledge in the field of different aspects and facets of information technology for managing the third millennium.

POLICIES RELATED TO WORK INCLUDING EMPLOYMENT

1.1 Principles

We distinguish between work, defined as any purposeful activity, and employment, defined as paid work. We support the principle of full employment, meaning the availability of safe, socially useful, environmentally benign, adequately paid work for all those who wish to engage in it. This may be full or part time.

We define unemployment as the lack of availability of paid work for anyone who wishes to engage in it.

We do not support the perception in society that unemployed people cannot make a useful contribution to society. We reject any inference of 'inadequacy' in those who choose not to seek employment but contribute to society through other productive, economic and/or socially useful activities.

We are committed to redressing discrimination and inequality across the spectrum of work. We also believe that economic growth is an inadequate solution to the unemployment problem at a time when market economics and mass-consumerism have already placed the environment and people under heavy pressure.

The trend to globalisation and the view of economic rationalist theory that international competitiveness should be the priority consideration in economic policy clearly both need review. Constraints on globalisation are necessary for important environmental, social and economic reasons. Protecting employment in domestic industries is one of those important social reasons, and such protection may also have environmental benefits from reduced transport of goods. While protection can have an overall economic cost, this cost is of secondary importance to the social and environmental benefits, and is therefore a cost that is warranted for the social good. We realise that the logical consequence of the present conditions is that less formal work is needed and more free time becomes available for everyone's chosen pursuits. We will work towards shorter standard working hours and a reversal of current trends towards increased unpaid work. A radically new perspective needs to be taken. The green vision is one where work, leisure and income are all shared equitably. In a green society, everybody is the master of her/his own time. People must have time for leisure as well as for shouldering the responsibility of the family, society and the environment. People must also have time to keep better informed and to participate in politics.

1.2 Goals

We propose an employment, labour market and income policy that will recognise and reward all peoples' occupations appropriately, with a commitment to a proper safety net for all.

We aim to redress discrimination and inequality in employment and to promote equitable participation by all Indians regardless of gender, age or ethnicity.

We will work towards creating a society in which:

- a) the goal is full employment as defined above;
- b) the norm is shorter hours in paid work than at present;
- c) people enjoy self-esteem, security and material comfort whether or not they have paid jobs;
- d) it is recognised that all people have the potential to contribute to the enhancement of the community, whether or not they are in paid employment;

e) educational, recreational and creative opportunities and resources are provided for all people, regardless of age and regardless of whether or not they are in paid employment; and

f) actions which are positive for the society and the environment are valued whether they are paid for in the formal economy or carried out in the informal sector.

1.3 Short Term Targets

There is plenty of socially and environmentally sustainable work which needs to be done and imaginative forms of job creation and sharing will need positive intervention by Government.

There are also many areas of manufacturing and services which could be encouraged whilst taking careful account of the need for such activities to be environmentally positive or at least benign.

We propose:

- a) the creation of a system in which all citizens have the right to a Guaranteed Adequate Income.
- b) a society where paid work is distributed more equitably than it is at the present time;
- c) greater equity in job sharing because of the shortage of full-time jobs for all and the need for more leisure time and less stress;
- d) greater equity in job sharing between people from different regions, with different gender and of different ethnic origin;
- e) the creation of ecologically sustainable industries;
- f) legislation preventing discrimination against people who are not in formal employment;
- g) public discussion on the meaning of work, facilitated by the Government;
- h) the promotion of an anti-materialist culture to reduce needless consumption, whilst enabling people to fulfil their real economic and social needs.

SOCIAL CITIZENSHIP INCLUDING SOCIAL JUSTICE AND EMPOWERMENT

2.1 Principles

2.1.1 Inequities addressed

We propose a system in which the Central Government will assist the States, and where necessary mount its own programme, to address the uneven provision of basic services in India. The unevenness of delivery of services is exemplified by the disastrous state of housing, health and education that exists in many rural areas.

2.1.2 Work to be Redefined

We call for a redefinition of the concepts of work and unemployment.

2.2. Goals

2.2.1 Affirmative Action

We recognise a continuing need to focus on disadvantaged groups in the Indian community.

Affirmative action policies need to ensure that the opportunities and rewards for women are equal to those for men.

2.2.2 Strengthening Communities

While a world view is necessary if we are to both care for the planet and redress world-wide injustices and inequities, the fate of the world rests significantly on the actions of communities - both in their ability to generate local initiatives and in their combined ability to promote change at national and international levels. We aim to strengthen local democratic processes, encourage regional sustainable development initiatives and planning, and enhance management capabilities within local communities.

2.3 Short Term Targets

2.3.1 Income Security

We propose that the social security system be reformed. It should be simplified and made more uniform by:

- a) aligning all payments for adults and independent young people associated with unemployment, study, disability, special benefit and age pensions;
- b) aligning all youth payments and increasing these over time to reflect real living costs;
- c) amalgamating the various child support and family allowance payments, and increasing these in line with the cost of caring for children;
- d) linking all income and other support levels to changes in the cost of living, so that they are automatically adjusted for inflation.

2.3.2 Targeting Inequities

We propose that disadvantaged individuals and communities will be the focus of specific public housing, health, education and public transport programme.

2.3.3 Community Development

We propose that:

- a) financial assistance be provided to local interest groups to assist them to participate in local and regional planning and sustainable development initiatives;
- b) funds be made available from the Central Government for the coordination, preparation and implementation of ecologically sustainable strategic plans by state Governments and regional organisations;
- c) funds be made available for the planning and initiation of ecologically sustainable industries at local and regional level; and
- d) funds be provided for a Rural Community Initiatives Programme to be instituted to assist in the strengthening of rural communities, including improving opportunities for employment, cultural and youth activities.

INDUSTRIAL RELATIONS POLICIES FOR PRODUCTIVITY

3.1 Principles

The starting point for us in industrial relations, as in all policy areas, is ethics. The workplace should provide the opportunity for workers to be empowered and to engage in safe, socially useful and productive work. Criteria such as profitability and efficiency are important in structuring a workplace, but they are secondary.

The central issue in industrial relations is to maintain the arbitration system as the protector of the public interest.

We support:

- a) the provision of pathways for all employees to have work which is safe, satisfying and socially useful;
- b) opportunities for workers to receive education and training appropriate for the achievement of these goals;

- c) equal opportunities and fair and equitable treatment across the workforce for all employees;
- d) effective consultation between Governments, employers and unions on all aspects of industrial legislation;
- e) processes of conciliation and arbitration as the proper bases for a fair and effective industrial relations system;
- f) the rights of unions and unionists to take industrial action to protect and promote their legitimate industrial interests without legal impediment;
- g) the establishment of a Charter of Workers' Rights in special legislation;
- h) the right of all workers to be involved in participatory planning; and
- i) a wider role for the Indian Industrial Relations Commission (IIRC) a body to be established as an arbiter in industrial disputes to consider social and environmental implications regarding a dispute. Appropriate representatives of relevant groups should be given standing to appear in the Commission to present their views regarding such implications.

3.2 Goals

We aim to:

- a) maintain the system of industrial awards;
- b) extend the system of equal opportunity throughout the workforce;
- c) develop flexible and democratic workplace patterns and structures;
- d) support the highest standards of workplace health and safety.

3.3 Short Term Targets

We will work to:

- a) repeal the provisions against legitimate union activity such as boycotts and pickets in the Trade Practices Act and other pieces of Central legislation, and protect unions and workers against common law actions;
- b) provide accredited and transferable training and skill development for employees in a national framework;

- c) support a national system of industrial relations and facilitate the provision of more flexible working arrangements/hours where these are not at the expense of work satisfaction, workers' income or family life;
- d) extend union participation in the Central industrial relations system regardless of the nature of the employment of their members, such as casual or part-time employees;
- e) facilitate the continued effective and democratic functioning of unions;
- f) encourage employee owned or managed businesses, or businesses with significant employee ownership or control;
- g) establish processes which ensure the participation of women in enterprise or collective bargaining and other industrial negotiations;
- h) support legislation that ensures that employers recognise and negotiate with the relevant unions;
- i) support only those enterprise agreements that do not undermine the system of awards and award conditions, and support enterprise agreements that involve employers and unions;
- j) ensure resources are provided to organisations of the unemployed to give them an effective voice in society.

STRENGTHENING RURAL COMMUNITIES THROUGH RURAL RECONSTRUCTION

4.1 Principles

4.1.1 Rebuilding Rural Communities

While a world view is necessary if we are to both care for the planet and redress world-wide injustices and inequities, the fate of the world rests significantly on the actions of communities - both in their ability to generate local initiatives and in their combined ability to promote change at national and international levels. Our policies therefore strengthen local democratic processes, encourage regional sustainable development initiatives and planning, and enhance management as well as administrative capabilities within local communities.

Our policy for strengthening rural communities is based on the recognition that the situation in rural communities, whereby occupational choices are limited, family members often have to leave the district to obtain work, services have been cut back and where cultural and social opportunities are restricted, is one which needs major Government attention and implementation of positive community and regional development initiatives in order to be redressed.

We recognise that Indian rural communities have, in recent time, been subject to Government policies which have adversely affected the viability of community life, the quality of life in rural communities as well as adversely affecting producers' access to markets within India. We are wary of making an economy less diverse and more vulnerable through encouraging it to specialise in those industries in which it has competitive export advantage while abandoning those industries that cannot compete against foreign imports.

An efficient and sustainable agricultural sector is critical to the viability of local and regional economies and is a vital component of the revitalisation of rural India. Our policies for strengthening rural communities and for Agriculture recognise the central role of community and ecologically sustainable agricultural production to regional and national economies.

We also recognise that in a technological society, empowerment of the individual may rely on his/her ability to effectively use communication technology and information systems.

We will support education policies to enhance the opportunity for all Indians to reach their full potential in science and technology literacy.

4.1.2 Physical Environment

Agricultural practices are presently operating beyond the ecological capacity of most areas devoted to farming, which in turn impacts on rural communities. Processes that threaten biodiversity, the long-term viability of agriculture and in which inappropriate land management practices are currently implicated include:

- ongoing legal and illegal clearing of native vegetation;
- changed and/or insufficient flow regimes in rivers and streams;
- salination;
- soil erosion and degradation;
- chemical contamination of habitat and food sources;
- water pollution;
- irrigation; and
- intensive inappropriate or cruel animal production practices.

The ecological and economic cost of land degradation will increase unless major steps are taken to counter degradation processes. Farm financial pressure is a contributing factor to land degradation. The servicing of loans often requires farmers to extract the maximum amount of income from their land. Financial pressures are exaggerated by unsympathetic banks, fluctuating commodity prices and unreliable climatic conditions. The cost of land degradation in India is now measured in crores of rupees per year, resulting also in significant impacts on rural communities.

Our policies for water are based on adopting a total catchment approach to the management of water, recognising that the restructuring of the water supply in India by

introduction of free market competition is likely to be accompanied by a severe loss of social and environmental accountability and responsibility; and, equitable allocation of water amongst all users.

4.2 Goals

4.2.1 Provision of Services to Rural Communities

We aim to:

- a) provide a level of services comparable, where feasible, with metropolitan services, for example, in health, education, community care, communications (including both post offices and information technology services), sports facilities and cultural activities;
- b) provide programmes to ensure residents achieve a comparable quality of life and access to services;
- c) provide programmes to enable rural residents to appreciate culture and knowledge; and
- d) facilitation of public transport and communications (including postal services) and provide improved access to transport services to residents of rural India.

4.2.2 Community Participation in Government

The following goals are set by us :

- a) in the long term, wherever possible, decision-making should be determined by bioregional considerations and patterns of social interaction;
- b) community services and local environment policy should be provided at the closest possible level to the consumers of the services; and
- c) there should be a move towards regional planning and organisation, foreshadowing the eventual emergence of a more decentralised system of Government.

4.2.3 Environment

We aim to:

- a) hold the amount of water captured for human use from surface aquatic systems and provide environmental flows to all river systems and their dependent ecosystems;
- b) limit the amount of water drawn from groundwater systems to rates not greater than they are replenished; and

c) maintain public ownership and control over all major water supply, distribution, drainage and disposal systems.

4.3 Short Term Targets

4.3.1 Provision of Services to Rural Communities

We will:

- a) work to provide a quality public education system with guaranteed access for all, including rural residents;
- b) provide additional funding for students who are physically and/or intellectually disabled, or who are disadvantaged by location and/or distance;
- c) initiate programmes aimed at reducing suicide rates, particularly among young people and people in rural areas; and

4.3.2 Support for Young People in Rural Communities

We support:

- a) increased employment and education opportunities, for disadvantaged young people, including for those in rural or remote areas; and
- b) greater representation of young people on regional economic organisations and greater recognition of community-based grassroot organisations which generate environment friendly and sustainable as well as socially useful employment opportunities.

4.3.3 Community Participation in Government

We propose that

- a) funds be made available from the Central Government for the coordination, preparation and implementation of ecologically/environmentally sustainable strategic plans by local Governments and regional organisations; and
- b) financial assistance be provided to local interest groups to assist them to participate in local and regional planning and sustainable development initiatives.

4.3.4 Trade

We will also support a review of agriculture subsidies in terms of their adverse social and environmental impacts.

4.3.5 Environment

We will work to:

- a) implement, as a matter of urgency, national legislation to control the clearing of native vegetation, with complementary provisions at State and/or local level;
- b) integrate commercial wood production into diversified agricultural enterprises, as well as providing marketing mechanisms to facilitate this;
- c) support the development of alternative fibre industries where they are more ecologically sustainable;
- d) provide funds for the planning and initiation of ecologically sustainable industries at local and regional level;
- e) propose changes in the taxation structure for chemical fertilisers and pesticides with the aim of supporting a change to ecologically sustainable farming methods. Levies on these products will be redistributed to the farming community through education, information and other appropriate programmes on integrated and non-chemical pest management and sustainable farming practices.
- f) maintain or restore the natural diversity and productivity of soil in agricultural and pastoral areas .
- g) provide information and low-interest loan incentive programme to assist rural residents to:
 - choose renewable energy systems for domestic and farm power supplies; and
 - adopt water conservation practices for domestic and farm use.

DRUGS POLICY AND DRUG DE-ADDICTION POLICY

5.1 Principles

In a democratic society in which diversity is accepted, each person has the opportunity to achieve personal fulfilment. It is understood that the means and aims of fulfilment may vary between people at different stages of their lives, and may, for some people at particular times, involve the use of drugs.

Classification and regulation of drugs should be based upon known health effects with community education programme to make factual information freely available.

Regulation should aim to maximise individual health and social safety and well-being.

Programmes operating among users of addictive drugs should focus upon harm minimisation and increasing their life options.

5.2 Goals

We will work towards:

- a) more appropriate classifications for drugs based upon their effects upon health;
- b) wide availability of relevant information about drugs;
- c) decriminalisation of drugs;
- d) making the connections between addictive drug use and wider issues such as suicide, unemployment, homelessness, lack of hope for the future; working towards solving these problems; removing the focus on excessive drug use which is a symptom rather than a cause; and
- e) widely available community-based counselling and support services for drug-users without condemnation, including adequate follow-up.

5.3 Short term targets

5.3.1 Illegal drugs

We believe that softer, less addictive drugs should be more freely available as research shows that such availability mitigates against the use of hard drugs.

5.3.2 Regulated drugs

We will work to immediately set in process the following:

- a) independent research into the effects and addictive properties of drugs commonly prescribed by doctors for a wide variety of causes from hyperactiveness in children to stress and depression in adults, with a view to greater restriction and regulation of those;
- b) mandatory labelling and verbal advice by doctors as to the effects and potential for addiction of prescribed drugs; and
- c) continued independent research into food additives to ascertain their health effects, both short and long term, and ensuring the publicising of results.

5.3.3 Freely available drugs

We will work to immediately set in process the following:

- a) taking all possible steps to reduce the image tobacco and alcohol have, especially for young people; this will include banning advertising of tobacco and alcohol products and restricting opportunities for sponsorship;
- b) ensuring that smoking does not endanger the health of others;
- c) disallowing the use of drunkenness as an excuse to avoid retribution in crimes of violence and negligence;
- d) restriction of sale of alcohol to people under the age of 18.

5.3.4 Treatment of people with drug addictions

We will work to immediately set in process the following:

- a) freely available treatment programme with adequate follow-up;
- b) treatment programme and facilities which sensitively cater for individuals within different groups, women and men, including older people, parents of children and the young.
- c) involving NGOs to locate drug addicts and bring attitudinal and behavioural change among them with a view to advising them to stop taking drugs.
- d) bringing such drug addicts to the main stream by providing them suitable training for making them social activists in the areas of social justice and empowerment.
- d) organising deaddiction camps by inviting medical experts belonging to modern medicine as well as alternative, complementary and energetic medicinal areas.

ENVIRONMENTAL PROTECTION POLICIES

1.1 Principles

We recognise that the Earth's life support systems are fundamental to maximising human welfare.

In pursuit of our goals, the we will ensure equity and social justice, and that those sectors of the community least able to bear the cost of redressing environmental degradation will not be disadvantaged.

In formulating an Environment Policy, we are striving for ecological sustainability through:

- a) the protection of biological diversity and the maintenance of ecological integrity;

- b) the use of material resources in accordance with the Earth's capacity to supply them and to assimilate wastes arising from their use; and
- c) equity within and between generations.

Where there are threats of serious or irreversible environmental damage, decisions should err on the side of caution, with the burden of proof resting with technological and industrial developers to demonstrate that the planned projects are ecologically sustainable.

To become ecologically sustainable, our society must change over time from one which recognises no physical or ecological limits, to one which lives within the capacity of the Earth to support it and allows for the Earth to sustain the diversity of living things. This means that ingenuity must be used to do more with less, the trend to more efficient use of physical resources and energy must be accelerated, and the limits within which society and the economy function must be explicitly recognised. To enable targets to be set and progress to be measured, these limits must be defined as early as possible. We set the following goals and limits as essential for the achievement of ecological sustainability in our country.

1.2 Goals

We aim to:

- a) achieve an ecologically sustainable society, both in India and globally, which lives within the capacity of the Earth to supply renewable resources and to assimilate wastes;
- b) ensure that human activities maintain the biological diversity of all named organisms at the level of subspecies and of all other organisms, through the adequate protection of the ecological communities of which they are part;
- c) hold the amount of water captured for human use from surface aquatic systems and provide environmental flows to all river systems and their dependent ecosystems;
- d) limit the amount of water drawn from groundwater systems to rates not greater than they are replenished;
- e) reduce emissions of Carbon Dioxide as well as other greenhouse gases;
- f) eliminate human-induced release of ozone-depleting substances in the upper atmosphere;
- g) reduce the total quantity of solid, liquid and gaseous wastes (including those from non-point sources) annually disposed into the environment;

- h) maintain or restore the natural diversity and productivity of soil in agricultural and pastoral areas;
- i) reduce the total amount of land occupied by human infrastructure (transport, buildings, roads) and agriculture (grazing, cropping);
- j) facilitate closer liaison among rural, urban, tribal and indigenous peoples in India, such that all might benefit from indigenous knowledge of our land in order to further its management in ways which are sustainable;
- k) provide for increased participation by local communities in planning and implementing strategies to protect the environment;
- l) increase environmental awareness leading to a desire by all Indians to protect the environment; and
- m) apply the principle of intergenerational equity in all environmental programmes.

1.3 Short Term Targets

1.3.1 Biological Diversity

We will work to:

- a) ensure funding and enforcement of habitat recovery plans for endangered species;
- b) implement, as a matter of urgency, national legislation to control the clearing of native vegetation, with complementary provisions at state and/or local level; and
- c) establish a comprehensive and viable system of terrestrial and marine protected areas managed primarily to protect biodiversity; the system will include all remaining areas of high wilderness value, and will also protect wild and scenic rivers which remain in essentially pristine condition;
- d) prohibit automatic mining rights and mining exploration on agricultural land.

1.3.2 Forests and Wood Production

We will work to:

- a) end logging of old growth and other high conservation value native forests immediately, and over time complete the phase-out of most logging from native forests, including regrowth forests;
- b) adopt a Wood Products Industry Plan that will accelerate the transition from native forests to plantations by encouraging the fullest possible domestic processing of wood from

plantations, and increased recycling. As a complement to the plan, we will provide a package of retraining and other assistance for workers facing displacement from the native forest-based industry;

c) integrate commercial wood production into diversified agricultural enterprises, as well as providing marketing mechanisms to facilitate this; and

d) support the development of alternative fibre industries where they are more ecologically sustainable.

1.3.3 Mining and Mineral Exploration

We will work:

a) to prohibit mineral exploration and mining as well as extraction of petroleum and gas in nature conservation reserves, including national parks, wilderness areas and other areas of outstanding nature conservation value;

b) to ban all new sand-mining operations in the coastal zone.

1.3.4 Marine Environments and Fishing

We will:

a) work to establish a comprehensive system of marine reserves in Indian waters; and

b) for existing fisheries, work to immediately prohibit an increase in level of harvest, and determine as a matter of urgency the requirements for ecological sustainability and regulate the catch accordingly, with a substantial safety margin to ensure sustainability

1.3.5 Climate Change and Ozone Depletion

We will work to:

a) reduce emissions of Carbon Dioxide as well as other greenhouse gases and to have clear national, regional and local energy policies adopted to enable this target to be reached;

b) support an international protocol that makes these greenhouse gas emission targets binding for all industrialised countries; and

c) phase out production of carbon tetrachloride, methyl chloroform, CFCs and halons immediately, and HCFCs and methyl bromide by 2020.

1.3.6 Machinery of Government

We will work to:

- a) legislate to establish a Commission with independent funding to examine and report on the environmental performance of public authorities;
- b) strengthen the Environment Protection Act 1986.
- c) ensure the development of publicly accessible, well resourced, compatible, coordinated networks of data monitoring and data-based legislated State of Environment reporting at local Government, state/territory or regional, and national levels;
- d) ensure the Government maintains and exercises those constitutional powers which are applicable to the environment, with State environmental policy to be supervised and subject to a minimum set of stringent national standards.

COASTAL ZONE MANAGEMENT POLICIES

2.1 Principles

Our policies for the management of our coasts are based on the following general principles which underpin ecologically sustainable development:

- a) the protection of biological diversity and the maintenance of ecological integrity;
- b) the use of material resources in accordance with the Earth's capacity to supply them and to assimilate wastes arising from their use;
- c) equity within and between generations; and
- d) public participation and involvement.

2.2 Goals

We aim to:

- a) increase ecological, economic and social awareness of the importance of coastal and inland waters and of human impacts on them;
- b) protect coastal ecosystems;
- c) allow the replenishing of stocks of depleted aquatic and coastal life;
- d) reduce the harvest of all coastal resources to well within an ecologically sustainable limit;
- e) protect fish breeding areas;

- f) reduce marine and other aquatic pollution, including from diffuse urban and agricultural sources;
- g) increase the involvement of local communities in the management of coastal, onshore and aquatic resources;
- h) ensure an integrated approach to management;
- i) improve local, national and global coordination of coastal management policies;
- j) locate activities that are not coast-dependent away from the coastal zone; and
- k) develop long-term strategies to contain urban and tourism development.

2.3 Short Term Targets

We will work to:

- a) establish a comprehensive national system of marine reserves in Indian waters by the year 2020;
- b) for existing fisheries, immediately prohibit an increase in level of harvest, and determine as a matter of urgency the requirements for ecological sustainability and regulate the catch accordingly, with a substantial safety margin to ensure sustainability;
- c) work with the States and Union Territories and/or directly with local Governments to complete an environmental audit of the coastal zone by 2020 and an action plan by 2022;
- e) implement a national legislative / planning regime to control land use and development in the coastal zone, including a moratorium on new subdivisions until completion of the coastal action plan;
- f) ban all new sandmining operations in the coastal zone and inland rivers.

WATER MANAGEMENT POLICIES

3.1 Principles

Our policies for water are based on:

- a) adopting a total catchment approach to the management of water;
- b) preserving biodiversity and ecological integrity;

c) recognising that the restructuring of the water supply in India by introduction of free market competition is likely to be accompanied by a severe loss of social and environmental accountability and responsibility; and

d) equitable allocation of water amongst all users.

3.2 Goals

We aim to:

a) decrease per capita consumption of fresh water by increasing efficiency of water use, and expanding opportunities for re-use;

b) stop the discharge of sewage into aquatic systems;

c) maximise the capacity to reuse sewage treatment by-products by reducing pollution at source, minimising waste, and phasing out the discharge of toxic chemicals to sewerage systems;

d) hold the amount of water captured for human use from surface aquatic systems and provide environmental flows to all river systems and their dependent ecosystems;

e) draw water from groundwater systems at rates not greater than they are replenished;

f) ensure equitable access to adequate supplies of clean water for human consumption;

g) apply the principles of least-cost planning to the provision of water, drainage and sewerage services;

h) reduce erosion, sedimentation and pollution of watercourses, wetlands and estuaries, by protecting and restoring native riparian vegetation and improving catchment management;

i) maintain public ownership and control over all major water supply, distribution, drainage and disposal systems;

j) maintain and where possible increase the area of water supply catchments that are free of logging, agriculture and other land uses which degrade water quality

k) provide for full public participation in decisions about water, drainage and sewerage; and

l) provide information and low -interest loan incentive programme to assist rural residents to adopt water conservation practices for domestic and farm use.

3.3 Short Term Targets

We will work to:

- a) establish a major new national programme to restore environmental flows to all river systems and improve water quality and implement the programme through national agreements between Central / State and / or local Governments;
- b) use all available powers to maintain major water supply, distribution, drainage and disposal systems in public ownership;
- c) cancel all plans to build large-scale new dams; and
- d) ensure that drinking water supplies meet or exceed WHO (World Health Organisation) standards, and that their quality is publicly reported regularly.

ENERGY MANAGEMENT POLICIES

4.1 Principles

Our energy related policy is based on these premises:

- a) the price of energy should fairly incorporate the full social, health and environmental costs of production and use;
- b) there is a finite limit to non-renewable resources available for energy production;
- c) the most commonly used methods of energy production have serious, deleterious effects upon the planet, most notably air pollution and contribution to greenhouse gases;
- d) energy problems will not be solved by additional conventional power generation capacity;
- e) transition to ecologically sustainable energy systems will be achieved through long term planning, research and development, demand management, increased energy efficiency and conservation, and greater reliance on renewable sources of energy;
- f) given the environmental impact of large scale dams for hydro-electric schemes, and the high costs and risks to the environment and human health associated with nuclear energy, we do not consider that these systems form a viable long-term basis for putting the energy sector on an ecologically sustainable footing; and
- g) achieving sustainability in the use and production of energy will have ramifications for every sector of the economy.

4.2 Goals

We aim to:

- a) take a lead role internationally in promoting policies to reduce the impact of climate change due to the enhanced green house effect :
- b) assist other countries to develop and meet greenhouse gas emission targets through technology transfer and other forms of assistance;
- c) apply integrated resource planning principles to the provision of all non-transport energy services. This is a systematic way of providing energy services to society at least cost;
- d) provide for participation by local communities in planning and implementing strategies to provide energy services sustainably;
- e) exercise restraint in use of non-renewable fossil fuel reserves in order to leave adequate supplies for future generations;
- f) reduce dependence on fossil fuels by
 - supporting the phase-out of coal and oil-fired power stations and the development of renewable alternatives;
 - decreasing reliance on private motor transport; and
 - increasing energy efficiency;
- g) address regional equity impacts of making the transition to ecologically sustainable forms of energy production and use, through long term planning and specific development programme for affected regions. Some regions which are currently heavily dependent on the extraction of fossil fuel and the development and maintenance of power generation facilities which use fossil fuel will suffer employment loss in the transition;
- h) establish strong national regulation over energy production, distribution and supply to ensure that integrated resource planning is implemented, to control economic, social and environmental impacts in the public interest and to ensure full community consultation;
- i) provide incentives to encourage consumers to promote alternative energy technologies;
- j) introduce a comprehensive carbon levy; revenue from this levy is to be used to fund public transport as well as the development of alternative energy techniques such as solar thermal power, photo-voltaics and wind power; there will also be compensation for any regressive impact of this levy on low income earners.

4.3 Short Term Targets

We will work to:

- a) introduce a carbon levy;
- b) use all available mechanisms to optimise electricity generation, distribution and supply infrastructure;
- c) introduce tight enforceable regulation of the electricity supply industry to protect the public interest and the environment;
- d) reduce emissions of Carbon Dioxide and other greenhouse gases and adopt clear national, regional and local energy policies to enable this target to be reached;
- e) support an international protocol that makes these targets binding for all industrialised countries;
- f) introduce national legislation to give effect to climate change controls;
- g) establish a Sustainable Energy Authority to coordinate and oversee programme for research, development and adoption of energy efficiency and renewable energy in India;
- h) adopt mandatory energy labelling, and mandatory minimum energy performance standards for all commercial and domestic appliances, equipment and buildings;
- i) oppose any new coal-fired power stations and large-scale hydro-electric dams;
- j) provide information and low-interest loan programmes to encourage rural residents to choose renewable energy systems for domestic and farm power supplies;

WASTE MINIMIZATION AND MANAGEMENT

5.1 Principles

Waste management is a growing issue. The accumulation of rubbish presents aesthetic, social and environmental problems and is representative of inefficient resource use. Recycling technology, and profit from the resale of recycled materials, are improving and this is to be encouraged. More important, however, is the encouragement of avoiding waste as well as reducing and reusing at both the manufacturing and consumer levels. A comprehensive waste reduction strategy should be developed addressing each stage of the production and consumption cycle.

When it comes to implementing the strategy Governments have largely relied on voluntary measures, which have proved insufficient, particularly as far as the industrial

sector is concerned. We are proposing legal measures as well as economic incentives to encourage waste minimisation.

5.2 Goals

The disadvantages of landfill disposal of waste are obvious to most people. The loss of various resources is accompanied by water pollution, odour and vermin. We support measures that will reverse such a procedure. We want to be part of building a society where:

- a) individuals are aware of the importance of reusing whatever can be reused and refusing whatever will eventually go to landfills when another choice is available;
- b) manufacturers move towards a whole life cycle approach to resource management and ultimately toward closed loop production systems;
- c) in the short term, levies are imposed on non-recyclable containers and other plastic and metal items, with a view to the long-term phase-out of these items;
- d) material that can be recycled is collected and then actually used in the production of new goods; and
- e) departments, offices and private citizens are given financial incentives to use recycled material and disincentives against their use are examined.

5.3 Short Term Targets

5.3.1 Non-Recyclables

We will support the phasing out of non-recyclable plastics through various means, including the imposition of levies on their use.

5.3.2 Encouraging Reuse Of Containers

We will:

- a) propose container deposit legislation to encourage the reuse of glass containers; and
- b) propose a levy on disposable plastic carry bags in shops; this is to be paid by the customer, as a means of discouraging wasteful plastic packaging as well as for encouraging recycling of old bags.

5.3.3 Increasing Recycling

We will:

- a) ensure the Government gives preference in purchasing contracts to recycled products or products that can be re-used (for example, recycled paper and the re-filling of computer printing cartridges). The preferred purchasing will be extended to low energy rated products such as equipment that has energy saving features;
- b) propose mandatory recycling of waste paper from Government departments and other big paper users;
- c) investigate what happens to material collected as recyclables to ensure they are in fact being recycled;
- d) propose special facilities for the collection of heavy metals contained in fluorescent tubes and non-rechargeable batteries;
- e) implement a levy for non-rechargeable batteries to make rechargeable batteries more cost competitive; and
- f) propose the establishment of tyre recycling facilities.

5.3.4 Composting

We will:

- a) encourage home composting;
- b) support local Government provision of composting bins both for collection and for on-site usage; and
- c) examine mechanisms for removing disincentives.

5.3.5 Disposal of Harmful Substances

We will

- a) support measures to collect, and whenever possible recycle, material for which dumping can be harmful to fauna or flora;
- b) work to establish a National Waste and Pollution Inventory and legislation requiring companies to report any roxic substances released into air, soil or water, with details about when, where and how emitted. The data base should be accessible to the public; and
- c) require industry to work towards elimination of toxic waste.

AGRICULTURAL PRODUCTION AND QUALITY CONTROL

6.1 Principles

Our policy for land management and agriculture is based on:

- a) recognising the need for flexibility and diversity in agriculture for environmental and economic reasons;
- b) recognising the central role of ecologically sustainable agricultural production to regional economies and the nation;
- c) preventing significant or lasting negative impacts on soil and water quality and biodiversity;
- d) recognising India's national and international moral responsibilities as a food producer;
- e) supporting trading patterns and local controls which enable environmental and food quality standards to be maintained and improved; and
- f) concern for the welfare of animals used in agriculture.

6.2 Goals

We aim to:

- a) build on participatory processes which improve land and water catchment management;
- b) ensure that economic viability does not force exploitation of labour;
- c) ensure that agriculture takes full account of the need for water management as an input to farming and as a resource vital to others;
- d) encourage forms of primary production and rural land-use that conserve soil and water, maintain biodiversity, and use minimal amounts of non-renewable energy, agrochemicals and water;
- e) encourage the development of value-adding and quality agricultural products;
- f) encourage agricultural systems, enterprises and processes which are resilient and diverse;
- g) introduce policies to reverse land degradation (erosion, salinity, acidification, nutrient loss, soil structural decline, loss of native vegetation) and ensure that land management practices are compatible with programmes to restore degraded ecosystems and habitat;

- h) reduce the dependence of agriculture on chemicals, and provide accurate information about them to farmers and consumers;
- i) ensure that the use of genetic engineering is strictly controlled, particularly the transfer of genetic material between species, with the onus of proof on the proponent;
- j) require food that has been produced as a result of genetical engineering to be labelled accordingly;
- k) improve the welfare of animals used in agriculture;
- l) ensure that responsibility for sustainable land management is shared by businesses which process and sell produce, or supply inputs, and by consumers, as well as by landholders and all levels of Government;
- m) encourage systems which maintain socially and economically diverse and vibrant rural communities;
- n) encourage the revitalisation of rural communities and ensure adequate services for physical and social needs;
- o) provide for participation in planning and implementing strategies for ecologically sustainable agricultural production;
- p) facilitate dialogue between conventional and modern farmers to assist the exchange of land management skills;
- q) move towards regional levels of planning and organisation for the management of natural resources;

6.3 Short Term Targets

We are working to establish a clear regulatory environment for agricultural businesses, through national legislation, complemented by state and/or local provisions. Areas to be regulated include:

- clearing, management and restoration of native vegetation;
- importation, propagation and movement of exotic plants and animals; and
- mandatory notification, assessment and monitoring of all genetic engineering proposals, including environmental impact assessment.

We will work to:

- a) introduce enforceable national standards for the licensing and use of agricultural chemicals. Such standards shall be compatible with or better than the most rigorous standards for specific chemicals with related use-paths elsewhere in the world;

- b) ensure the adoption of national, legally enforceable codes of practice to ensure that animals used in agriculture have the ability to satisfy their natural physical and behavioural needs;
- c) target direct funding and other forms of economic assistance to enhance achievement of ecologically sustainable land management;
- d) propose changes in the taxation structure for chemical fertilisers and pesticides with the aim of supporting a change to ecologically sustainable farming methods. Levies on these products will be redistributed to the farming community through education, information and other appropriate programmes on integrated and non-chemical pest management and sustainable farming practices;
- e) systematically and regularly review the efficacy of existing agricultural assistance as well as rural land management programme;
- f) significantly enhance funding for research and programme which provide control of environmental weeds and environmentally sound and humane methods for control of feral animals;
- g) monitor land degradation and biodiversity on rural private land at a national level;
- h) initiate a comprehensive, uniform national mapping of land systems and biota, and their condition, as a base for preparing regional plans for sustainable land management;
- i) ensure comprehensive review and restructuring of the arid lands pastoral industry;
- j) propose research, promotion and training in farm practices including effective forms of biological pest control that reduce the use and impact of chemicals;
- k) immediately transfer responsibility for land protection to the Environment portfolio; and
- l) implement an action plan for the retirement and/or conservation covenanting of land deemed ecologically unsuited to continuing agricultural use, or of significant ecological value.

INDUSTRIAL DEVELOPMENT AND ENTREPRENEURSHIP

7.1 Principles

We hold that:

- a) India must find creative solutions to the urgent global problem of developing products and processes to meet an increasing population's material needs while protecting the

natural environment on which all economic activity and social well-being ultimately depends;

b) Governments should provide a clear national regulatory framework for environmental protection, and adjust economic incentives accordingly, to encourage industry to commit to major, long-term ecologically sustainable projects;

c) strong regulation can assist business to become more competitive;

d) Governments should play an active role both in mediating negative social and economic effects which may result from a shift to ecologically sustainable industries and in developing new opportunities;

e) clean production technology which seeks to minimise potential problems at their source is preferable to costly and often ineffective clean-ups;

f) industry has a crucial role in advancing sustainable development through the adoption of appropriate technology and practices;

g) industry can become more efficient and competitive by adopting Green objectives to reduce raw material consumption and reduce pollution;

h) investment in education and training at all levels and maintenance of the nation's research facilities at world best standards will provide the human and intellectual capital required to compete in high-skilled, high value-added and innovative green industries; and

i) decisions relating to the impact of industrial activities on the environment are complex and must be supported by accurate, detailed and timely data.

7.2 Goals

We aim to:

a) phase out tax breaks, subsidies and other Government policies that encourage resource waste, pollution and environmental degradation;

b) offer positive incentives like tax deductions, rebates and enhanced depreciation allowances to businesses investing in technology or capital expenditure which reduces resource use, waste and pollution;

c) phase in price adjustments for energy, water and landfill that equitably incorporate the social, health and environmental costs of production and use;

d) promote environmental auditing procedures and best practice management to utilities, Government enterprises and private sector businesses;

- e) encourage unions to pursue environmental improvement plans in the context of enterprise bargaining to enable all employees to participate in and benefit from workplace environmental performance;
- f) press manufacturers to move towards a whole life cycle approach to resource management and ultimately toward closed loop production systems;
- g) encourage industry to take maximum responsibility for the reduction, sale or recovery of by-products so that external waste treatment becomes the instrument of last resort;
- h) incorporate the polluter-pays principle into national legislation;
- i) assist consumers to make environmentally conscious evaluations of goods and services by providing accessible, practical, comparative information, including whole of life cycle assessments, and by further strengthening the National Eco-labelling Scheme to define green products;
- j) institute preferential purchasing by Governments for so defined “green” products;
- k) give top priority to research that facilitates the achievement of Ecologically Sustainable Development (ESD), with particular emphasis on energy saving technologies and renewable energy sources;
- l) fund research into the linkages between threats to biodiversity and ecological integrity and particular industries or industrial processes;
- m) implement a national approach to environmental monitoring and reporting;
- n) phase out the exportation of toxic and putrescible waste to landfill; and
- o) encourage environmental performance reporting in accounting information and company annual reports. Guidelines need to be established for environmental data labelling on goods and services, including such information as depletion of resources, emissions and waste. All spheres of Government should make mandatory the inclusion of environment performance and environment data labelling in tenders from the private as well as public sector.

7.3 Short Term Targets

We will work to:

- a) establish a National Ecologically Sustainable Industry Assistance Programme with funding derived from directed superannuation investment and national industry partnership funding;

- b) announce a Sustainable Industries Plan, setting out directions, targets, benchmarks, time frames and funding;
- c) establish uniform national environmental regulatory standards for air and water quality, including waterways;
- d) establish uniform national legislation to ensure clarity and enforcement of environmental protection legislation;
- e) implement national strategies for the treatment of hazardous and intractable wastes, with appropriate funding;
- f) establish a National Waste and Pollution Inventory and legislation requiring companies to report any toxic substances released into air, soil or water, with details about when, where and how emitted. The Inventory will include transfer data (i.e. statutory authority emissions such as sewage, waste, etc.). The data base will be accessible to the public;

POPULATION EDUCATION AND STABILIZATION

8.1 Principles

Neither the planet, nor any country, can sustain continued human population growth. Four Earths would be required for all human inhabitants to live if population grows as the present rate. However, the relationship between people and environments is a complex one, not reducible simply to carrying capacity, but mediated by economic, social, political, cultural and technological considerations. The Indian Government should consult with the widest possible range of interest groups to arrive at a population policy which respects human rights.

The basis for India's population policy, both domestic and global, must be ecological sustainability, intergenerational equity and social justice. A precautionary approach is required in order to take into account the consequences of human impact on the environment.

In order to achieve a sustainable population, action must be taken on consumption levels and technology use as well as population size. We must generate less waste and implement technologies, such as those based on renewable energy, which are more environmentally benign.

The consumption patterns are contributing to global as well as to local environmental problems and we have a responsibility to current and future generations to ensure that we do not knowingly degrade their world. As Indians we also have a responsibility towards non-human species, many of which have already become extinct or endangered. Government policies and taxation systems are tools which can be used to change consumption patterns over the medium to long term, and to protect and manage ecosystems vulnerable to human activity.

India must contribute towards achieving a globally sustainable population and solving the macro aspects of demographic transition of civilisational regions as part of international responsibility. We should set an example by:

- a) managing our own population growth in accordance with more equitable consumption patterns in relation to the international context; and
- b) redirecting the bulk of aid towards eradicating poverty and towards those programmes which empower women.

In attaining a sustainable population India must shift its involvement in a competitive world economy to a more cooperative, regional, self-sufficient economy based on equality and human rights.

8.2 Goals

An Indian population policy should consider the distribution of human settlements rather than just concentrate upon population size at the national level. The continuing de-settlement of rural areas must be considered in the light of ecological and social sustainability and efforts must be set in place to reverse it in those areas where settlement is ecologically benign.

The ecological and social viability of areas expected to experience great growth needs to be safeguarded, and appropriate planning processes set in place. Human settlements should be designed and built to minimise environmental and maximise social well-being. Investing in the social well-being of the entire population should be the main aim of Government, so that there are publicly provided services of the highest possible standard. These services should include education, infrastructure, health, employment and income support.

8.3 Short Term Targets

We will work towards:

- a) ensuring that Indian family planning programme, deliver services in the context of reproductive health programme which increase the power of girls and women to determine their own reproductive lives, and increase the understanding of men of their reproductive responsibilities
- b) envisaging a marketing approach to family planning policies.
- c) evolving a new communication strategy for family planning and population control for reaching the diverse committees in different States and Union Territories of India.

CONSTITUTIONAL REFORMS

1.1 Principles

We believe that:

- a) Parliament is the central authority of representative and responsible Government;
- b) each person should have one vote, that all votes should be of equal value, and that proportional representation best reflects the wishes of the electorate in the composition of Parliament and State Assemblies;
- c) each citizen has both the right and the responsibility to participate in the processes of Government;
- d) India's constitution and democratic structures should help to build an ecologically sustainable and socially just society, with a global consciousness and a long term perspective;
- e) India's constitution should express our aspirations as a community and define our rights and responsibilities as individuals and as members of the community, as well as establish the powers and duties of Government; and
- f) India's constitution and public institutions need some changed, which should be brought about through an ongoing participatory process.

1.2 Goals

We propose that the following areas be enshrined in the constitution more clearly :

a) Civil and Political Issues

- life, liberty and security;
- legal recognition and equality;
- voting and standing for election;
- privacy;
- police custody;
- that relating to an alleged offender;
- standard of criminal procedure;
- that relating to the victim;
- property;
- procedural fairness;
- that particular to a child;
- freedom
- of religion;
- of thought, conscience and belief;

- of speech and other expression;
- of association;
- to peaceful assembly;
- of movement and residence;
- development.
- from discrimination;
- from slavery; and
- from torture, experimentation and treatment;
- Economic and Social Issues
- education;
- adequate standard of living;
- work;
- legal assistance;
- freedom of family structure; and
- adequate child care.
- Community and Cultural Issues
- living in a safe society;
- collective and individual development;
- culture;
- environmental protection and conservation; and
- ecologically sustainable

1.3 Short Term Goals

We will:

- a) propose the development of an international Framework Convention on Sustainable Development which is made more precise by the addition of protocols, for example dealing with environmental health and environmental due process;
- b) oppose attempts to undermine the domestic implementation of India's international obligations arising from the ratification of treaties, whilst working towards a process for domestic ratification of international treaties;
- c) support the right of people from the age of 16 years to vote and to hold public office, in recognition of the increasing awareness of and responsibility towards current issues of young people;
- d) introduce rules such that people who are found to have acted in a corrupt way be barred from ever holding public office again and as well, that they forfeit any superannuation payments they may have made while holding that office and that they lose the right to any termination payments for which they would otherwise have been eligible; and
- e) work for appropriate and adequate consultation to better gauge opinions on issues of concern.

LOCAL SELF-GOVERNMENT

2.1 Principles

We believe that fundamental changes to the structure of Government are vital if we are to achieve true democracy in this country. If Government is to be of, for and by the people, it must start at the local level and it is at this level that the power must remain.

Whatever the final shape of the reorganisation of the Indian system of Government, we support the preservation of a system of local Government which reflects the desire for local community identity and self-determination. We believe that power should reside in the most localised sphere of Government that is able to deal with the issue.

2.2 Goals

While we support local autonomy, we also acknowledge that giving unbridled power to local councils could lead to further problems, especially irreversible environmental ones.

We propose:

- a) a Code of Ethics and a Bill of Rights and Responsibilities based on green principles to ensure that, among other things, local activities are socially advantageous and environmentally benign;
- b) a review of local Government electoral processes, with a view to recommending proportional representation;
- c) a review of the revenue base of local Government; and
- d) better coordination with other levels of Government to avoid duplication and unnecessary waste of resources.

2.3 Short Term Targets

In recognising that local Government must play an expanded and more autonomous role while maintaining its accountability if we are to achieve a truly democratic system of Government in India, we propose:

- a) financial support for those elected to local Government, in recognition of the part they must play in decision-making;
- b) increased involvement of local Government at other levels of Government;
- c) that State of the Environment reporting include criteria for measuring the environmental impact of developments;

- d) that those people who are found to have acted in a corrupt way be barred from ever holding public office again and as well, that they forfeit any superannuation payments they may have made while holding that office and that they lose the right to any termination payments for which they would otherwise have been eligible;
- e) that local councils require all new buildings, subdivisions and developments to conform to Ecologically Sustainable Development (ESD) principles;
- f) a regular flow of information to the community via community radio, newsletters and noticeboards to give equal voice to a range of ideas and to encourage community participation in local Government;
- g) that all spheres of Government take immediate steps to familiarise all citizens with their rights and with all aspects of the present electoral system; and
- h) that there be appropriate and adequate consultation to better gauge opinions on issues of concern.

COMMUNITY PARTICIPATION IN GOVERNMENT

3.1 Principles

We are working according to these principles:

- a) the legitimacy of community participation in the making of law and policy should be established as an underpinning principle of all actions of Governments;
- b) all individuals and community groups should be given the opportunity to participate in decisions which affect them;
- c) the contribution of diverse groups provides a valuable addition to available information;
- d) the needs of future generations should be recognised in contemporary decision-making;
- e) decisions should be made at the most appropriate level; in some cases this will include groupings not currently given decision-making status, such as the neighbourhood;
- f) policies, strategies and frameworks should be developed which enable civic infrastructure to facilitate community participation in the business of Government;
- g) every effort should be made to give marginalised groups opportunities to be effectively involved in decision-making. This will entail longer timelines and the introduction and strengthening of community development practices. Outreach beyond written submissions and public forum techniques will be required;

- h) involvement in community consultations should be recognised as work. Support should be provided to community organisations to participate in consultative processes;
- i) community participation in decision-making should be an ongoing process, rather than a one-off event which leaves communities out of reviews and changes to policies;
- j) the ability of community groups and individuals to gain access to information which will empower them to participate effectively is crucial to meaningful participation; and
- k) Governments, of all spheres, should produce and follow guidelines to ensure that the community representatives whom they consult on a day to day basis reflect accurately the views of their constituencies.

3.2 Goals

The following goals are set by us:

- a) In the long term, wherever possible, decision-making should be based on bio-regional considerations and patterns of social interaction;
- b) because of the importance of everybody taking part in political life, the we will work for the principle that leave without pay is automatically granted for anybody standing in an election for public office;
- c) community services and local environmental policy should be provided by the closest possible sphere to the consumers of the services;
- d) the central Government's domestic role should be to ensure equitable distribution of resources and information, to coordinate services which cut across state boundaries and to ensure that principles of ecological and social sustainability are followed by local Governments; and
- e) less formal organisations at the level of neighbourhoods country towns, particular interests and issues, etc, should have access to all spheres of Government through formal and informal consultative and review procedures.

3.3 Short Term Targets

We set the following targets:

- a) the move towards a new form of Government should be based on wide information-sharing and consultation with all constituencies of India's population;
- b) processes of policy review and decision-making by Government and its institutions should be made more open and accessible to the public;

- c) Freedom of Information legislation should be widened to make relevant information more accessible and to reduce the cost of attaining information by community groups;
- d) those public servants and journalists, etc, who publicise sensitive information of benefit to the community should be encouraged rather than disadvantaged for efforts to inform the public of actions which are not in the community interest;
- e) democratically constituted groups which work on behalf of the wider community, or identified constituencies within it, should be adequately resourced to enable them to fulfill their functions;
- f) consultative periods should be well advertised and of sufficient length to enable all those interested to participate;
- g) relevant documents should be available in places accessible to all members of the public; shopfronts should be set up for this purpose;
- h) public meetings should be held at varying times in appropriate places to enable attendance by all affected. In many cases it will be important to provide childcare and transport, as well as access for the disabled for maximum involvement of all constituencies; in some cases, it will be preferable to talk to people in their homes or habitual meeting places rather than to set up a meeting and expect them to attend;
- i) information should be presented clearly, graphically and free of jargon;
- j) the development of a free-access citizen information and governance participation facility on the Internet should be promoted;
- k) existing community networks should be identified and strengthened through community development.

ECONOMIC UNDERSTANDING

1.1 Principles

We are committed to four pillars of Green Economics:

1.1.1 Ecological Integrity

We affirm the inherent worth and interconnectedness of all living things. Biodiversity is an essential component of human welfare, yielding both utilitarian and existence values. The intrinsic value of biodiversity, in its own right, is also emphasised by us.

Society needs to uncouple the traditional relationship between economic growth and increased resource use, so that irreparable damage to nature is avoided and the depletion of the natural resource base is slowed. The impact of economic activity must be kept within environmental limits, particularly the capacity of ecosystems to process wastes.

Integration of economic, social and environmental imperatives must replace the narrow pursuit of economic growth as currently defined. Many environmental problems are global in scale, therefore the maintenance of ecological integrity requires the adoption of a global perspective.

1.1.2 Equity

Social responsibility implies that people should contribute in proportion to their ability and resources, and that the community should ensure that no-one is forced to go without the necessities of life. The phasing out of unsustainable activities should not further deprive people who do not have sufficient means to live. These responsibilities apply at the individual, local, national and international levels.

In ensuring equity within the current generation, we must treat future generations equitably. This implies solidarity with deprived groups in our country as well as with disadvantaged countries and nations elsewhere. It also implies solidarity with future generations. Each generation should receive an endowment of social and environmental assets that allows for human needs to be met and development options to be pursued. Because the negative consequences of human activity on the ability of future generations to meet their needs are not fully understood, the precautionary principle should become an important decision-making tool.

1.1.3 Empowerment and Choice

Social, political and economic institutions must allow individuals and communities to determine their own priorities, while ensuring that we have the ability - as a wider community - to meet our national and international obligations.

We also recognise that the market does not provide sufficient tools for informed rational choice which would maintain a long term perspective and lead to equitable outcomes.

1.1.4 Caring and Cooperation

The fulfillment of human potential and the enrichment of lives are best achieved by people living and working together, and guided by common goals. These goals should respect and enhance the integrity and diversity of human and ecological communities and recognise their global linkages. Economic activity involves the cooperation of many different individuals and groups in the production, distribution and consumption of a wide range of goods and services. The focus of activity should be on cooperation and opportunities for mutual benefits, rather than on competition and control that typically benefit powerful

minorities. Cooperative principles should also apply to the protection and management of the global commons and resources.

1.1.5 Provision of Services by the Public Sector

We believe that a strong public sector is a prerequisite for a healthy civil society and that some services, because of the community service obligations required of them and the essential nature of the services, should be undertaken by public sector agencies. Ownership by the Government does not preclude some such agencies being run on a corporatised basis, but does mean that fulfilling of community service obligations may mean that their profits would not be as great as they would be without such obligations. This reduced revenue is accepted as a necessary cost in a civil and equitable society. These community service obligations may include providing services at reduced rates to the disadvantaged in society, for example, the aged or sick, and providing services to rural and remote communities.

Such services, which are often natural monopolies because of the efficiency of having a single or well coordinated distribution system, include, but are not necessarily limited to, water supplies and distribution, electricity services, employment services, social and cultural services, phone and postal services, education, health, judiciary, town planning, environmental management, policing and custodial services, the radio and television services, public transport and interstate rail services, national parks, and defence. Of course public services should continue to provide and to extend its services to the public and to the Government executive, with increased public involvement in Government decision making and provision of services as an important mechanism for ensuring the appropriateness and effectiveness of Government policies and action.

1.2 Goals

We aim to:

- (a) keep natural monopolies and other essential public services under public ownership and re-establish such ownership as necessary;
- (b) ensure the level of services in rural and remote communities is, as far as practicable, comparable with those provided in metropolitan areas and such as to ensure the vitality and strengthening of rural communities and the quality of life in those communities.

At a national level we should be working towards a sustainable society in which quality of life is considered to be of the utmost importance. To this end, policy priorities are:

- a) better distribution of work and income;
- b) a more equitable taxation system; and
- c) an improved social safety net.

An imperative is the adoption of a set of policy guidelines for the costing of environmental impacts and for the movement of the economy towards the sustainable use of India's renewable resources.

We support continued public ownership and control of public sector enterprises especially services such as power, water and telecommunications.

At the same time, we emphasise the importance of an international approach to addressing social and environmental problems. Global cooperation must be directed at:

- implementing the principle of intergenerational equity in considering social and environmental conditions;
- bringing an end to the profligate use and pollution of the unpriced global commons (atmosphere and oceans), and scarce resources; and
- addressing the problems of poverty and imbalance in resources.
- At the same time, however, it is recognised that national sovereignty is important in enabling effective global cooperation.

1.3 Short Term Targets

We are committed to the following :

a) the abandonment of economic growth (as conventionally measured), as the principal index of welfare, in favour of alternative indices, to be developed and integrated at national, state and regional level, and that regularly show:

- changes in the quality of life of the population;
- changes in the distribution of income and wealth; and
- changes in inventories and flows of environmental resources.

b) the adoption of taxation policy as a principal tool for achieving sustainable economic development.

c) focusing on taxing natural resources (ecological taxes) as a necessary departure from the emphasis on the taxing of incomes and labour. These policies include :

- the internalisation of the massive external costs associated with India's industrial economy; and
- the need for a fair distribution of national income and wealth.
- the targeting of spending policies to:
 - meet the basic needs of all Indians;
 - provide incentives for the substitution of renewables for non-renewable resources;
 - support the restructuring of industry ; and

e) that trade, and trade agreements, entered into by India, are subject to the priorities of human welfare and ecological sustainability.

TAX REFORMS

2.1 Principles

Our taxation policies constitute an integral part of economic policies. We call for the Indian Government to focus on particular principles to guide taxation policies:

- a) the need for a fair distribution of national income and wealth;
- b) the fact that environmental resources are community resources;
- c) the adoption of incentives for sustainable use and penalties for unsustainable use of natural resources;
- d) adequate provision of resources for public services;
- e) the support of full employment,
- f) the double benefit of reducing taxes on labour and increasing taxes on resource use and pollution; and
- g) the discouragement of speculation.

2.2 Goals

We aim to use taxation as an efficient tool for achieving objectives relating to social equity and environment. This can be carried out either by using tax revenue to finance beneficial reforms or by applying taxation as a steering instrument in itself.

It should be a responsibility of the Government to educate the community about the social benefits of the taxation system and the citizens' responsibility to contribute through the taxation system.

2.2.1 Taxation as a Revenue Instrument

We reject the regressive fiscal policies of the old parties. We see fiscal policy playing a vital role in reconstructing the Indian economy on a socially and environmentally sustainable basis. It is important that the revenue share of Gross Domestic Product (GDP) is raised.

Our fiscal policy aims to raise a sufficient revenue base to:

- a) create a sustainable economy with appropriate levels of development in environmentally sound industries;

- b) create sustainable communities based on principles of social justice, and ensure equal access to community services such as schools, adequate health care, safe streets and reliable public transport;
- c) provide a strong financial basis for effective management of public sector expenditure and debt;
- d) provide revenue for a budget that can sustain healthy programme for third world aid and for nature conservation; and
- e) provide a platform for ethical capital investment in community amenities and infrastructure.

2.2.2 Taxation as a Steering Instrument

A Green economy implies that taxation be used as a steering instrument in the following ways:

- a) ecological taxation for the protection of nature so that our generation can leave a healthy ecological system to future generations. The tax system should encourage environmentally positive behaviour and penalise environmentally destructive behaviour. It should provide incentives for sustainable use of natural resources;
- b) progressive taxation as part of a policy for national equity;
- c) the burden of taxation should be levied on the consumption of scarce material resources and financial speculation rather than on labour;
- d) tax should provide a mechanism to limit foreign debt and foreign speculation; and
- e) tax should encourage domestic savings, employment and productive investments.

2.3 Short Term Targets

We will support tax increases sufficient to support a strong budget with environmental and social goals.

2.3.1 Personal Income Tax

Marginal tax rates for individual income earners need to be made more progressive. At present, the tax payers on low to middle incomes pay more tax in proportion to their income than people on high incomes having a fairly better knowledge and planning skills for tax savings. This is not favourable for the majority of Indians.

We recognise that the taxpayers have not been generally responsible for the avoidance of tax which has led to the erosion of India's revenue base.

We also believe that the number of tax payers can increase exponentially if proper education regarding paying income tax is provided to all persons having some earning. This includes individuals, business organisations incorporating proprietary, partnership, cooperative, private as well as public limited companies. There should be simple procedures for paying income tax so that anybody can put the right amount of tax in the Government's bank accounts for developmental work. People have a fear that if they pay income tax even at the standard slab fixed by the Government, they will be harassed by the tax authorities and that they will have to pay more taxes in the long run.

2.3.2 Indirect Taxation Reform

We propose a reform to improve the existing sales tax system so as to :

- a) encourage more efficient resource use eg. by the reuse of material and equipment;
- b) increase the efficiency and transparency with an emphasis on taxes with an ecological component; and
- c) make taxation more progressive through higher rates for luxury items;

2.3.2 Eco-taxes

We regard ecological tax reform as the key element of a tax reform package.

Eco-taxes seek to incorporate the costs of resource use and disposal into prices to encourage efficient resource use and to reduce pollution.

We support the introduction of eco-taxes, although we acknowledge the fact that environmental values cannot be reduced rupees and paise alone.

Eco-taxes aim to address :

1. the problem of many resources being consumed at an alarming rate; and
2. the problem of increasing pollution, causing deterioration of air, water and soil.

We believe that the application of appropriate tax rates and tax mix will encourage intergenerational equity.

We will work to develop a package of levies to provide incentives and penalties for individuals and industry, to encourage the adoption of waste minimising technologies and the production of recycled and recyclable goods. These include:

- a) resource levies to be applied to primary commodities including minerals, coal and timber. Those levies should be calculated on volume of resource extracted rather than on profits sometimes generated;
- b) levies on the extraction of forest and water resources to reflect their critical environmental values as well as other, including intrinsic, values;
- c) pollution levies on the emission of poisonous substances such as sulphur dioxide, nitrogen oxides and heavy metals into the environment;

We will also

- a) offer tax incentives for the transition to non-polluting processes and technologies;
- b) eliminate subsidies and tax exemptions for ecologically damaging activities such as resource consumption and pollution; and
- c) ensure that ecotax revenues are used to offset taxes on labour in order to maximise the double dividend obtainable from ecological tax reform and encourage employment and productive investment.

2.3.3 Transport

We will:

- a) work towards a change of the current indirect tax system for cars and trucks to favour more energy-efficient vehicles;
- b) propose changes to the system of fringe benefits taxation so that driving of employer provided vehicles is appropriately and equitably taxed;
- c) propose a shift of charges for motor vehicle registration and compulsory third party insurance to a fuel tax, so that car owners only pay in relation to the amount of travelling they do, with compensation to be assessed on the basis of income and place of residence; and
- d) maintain excise on fuels but substantially reduce the rebates to the mining and forestry industries.

2.3.4 Energy

We will propose changes in the taxation structure in the energy sector to support the aims described in the Energy policy framework.

- (a) improve and expand public transport;

- (b) develop alternative energy techniques such as solar thermal power, photovoltaics and wind power;
- (c) reduce taxes, such as payroll tax; on employment;
- (d) compensate low income earners for the regressive impact of the levy.

2.3.5 Agriculture

We will propose changes in the taxation structure for chemical fertilisers and pesticides with the aim of supporting a change to ecologically sustainable farming methods.

2.3.6 Urban Planning

The growth of our cities is often haphazard, with negative consequences for people and for the environment. We will support:

- a) tax incentives for environmentally-sound residential developments; and
- b) removal of hidden and explicit incentives for urban sprawl.

FINANCE, DEBT MANAGEMENT AND INFLATION

3.1 Principles

A deregulated financial system is incompatible with social and environmental sustainability. In order to address social and environmental needs, the Indian Government must interact with the international financial system on its own terms. This will require:

- a) national economic sovereignty (ie democratic control of the economy, not market control;
- b) domestic funding of Government deficits;
- c) an effective system of foreign exchange management;
- d) reduction in foreign ownership and debt; and
- e) movement towards a sustainable financial system which enables the real economy to be maintained decade after decade at its full employment potential without recurring inflation and over-indebtedness.

3.2 Goals

The objectives of the policy include:

- a) reduction of foreign ownership of Indian enterprise;
- b) more equitable employment and income distribution;
- c) control of interest rates and debt;
- d) low inflation;
- e) full employment underpinned by a Guaranteed Adequate Income;
- f) well funded public infrastructure;
- g) appropriate economic monitoring, measurement, and accounting practices;
- h) reduction of private and public sector debt.

3.3 Short Term Targets

- a) detailed monitoring and regulation of foreign capital;
- b) investment of foreign capital in import replacement industries and enterprises consistent with national environmental and social priorities; and
- c) strict monitoring of export and import prices to reduce transfer pricing by multinationals.

We will support the establishment and use of community controlled investment facilities which direct investments to eliminate reliance on foreign borrowings by both the public and private sectors. Investments in ethical enterprises which emphasise both social and environmental sustainability will be encouraged. We will explore a range of opportunities to assist these measures and support:

- a) campaigns encouraging citizens and organisations to place their savings in ethical investment organisations;
- b) the right of credit cooperatives to invest in productive enterprises;

3.3.4 Inflation

We will support disaggregating the causes of inflation so that distinctions can be made between cost increases which are socially and environmentally beneficial, such as including the real costs of natural resources like water, and those which are not.

GLOBAL TRADING AND INVESTMENT RELATIONS

4.1 Principles

4.1.1 Objectives

We support a policy of managed international trade and foreign investment based on the general recognition that nation states have a right and a duty to ensure that their consumption and production, including both imports and exports, is sustainable. These principles, which are fundamentally different to the those of the proposed Multilateral Agreement on Investment (MAI), require that international trade and foreign investment support the following objectives:

- a) protecting local employment and labour conditions;
- b) reducing economic and political vulnerability;
- c) encouraging diversification of industry;
- d) permitting the development of local technologies; and
- e) protecting the environment.

4.1.2 Benefits of Trade

We recognise that foreign trade and investment are beneficial in terms of:

- a) transferring skills and technology not normally available in an economy;
- b) allowing the importation of strategic goods and services;
- c) encouraging innovation and the adoption of new practices and higher standards;
- d) encouraging efficiency through the adoption of 'international best practice' and the importation of technology which makes the local production of new goods and services possible; and
- e) giving developing countries in particular, fair opportunity to trade with developed countries.

4.1.3 Problems with Trade

We, however, are wary of the possible negative influences of poorly regulated foreign trade and investment such as the Multilateral Agreement on Investment (MAI) which may include:

- a) loss of national economic sovereignty, particularly with regard to employment, taxation, inflation, tariff and wages policy;
- b) a reluctance by nations to take unilateral environmental initiatives for fear that they might unduly erode a nation's economic competitiveness;
- c) making an economy less diverse and more vulnerable through encouraging it to specialise in those industries in which it has competitive export advantage while abandoning those industries that cannot compete against foreign imports;
- d) erosion of local culture in the face of imports that have a strong cultural element such as films, electronic media, music and food;
- e) forcing countries to adopt environmentally unsustainable or socially unjust practices which damage the global commons in order to be able to earn foreign exchange;
- f) forcing many countries, including India, into ever-increasing foreign debt leading to spiralling overseas interest payments;
- g) inducing a global increase in transport use which is both inefficient and destructive to the environment;
- h) allowing transnational corporations to increasingly dominate global trade and investment which in many cases is anti-competitive; and
- i) leaving many developing countries at the mercy of IMF and World Bank required restructuring, often resulting in social polarisation.

We support international trading systems and associated institutions in which nation states work to maximise global equity and ecological sustainability. We also encourage exchange which will enhance the development of economies and societies that are ecologically sustainable, diverse, self-reliant, and therefore less vulnerable to external political and economic pressure.

4.2 Goals

We recognise that trade and investment issues must often be dealt with on a case-by-case basis. Given the diversity of social and environmental costs and benefits that can apply to each trade and investment issue, and recognising the risks and benefits of foreign trade and investment, we will pursue policies to achieve the following goals:

- a) to limit trade in goods and services that are produced by methods that are environmentally unsustainable or socially unjust;
- b) to promote trade associations and participate in international trading systems in order to enhance the achievement of this goal;

c) to increase India's self-reliance by limiting net foreign debt and current account deficits; and

d) to promote the regulation of transnational corporations.

The achievement of these goals will be facilitated not only through international trade policy but also by supporting the following short term targets.

4.3 Short Term Targets

4.3.1 International Context

International trade and investment can be positive in terms of countries benefiting from the initiatives and lower production costs of other countries and generally promoting greater global cooperation, but they can be negative in terms of fostering economic vulnerability and consuming a large amount of global transport and communications energy. Countries like India should never be isolationist in their global trade and investment policies and should always be prepared to negotiate at international forums. But countries like ours should not negotiate from a position of weakness; they should not be so dependent on the global economy that they will take whatever terms are offered. Instead they should negotiate from a position of strength where, if needs be, they can be economically self-reliant. We believe that international trade and investment should always be transparent and fully accountable and should not be controlled by trading blocks.

We also believe that international trade and investment should generally be carried on within a global environmental imperative to make the consumption of resources sustainable. Trade liberalisation should never be allowed at the expense of the environment.

4.3.2 Fair Trade and Reform of the WTO

We support reform of the World Trade Organisation (WTO) and the International Labour Organisation to ensure:

a) full recognition of the overriding necessity of environmental and social agreements;

b) the modification of multilateral trading agreements to allow nation states to impose internationally acceptable environmental and social practices;

c) the promotion of moves at the WTO and other relevant organisations which increase the food security of poorer countries and help them stabilise and improve prices for their commodities;

d) the support of poor countries for growing their own food as a priority over growing tobacco and other products for export to industrial countries;

- e) trade agreements on Intellectual Property Rights that support the right of developing countries to acquire the technology they need at a cost they can afford and receive fair remuneration for the genetic resources found in their territory or developed or conserved by their people;
- f) a revision of WTO processes and procedures to ensure transparency and include participation by Non-Governmental Organisations (NGOs) as well as other representatives of civil society;
- g) the encouragement of the use of counter-trade in the form of swap arrangements between two or more countries that do not have sufficient foreign exchange to pay for imports; and
- h) the development of preferential trading status based on principles of ecological sustainability and social justice and aid.

We will also support:

- a) a comprehensive ban on the movement of hazardous waste (including nuclear waste) and hazardous waste recyclables;
- b) the development and transfer of technologies needed to achieve this; and
- c) a review of agriculture subsidies in developed countries, in terms of their adverse social and environmental impacts on other developed and also developing nations.

4.3.3 Transnational Corporations

Transnational corporations now control about two-thirds of all international trade and most international investment and with the introduction of the Multilateral Agreement on Investment their power domination would further increase. They have become a powerful force in the world economy, and often play one country off against another to secure maximum financial advantage.

We will:

- a) promote the regulation of transnational corporations in terms of environmental impact and sustainability, social impact, labour relations and democratic participation;
- b) promote the import of only those goods from developing countries that satisfy basic criteria of decent wages, working conditions, sufficient food supply and environmental sustainability in the country of origin;
- c) support the prohibition of the import of goods that are produced through the exploitation of children and;

d) investigate means through which both the Government and the United Nations can improve the business practice of transnational corporations including regulation through anti-monopoly legislation in India;

4.3.4 National Context

We believe that the current *laissez-faire* attitude to international currency transactions needs to be reformed and that the Government has a role in limiting national foreign debt for having a better image of India. Researches should be conducted with the help of universities as well as institutions of national importance for having a national policy of development without taking international loan with a view to reducing the foreign debt. We will institute an inquiry into the means available to achieve a regulated limitation of the national foreign debt which may include the following :

a) tighter control by the Government of India, including the establishment of an independent regulatory authority that would scrutinize all foreign investments with a clear mind for assessing such investments and their different types of consequences;

b) the introduction of import taxes and customs duties; and

c) work to be done at the international level to achieve reform of the financial system;

HUMAN RIGHTS AND DUTIES EDUCATION

1.1 Principles

We believe that it is essential to:

a) ensure that basic human rights are respected in all countries;

b) avoid compromising on human rights for economic or political expediency;

c) recognise democratic institutions as a fundamental human right; and

d) work towards the sovereignty and self-determination of entities with historical, cultural and ecological identity.

1.2 Goals

We will pursue policies that :

a) restrict cooperation with governing regimes that violate human rights;

b) actively engage with other countries to promote human rights;

- c) bring diplomatic and commercial pressures on regimes that violate human rights, to ensure that they respect the basic rights of their citizens;
- d) keep the interests of disempowered communities foremost in all dealings with countries in which human rights violations occur;
- e) support the end of colonialism and press for resolution of colonial conflicts through the UN framework;
- f) develop a more distinctive and effective role for the International Court of Justice in the field of human rights; and
- g) support, through the UN framework, democratic and economic reforms in countries coming out of totalitarian control.

ENVIRONMENTAL SUSTAINABILITY

2.1 Principles

We support the conservation of the Earth's environment and its biodiversity, both as a value in itself and as essential for human survival and happiness.

2.2 Goals

We will:

- a) support international and national moves to halt deforestation in India as well as the rest of the world and help reforestation; this involves both cessation of unsustainable logging and more efficient use of land for human activities by encouraging the reduced consumption of meat and dairy products, especially in the richer countries;
- b) support international moves to limit land degradation;
- c) support international conventions to stop over-fishing in the oceans;
- d) support international moves to reduce pollution of the seas and the atmosphere;
- e) support moves to end trade in hazardous waste;
- f) support moves to end exploitation of and trade in endangered species;
- g) support the transfer of environmentally sustainable technologies to developing countries; and

h) promote the establishment of an Environmental Council at the UN with similar decision-making powers to the Security Council, but dealing instead with environmental issues of global significance.

2.3 Short Term Targets

We will support:

a) urgent measures to stop the exploitation of rainforests, which has resulted in both the loss of a rich biosystem and the displacement and possible extinction of the native peoples of the forests;

c) efforts to end the dumping of nuclear waste in the oceans;

d) effective measures to reduce greenhouse gas emissions and use of ozone-depleting substances;

e) legislation to require Indian companies, Government agencies and business enterprises, operating overseas to observe social and environmental standards no less stringent than those required in India.

INTERNATIONAL DEBT CRISIS

3.1 Principles

We recognise that repayments of past loans have so outstripped new loans that the net transfer of money is from the developing world to the developed.

3.2 Goals

We will intensively lobby to :

a) cancel all debts of developing countries;

b) achieve radical reform of the World Bank and the International Monetary Fund or establish a new international lending institution that would take over the responsibilities of these institutions, to be governed by a board with gender balance as well as equal representation from both developing country debtors and western lenders; and

c) encourage developing countries to pursue strategies of economic development which are highly self-reliant and which prioritise the production of goods and services from local sources.

PEACE AND SECURITY

4.1 Principles

We are committed to:

- a) developing fair and just international relations with other countries, peoples and regions;
- b) building positive peace into our international security relations;
- c) resolving conflict rather than merely deterring war through the maintenance of traditional military structures;
- d) ensuring the greatest possible transparency in India's foreign and security relations, domestically as well as internationally;
- e) working with individuals and organisations which openly and democratically work for such an objective at a local, regional, national and international level;
- f) working towards a policy framework of sustainable international relations, strongly supported by nonviolent strategies of international cooperation, conflict prevention, international mediation and conflict resolution, and which recognise the local, national and international dimensions of conflict in our region;
- g) capability for the foreseeable future, subject to eventual regional-wide demilitarisation;
- h) reforming the Indian Defence Forces to ensure that they are trained and equipped for more sustainable national and international security roles aimed at ensuring peace; and
- i) envisaging an ecologically sustainable post nuclear "New International Political Order" on the matrix of Civilisational Homes (like EU) superseding the present nation - state arrangement.

4.2.1 Working towards Regional and Global Demilitarisation.

We will:

- a) participate in global regime initiatives to monitor and reduce the manufacture and export of biological, chemical and nuclear weapons technologies;
- b) support a global nuclear weapons Comprehensive Test Ban Treaty (CTBT), with particular reference to nuclear weapons testing in the Asia-Pacific region;

c) support global nuclear non-proliferation, and comprehensive measures to dismantle all nuclear weapons and their target systems, through convening a UN-sponsored International Peace Conference on general nuclear disarmament;

d) support a global ban on the militarisation of space.

4.2.2 Combating the International Arms Trade and Provision of Military Assistance.

We will support policies to:

a) ensure that India will not produce weaponry or components for export;

b) compile a register of all dual-use (civilian-military) technology which may be exported from India, and restrict the trade with reference to a broad range of security considerations (such as the human rights record of our trading partners);

c) encourage other states to phase out external military aid in the Asia-Pacific region;

d) end arms trade fairs in India and coordinate with neighbouring states on similar measures; and

e) establish a realistic, comprehensive register of the arms trade in the Asia-Pacific region, and work to develop alternative regional and UN-sponsored disarmament initiatives with a capacity for binding verification.

4.2.3 Regional Confidence-building and Peace-building

We will support policies that:

a) develop regional security relations which build peace and confidence, and work towards resolving conflicts before they evolve into violent international disputes; and

b) recognise that the basis of regional peace and security is a sustainable framework of human rights protection and promotion, just and equitable regional trade arrangements, generous and appropriate overseas aid programme and strong multinational environmental safeguards; and

c) ensure that the Asia-Pacific states, and their constituent peoples, have open access to dependable international legal dispute mechanisms.

4.2.4 Regional Conflict-Prevention

We will encourage:

- a) the development of an inter-related set of global security campaigns through the Ministries of Defence, Foreign Affairs and Education;
- b) effective diplomatic intervention in potential conflict situations, through India's network of regional diplomatic ties, and through regional institutions and the UN where appropriate; and
- c) conflict-preventive peacekeeping deployments for interceding in potential conflict situations, wherever appropriate, in the form of monitors, police, aid and assistance personnel or peacekeeping forces, with all-party support managed through relevant regional organisations or the UN.

4.2.5 Linking Peacebuilding with Peacekeeping and Peacemaking

We will support policies which:

- a) manage India's foreign and security relations in ways which recognise that peacebuilding and peacemaking are crucial elements of any regional conflict management framework, and that peacekeeping has the potential to operate at an interface between the two;
- b) develop an integrated strategy linking peacebuilding, peacekeeping and peacemaking approaches to conflict management;
- c) establish an appropriate peacekeeping strategy to be developed both nationally and through the UN; and
- d) respond to the urgent need to comprehensively develop international peacemaking capabilities, both in new regional institutions and through a reformed UN.

4.2.6 Sanctions Enforcement Action

We will work to ensure that trade embargoes:

- a) are only conducted within a UN mandate;
- b) are closely associated with an appropriate strategy of conflict resolution; and
- c) are rigorously enforced in order to achieve their goals as rapidly as possible.

4.2.7 Military Enforcement Action

We support a comprehensive strategy of nonviolent conflict management as the most effective means of promoting peace and security in the international arena; in which military enforcement action is only seen as appropriate in securing effective UN sanctions against states which seriously violate international peace.

4.2.8 Establishing an Agency for Monitoring Demilitarisation

We will support policies to:

- a) establish an Agency for Monitoring Demilitarisation.
 - monitoring and/or coordinating regional arms control and disarmament measures;
 - monitoring and combating the arms trade;
 - monitoring weapons testing and military exercises;
 - coordinating regional arms conversion strategies;
 - and
- b) develop a culture of nonviolent conflict management and peace education throughout the world.

AAFT UNIVERSITY OF MEDIA AND ARTS

Maath, Kharora,
District – Raipur, Chhattisgarh- 493225
Mobile : +91-9109032675
Email : enquiry@aaft.edu.in

AEG is an integral education and training academy of Marwah Studios, which is a leading entertainment and media conglomerate. What started out as India's foremost private film school over 26 years ago, has since grown into the largest media education hub in Asia. With a vision to produce global leaders of highest intellectual and ethical calibre, AAFT delivers high quality technical education in emerging areas of media and creative arts.

AEG group of institution has been imparting education and training for creative platforms since its inception in 1993 at the prominent location of Film City, Noida. With more than 25 years of proficiency and expertise in the field of media & arts technology, this ISO certified institution has facilitated revolutionary education to more than 17000 students and has managed to establish a benchmark of success and achievements. It has been awarded as "Best Media School" by The Edutainment Award in 2015 for being a pioneer in the field of film, media, music, animation and fashion education proliferated through different schools.

ABHILASHI UNIVERSITY

Chail Chowk, Tehsil, Chachyot, Mandi

Himachal Pradesh - 175028

Phone: 01907-250407, 9418056520

VC : (01907) 250015, Registrar : (01907) 250406-0708

Email ID: regabhilashi@gmail.com

Abhilashi University, Chailchowk, Tehsil Chachiot, Distt. Mandi (HP) is established by the Govt. of Himachal Pradesh and is a Govt. recognized University. The Abhilashi University is the first University that is run by Himachalies and the true educationalists. The campus of the University is located at Chailchowk near Mandi (HP) and surrounded by lush green fields, pine and oak forests thus becomes an ideal place for study in a clean health-oriented environment.

Abhilashi University is managed by Abhilashi Educational Society, Nerchowk, Distt. Mandi (HP) which is a pioneer organization managing various educational institutions in the State of Himachal Pradesh. Abhilashi University is the most emerging private University of Himachal Pradesh having various technical and professional courses viz. BAMS, B.Sc. (Hons.) Agriculture, B. Pharmacy (Allopathy), D. Pharmacy, M. Pharmacy, B. Tech. (CE), B. Tech. (ME), M. Tech. (CE), M. Tech. (ME).

Abhilashi University has enrolled students from across the country from the states, other than Himachal Pradesh i.e. Uttarakhand, Punjab, Rajasthan, Sikkim, Arunachal Pradesh, Bihar, Jharkhand, West Bengal etc. and remain as the most preferred university in Himachal Pradesh. There are various courses in Abhilashi University which have 100% occupancy and huge number of application are received for the admission Abhilashi University has 60 bedded in campus hospital with 24x7 resident doctors and pharmacy in order to ensure the good health conditions of its students. Other various amenities like canteen, tuck shops, stationary shops, re-creation centres, sports ground etc. are available in the campus along with the in campus ATM facility (IDBI Bank). Hence Abhilashi University is an ultimate destination for the students who can ensure their career and future.

Vision

Excellence in professional and technical education through dedication and innovative research.

Our Mission

- To provide environment for achieving excellence in education.
- To create and generate environment for quality education.
- To impart quality education through value-based & industry-based curriculum.
- To strengthen in humanistic, social and moral values.
- To plant education and qualities of leadership in minds of students for future development of the nation.

ACADEMY OF SCIENTIFIC AND INNOVATIVE RESEARCH

Training and Development Complex
CSIR Campus, CSIR Road,
Taramani, Chennai – 600 113
Ph: +91-44-22545679, 22545681
Email : info@acsir.res.in director@acsir.res.in

Established in 2010, by an Act of Parliament, the Academy of Scientific and Innovative Research Act, 2011 vide The Gazette of India No. 15 dated February 07, 2012 and notified on April 03, 2012. There are 2453 Scientists of CSIR as Faculty members of AcSIR and 36 Adjunct faculty members. Out of a total of over 3000 Students, there are 3082 Ph.D, 95 Integrated M.Tech-Ph.D (IMP), 20 Integrated M.Sc-Ph.D and 06 PG Diploma in 'Patinformatics' students, respectively.

- First Convocation held on September 15, 2011 (during interim mode) for 52 Students of PGRPE-2009 batch.
- Second Convocation held on September 26, 2012 for 71 Students of M.Tech (PGRPE)-2010-12 batch.
- Third Convocation held on March 24, 2014 for 81 Students of M.Tech 2011-13 batch and 5 Ph.D Students.
- Fourth Convocation held on August 28, 2014 for 107 Students of M.Tech 2012-14 batch and 40 Ph.D Students

The mission of the Academy is to create highest quality personnel with cross- disciplinary knowledge, aiming to provide leaders in the field of science and technology.

- Nurture a research-propelled, technology-enabled, industry-linked, socially conscious higher education platform
- Achieve a seamless integration of intellectual strengths with current market needs with a people centric focus.
- Develop niche capability required to bolster research efforts in futuristic science.
- Provide the opportunity to work on the frontier and contemporaneously challenging areas for nurturing innovation

Objectives

- Disseminate advanced knowledge in science and technology, by providing teaching and research facilities in emerging and futuristic areas of inter-disciplinary and multi-disciplinary areas—whether the focus is natural sciences, life sciences, mathematical and computational sciences, medical sciences, engineering, applied art, humanities, social sciences, law relating to these areas
- Adopt measures for innovations in teaching and learning processes
- Create an ambience for learning and scholarship in advanced science and technology instead of exclusively focusing on marks or grades
- Educate and train manpower in scientific and technological fields; science 2.0 e-enabled cloud environment.
- Establish linkages with industries in India and outside India for the promotion of science and technology.
- Collaborate, in appropriate areas in the field of science and technology, with reputed universities and institutions in India and outside India
- Promote research in science and technology having a bearing on social, economic, cultural, and intellectual, welfare of the people.
- Organize and undertake extramural studies, training and extension services.

Ajeenkya DY Patil University offers the best undergraduate and postgraduate programs in unique areas, linked to exemplary 'ADYPU Student Experience', which is supported by excellent facilities and highly motivated teaching staff. Our aim is to contribute to the creation of Innovation oriented Indian society. The aim is to develop new solutions that elevate the quality of life for every Indian by utilizing the new knowledge created. As future economic, financial & social paradigms evolve, the Ajeenkya DY Patil University is gearing up to new challenges & exploiting vibrant possibilities for growth through single-minded focus on innovation. We apply innovative thinking across our activities, now and for the future. We continue to develop effective capabilities to respond flexibly and quickly to the changes by employing innovative solutions in our internal processes as well as external offerings. Ajeenkya DY Patil University, Pune has been established under Maharashtra Govt. Act of 2015 of Government of Maharashtra. Our mission is to graduate well-educated students who are prepared to meet the challenges of a rapidly changing, increasingly complex world, and to contribute to the betterment of the world.

The strategic intent for Ajeenkya DY Patil University is "Always The Best".

In the coming five years, ADYPU will be recognized as one of the top 10 institutions in the country for academic excellence in teaching, research and quality of service. The guiding terms for us shall always be Inspiration, Intuition, Imagination and Innovation. To achieve the strategic intent, ADYPU is committed to:

- Create and disseminate knowledge through a range of high-quality academic programs in a student-centered learning environment emphasizing intellectual achievement and employability.
- Work through a matrix of four imperatives in all academic and research pursuits, viz. what is desirable to people, what is feasible through technology, what is viable for business and what is good for society and the environment.
- Create an enabling environment of freedom and responsibility, which stimulates the intellectual capacity of students, faculty and staff to create opportunities for personal and professional growth.

Our past accolades are accompanied by a great responsibility towards our students. We are dedicated to living up to our acclaim by working diligently with you to assure that we are a world class institution – a place where students are engaged, involved, concerned and prepared for lifelong practice in their respective fields.

AKAL UNIVERSITY

Akal University - Guru Ki Kashi

ਦਿਹ ਹੈ ਪ੍ਰਗਟ ਰਮਾਨੀ ਕਾਸ਼ੀ। ਪ੍ਰਭੂ ਹੈ ਦਿਹਾ ਚੋਰ ਮਾਤਿਰਾਸੀ।
ਭੈਖਰ ਗੁਰੀ ਕੀਵੈਦ ਗਿਆਨੀ। ਬੁੱਧਿਮੰਤ੍ਰੂ ਹੋਏ ਦਿਤ ਆਨੀ॥

Fulfilling Sri Guru Gobind Singh Ji's fourth Prophecy of " Guru Ki Kashi ". For a Sikh, there is nothing more rewarding than to serve the cause of Humanity and especially Education, which enlightens the minds of the people and removes the darkness of ignorance from their minds.

Propagating the vision of Guru Gobind Singh Ji, the Guru Ki Kashi Akal University is the ideal center for education located in the heart of Talwandi Sabo, Punjab. Advanced technological facilities and modern infrastructure makes the Akal University the perfect education destination for students imparting value based education along with a safe & secure environment for all its students. With the blessings of Baba Iqbal Singh Ji and support of the Kalgidhar Society, Baru Sahib, the Akal University has been established as a center for State of the Art Education. With 5 colleges offering a diverse range of courses in Humanities, Science, Commerce, Religious Studies and Languages the aim of the university is to ensure a complete and comprehensive approach to instill the values of Sikhism and religious secularism through its courses. The divinity centre at the university will train scholars to translate Sri Guru Granth Sahib in different languages and carry the message of the Guru to the outside world in different languages to raise awareness about Sikhism in the world around us.

Our endeavour at Akal University is to develop in every student the ability to express himself/ herself in English. Good communication abilities are among the most important life skills critical to achieving success in any field. No matter how brilliant you may be, or how knowledgeable about a subject you are, if you can't get the words out in a compelling, convincing, or coherent way, your thoughts are of limited value. This is why teaching effective communication skills must serve as the cornerstone for any program preparing young people for the 21st century. At Akal University, English will not only be the medium of instruction but also the only means for all communications and at all levels.

AKS UNIVERSITY

Sherganj, Panna Road

Satna – 485001, Madhya Pradesh

Admission Cell: +91 8889237776, 8889207776, 9981164776

Satna City Office : 07672-411776, 403776

Email: admission@aksuniversity.ac.in

AKS University, Satna, Madhya Pradesh has been established by Government of Madhya Pradesh by Act No.44 of 2011 of Madhya Pradesh Vidhan Sabha. The University is dedicated to perform in a unique manner to achieve academic excellence in a creative way by using innovative ideas to produce perfect human resources and to act as center for 'Amicable Knowledge Solution'. AKS University Satna is recognized by University Grants Commission (UGC), a statutory body of the Government of India under 2(f) of UGC Act. As per law, Universities do not require AICTE approval. Only institutions which are affiliated to Universities require approval. As AKS University is a Bonafide University established by a State Act and duly recognised by UGC, hence it does not require AICTE approval. This standing of law is established by Hon'ble Supreme Court of India in the case of Bharathidasan University vs. AICTE. The University is dedicated to perform in a unique manner to achieve academic excellence in a creative way by using innovative ideas to produce perfect human resources and to act as center for 'Amicable Knowledge Solution'. AKS University at Satna [M.P.] promoted by the eminent Rajiv Gandhi Group of Institutions and value-driven professionals with an enviable track-record of molding almost 12000 students over last 17 years, is guided by the principle of Think Global and Act Local. The curriculum, course offerings, and the Centers of Excellence at the AKS University are all aimed at knowledge-creation & skill-development, for the regional industry like Cement and cable, and for managing abundant regional natural resources like water, agriculture, Environment, Mines. This "Industry-Centric" approach of AKS University will give the students assured opportunities for internship & practical training and knowledge-sharing sessions from industry professionals, and will give the faculty members ample research-and-consultancy opportunities. AKS University's teaching is based on 60-20-20 Teaching Model, so that 60% teaching would be done by eminent & highly qualified in-house faculty drawn from world-leading institutes like Harvard, IITs; 20% teaching would be done by Adjunct faculty from leading institutes from the country & abroad, and balance 20% will be taught by practicing Industry professionals. Leveraging ICT innovatively, Adjunct faculty and industry professionals would teach through Webinars, besides live lectures. The University's structure and philosophy is based upon a 75:15:10 Employment Model whereby 75% of the graduating students would take up jobs in companies, 15% would become Employer-Entrepreneurs; and balance 10% would go into research activity. Besides teaching, internships and industry-projects, well-equipped research-labs and incubator cells are a key feature of AKS University.

APG SHIMLA UNIVERSITY

Shoghi-Mehli Bypass Road Shimla
Himachal Pradesh - 171009

Website: www.ametindia.com, www.ametuniv.ac.in

AMET (Deemed University) is located on the beautiful shore of Bay of Bengal at Kanathur, just an hour's drive from Chennai city. It utilizes a semester-based academic calendar and is a state of the art establishment totally dedicated to the dissemination of knowledge and training to cadets and students. AMET is established as a private maritime institute through Smt.Pattammal Educational and Charitable Trust with just 14 cadets in 1993. AMET has, through its uncompromising strides of excellence and ambitious zeal to serve the students and nation, transformed into the first university for maritime education in India under AMET Trust. (AMET) was granted the deemed to be University status by the UGC on 21st August 2007 under the “de-novo” category with maritime education as emerging field with great potential. Now the strength is touching upon a proud 3539 students enrolled in different intensively maritime and marine related UG and PG programmes. AMET Providing competitive advantage in gaining employment by offering innovative programmes in emerging areas and for further academic pursuits.

AMET offers a wide range of courses approved by Directorate General of Shipping and University Grants Commission, including vocational certificates at many levels, bachelor degrees and diplomas; as well as postgraduate certificates and degrees, including doctorates. Now, AMET-trained Seamen navigate proudly all over the world spreading its popularity and quality training made possible through the following academic and professional strengths: Graduates from our School of Marine Engineering, School of Nautical Science, School of Electrical Engineering, School of Offshore Engineering, School of Naval Architecture and AMET Business School occupy important positions in industry houses throughout the world. In providing Quality Assurance, AMET has obtained Certification to ISO 9001: 2000 Standards from Det Norske Veritas, Norway.

AMET University aims to further enhance the maritime education and aspires to be a leading Maritime University with international standards by providing the best infrastructure in terms of class rooms with modern teaching aids, well equipped workshops for practical training, marine workshop for hands on training on marine auxiliaries, Ship in Campus, well furnished hostels, canteen facilities, indoor & outdoor games, swimming pool, medical facilities and an overall congenial atmosphere for learning by the students.

ACADEMY OF SCIENTIFIC AND INNOVATIVE RESEARCH

CSIR- Human Resource Development Centre
(CSIR-HRDC) Campus
Postal Staff College Area, Sector 19, Kamla Nehru Nagar
Ghaziabad, Uttar Pradesh- 201 002
Ph: +91-120-2783009 (L), (M) +91-9266600847, 9266600947
Email : info@acsir.res.in
Website : <http://www.acsir.res.in>

Establishment of AcSIR has its origins with the Kelkar Committee constituted in 2004 to review CSIR's functioning. The Report recommended that CSIR laboratories should be encouraged to take on the role of Research University and seek Deemed University status. Later AcSIR was established in 2010 (by a resolution of GOI on July 17, 2010) and formalized by an Act of Parliament vide The Gazette of India (dated February 7, 2012) and notified on April 3, 2012 as an Institution of National Importance.

The mission of the Academy is to create highest quality personnel with cross- disciplinary knowledge, aiming to provide leaders in the field of science and technology.

- Nurture a research-propelled, technology-enabled, industry-linked, socially conscious higher education platform.
- Achieve a seamless integration of intellectual strengths with current market needs with a people centric focus.
- Develop niche capability required to bolster research efforts in futuristic science.
- Provide the opportunity to work on the frontier and contemporaneously challenging areas for nurturing innovation.

Objectives

- Disseminate advanced knowledge in science and technology, by providing teaching and research facilities in emerging and futuristic areas of inter-disciplinary and multi-disciplinary areas—whether the focus is natural sciences, life sciences, mathematical and computational sciences, medical sciences, engineering, applied art, humanities, social sciences, law relating to these areas.
- Adopt measures for innovations in teaching and learning processes.
- Create an ambience for learning and scholarship in advanced science and technology instead of exclusively focusing on marks or grades.
- Educate and train manpower in scientific and technological fields; science 2.0 e-enabled cloud environment.
- Establish linkages with industries in India and outside India for the promotion of science and technology.
- Collaborate, in appropriate areas in the field of science and technology, with reputed universities and institutions in India and outside India.
- Promote research in science and technology having a bearing on social, economic, cultural, and intellectual, welfare of the people.
- Organize and undertake extramural studies, training and extension services.

Andhra Pradesh Agricultural University (APAU) was established on June 12, 1964 at Hyderabad. The University was formally inaugurated on March 20, 1965 by Late Shri Lal Bahadur Shastri, the then Hon'ble Prime Minister of India. Another significant milestone was the inauguration of the building programme of the University by Late Smt Indira Gandhi, the then Hon'ble Prime Minister of India on June 23, 1966. The University was renamed as Acharya N. G. Ranga Agricultural University on November 7th 1996 in honour and memory of an outstanding Parliamentarian Acharya N.G. Ranga, who rendered remarkable selfless service for the cause of farmers and is regarded as an outstanding educationist, kisan leader and freedom fighter. The importance of the application of Science and Technology for Agricultural development was realized as early as in the beginning of century. Among the several commissions appointed for suggesting steps to streamline agriculture development, the Royal Commission (1926) emphasized the need for a strong research base for agricultural development. Subsequently, the recommendations of the Radhakrishnan Commission (1949) on University Education led to the establishment of Rural Universities for the overall development of agriculture and rural life in the country. Later, the Government of India constituted the First Joint Indo-American Team (1955) that studied the status and future needs of agricultural education in the country. In accordance with provisions of the Andhra Pradesh Agricultural University Act, 1963, some of the Colleges of Agriculture and Veterinary Science were transferred from the Universities to which they had been affiliated to the Andhra Pradesh Agricultural University during June, 1964. These are: Colleges of Agriculture and Veterinary Science, Hyderabad (established in 1961, affiliated to Osmania University), Agricultural College, Bapatla (established in 1945, affiliated to Andhra University), Sri Venkateswara Agricultural College, Tirupati (established in 1961, affiliated to Sri Venkateswara University) and Andhra Veterinary College, Tirupati (established in 1961, also affiliated to Sri Venkateswara University). In addition, 41 Agricultural Research Stations, functioning under the Department of Agriculture and four Research Stations of the animal Husbandry Department were transferred to the University in July, 1966 and May, 1967, respectively. The University was formally inaugurated on March 20, 1965 by late Shri Lal Bahadur Shastri, the then Hon'ble Prime Minister of India. Another significant milestone was the inauguration of the University's building programme by Smt. Indira Gandhi, the then Hon'ble Prime Minister of India on June 23, 1966.

ACHARYA NAGARJUNA UNIVERSITY

Nagarjuna Nagar

Guntur - 522 510, Andhra Pradesh

Tel : 0863-2293238, 223333, 2293269, 5513330

Fax : 0863-2293378, 2293320

Email : vcnu@nagarjunauniversity.ac.in

Website : www.nagarjunauniversity.ac.in

The name, Nagarjuna University is quite significant in that the great Buddhist preceptor and Philosopher Acharya Nagarjuna founded a University on the banks of river Krishna some centuries ago and made it a great centre of learning, attracting a large number of teachers and students from distant parts of the world. The University was established by Act 43 of 1976 of A.P. State Legislature and Governed by Act 4 of 1991 covering 6 Universities of the State. The present Acharya Nagarjuna University is not very far from the haloed spot, as it derives its moral and intellectual sustenance from Acharya Nagarjuna in which context the University has been renamed Acharya Nagarjuna University through the A.P. Universities (Amendment) Ordinance, 2004, promulgated by the Governor of Andhra Pradesh. The aspirations of the southern coastal Districts of Andhra Pradesh to pursue Post-Graduate education nearer their homes resulted in the establishment of Acharya Nagarjuna University. In 1976, Andhra University started a Post-Graduate Centre in Nallapadu, Guntur Dt., Andhra Pradesh, as an Extension Center to cater to the needs of higher education of the people of this region. It is in the fitness of things that a University should grow from this Center to fulfill the desire of the people of this belt. Accordingly, Nagarjuna University came into being in August 1976.

Acharya Nagarjuna University has completed three decades of its existence. It was inaugurated on 11th September, 1976 by the former President of India, Sri Fakruddin Ali Ahmed. There have been many problems, difficulties and teething problems in its onward march. In the course of the last 30 years, the University has successfully overcome most of the initial problems and is moving forward with determination, enthusiasm and hope. From the corridors of a local polytechnic college in Nallapadu to the imposing buildings in Nagarjuna nagar, the road was very long. Sacrifice, service and commitment marked the growth of Acharya Nagarjuna University.

Acharya Nagarjuna University, an affiliating University, started with only 10 post-graduate courses in the University College. Since then, it has achieved tremendous progress through quantitative expansion and qualitative improvements on various academic fronts. This has been possible by the efforts of its dedicated faculty, an efficient team of supporting staff and high quality student input. The Acharya Nagarjuna University at present offers post-graduate education in 47 courses (39 on the University campus, 4 at University PG Campus at Nuzvid and 5 at University PG Campus at Ongole) besides Post-graduate courses in affiliated colleges.

ADAMAS UNIVERSITY

Adamas Knowledge City
Barasat-Barrackpore Road
Barbaria, Kolkata - 700126

Genetics), Commerce, and Computer Application, and sponsored by Sachis Kiron Roy Memorial Trust (RICE Group) - The founder of Adamas Institute of Technology (Barasat), Adamas International School (B.T.Road, Dunlop, Belgharia), Adamas Institute of Teacher Education (Barasat), Adamas World School (Barasat), Adamas Higher Secondary Model School (Barasat), Adamas University is all set to launch the need based programmes for the young boys and girls from all over the country. The provisions of the Adamas University Act, 2014 have come into effect from 11th April 2014 in terms of the notification issued by the Government of West Bengal. This is another venture of the promoters of the RICE Group which has been rendering Yemem's service for the youths of West Bengal.

Adamas University has been established with the vision of providing high quality all round education to students to grow them as professionally competent and academically knowledgeable world citizens. The University acts as a centre of excellence to draw students from the country and abroad. High quality relevant research will be the hall mark for the University. The students would be trained in such a way as to make them ready and capable for employment and also for entrepreneurship in different sectors like Government, Industry, Social and Services Sectors. Efforts will be made to collaborate with the Industries and Educational Institutions of repute within the country and abroad by way of Collaborative Projects, Collaborative Research, Faculty and Student Exchange programs. The role of RICE Group in shaping the destiny of large number of youths of West Bengal will also be a contributing factor for shaping the students of The Adamas University.

The University will begin with several Faculties namely, Faculty of Engineering, Technology & Science, Faculty of Liberal Arts, Faculty of Law, Management & Commerce and Faculty of Education to name a few. The system of education will be flexible, multidisciplinary and useful for the society. Gradually the University will grow to accommodate areas like Biological Sciences, Earth Sciences, Fine & Visual Arts and different branches of Medical Sciences. The pedagogy will be state-of-the-art, interactive and whole time.

ADANI UNIVERSITY

Shantigram Township, Nr. Vaishnodevi
Circle, SG Highway, Ahmedabad - 382421,
Gujarat, India.
Tel: +91 79 2555 6592
Website : <https://www.adaniuni.ac.in/>

With a vision to educate and empower the youth, to encourage transformative research that focuses on real-world problems, and to contribute to global sustainability via excellence at all levels, the Adani Group – one of India’s largest transport and utility infrastructure conglomerates with inspiration from the infrastructure and visionaries of India – Shri Gautambhai Adani and Smt. Pritiben Adani – has established the Adani University in the enterprising State of Gujarat in India.

With major thrust on education for transformation, Adani University will be engaged in building state-of-the-art futuristic institution for education, training and research that shall disseminate managerial and technological knowledge of the highest value through impactful industry engagement and multidisciplinary research.

Five thrust areas, namely Infrastructure, Technology, Healthcare, Energy and Defense, will be the focus of university programmes, while the approach will be broad and complementary. Adani University will be a research-intensive institution that seeks to address and impact real-world problems. Research, formal and non-formal programmes for doctoral, under-graduate and post-graduate degrees and certification programmes, at the intersection of disciplines, will be offered at the University.

Adesh University, Bathinda, the flagship academic and research endeavor of Adesh Foundation, a pioneer in health care, medical and technical education came into existence in the State of Punjab in July 2012 by Act No. 6 of 2012 of Government of Punjab, notified under Punjab Government Gazette (Extraordinary) dated July 10, 2012 under Punjab Private Universities policy 2010. The parent body, the Adesh Foundation was established in 1995 vide Registration No. 618 of 1995-1996 (Registered under Societies' Registration Act XXI, 1860) in Sri Muktsar Sahib, an underdeveloped area of Southern Punjab, with aim and objectives of serving humanity in the sphere of health care as well as medical, paramedical and technical education.

Adesh Foundation started its journey in the field of professional education and health care with the establishment of Adesh Institute of Engineering and Technology, Faridkot in the year 1996, to deliver various undergraduate and postgraduate level programmes in the field of technical education. The Foundation established its second degree level institution in the sacred memory of martyrs of Sri Muktsar Sahib under the name Bhai Maha Singh College of Engineering, Muktsar in the year 2002. The foundation established a Medical College at Bathinda under the name and style as Adesh Institute of Medical Sciences & Research, Bathinda. This premier medical institution of Northern India with an annual intake capacity of 150 students in MBBS course is duly recognized by Medical council of India/Govt of India. The foundation further established College of Nursing, AIMSAR, Bathinda and College of Physiotherapy, AIMSAR, Bathinda in the year 2005. College of Pharmacy, AIMSAR, Bathinda was established in the year 2006, while Adesh Institute of Pharmacy and Biomedical Sciences, Bathinda was established in the year 2007 to impart training in the field of Pharmacy. All these colleges are recognized/approved by respective regulatory councils / authorities. Adesh Institute of Dental Sciences & Research, Bathinda was established in year 2008 to impart training in dental sciences, with the annual intake of 100 seats in BDS. The dental college is recognized by Dental Council of India/Government of India. The Adesh Foundation has made a rapid progress and growth since its inception by introducing innovative and professional courses in medical sciences, allied health sciences, management and technical education. As the Foundation was identified as having potential of conducting and introducing programmes of research and innovations, a University by the name and style as Adesh University was established under its fold in year 2012.

ADIKAVI NANNAYA UNIVERSITY

D.No. 25-7-9/1 Jayakrishna Puram
Rajahmundry 533 105, Andhra Pradesh
Tel : 0883-2472617 (Off); 0883-2472616 (Direct)
Fax : 0883-2472615
Email : registrar_aknu@rediffmail.com
Website : www.nannayauniversity.info

Adikavi Nannaya University, established in March 2006 through the Government of Andhra Pradesh Act No. 28 of 2006 at Rajahmundry, is a unique addition to the existing Universities in India. Named after Adikavi of Telugu literature Nannayabhatta, the eleventh century poet laureate who initiated a freeway authentic translation of the great epic Mahabharata from Sanskrit to Telugu, the University aims to combine the pristine glory and the contemporary demands of educational excellence.

In the new millennium when the paradigm has shifted to making India a Knowledge society, Adikavi Nannaya University strives to be an active contributor to the ever-expanding field of knowledge. University attends to the educational needs of both the Godavari Districts and very soon all the Post Graduate and Degree Colleges in these Districts are going to get affiliated to this University. The ardent hope is that the fledgling University of today will soon become a crowning jewel among the Indian and global Universities.

Adikavi Nannaya University vision has a dream of achieving excellence in the near future and becoming a forerunner of designing and initiating novel programmes that are relevant to the demands of the Godavari Districts. In its year of inauguration during 2006, the University initiated a potentially job oriented program in Geo-informatics, the first of its kind in Andhra Pradesh and one of the few in the country. In the second phase, keeping in view of the Govt.'s policy of encouraging 5 year integrated courses, the University designed and offered a new course in Mathematics and Computing, with the objective of providing trained programmes to I.T Industry. The University realizes that, besides being institutions of Human Resource Development, the University should be a active research center involved in solving the problems of the industry and occupations around and particularly the Godavari Districts. A new University must be able to foresee the thrust areas for future research and tailor its curriculum aimed at generating trained manpower to be involved in such a research. Any plan of action cannot overlook the fact that the Godavari Districts constitute a modern laboratory, wherein millions of tons of sediments and organic matter is regularly transported to the sea paving the way for formation of rich hydrocarbon reservoirs of the future. The Krishna – Godavari basin has proved itself to be a rich source of natural gas. The ONGC has its office in Rajahmundry, and several gas based industries and power plants are being planned in Andhra Pradesh.

AGRICULTURE UNIVERSITY

Website : <https://www.aujodhpur.ac.in/>

Agriculture University, Jodhpur was established on 14th September, 2013 by Government of Rajasthan under Agriculture University, Jodhpur Act 21 of 2013 to focus on holistic development of arid and semi-arid regions of the state covering 6 districts (Jodhpur, Barmer, Nagaur, Pali, Jalore and Sirohi), constituting 28% of total geographical area which is sustaining 20.8% human and 28.4% animal population of the state. The districts under jurisdiction of the university cover 3 agro-ecological zones of the state. These are Arid Western Plain Zone Ia (Jodhpur and Barmer districts), Transitional plain of Luni Basin Zone IIb (Jalore, Pali, and Sirohi districts) and part of Transitional Plain of Inland Drainage Zone IIa (Nagaur district).

The university has 1 institute of diploma and 3 colleges to produce highly competent educated human resources in agriculture and allied sciences besides 2 agricultural research stations, one each in zone Ia & IIb and 3 agricultural research sub stations, one in each zone to prepare, plan and perform highly need based research in this acute water scarce but naturally rich bio-diversified zone of the country. The third most important part in tri-pillar (Teaching, Research & Extension) of agricultural development, the extension for transfer of technologies are reached to doorsteps of the farming community by 6 Krishi Vigyan Kendras (K-V-Ks), 2 in Nagaur district and 1 each in Jodhpur, Barmer, Jalore & Sirohi districts under the umbrella of the university. The different units of teaching, research and extension are coordinating to systematically run by the headquarter situated at Mandor, Jodhpur.

Objectives

- To provide high quality modern education and scientific research in the field of agriculture and its allied sciences.
- To increase quality, quantity and productivity of prominent crops including arid spices, millets, oilseeds, pulses and medicinal crops of the region.
- To serve the farming community through transfer of agricultural technologies ensuring the latest quality technologies in all its outputs.
- To serve the society by satisfying the increasing demand for excellence in agricultural education, research and extension in the region and
- To focus on knowledge as a principle driving force for development, taking the initiatives in innovation and creativity in the different fields of agriculture to keep up with the holistic development of the region.
- Such other objectives as the University may from time to time determine.

AHMEDABAD UNIVERSITY

AES Bungalow # 2, Navrangpura

Ahmedabad - 380 009, Gujarat

Website : www.ahduni.edu.in

Ahmedabad University (AU) was established in July 2009. It is promoted by Ahmedabad Education Society (AES), a Society established in 1935 which is one of the best education societies in western India. It is a self-financed, non-affiliating State Private University established under Section 3(1) of the Gujarat Private Universities Act, 2009.

Vide its letter dated 28th July 2010 F.No. 8-13/2010(CPP-I/PU), the University Grants Commission has notified that Ahmedabad University has been established by an Act (No. 8 of 2009) of State Legislature of Gujarat as a State Private University and is empowered to award degree as specified by the UGC under section 22 of the UGC Act 1956.

To be a temple of higher learning engaged in gathering, generating, storing and disseminating knowledge relevant to the societal needs, offering multi-disciplinary programs to students emphasizing their all round development

Ahmedabad University aims to develop competent, sensitive individuals grounded in sound ethical values. It seeks to:

- Help students realize their full potential in a field of their choice
- Launch students on a journey of self learning and development
- Prepare value-driven leaders
- Encourage research and the open exploration of intellectual enterprise
- Foster an environment that encourages critical thinking and an inclusive community
- Stimulate discussion and debate
- Create an awareness and encourage development of a personalized programme of physical fitness
- Make students socially responsible
- Contribute to the development of society in all its facets – political, economic, social, cultural and ethical

AIPH UNIVERSITY

Registered Office : 2934 Nageswar Tangi, Bhubaneswar-751002

University City Campus : Pahala, Bhubaneswar-Cuttack NH 5 Bhubaneswar-752101

Call: +91-7205074656 / +91-9938213237

Asian Institute of Public Health University is a Private Public health university located in Bhubaneswar, Odisha, India. It was established after the AIPH University, Odisha Bill, 2017 was passed by the Odisha Legislative Assembly. It is the first Public health institute of Odisha.

AIPH University campus is located in the heart of Bhubaneswar, one of India's fastest growing cities. Home to students and faculty from across India and the globe, the University is not just an educational hub but a community of scholars, educators, and innovators.

In 2009, AIPH brought the much-needed expertise in various domains of public health to Odisha, and the region. During the last ten years various educational, training and research programmes in birth asphyxia, malaria, water sanitation and hygiene, TB, and women's health were added to the portfolio of AIPH in collaboration with Duke University, UC Davis, Emory, and London School of Hygiene and Tropical Medicine.

Faculty members at AIPH University are now engaged in basic and translational research in infectious diseases, cancer epidemiology, big data analytics, environmental health, chronic diseases, water sanitation and hygiene, microbiome and probiotics, and region-specific problems such as sickle cell disease. Results of these studies funded by DBT and ICMR – India, NIH-USA, the Bill and Melinda Gates Foundation through Child Health Research Foundation, WHO-UNICEF, other state and central government agencies have been published in the world's best journals including Nature, Lancet, and PLoS Medicine to name a few.

This has allowed AIPH faculty to carry a high h-index and attract new collaboration, and funding to achieve excellence. AIPH University is committed to being a leader in education, research and service and providing a platform to students, faculty, and collaborating researchers from around the world to teach, learn, and innovate for improving population health locally and worldwide. The students and faculty at AIPH University have the privilege of interacting and working with leading experts from different parts of the world. It is a two-way exchange that is beneficial for developing an understanding of the working environment that prevails in the current times.

AISECT UNIVERSITY

Village-Mendua, Post-Bhojpur,

Website : www.aisectuniversity.ac.in

Established in 1985, AISECT has established itself as India's largest education, skill development, services and e-governance network, which is changing the face of semi-urban and rural India. With 12,000 centres across 27 States and 3 Union Territories, as well as several higher education institutions, AISECT has transformed the lives of millions of people at the grass root level.

An ISO 9001:2008 certified organization, AISECT has carved its own unique value proposition and is untiringly reaching out to the remotest corners of the country for the dissemination of its products and services. Recognized in a World Bank-IIM (A) Joint Report as "the most sustainable and scalable form of IT penetration & popularization in India, AISECT's sustained efforts have been recognized by 'World Bank', 'IIMA', 'World Economic Forum', 'NASSCOM', 'World HRD Congress' and a host of other national and international bodies.

AISECT'S endeavors includes the creation of a unique multipurpose centre model, offering a wide array of university certified vocational courses through six major academies, partnering with the Central and State Governments for numerous skill development and capacity building initiatives, the recent partnership with the National Skill Development Corporation (NSDC) to provide skill based training to over 1.3 million people in the next 10 years, establishment of several higher education institutions including Dr. C.V Raman University in Bilaspur (Chhattisgarh).

AISECT University in Bhopal (Madhya Pradesh) and SCOPE Group of Institutions in Bhopal (Madhya Pradesh), e-governance innovations as India's leading Service Centre Agency (SCA) for the prestigious Common Service Centre (CSC) Project, offering business correspondence services for 26 nationalized banks through its financial inclusion initiatives, creation of innovative digital platforms like AISECTOnline.com and RojgarMantra.com along with breakthroughs in the K12 segment with Eduvantage PRO, a low cost interactive multimedia education tool.

AISECT UNIVERSITY

Infront of Gandhi Nagar Maidan

Hazaribagh, Jharkhand

Tel. : 8252299990, 8292846702

E-Mail-info@aisectuniversityjharkhand.ac.in

The AISECT University, Jharkhand is a premium University that maintains a unique pedagogy and innovative teaching methodology. Bhopal-based AISECT Group, which is India's first Skills University where skill development programmes are a compulsory part of the course curriculum, has set up AISECT University, Jharkhand at Matwani in Hazaribagh district of Jharkhand. As the first skills-based University of the state as well as the first private University of the district, it will endeavor to impart world-class skills-based formal higher education to students of Jharkhand. This will be the second campus of AISECT University in the country. At present, the proposed curriculum of AISECT University Hazaribagh comprises of Undergraduate and Post Graduate programmes under six Faculties including Management, Commerce, Computer Science & IT, Agriculture, Art and Vocational Educational. The University will also offer M. Phil. and Ph.D. courses in the years to come. AISECT University was launched in 2012 in Bhopal by AISECT, which is India's leading Social Enterprise working in the areas of Skill Development, Higher Education, Financial Inclusion and other ICT based services. It is the first University in India to introduce compulsory skill courses at the UG & PG levels. In addition to the normal curriculum, the University has made one skill compulsory every year for each student during any degree course. Therefore an Undergraduate student passes out from the University with minimum 3 to 4 skills in addition to hands-on experience on industrial machines in labs. The University has also started eight Multi Skill Academies in collaboration with the National Skill Development Corporation (NSDC) to provide over 30 skill courses. Furthermore, it has collaborated with various industries nationally as well as internationally like Microsoft, Tata Motors, Reliance, BSNL, IT Power, etc. to jointly set up skill centres, research labs etc., thereby creating a vibrant platform for the development of the students. "In the present era, there is a need for educational programmes which focus exclusively on skill enhancement thereby giving a boost to the practical efficiencies of the youth. We, at AISECT University, aim at making our students competent and professional. We believe in their holistic development of the students and that's why our goal is not only to provide them standardized education and training, but also to enhance students' skill-set so that they are ready to face the hurdles of the professional world as soon as they step out of the University.

We have successfully executed this at our campus in Bhopal and plan to continue this legacy at the new campus in Hazaribagh as well," said Mr. Santosh Kumar Choubey, Chancellor, AISECT University.

ALAGAPPA UNIVERSITY

Alagappa Nagar, Karaikudi - 630 003

Tamilnadu

Tel : 04565-225200, 225201, 226001, 235800

Fax : 04565-225202

Email : vc_alagappa@rediffmail.com alagappauniversity@gmail.com,

Website : <http://www.alagappauniversity.ac.in>

Alagappa University reaccredited with 'A' Grade by National Assessment and Accreditation Council (NAAC) is located at Karaikudi in Tamil Nadu and is accessible from Madurai and Tiruchirappalli Airports within two hours. The 440 acre green and lush campus houses all the academic activities. This University has emerged from the galaxy of institutions initially founded by the great philanthropist and educationist Dr. RM. Alagappa Chettiar.

Alagappa University was brought into existence by a Special Act of the Government of Tamil Nadu in May 1985 with the objective of fostering research, development and dissemination of knowledge in various branches of learning. Alagappa University is recognized by the University Grants Commission (UGC) of India. The University has 23 Departments, 6 Centres and 2 Constituent Colleges on its campus. 31 Affiliated Colleges located in the Districts of Sivaganga and Ramanathapuram are part of the University.

The University offers education through Regular, Week-end, Distance and Collaborative modes. The Distance Education Directorate offers a variety of programmes to the student community spread across the country and in selected foreign countries. Through all the modes of education, the University caters to the needs of the student community of around 1,25,000.

As a member of the Association of Indian Universities (AIU), as well as the member of the Association of Common Wealth Universities (ACU), it has rewarding relations with other academic institutions, research laboratories and industrial establishments that promise a spectacular feature.

The University is having international Collaborations with Universities / Institutions of Higher Learning in countries like China, Malaysia, West Indies, U.S.A. and South Korea. New innovative programmes have been designed and offered at the University. Many exchange programmes attract the attention of the teachers and students from abroad.

The University's motto is "Excellence in Action" and the University keeps before it the vision of excellence in all spheres of its action.

ALLAHABAD STATE UNIVERSITY

CPI Campus, Mahatma Gandhi Road,
Civil Lines, Allahabad - 211001, UP, India

Phone: 0532-2256206

E-mail : info@afset.org , jasiddiqui@rediffmail.com,

fardeenbeg786@rediffmail.com

Al-Falah University (AFU) at Faridabad, Haryana. is established by State Legislative Assembly of Haryana under “A university by Act of Legislative Assembly of Haryana, The Haryana Private Universities (Amendment) Act 2014” on the 4th March 2014.

Al-Falah University is an endeavor of Al-Falah Charitable Trust, in keeping up with its tradition of fostering professional education, training and guidance. Spread over 56 acres of lush greenery, Al-Falah University offers world-class education to students from India and other countries by providing a learning experience designed to develop intellectual abilities as well as good social, moral and ethical values.

The university is committed to providing a rigorous academic environment to equip students with knowledge, skills, insights, attitudes and practical experience in order to enable them to become discerning citizens. The emphasis by the university is placed on nurturing talent by providing need-based education to create a resource pool for developing cutting edge technologies for the benefit of the country. We believe that this pool of immense talent would enrich the national fabric and shall act as a driving force for transforming India into a great nation. Our curricula and teaching methods are rigorous, innovative and distinctly oriented towards competitiveness, keeping an eye on global environment of business, industry and academia. A distinct feature of our academic programme is the focus on the industrial needs of the country. The students at Al-Falah University are exposed to an optimal blend of analytical and practical knowledge, enriched by industrially-oriented training and project work. The university emphasizes on overall development of the students to cope with the fast changing technology. Consistent with this vision, Al-Falah University has been imparting quality education and has successfully developed over the years into a premier institution creating well-trained pool of professionals in all spheres of study.

The campus of the university is inspiring for our young minds. It has often been rated as one of the most beautiful campuses in India. It resembles a large, self-contained village with lecture theatres, seminar rooms, accommodation, cafeterias, canteens, shops and sports facilities, libraries and laboratories. The most remarkable feature of the campus is the seamless interconnection of nature and the built environment. There are a number of lush green gardens, water fountains and sidewalks which provide an ideal environment on the campus for study and leisure.

AL-KARIM UNIVERSITY

Near Katihar-Purnea Road
Sirsa, Karim Bagh, Katihar-854106
Bihar

For educationist Ashfaq Karim, this is an overwhelming decision. Kosi-Seemanchal is one among the most backward regions of Bihar. Higher education is far from the reach of the masses. Establishment of a university in this region would open doors to opportunities for the youth here. There was a time when no university had a mark in the region. Ashfaq Karim toiled hard to set up the first private medical college that is Katihar Medical College in Katihar District of Kosi belt. Now with the decision of state Government to form five new private universities will change the lives of the people.

The Kosi region in the north of the state of Bihar which is spread over two divisions of Purnea and Saharsa suffers from the lack of development of road, power, education and medical facilities. Extreme economic backwardness tells upon health, education and culture of the people of this region. Meritorious students of the region in general and Muslim youths in particular can ill afford to go out side for medical, technical and other professional education. Moreover, the ailing people of the area had to go to distant places e.g. Patna, Darbhanga and Bhagalpur Medical Colleges for specialized treatment, which is beyond the means and reach of the common people.

In view of the aforesaid facts, there has always been a crying need of a Medical College and Hospital in this part of Bihar having about 40% Muslim population mostly below poverty line. To meet this demand of the community the Al-Karim Education Trust, Patna under the provisions of Art. 30 (i) of the Constitution of India sponsored and established the Katihar Medical College in 1987. The college celebrated its Silver Jubilee in October 2012.

The parent body of Al-Karim University and Katihar Medical College is a registered trust of the members of the Muslim religious minority community devoted to the promotion of education, research and information dissemination among Muslim minority community as well as general students. The Trust has also been established for the benefit of the poor and weaker section of the community specially to ameliorate their educational and economic backwardness and poor health care. It shall further undertake and pursue advancement of other aims and objectives of public utility in which the Muslim population is interested, to serve the nation and humanity in a better way.

The campus is situated in a land of fifty five acres approximately with a built up area of 9,00,000 sq.ft. The college consists of various buildings housing different facilities such as administrative block, lecture theatre, separate hostels for boys, girls and interns, for PG students 155 suites with attached kitchen & bathroom, Emergency and Casualty services, O P D, 600 Bed Hospital with Modern Operation theatres, Radiology with facilities of MRI (1.5 tesla), DSA (Digital Substracting Angiography), CT Scan & Mammography besides X-ray, Microbiology, Pathology and Biochemistry Labs, Auditorium, Animal House, Postmortem Block with gallery and a full fledged Blood Bank with Blood Component facility, Bungalow for the Principal and residential apartments for Staff (102 quarters for teachers) and modern guest house are situated behind a panoramic view. The college library is located in the main building covering an area of about 17500 Sq.ft. It is well appointed with well-furnished reading rooms besides large number of latest text and reference books on all aspects of medical sciences and subscribes to 113 National and International Journals.

ALIAH UNIVERSITY

DN-18, DN Block, Sector V, Salt Lake City

Kolkata-700091, West Bengal

Tel : 033-27062269/27062125, 91-33-2706-4042

Email : vc@aliah.ac.in; infodesk@aliah.in; alam@maths.iitkgp.ernet.in

Website : www.aliah.ac.in

Aliah University started its glorious journey from the 2008-09 academic session with great potential and immense opportunities. It is hoped that this university, harmonizing tradition and modernity, will emerge as a unique institution of higher studies and research. As per Aliah University Act 2007, Section 3 (3), it has been conferred the status of a minority educational institution. Aliah University is an autonomous university under the Department of Minority Affairs and Madrasah Education, Government of West Bengal. It is hoped that along with the people of any race, creed, caste or class, this University will play a crucial and leading role in the advancement of higher education for socially and educationally backward classes belonging to the Minorities. Aliah University has with it the rich heritage of the 229-year old educational and cultural institution, Mohammedan College of Calcutta, popularly known as Madrasah-i-Aliah or Calcutta Madrasah, the first educational institution set up in India in 1780 by Warren Hastings, the then Governor General of India. Thus, one of the oldest centres of higher learning and culture, the institution is steeped in history. Many eminent scholars were associated with this institution as administrators, principals, teachers as well as students. Calcutta Madrasah was upgraded to Calcutta Madrasah College and then to Aliah University by the Government of West Bengal through Aliah University Act XXVII of 2007 passed in West Bengal Legislative Assembly. Calcutta Madrasah was established chiefly for the study of the Arabic and Persian languages and Muslim Law so that the sons of the Muslim gentry can perform the duties as officers for running the revenue administration and judiciary. The Naib Nizam was instructed to recruit the students of the Madrasah as vacancies occurred in the Fauzdari Courts, on production of certificates of efficiency. However, within a decade Arithmetic, Algebra, Geometry, Astronomy, Islamic Theology, Oriental Studies, Natural Philosophy, Geological Studies, Law, Logic, Rhetoric, Grammar, and Oratory were added on the list of prescribed subjects for study. In 1821, the Annual Examination of the Madrasah was held in the presence of many respectable officials and gentlemen of Calcutta. This was the first public examination held in British India. A medical class, headed by Dr Breton, Professor of Medicine, was started at this Madrasah in 1826 for the first time in British India. Dr Breton was authorized to purchase a skeleton and collect medical books. An anatomical work published by John Taylor was arranged to be translated into Arabic.

The medical class continued here till the establishment of Calcutta Medical College in 1836. However, the students of the Madrasah were allowed to study medicine at Calcutta Medical College. This speaks for the high standard of education at the Madrasah in those days.

ALIGARH MUSLIM UNIVERSITY

Fax : 0571-2700087/2700528

Website : www.amu.ac.in

The University grew out of the work of Sir Syed Ahmad Khan, the great Muslim reformer and statesman, who in the aftermath of the Indian War of Independence of 1857 felt that it was important for Muslims to gain education and become involved in the public life and government services in India. Raja Jai Kishan helped Sir Syed in establishing the university. The British decision to replace the use of Persian in 1842 for government employment and as the language of Courts of Law caused deep anxiety among Muslims of the sub-continent. Sir Syed saw a need for Muslims to acquire proficiency in the English language and Western sciences if the community were to maintain its social and political clout, particularly in Northern India. He began to prepare foundation for the formation of a Muslim University by starting schools at Moradabad (1858) and Ghazipur (1863). His purpose for the establishment of the Scientific Society in 1864, in Aligarh was to translate Western works into Indian languages as a prelude to prepare the community to accept Western education and to inculcate scientific temperament among the Muslims. The intense desire to ameliorate the social conditions of Indian Muslims led Sir Syed to publish the periodical, 'Tehzibul Akhlaq' in 1870. In 1877, Sir Syed founded the Muhammadan Anglo Oriental College in Aligarh and patterned the college after Oxford and Cambridge universities that he had visited on a trip to England. His objective was to build a college in tune with the British education system but without compromising its Islamic values. Sir Syed's son, Syed Mahmood, who was an alumnus of Cambridge prepared a proposal for an independent university to the Muhammadan Anglo-Oriental College Fund CommitteeTM upon his return from England in 1872. This proposal was adopted and subsequently modified. Syed Mahmood continued to work along with his father in founding the college. It was one of the first purely residential educational institutions set up either by the government or the public in India. Over the years it gave rise to a new educated class of Indian Muslims who were active in the political system of the British Raj. When viceroy to India Lord Curzon visited the college in 1901, he praised the work which was carried on and called it of "sovereign importance". The college was originally affiliated with the University of Calcutta and subsequently got affiliated with the university of Allahabad in 1885. Near the turn of the century, the college began publishing its own magazine, The Aligarian, and established a Law School. It was also around this time that a movement began to have it develop into a university. To achieve this goal, expansions were made and more academic programs added to the curriculum of the college. A school for girls was established in 1907. By 1920 the college was transformed into the Aligarh Muslim University. Sir Syed breathed his last on March 27, 1898 and was buried in the premises of the university mosque in the Sir Syed Hall, Aligarh Muslim University.

ALIPURDUAR UNIVERSITY

P.O. Alipurduar Court
Distt. Alipurduar – 736 122
West Bengal, India
Phone : (03564) 255045
Email : info@alipurduaruniversity.ac.in

Alipurduar University established as per West Bengal Act VXII of 2018 dated 1 October 2018.

Alipurduar University is the first State aided University of Alipurduar District which was inaugurated by Smt. Mamata Banerjee, the Hon'ble Chief Minister of West Bengal. We all welcome everyone to Alipurduar University. Alipurduar is an extensive area in the eastern end of the Dooars in West Bengal situated on the east bank of Kaljani River on the foothills of the Himalayas. It is also the gateway to Bhutan and north-eastern states of India and is inhabited by people of various castes, creeds, communities and ethnic groups of West Bengal.

It was a long-cherished dream of a University at Alipurduar by the people of this locality. With the up-gradation of the existing Alipurduar University to Alipurduar University, the aspirations of the people have become a reality. On occasion of this marvellous moment, I want to share my excitement with all aspiring and ambitious students, respected guardians and all respected citizens, and humbly appeal all to be associated with and contribute to the realization of the Vision and Mission of this newly born institution. I also take this opportunity to acknowledge the selfless services of all the people of this locality whose endeavour has resulted in the establishment of this institution and achieving the present status.

The Mission of this University would be to make far reaching and positive impact on the world through the education of our students and to empower the society to overcome the backwardness by achieving enlightenment through quality education. The University aspires to offer quality education in different fields such as Arts, Commerce and Science and create a niche for skillful youths who will be empowered in the nation building process. Apart from offering education in traditional subjects, we plan to establish new centres for excellencies in Tea, Tourism, Food, Wood, Health, Local languages, Physical education etc. in collaboration with lead centres from India and abroad which have the potential for opening the door to new opportunities.

Website : www.aiims.edu ; www.aiims.ac.in

Creating a country imbued with a scientific culture was Jawaharlal Nehru's dream, and immediately after independence he prepared a grand design to achieve it. Among the temples of modern India which he designed, was a centre of excellence in the medical sciences. Nehru's dream was that such a centre would set the pace for medical education and research in Southeast Asia, and in this he had the wholehearted support of his Health Minister, Rajkumari Amrit Kaur.

The health survey and development committee, chaired by Sir Joseph Bhore, an Indian Civil Servant, had in 1946 already recommended the establishment of a national medical centre which would concentrate on meeting the need for highly qualified manpower to look after the nation's expanding health care activities. The dreams of Nehru and Amrit Kaur and the recommendations of the Bhore Committee converged to create a proposal which found favor with the government of New Zealand. A generous grant from New Zealand under the Colombo Plan made it possible to lay the foundation stone of All India Institute of Medical Sciences (AIIMS) in 1952. The AIIMS was finally created in 1956, as an autonomous institution through an Act of Parliament, to serve as a nucleus for nurturing excellence in all aspects of health care. All-India Institute of Medical Sciences was established as an institution of national importance by an Act of Parliament with the objects to develop patterns of teaching in Undergraduate and Post-graduate Medical Education in all its branches so as to demonstrate a high standard of Medical Education in India; to bring together in one place educational facilities of the highest order for the training of personnel in all important branches of health activity; and to attain self-sufficiency in Post-graduate Medical Education.

The Institute has comprehensive facilities for teaching, research and patient-care. As provided in the Act, AIIMS conducts teaching programs in medical and para-medical courses both at undergraduate and postgraduate levels and awards its own degrees. Teaching and research are conducted in 42 disciplines. In the field of medical research AIIMS is the lead, having more than 600 research publications by its faculty and researchers in a year. AIIMS also runs a College of Nursing and trains students for B.Sc.(Hons.) Nursing post-certificate) degrees. Twenty-five clinical departments including four super specialty centers manage practically all types of disease conditions with support from pre- and Para-clinical departments. However, burn cases, dog-bite cases and patients suffering from infectious diseases are not entertained in the AIIMS Hospital. AIIMS also manages a 60-bedded hospital in the Comprehensive Rural Health Centre at Ballabgarh in Haryana and provides health cover to about 2.5 lakh population through the Centre for Community Medicine.

ALL INDIA INSTITUTE OF MEDICAL SCIENCES BHOPAL

Saket Nagar, Bhopal
Madhya Pradesh - 462020
Email : admin@aiimsbhopal.edu.in

AIIMS Bhopal is one of the seven AIIMS apex healthcare institutes being established by the Ministry of Health & Family Welfare, Government of India under the *Pradhan Mantri Swasthya Suraksha Yojna* (PMSSY). With the aim of correcting regional imbalances in quality tertiary level healthcare in the country, and attaining self sufficiency in graduate and postgraduate medical education and training the PMSSY planned to set up 6 new AIIMS like institutions in under served areas of the country. These institutions are being established by an Act of Parliament on the lines of the original All India Institute of Medical Sciences in New Delhi which imparts both undergraduate and postgraduate medical education in all its branches and related fields, along with nursing and paramedical training. to bring together in one place educational facilities of the highest order for the training of personnel in all branches of health care activity. Research is a pursuit of knowledge and is limitless. Though we are recently established institute, research is an important mission of AIIMS Bhopal towards better healthcare and teaching. At AIIMS Bhopal we pursue research to understand the intricacies and maladies of the human body and its interaction with nature, find cure to ailments, improve quality of living and enhance teaching. Research at AIIMS Bhopal is a dedicated team work led by the faculty of the Institute as Principal Investigators (PI) with the assistance of senior residents, postdoctoral fellows and undergraduates and technical staff. The research funding is obtained mainly by extramural grants from agencies namely DBT, MPCST, ICMR, DST and others. The institute aims to provide modest intramural financial support to investigators for initiating research. The research projects are reviewed by the Research review board (RRB) comprising of faculty of the institute. Depending on the requirements RRB forwards the projects for further review to Institutional Human Ethics Committee (IHEC), Institutional Biosafety committee (IBSC) and Institutional Animal Ethics Committee (IAEC). The registration of IHEC with DCGI, IBSC with DBT and IAEC with CPCSEA is in process.

Facilities for research: Our research is facilitated by state of art instrumentation including Real-time PCR, flow cytometry, HPLC, Biosafety cabinets, high speed centrifuges, ELISA, chemiluminiscent analysers, microscopes with varying resolutions manned by trained technical staff. Equipments for high throughput and advanced technologies including genomics, proteomics, metabolomics, mass spectrometry, bioinformatics and NMR are underway.

Undergraduate research: At AIIMS Bhopal, undergraduate students are encouraged to identify a problem in research and address it with help of a mentor in the Institute. The aim of undergraduate research is to develop critical thinking and expand academic knowledge, explore research techniques, inculcate team spirit and time management, identify career interests, establish contacts with faculty and presenting at research conferences. Undergraduate research has been supported by intramural funding and short term studentships (STS) of ICMR. Twenty-five undergraduates of AIIMS Bhopal have bagged the prestigious STS fellowships since 2012 and have won accolades in platform and poster presentations in various national and international conferences.

ALL INDIA INSTITUTE OF MEDICAL SCIENCES BHUBANESWAR

Sijua, Patrapada, Bhubaneswar-751019

E-mail:- info@aiimsbhubaneswar.edu.in

AIIMS Hospital OPD Help Desk: (0674) 2476789

All India Institute of Medical Sciences, Bhubaneswar is one of the apex healthcare Institutes established by the Ministry of Health & Family Welfare, Government of India under the Pradhan Mantri Swasthya Suraksha Yojna (PMSSY). Under this scheme six new All India Institutes of Medical Sciences have been established at Patna, Raipur, Bhopal, Bhubaneswar, Jaipur and Rishikesh apart from the one at New Delhi. In his Independence Day Speech on August 15, 2003, then prime minister Atal Bihari Vajapayee announced opening up of 6 AIIMS Hospitals at Patna, Raipur, Bhopal, Bhubaneswar, Jaipur and Rishikesh under Pradhan Mantri Swasthya Suraksha Yojana (PMSSY) launched for up gradation of medicare facilities in underserved areas of the country besides providing quality medical education in super-specialty disciplines in these areas. The foundation stone of this institute in Bhubaneswar was laid by then Prime Minister Atal Bihari Vajapayee on July 15, 2003. All India Institute of Medical Sciences, Bhubaneswar was established as autonomous institution and institute of National importance through the All India Institute of Medical Sciences (Amendment) Ordinance passed on 16th July, 2012.

Mission and Vision Statement

To establish a centre of excellence in medical education, training, health care and research imbued with scientific culture, compassion for the sick and commitment to serve the underserved.

Objectives of the Institute

- To develop patterns of teaching in undergraduate and postgraduate medical education in all its branches so as to demonstrate a high standard of medical education to all medical colleges and other allied institutions in India;
- To bring together in one place educational facilities of the highest order for the training of personnel in all important branches of health activity; and
- To attain self-sufficiency in postgraduate medical education.

Functions of the Institute

- Provide for undergraduate and postgraduate teaching in the science of modern medicine and other allied sciences, including physical and biological sciences.
- Provide facilities for research in the various branches of such sciences.
- Provide for the teaching of humanities in the undergraduate courses.
- Conduct experiments in new methods of medical education, both undergraduate and postgraduate, in order to arrive at satisfactory standards of such education.
- Prescribe courses and curricula for both undergraduate and postgraduate studies.
- Train teachers for the different medical colleges in India.
- Establish and maintain a dental college.
- Establish and maintain a nursing college.
- Establish and maintain rural and urban health organisations which will form centers for the field training of the medical, dental and nursing students of the Institute as well as for research into community health problems.
- Establish and maintain a other Institutions for the training of different types of health workers, such as physiotherapists, occupational therapists and medical technicians of various kinds.

ALL INDIA INSTITUTE OF MEDICAL SCIENCES JODHPUR

Basni Industrial Area, Phase-2, Jodhpur, Rajasthan - 342005

Medical College:- 0291-2740741

Hospital:- 0291-2740742, Fax:- 0291-2740531

Email : aoadmin@aiimsjodhpur.edu.in

AIIMS Jodhpur is one of the SIX NEW AIIMS established by the Ministry of Health & Family Welfare, Government of India under the *Pradhan Mantri Swasthya Suraksha Yojna* (PMSSY) with the aim of correcting regional imbalances in quality tertiary level healthcare in the country and attaining self sufficiency in graduate and postgraduate medical education. PMSSY planned to set up 6 new AIIMS like institutions in under served areas of the country. These institutions are being established by an Act of Parliament on the lines of the original All India Institute of Medical Sciences in New Delhi which imparts both undergraduate and postgraduate medical education in all its branches and related fields, along with nursing and paramedical training to bring together in one place educational facilities of the highest order for the training of personnel in all branches of health care activity. The College of Nursing, AIIMS, Jodhpur has been established to become a benchmark in field of Nursing Education in India. The first batch of B.Sc (Hons) Nursing started on 2nd September, 2013 with an intake of 60 students. Nursing is an art as well as profession of scientific care. Nursing is a unique profession with a primary focus on care of the sick in the hospital in particular and providing preventive, promotive and rehabilitative health care services to the community at large. The domain of Nursing is based on the synthesis of biological, behavioural, social and cultural sciences with the focus on the population across the life span to maximize their potential for optimal health. As a practice discipline, Nursing enters the lives of individuals, families and communities for the purpose of healing, maintenance and adaptation. Nursing continues to be an indispensable service in the health care sector. Nursing practice is also dynamic as it grows continuously through health care, research, education, quality improvement and advocacy. Nursing personnel work independently, collaboratively and assume accountability and responsibility for the delivery of evidence based, cost effective quality client care. The turbulent swirl of change within the health care industry, the increased consumer awareness and increased health care cost has provided challenges and opportunities for Nursing professionals. Competent nurses are in demand all over the world. The College of Nursing, AIIMS Jodhpur is striving hard to prepare technically advanced professional nurses to cater the need of country in specific and global in general.

Aims and Objectives:

To train and educate nursing students so that they can make a significant contribution in all branches of nursing for promotion of health, prevention of diseases, maintenance of health and care during illness; To develop a research oriented view among the nursing professionals in nursing education and practice; To develop a continue education programme for different levels of nursing professionals for their professional growth and development; To demonstrate a commitment to leadership and professionalism through the delivery of socially, ethically and economically responsible client care.

ALL INDIA INSTITUTE OF MEDICAL SCIENCES PATNA

Phulwari Sharif, Patna, Bihar - 801507

Tel. : 0612- 2451923(OPD)/0612-2451044 (Administration)

Email: admin@aiimspatna.org

AIIMS Patna is the vision of the Hon'ble Prime minister Shri Atal Bihari Vajpayee who decided to give to the nation six regional AIIMS with the mandate to provide the most modern healthcare to the last man in the queue at affordable cost. Also, AIIMS Patna was created by the ordinance dated 16 July, 2012 and then the Act (Amendment), 2012 on 2nd July, 2013. The work started in 2010 with construction in six packages by the Project Monitoring Unit of the MoHFW under six packages and is referred to as AIIMS project. The project management at individual sites was done by a Superintending Engineer on behalf of the MoHFW, the DPR, the project consultant and the contractors till date. The IPD, OPD and trauma center of the hospital is still to be made available to AIIMS Patna.

Recruitment of faculty for all SIX AIIMS was undertaken by the MoHFW being coordinated by AIIMS Patna from November, 2011 which processed six thousand five hundred online applications for 546 posts in Six New AIIMS by September 30th 2012. To start the MBBS course in All six AIIMS by counseling 300 students admitted through the AIIMS Delhi entrance test. Since then AIIMS Patna had admitted 217 MBBS and 120 B.Sc. (nursing) students. Besides, the hospital for which only the AYUSH& PMR building are available and the IPD, OPD and trauma center are still to be handed over to AIIMS. AIIMS Patna caters a foot fall of 1000-1500 patients a day, does more than 200 investigations at 27% lower than the CGHS rates, has conducted more than 800 major surgeries since march 2014 including Total Hip Replacement, Total Knee Replacement, Cochlear implant, has electronic medical records, a telemedicine programme called Chhattisa, a community outreach programme which has conducted more than 50 health camps and is all set to start its three modular OT, and upgrade its bed strength to 300 besides starting 24x7 emergency services. AIIMS Patna has a net based tele-medicine education programme to train the common man to deal with medical emergencies before formal health care arrives at www.sankatmochannagrik.co.in

Those taking the programme are further trained as part of the Quick Medical Response Training programme being done in collaboration with the Department of Health and Family welfare and Disaster Management of the Government of Bihar. In innovations we have devised an android mobile based application called “Sankat Sanket” which can beam a message like “I am in danger” and the location of the mobile will visible at a site www.sankatsanket.org , so that the nearest help be it Ambulance, Police or fire fighters can be diverted to the victim.

ALL INDIA INSTITUTE OF MEDICAL SCIENCES RAIPUR

Tatibandh, G E Road, Raipur – 492099, Chhattisgarh

Phone (Office) : 0771-2573777

Email : admin@aiimsraipur.edu.in

AIIMS Raipur is one of the SIX AIIMS healthcare institutes being established by the Ministry of Health & Family Welfare, Government of India under the Pradhan Mantri Swasthya Suraksha Yojna (PMSSY). With the aim of correcting regional imbalances in quality tertiary level healthcare in the country, and attaining self sufficiency in graduate and postgraduate medical education and training the PMSSY planned to set up 6 new AIIMS like institutions in under served areas of the country.

All India Institute of Medical Sciences Raipur is a medical college and medical research public university based in Raipur, Chhattisgarh, India. The Institute operates autonomously under the Ministry of Health and Family Welfare.

This All-India Institute of Medical Sciences (Amendment) Act, 2012 has replaced the Ordinance which allowed the six AIIMS—like institutes to become operational from September 2012. The All-India Institute of Medical Sciences (Amendment) Bill, 2012, was introduced in the Lok Sabha on 27 August 2012. Lok Sabha passed the AIIMS (Amendment) Bill, 2012 on 30 August 2012. Bill was then introduced in Rajya Sabha on 3 September 2012. Rajya Sabha passed the Bill on 4 September 2012. Bill got its assent from the President of India, Pranab Mukherjee on 12 September 2012 and the Act came into force. The proposed measure will help the Centre change the status of the six new AIIMS registered under the Indian Societies Registration Act to be autonomous body corporate on the lines of the existing AIIMS in Delhi. AIIMS (Amendment)

AIIMS, Raipur is located on GE Road, near the Tatibandh Gurudwara in Raipur. Built at a cost of 840 crore (US\$120 million), AIIMS Raipur is spread over an area of 103.63 acres (0.4 km²), where the hospital and college complex occupies 63.85 acres (0.3 km²) while residential complex is on 39.78 acres (0.2 km²).

Status

- The institute admitted its first batch of 50 MBBS students in September 2012. Since 2013 it admits 100 MBBS students per year.
- The 160 bedded hospital is working since February 2014.

ALL INDIA INSTITUTE OF MEDICAL SCIENCES RISHIKESH

Virbhadra Road, Rishikesh - 249 201, Uttarakhand
Email : rakeshkumar.aoaiims@gmail.com

AIIMS, Rishikesh is one of the SIX AIIMS like apex healthcare institutes being established by the Ministry of Health & Family Welfare, Government of India under the Pradhan Mantri Swasthya Suraksha Yojna (PMSSY). With the aim of correcting regional imbalances in quality tertiary level healthcare in the country, and attaining self sufficiency in graduate and postgraduate medical education and training the PMSSY planned to set up 6 new AIIMS like institutions in under served areas of the country. These institutions are being established by an Act of Parliament on the lines of the original All India Institute of Medical Sciences in New Delhi which imparts both undergraduate and postgraduate medical education in all its branches and related fields, along with nursing and paramedical training. To bring together in one place, educational facilities of the highest order for the training of personnel in all branches of health care activity. The All India Institute of Medical Sciences, Rishikesh came into existence as an institute of National Importance through an Act of parliament. The All-India Institute of Medical Sciences (Amendment) Bill, 2012, was passed in the Lok Sabha on August 30, 2012 and in Rajya Sabha on September 4, 2012. This Act enabled the Rishikesh AIIMS to be an autonomous body on the lines of the existing AIIMS, Delhi. Official inauguration ceremony for Medical college of AIIMS, Rishikesh was held done on 20.09.2012. Subsequently MBBS classes with batch of 50 students were started on 21.09.2012.

MISSION : The government of India has launched the *Pradhan Mantri Swasthya Suraksha Yojana* (PMSSY) under the Ministry of Health and Family Welfare, New Delhi with the objective of correcting regional imbalances in the availability of affordable and reliable tertiary healthcare services and also to augment facilities for quality medical education creating a critical mass of doctors and conduct research in the country relevant to the area. Main mission is to establish a centre of excellence in medical education, training, health care and research imbued with scientific culture, compassion for the sick and commitment to serve the under served.

VISION : The institution will be expected to absorb talent, provide highly trained medical and paramedical manpower for the country and conduct research in national and regional health problems. The institute, outside the purview of the Medical Council of India shall be allowed to experiment with innovations in medical education and serve as advisory body for making government health policies. Main objectives according to Director are to create an excellent academic and educational milieu for providing a platform for development of quality medical services, teaching and research. Other objectives are to achieve an epitome of quality in medical education delivery and training system and to render International standard quality patient care and health care development system. We aim to enhance the reputation of our country by relevant research in medical field, creating clinical excellence and social awareness in young doctors and giving bright minds of Uttarakhand a preference in participation of path breaking research and giving new dimensions to medical science.

ALLIANCE UNIVERSITY

Chikkahagada Cross
Chandrapura-Anekal Main Road
Bangalore, Karnataka
E-mail : vc@alliance.edu.in
Telephone : +91 80 30938100/8200

Alliance University is a private University established in Karnataka State by Act No.34 of year 2010 and is recognized by the University Grants Commission (UGC), New Delhi.

Alliance University is a renowned university of higher learning located on an extensive state-of-the-art campus in Bangalore offering a variety of degree courses. The University has baccalaureate concentrations, postgraduate offerings, doctoral degree programs and several professional certificate programs.

Alliance University aspires to be among the best universities in the world by the year 2025 through a series of strategically crafted moves, precisely calibrated action plans and an unwavering commitment to the pursuit of excellence.

While its oldest professional school—Alliance School of Business—is consistently ranked among the top ten private business schools in India by various ranking agencies, the University having already established Alliance College of Engineering and Design; Alliance School of Law; and Alliance Ascent College, is in the process of establishing many other prominent academic units, viz., Alliance College of Arts and Humanities; Alliance College of Science; Alliance College of Medicine and Dentistry; Alliance College of Education and Human Services; Alliance School of Health Sciences; and Alliance College of Media and Communications.

The ambience and serenity of a world-class infrastructure housed in a 'green' campus; faculty who have proven themselves in their respective fields by providing an excellent blend of rigor and relevance in their teaching; staff who are ever ready to reach out; robust industry interactions; research aimed at solving problems of the real world; a plethora of international collaborative arrangements; outreach activities that touch the lives of a wide cross section of society; and an exemplary track record in career counseling and placement facilitation—all combine to provide a rare synergy that transcends artificial barriers and enables students to follow their hearts with passion and confidence.

AMITY UNIVERSITY

Amity University, Rajasthan (AUR) has been established by the Amity University Rajasthan, Jaipur Act, 2008. AUR is a private university established by the Ritnand Balved Education Foundation (RBEF), New Delhi which is a society registered under the Societies Registration Act, 1860 and was established with the view to promote professional, industry-oriented education in the state of Rajasthan.

The Amity University Rajasthan has a beautiful campus located on 152 acres of land on the Delhi-Jaipur Highway just outside of Jaipur towards Delhi. The University will impart modern, practical and research-based courses which will lead to the development of manpower which is employable and ready for industry. This in turn will drive the socio-economic upliftment of the region. Ritnand Balved Education Foundation is an Umbrella organization of all amity Institutions. RBEF was established in 1986. Presently, more than 1,00,000 Students study in 240 programs across 30 Amity campuses spread over 1000 Acres of land with more than 5.1 million sq. ft. of built-up area. More than 4000 faculty and staff members are dedicated to making Amity institutions world class and include leaders such as 5 former vice chancellors of renowned universities including Roorkee University, the former vice chairman of the AICTE, 12 former Generals of the Indian Army, IAS and IPS officers, renowned scientists, former CEOs of PSUs and of course many brilliant academicians.

Amity imparts education in almost all areas including management, engineering, biotechnology, law, communication, insurance, nanotechnology, behavioral science, fine arts etc. The Amity Business School and the Amity Institute of Biotechnology have both been ranked No.1 in the country among private institutes. The Amity Institute of Telecommunication and Technology Management has also been ranked among the top in the country and The Amity School of Engineering has been ranked No. 1 in terms of placements.

Amity provides industry oriented professional courses and is at the cutting edge of innovation. The first Masters program in nanotechnology was started by Amity. Amity was also the first in the country to start a program in cyber law and the first to launch an insurance institute. This industry-oriented approach has ensured that Amity has 100% placements.

Website : www.amrita.edu

Amrita University is a multi-campus, multi-disciplinary research university that is accredited 'A' by NAAC and is ranked as one of the best research universities in India. The university is spread across five campuses in three states of India - Kerala, Tamil Nadu and Karnataka, with the University headquarters at Ettimadai, Coimbatore, Tamil Nadu.

The university continuously collaborates with top US universities including Ivy league universities and top European universities for regular student exchange programs, and has emerged as one of the fastest growing institutions of higher learning in India. The university is managed by the Mata Amritanandamayi Math.

Amrita is a thriving campus that has a creative and proficient community of high achievers. Life at Amrita brings surprises and new experiences every day. Amrita University has a students strength of around 18,000 with the student body almost equally divided between boys and girls. Each campus has about thirty percent of the students coming from states outside the location of the campus they are attending. In fact, there are students from nearly every state in India. The student body also includes NRI and foreign students. Such a diverse student body helps enrich sharing and learning spontaneously. At the same time it creates an awareness of different cultural norms, generates sensitivity to the needs and concerns of others, and focuses on intercultural cooperation.

Learning happens not just in the classroom at Amrita. Extracurricular activities are encouraged with students forming clubs and associations that deal with topics like science, astronomy, environment, literature, music, culture, dance and photography.

Students are encouraged to become members of professional bodies such as the Association of Computer Machinery (ACM), Institute of Electrical and Electronics Engineers (IEEE), Society for Automotive Engineers (SAE), Computer Society of India (CSI), and Institution of Electronics and Telecommunications Engineers (IETE). Reading and discussing research papers is part of the curriculum not just at the master's and doctoral levels, but at the bachelor-level too.

ANAND AGRICULTURAL UNIVERSITY

University Bhavan,
Anand - 388110, Gujarat
Tel : +91-2692-261310; +91-2692-261273

Website : <http://www.aaau.in>

Anand Agricultural University (AAU) was established this year at Anand with the support of the Government of Gujarat ,Act No.(Guj 5 of 2004) dated April 29,2004. Caved out of the erstwhile Gujarat Agricultural University (GAU), the dream institution of Sardar Vallabhbhai Patel and Dr. K.M.Munshi, the AAU was set up to provide support to the farming community in three facets namely education, research and extension activities in Agriculture, Horticulture Engineering, product Processing and Home Science.

At Present there Seven Colleges, Seventeen Research Centers and Six Extension Education Institute working in six Districts of Gujrat namely Ahmedabad, Anand, Dahod, Kheda,Panchmahal and Voadodra.

AAU's activities have expanded to span newer commodity sectors such as soil health card, bio-diesel, medicinal plants apart from the mandatory ones like rice, maize.tobacco, vegetable crops, fruit crops, forage crops, animal breeding, nutrition and dairy products etc. the core of AAU's operating philosophy however, continues to create the partnership between the rural people and comitted academic as the basic for sustainable rural development.

Inpursuing its various programmes AAU's overall mision is to promote continues process of development of susustainable growth and economics independence in rural society.

AAU aims to do this through education, research and extension education. Thus, AAU works towards the empowerment of the farmers.

Mandates

- Education to the students in agriculture and allied fields.
- Conduct research in order to improve the productivity of rural areas.
- Undertake basic research to breakthrough newer areas of knowledge.
- Provide opportunities to observe and understand the life of rural people.
- Enable the students to inculcate the attitudes and develop skills relevant for grass-root work.

ANANT NATIONAL UNIVERSITY

Sanskardham Campus, Post - Godhavi
Bopal - Ambli Road, Near Manipur Bus stand,
Ahmedabad, Gujarat, India
Phone : (+91-02717) 324295 - Institute 324399

E-mail : aiaanant@gmail.com

Anant Institute of Architecture is affiliated with one of the oldest and well known 'Gujarat University' The Gujarat University was conceived in the nineteen twenties in the minds of public-spirited and learned men like Gandhiji, Sardar Patel, Acharya Anandshankar B. Dhruva, Dada Saheb Mavlankar, Kasturbhai Lalbhai and many others. However, the University could come into existence only after the achievement of independence. In 1949, the University was incorporated under the Gujarat University Act of the State Government 'as a teaching and affiliating University.' This was done as a measure of decentralization and reorganization of University education in the then Province of Bombay. During the course of its life of more than five decades, the University has seen the establishment of seven more Universities which were carved out of the jurisdiction of the Gujarat University,

Even then, the Gujarat University is the largest university in the state catering to the needs of higher education of more than two lakh students scattered over 235 colleges, 15 recognized institutions and 24 approved institutions. There are 34 Post-Graduate University departments and 221 P.G. Centres.

Gujarat University has developed phenomenally in the last 57 years to be recognized as a premier University in the country today. It provides education in one of the widest range of disciplines to about two lakh students.

The fields of architecture and its allied disciplines are evolving towards sustainable development as a response to the effects of Globalization and Climatic Change. New materials and innovative construction technologies have led to radical change in economic, technical, and aesthetic formations in these design fields.

Vision of Anant Institute of Architecture is respond to these shifts while simultaneously believing in the importance of sensitively harnessing local resources while empowering and enabling best educational and best professional practices to meet current and future challenges.

ANDHRA UNIVERSITY

Website : <http://www.andhrauniversity.edu.in>

Initiated by the founder Vice-chancellor Dr. C.R. Reddy in 1926, legends like Dr. Sarvepalli Radhakrishnan, a great philosopher and a role model for the human race who later rose to the position of Vice-president of India, Dr. V.S. Krishna, a great visionary have continued the tradition of initiating innovative academic programs of national and international relevance and contributed to sustained development of this University.

Innovative academic activities in emerging fields like Nuclear Physics, Bio-Inorganic Chemistry, Geophysics, Meteorology and Oceanography, Human Genetics, Biotechnology, Microbiology, Naval Architecture, Biomedical Engineering, Bioinformatics, Human Resource Management, Business Management etc. even when these subjects were in a nascent stage in the West and Europe. Similarly the University also has the unique culture and practice of moulding these academic programmes to address the societal and technological needs. Programmes like 20th Century Gurukulam, Social Exclusion and Inclusive studies are some of the innovations contributing to the alleviation of the rural youth and the under privileged society. Thus the University strives hard to provide an equal and balanced opportunity for all genders and sections of the society.

The University's attention in augmenting state of the art equipment, infrastructure and library facilities and conceptualizing and implementing healthy practices in teaching and administration with a democratic team spirit has been applauded by the NAAC, the apex body to judge the credibility of any Indian University. Apart from being flexible in offering advanced courses for the benefit of the knowledge seekers from the neighbouring countries, the University is running a few twinning programmes in collaboration with some of the reputed International Universities. The exponential growth in the enrolment of foreign students is a testimony to its international commitment and quality education.

Five constituent colleges and five P.G. Centers of the University provide quality training and research leading to Masters and Doctoral degrees in more than 160 courses. Apart from under graduate programmes in Engineering and Technology the University offers Under graduate degree programmes with a variety of combinations of subjects in B.A., B.Sc., and B.Com courses. Believing in more focused training in professional courses, the University recently started five year integrated programmes in fields like Geology, Information Technology and Software Engineering.

ANDHRA KESARI UNIVERSITY

Pernamitta, Ongole, Prakasam
District - 523225, Andhra Pradesh
F2PV+3CF, Ramnagar,
Ongole, Andhra Pradesh 523001

Andhra Kesari University is a public university located in Ongole, Andhra Pradesh. It was established on 11 January 2022. The university was named after Tanguturi Prakasam, a political leader, social reformer and anti-colonial nationalist. He served as the chief minister of Madras Presidency and subsequently became the first chief minister of erstwhile Andhra State. He was known as "Andhra Kesari" which translates to "Lion of Andhra"

History

Earlier, the university is the outgrowth initiative of the Post-Graduate centre of Acharya Nagarjuna University, which was established on 16 November 1993 with the aim of ensure better education to poor and backward communities in and around Prakasam district. On 24 November 2021, Government of Andhra Pradesh introduced a bill in the Andhra Pradesh Legislative Assembly to upgrade the Post-Graduate centre into an autonomous university. On 11 January 2022, the university was officially established, through the A.P Universities (Amendment) Act, 2021.

Campus

The present Post-Graduate campus existed with 3.16 acres. In addition to this, it has 109.80 acres of land at Pernamitta, Ongole. The said multidisciplinary university is proposed to be established in Pernamitta village of Santhanuthalapadu mandal, Prakasam district, with an exclusive focus on Teacher Education, by relocating the existing P.G centre of Acharya Nagarjuna University.

Academics

The university consists of 8 departments, offering 10 postgraduate programs.

Departments

Commerce & Business Administration, Economics, History, Mathematics, Statistics
Social Work, Education, Physical Education and Sports Sciences.

ANNA UNIVERSITY

Sardar Patel Road
Guindy, Chennai-600 025, Tamilnadu
Email : registrar@annauniv.edu
Email : vc@annauniv.edu

Anna University was established on 4th September 1978 as a unitary type of University. It offers higher education in Engineering, Technology and allied Sciences relevant to the current and projected needs of the society. Besides promoting research and disseminating knowledge gained there from, it fosters cooperation between the academic and industrial communities. The University was formed by bringing together and integrating two well-known technical institutions in the city of Madras.

- College of Engineering, Guindy (CEG)(1794)
- Madras Institute of Technology, Chrompet (MIT)(1949) and three Technological Departments of the University of Madras.
- Alagappa College of Technology (ACT)(1944)
- School of Architecture and Planning (SAP)(1957)

Situated in the southern part of the city of Madras (Chennai), the University's main campus extends over 100 hectares abutting the Adyar River on the north and Raj Bhavan on the south. The Madras Institute of Technology at Chrompet constitutes the second campus of the University which extends over 20 hectares. Both the campuses have a variety of buildings serving the various needs of the University community. A third campus extending over 80 hectares is located at Taramani near the Instronic campus, Adyar. The Bioprocess Laboratory donated by SPIC is located at present in this campus and a few more centers of advanced studies, like National Institute of Fashion Technology (NIFT), Sugar Research Institute, Mechatronics Institute, Entrepreneurship Development Park, and Convention Centre will also be housed there in future.

Since December 2001, it has become a large, highly renowned Affiliated University, having brought into its fold about 426 Self-financing Engineering Colleges six Government Colleges and three Government-aided Engineering colleges located in various parts of Tamilnadu State.

The Anna University ,which is of the affiliated type is a member of the Association of Indian Universities, the Association of Commonwealth Universities and Partner of UNESCO International Center for Engineering Education (UICEE). UGC have accredited Anna University with Five Star Status in 2002 which is the highest rating. With proven capabilities both in academic and research areas, Anna University was able to receive this honour for a period of five years for excellence in Technical Education.

ANNAMALAI UNIVERSITY

Annamalainagar-608 002, Tamilnadu

Tel : 04144-238283, 238214, 238283, 238214

Website : www.annamalaiuniversity.ac.in

The Annamalai University is a unitary, teaching, and residential university. It was founded by the munificence of the farsighted and noble hearted philanthropist and patron of letters the late Hon'ble Dr. Rajah Sir Annamalai Chettiar of Chettinad, Kt, LL.D., D.Litt.

He started several colleges, and ultimately, the University in 1929. Since its inception, it has progressively tried to realize the aims of the noble Founder Pro-Chancellor. After him, his illustrious son, Padma Bhushan Dr. Rajah Sir Muthiah Chettiar of Chettinad, was the Pro-Chancellor from 1948 to 1984, and he sedulously nurtured the growth and development of the University.

The University has had the unique good fortune of having a succession of eminent Vice-Chancellors to guide its destinies.

During the last eighty two years the University has grown rapidly and has consolidated its position as a unitary and residential University with forty-nine Departments of Study and over 3240 members on its teaching staff. Annamalainagar is already a busy and full-fledged University town, east of Chidambaram, the abode of Lord Nataraja.

The University campus, including the colleges, hostels, and playgrounds, occupies an area of about thousand acres.

Annamalai University offers one of the highest number of scholarships and awards for eligible students. A total of 356 scholarships and awards are given to eligible candidates every year.

In 2006, Annamalai University opened its first Study Center in Toronto, Canada, offering programs in Music, Dance, Tamil and Yoga. Other overseas centres include the Al Mihad Institute, Dubai and the Al Hilal Education Centre, Sharjah in the United Arab Emirates as well as the Al Noor Education Centre in Muscat, Oman.

ANURAG UNIVERSITY

Venkatapur, Ghatkesar,

The Apeejay Stya University is a seat of global learning that offers rich opportunities for innovative teaching-learning, creativity and research across disciplines. It aims to bring about transformation of society through value-based education, man-making and nation-building, by blending together the dual identities of a technology and research based university with a liberal arts institution.

Established by the Apeejay Stya Education Foundation in the state of Haryana [under Act No. 10 of the Haryana Private Universities (Amendment) Act 2010], the ASU provides students not only 'education for living and livelihood' but also 'education for life', and empower learners with a fundamental foundation in leadership and professional skills to face the challenges of the new liberalized global economy.

Situated amidst a sprawling, picturesque campus with state-of-the-art infrastructure on the Sohna-Palwal Road in Gurgaon District of Haryana, the ASU offers a wide range of innovative graduate, postgraduate and doctoral programmes across a plethora of disciplines that are based on the best education practices of some of the leading universities of the world. These are greatly facilitated by the strong industry-academia linkages, already established by the existing Apeejay institutions of higher learning in all disciplines being offered by the University. The University has been set up under the vision and untiring stewardship of renowned industrialist, educationist, philanthropist and freedom-fighter Dr. Stya Paul, who has spearheaded the cause of education for over four decades as Founder President of the Apeejay Education Society (AES). The ASU and AES are a social commitment of the Apeejay Stya and Svrn Group-a highly diversified industrial conglomerate-and are known for their innovative approach to teaching, learning and research and reaching out to the community.

Apeejay's higher education programmes span across leading colleges and professional institutes that offer over 85 courses at the graduate and postgraduate levels in Management, Computer Sciences, Architecture, Engineering, Information Technology, Fine Arts, Design, Mass Communication, Bio-Sciences, Clinical Research and Humanities, to name a few. All the programmes of ASU meet rigorous quality standards of the industry and stipulations set by the various University Certification bodies under the University Grants Commission.

Arka Jain University popularly known as Jain College is the first private university of Jamshedpur in Jharkhand. The college marked the beginning of a new era among the young Jamshedpurians. In 2011, Mr. Amit Srivastav, the CEO of the university introduced three courses namely B.Com, BBA and BCA. By 2014, PGDM courses were also introduced. In 2017, the university was declared the first private university by the honorable Chief Minister Shri Raghubar Das.

The university campus is situated in Kharsawa district in Mohanpur. Adequate infrastructure for the mentees, intellectual mentors and excellent network with 100% placement can provide youngsters with new and challenging ideas. Today, the university offers Diploma courses in Engineering for students who have completed class 10th , and undergraduate courses for those who have completed class 12th, shaping one's thoughts and actions to compete as Masters in this competitive world.

VISION

JGI Group is committed to human development at all levels through education and entrepreneurship.

MISSION

To provide quality education from the elementary to tertiary levels there by creating human assets.

To fuel economic growth, create systemic changes and sustainable improvements by developing new generation social entrepreneurs.

To create a globally networked community of leaders, technocrats, scientists, professionals, sports persons, and artists.

To foster an ethical environment founded on human values in which both spirit and skill thrives to enrich the quality of life.

ARNI UNIVERSITY

The campus covers an area of about 120 acres of land, is picturesque and away from the din of the metropolis. The serenity of the hillocks all around endow the campus with an ideal environment for education and research.

Our mission is to impart quality education of world class standards, reflecting the latest advances in the field of education and research with state-of-the-art academic and administrative infrastructure.

The university has a well stocked and furnished library, well equipped labs, a host of games and sports facilities, majestic hostels separate for boys and girls with wide open spaces, lush green lawns, colourful flowerbeds and well kept orchards in sylvan surroundings.

The Arni University comprises of the following faculties namely Engineering and Technology, Management, Computer Sciences, Basic Sciences, Bio-Technology, Hospitality and Allied Health Sciences and Polytechnic.

ARUNACHAL UNIVERSITY OF STUDIES

NH- 52, Namsai

District- Lohit - 792103

Arunachal Pradesh

Email : vc@arunachaluniversity.ac.in

Website : <http://www.arunachaluniversity.ac.in>

Arunachal University of Studies has been established in the year 2012 under an enactment of the Government of Arunachal Pradesh under PPP mode.

Arunachal University of Studies believes in imparting education to the students in a comprehensive format while not compromising on the traditional ways of pedagogy which our country has nourished since its inception. It has therefore embarked on a novel concept clubbing the class room lectures and the industrial element together.

This approach lighten up the interest of the students in their respective scope of subjects and that gives an holistic get up to the whole perception of education. The course structure at the University's disposal has been very carefully crafted to incorporate the best practices of the industry and provides the students the required scope to hone their capabilities.

The course structure has been a genesis of eminent academicians of varied fields. Arunachal University of Studies shall encourage the inquisitive nature in the students and let them the freedom to find the answers themselves with the guidance of the faculties.

The University prophesies to inspire the students towards knowledge. In this purview it has purposefully tied up with the variant industries to let its students have hands-on experience right from the start of their academic session. This nurtures and moulds them well into the real world scenario.

The large cache of research papers and other learning materials available with the University complements this module. It further extends the same through e-learning materials.

Our approach remains convergent with an obvious envisaged goal of producing competent human resource. We shall remain dedicated to our motto of 'pursuit of excellence, education with a difference.... to provide education by offering unparalleled exposure to develop its students into holistic human beings, body, mind and soul'.

ARUNACHAL PRADESH UNIVERSITY

Pasighat, Arunachal Pradesh

ARUNODAYA UNIVERSITY

Lekhi Village, Naharlagun
Distt, Itanagar - 791110, Arunachal Pradesh
Tel. : 1800 3000 6223
Email : contact@arunodayauniversity.ac.in

Arunodaya University, established by the Government of Arunachal Pradesh under “Arunodaya University Arunachal Pradesh Act 2014 (Act No. 9 of 2014), which received the assent of the Hon’ble Governor of Arunachal Pradesh on October 26, 2014 and published in the Arunachal Pradesh gazette on October 30, 2014 vide Notification No. LAW/LEGN-1o/2014 is a new entrant in the education sector of the country and a collaborated initiative of World Education Mission and the Government of Arunachal Pradesh. Arunodaya University is the first University of the eastern region of Arunachal Pradesh of India. The first rays of sunshine of India light up the University each morning. The University has been incorporated with an objective of providing quality education supplemented with industrial internship and professional training in the areas of business & management, engineering & technology, training & development, computing & information technology, entrepreneurship, rural development, media & communication, basic and varied branches of science, humanities, juridical sciences, liberal art & sciences, performing arts, quality training & development of civil servant officials etc. Arunodaya University comes under section 2(f) of UGC act which empowers it to award degrees specified in section 22 of UGC act of 1956. Apart from this, the University is authorized to award diplomas, Degrees, certificates, pre-University certificates UG, PG and other academic distinctions in conformity with the provisions of the Arunodaya University Act (Act No. 9 of 2014). The University is open to all irrespective of caste, class, creed, religion, region, language, gender and nationality. The main campus of the University is situated in Itanagar, Arunachal Pradesh. The University trusts humanity and nature, the ones created by the Almighty. The University has skill development courses as it is a very effective and an efficient methodology of educating people with the help of real time working environment. This mode of education is necessary for a country like India because it serves the dual purpose of best utilization of the educational resources and adequate human resource development. The deficiencies of classroom teaching is backed up by practical skills. Theoretical knowledge serves half the purpose in classroom sessions whereas the University’s contemporary model believes in providing classroom as well as practical training sessions. This provides an edge to our students over the others who have not undergone such a model, to accommodate in their desired industries. It strengthens the University learning experience by clubbing practical skills with the study of concepts from various disciplines. The University will also focus on skill development programs with in-hand training to ensure employability of outgoing students in tune with the current policy of the government of India to provide proper training for employability of the youth. Classroom teaching, interactive mode teaching will be effectively supplemented through web based sharing of knowledge in such a way that all the students get the benefit of web based learning resource of the University as well as from the leading Universities across the world. The University believes in a level playing field for all and has continuing education programmes which will provide a chance to the drop out students to continue their studies in an institution/ a department/ a faculty/ a college/ a school of the University. As they say there has not been a night that shall defeat the sunrise. The University is all about realizing the potentials of an individual and then adding wings to them to fly high to their pinnacles. The overall mission & vision of the University is to provide quality education supplemented with industrial internship & professional training for holistic development of the students and the nation.

ARYABHATTA KNOWLEDGE UNIVERSITY

A.N. Sinha Institute of Social Studies Campus (West)

North Gandhi Maidan, Patna-800 001, Bihar

Tel : 0612-2351919(office)

Fax : 0612-2362270

Email : akuniv10@gmail.com

Website : <http://akubihar.org>

The Aryabhatta Knowledge University Act 2008 provides for the establishment of University at Patna to conduct and facilitate affiliation of institutions in the conventional as well new frontiers of professional education.

All colleges and institutions imparting professional education for example Engineering and Technology including information Technology, Nano technology & Biotechnology, Management, Medicine, Health technology, Public Health Pharmacy, Optometry, Nursing, Education, Law etc. is to be affiliated to this university.

Technical Education had been a key priority in the state of Bihar, and it had established several prestigious Technical institutes in the State.

The most prestigious institutes of the State, Bihar College of Engineering established in 1900, has been converted as centrally Funded Institute, namely National institute of Technology, Patna in February 2004. Other old & prestigious Institutions are Bhagalpur college of Engineering under Tilka Manjhi University, Bhagalpur and Muzaffarpur institute of Technology under BRBA Bihar University, Muzaffarpur.

BIT Sindri, Which is now is state of Jharkhand, was also established by state of Bihar. These institutes offered high quality Technical Education, and their alumni today have achieved National and International Recognition.

Aryabhatta Knowledge University (AKU), Patna has been established by Government of Bihar for the development and management of educational infrastructure related to technical, medical, management and allied professional education in the state. The objective of the university is to promote the professional education infrastructure to meet the national standard through well advanced course, infrastructure and quality faculty.

Bihar lacks in the infrastructure both in the terms of number of institutions and the quality of education. As a result Bihar state has become the major hub of students migrating to the others states for pursuing their education and carrier building for future growth.

ASBM UNIVERSITY

0674 – 2374801 / 4802 / 4803 / 4804 / 4805
Email : info@asbm.ac.in

ASBM University has been established by Government of Odisha (India) with a mandate to “set best standards in imparting value based quality education that builds leadership.” This new gen university founded and led by Prof. Biswajeet Pattanayak, former Professor of IIM Indore and Lucknow and a widely acclaimed Management Guru known internationally for his expertise in the domain of human resource management, emphasises learning by experimentation and innovation with a flexible and pragmatic attitude. For most seagulls, life consists simply of eating and surviving. Flying is just a means of finding food. However, Jonathan Livingston Seagull is no ordinary bird. For him, flying is life itself. Against the conventions of the seagull society, he seeks to find a higher purpose and become the best at doing what he loves.

ASBM received international recognition through accreditation by the Accreditation Council for Business Schools and Programs (ACBSP), USA and also by the South Asian Quality Systems (SAQS). In recognition of its outstanding journey of a decade and half benchmarking quality parameters, the Government of Odisha conferred on Asian School of Business Management the ‘University Status’ on 26th September 2019 by enactment of the ASBM University, Odisha Act, 2019 (Odisha Act 4 of 2019).

Asian School of Business Management was highlighted in the October, 2006 special B School issue of Business India as ‘a world-class business school modelled after the best IIMs set up in 180 days’. Over the years, it has been recognised as a front ranking business school for its outstanding achievements and its unique industry-linked sectoral focused programmes. As an autonomous institute, it was offering Post Graduate Programmes in Management with due approval from AICTE, Ministry of Education, Govt. of India. The programme was accredited by National Board of Accreditation and Association of Indian Universities.

ASBM University now carries forward the ASBM legacy of excellence and innovation in education and research, and offers cutting-edge programmes in various fields of higher education.

The University is engaged in imparting futuristic and holistic education at par with international standards with the objective of preparing our youth to face global competition and to participate in shaping India become a world leader.

ASHOKA UNIVERSITY

Plot #2, Rajiv Gandhi Education City
Kundli, Haryana - 131028
No. 2, Green Avenue Street
Green Avenue, Pocket D-3
Vasant Kunj New Delhi – 110070
Tel. : (O): +91 11 65652645 (M): +91 9015 151 151
Email: admissions@ashoka.edu.in

Ashoka University is an independent private university that is an initiative of the International Foundation for Research and Education (IFRE), a Section 25 non-profit company registered under the Indian Companies Act. On March 4, 2014, the Haryana Legislative Assembly passed the Haryana Private Universities (Amendment) Bill, 2014, and Ashoka University was notified as a university with full powers to award Bachelor's, Master's and Ph.D. degrees and diplomas. Ashoka University is recognized as a Haryana Private University, listed on the University Grants Commission (UGC) website. Programmes offered at the University are fully compliant with UGC guidelines. The Ashoka University campus is located on 25-acres in the Rajiv Gandhi Education City (RGEC), Kundli, in the National Capital Region. The RGEC, an initiative by the Government of Haryana, in total is a 1200-acre hub of several educational institutions, including the satellite campus of the Indian Institute of Technology, Delhi, and the National Law University.

The District of Sonapat is also home to institutions such as O.P. Jindal University, National Institute of Food Technology Entrepreneurship and Management (NIFTEM), Motilal Nehru College for Sports, and Schools such as G.D. Goenka International School and Delhi Public School, Sonapat. Kundli in the National Capital Region is a fast-growing centre of suburban residence, industry and institutes of higher education and research. It is located in Rai Mandal, Sonapat District, an hour's drive north of Central Delhi. It is located at the intersection of the proposed Kundli-Manesar-Palwal Expressway (connecting National Highways 1, 2, 8 and 10) and the Rapid Rail Transit System connecting Delhi, Sonapat and Panipat. It also proposed to be included within the Delhi Metro Rail Network by 2016. Its proximity to the capital, suburban character and rapid growth provides a great platform for Ashoka students to engage in local community development activities. The Ashoka University campus has been designed by renowned New York-based architects Perkins-Eastman. They have worked on several educational campuses around the world, including the recent Indian School of Business (ISB) campus in Mohali and Cornell University. Designed in association with New Delhi-based Space Matters and Abaxial Architecture, the campus plan is a combination of Indian aesthetics and global design standards, reflecting the intellectual ideology of Ashoka. The plan's connected web of buildings and dormitories that are drawn together by corridors meets the needs of the modern university student providing appropriate spaces for both learning and socializing.

ASIAN INTERNATIONAL UNIVERSITY

Ghari, Imphal West, Manipur-795140

Website : www.aau.ac.in

Assam Agricultural University is the first institution of its kind in the whole of North-Eastern Region of India. The main goal of this institution is to produce globally competitive human resources in farm sector and to carry out research in both conventional and frontier areas for production optimization as well as to disseminate the generated technologies as public good for benefitting the food growers/producers and traders involved in the sector while emphasizing on sustainability, equity and overall food security at household level.

During early 20th century, establishment of two research stations, one at Karimganj (1913) and the other at Titabor (1923) paved the way, immediately after independence, towards setting up of the Assam Agricultural College (AAC) at Jorhat and the Assam Veterinary College (AVC) at Nagaon in 1948. Later, on April 1, 1969 the Assam Agricultural University came into being through "The Assam Agricultural University Act, 1968", renaming AAC as College of Agriculture headquartered at Jorhat and AVC as College of Veterinary Science simultaneously shifting its site from Nagaon to Khanapara.

Subsequently, College of Home Science (1969), College of Fisheries (1988), Biswanath College of Agriculture (1988) and Lakhimpur College of Veterinary Science (1988) were established. Similarly, few more regional research stations at Shillongani, Diphu, Gossaigaon, Lakhimpur; and commodity research stations at Kahikuchi, Buralikson, Tinsukia, Kharua, Burnihat and Mandira were added to generate location and crop specific agricultural production.

Provisioning of quality human resource to facilitate technology led agricultural renaissance revitalizing and rejuvenating post-green revolution in agriculture ensuring both production and environment sustainability targeting a minimum of 4% agricultural growth while addressing the issues of household nutritional security, farmers' distress, commerce in agriculture as well as regional, national and global food crisis taking the advantage of innovative technology, market reforms and liberalization.

To fill up talent gap in agriculture and allied sector to preposition the state to combat the emerging challenges in agriculture and ensure productivity increase in agri-horti-animal-fish crops on the face of shrinking/fragmented land holdings, ailing soil health, diminishing water resources and increased human population.

ASSAM DON BOSCO UNIVERSITY

Website : www.dbuniversity.ac.in

Don Bosco University is a project of the Salesians of Don Bosco (SDB) executed by Don Bosco Society, Azara, Guwahati. Presently, Salesians are working in 132 countries catering to over nine million young people worldwide; Salesians have been recognized by Government of India as the single largest provider of technical education in India, second only to the Government. More than 100 Salesian technical schools and 25 colleges have been established in India. Scores of non-formal training centers, agricultural training centers, relief and rehabilitation centers, literacy centers and shelters for street children in India are managed by the salesians of Don Bosco.

The distinctive educational philosophy and method of Don Bosco as expressed by DBU charter are:

A preferential option for young people from the lower strata of society, providing them with an education and preparing them for their insertion into the world of work. Close attention to the inter-relationship between culture, religion, science, technology, education, professional ethics and integrity of life. A spirit of family characterized by the presence of teachers and administrators among and for the students. An academic and educative style of relationship founded on reason, religion and kindness. Special attention to the formation of educators, the field of technology and work, and the world of communications. Efforts to promote in society formative programs that impact educative processes as well as strategies and policies for youth research, teaching, study and cultural services aimed to know better the situation of youth, especially the most disadvantaged, to bring about their positive transformation.

Don Bosco University aims at excellence in teaching & formation and seeks to realize a vibrant campus ministry program. It offers a basket of 'finishing school' skills and quality placements for each and every student. Every process in the system comes under the purview of continuous and on-going evaluation. A sustained proactive alumni association is to carry forward the lifelong learning of the DBU students and their partnership with the Vision of their alma mater. The thrust areas of study and research have three major sectors; viz., Technology, Service and Social sectors. The Technology sectors include information and related fields, biotechnology and related fields. The Service Sector covers nursing, pharmacy, paramedical, psychology, counseling, management, media, arts, teacher education, social work, rural development and related fields. The Social sector has religion and culture, ethics, governance and tribal studies and other related fields.

ASSAM DOWN TOWN UNIVERSITY

Sankar Madhab Path
Gandhi Nagar, Panikhaiti

The down town Charity Trust was formed in 1997 by the down town hospital ltd. The urge to do something for the underprivileged and deprived section of the society led to the formation of down town Charity Trust. Apart from doctors, the members of the trust include Engineers, Educationists and other professionals from various walks of life.

The down town Charity Trust is promoted by down town hospital ltd., the first corporate multi specialty hospital in North Eastern India. It has a distinguished name in the healthcare industry, serving the people of Assam and the North Eastern Region with its expertise for the last 23 years.

Over the years, the trust has been involved in varied social activities like organising free health camps, undertaking special health programs like the Smile Train Project, the Dhvani Project as well as a free clothes bank “Sankar Madhab Vastra Bank” for the low income group population. The trust has established the Shankar Madhab Rural Charity Hospital at Panikhaiti Assam with the intention to provide quality healthcare at the reasonable fees to the common people. Keeping in mind with its second main objective the trust has embarked on the largest educational project of the North Eastern Region. The trust set out to start one of the largest and integrated educational campuses in the region, which will be able to provide a variety of professional programs, at a reasonable fee structure. Thousands of students have to leave the region, for want of better courses, which were not traditionally available. This educational campus would help to address that to some extent. The construction of the campus began in 2004. The trust started with BSc Nursing Program in 2008 and then followed it with the Paramedical degree course in 2009. In the initial year the courses were affiliated to the Assam government Health University. This was the first degree paramedical college in the region.

In 2010 the Assam government granted the campus a University status as per the provisions of the Assam Private University act 2010. In 2010 the University also successfully got the permission from A.I.C.T.E., New Delhi to start programs in Engineering, Management and Pharmacy. The trust also expanded into other programs like Hotel management and added more program in the allied health department.

Today, the university in its only third year of existence is offering almost 50 programs and has almost 2500 students from 10 Indian states as well as neighbouring countries of Butan and Nepal.

Assam University came into existence through Assam (Central) University Act, 1989 . It was established in 1994, since then the University is steadily becoming an excellent centre of learning. The campus, situated in Dargakona, about 20 kms from Silchar, is set amid sprawling hillocks, a typical landscape in the North East. The campus in an area of 600 acres surrounded by lakes and mountains provides an ideal environment for academic pursuit. Drawing its 230 plus faculty from many disciplines, from all over the country, the university sustains a multidisciplinary approach to higher education.

The University has sixteen Schools on major disciplines. There are 35 Departments under these Sixteen Schools. The University is situated in South Assam, bordering Bangladesh, Mizoram, Manipur, Maghalaya, and Nagaland. The Barak river flows across this region known as Barak valley.

The valley has a rich tradition of art, literature, culture and education. It has contributed a large number of eminent personalities to the nation in the fields of science, education, arts and many others. This historical heritage has given the place a strong foundation for the development of a Centre of Excellence in higher education. The five Districts under the jurisdiction of Assam University have as many as 53 Colleges, which speak of the depth of the intellectual and educational interests in the region. The University has gradually started attracting students from the neighboring states. The University is set to become a full-fledged residential University in near future creating a better environment for learning and research activities.

Assam University is a teaching-cum-affiliating University. The objectives of the University are to "disseminate and advance knowledge by providing instructional and research facilities in such branches of learning as it may deem fit and by examples of its corporate life to make provisions for integrated courses in humanities, natural and physical sciences and social sciences in the educational programmes of the University; to take appropriate measure for promoting inter-disciplinary studies and research in the University; to educate and train manpower for development of the state of Assam; and to pay special attention to the improvement of the social and economic conditions and welfare of the people of that state, their intellectual, academic and cultural development".

ASSAM WOMEN'S UNIVERSITY

Jorhat – 785 013, Assam

Tel : 0376-2340008 (Registrar, AWU)

Email: registrarawu@gmail.com

Established in the year 2013 through an Act of the State Legislature of the Assam Government, Assam Women's University is the first institution of its kind in the State of Assam. The main objectives of the University are:

To provide for facilities and offer opportunities to women for education in applied science, arts, technology, industry, commerce, management and social science by instruction, training, research, development and extension and by such other means as the University may deem fit;

To promote research in applied science and arts, technology, industry, commerce, management and social science for the advancement of knowledge and for the betterment of the society particularly with focus on women's perspective;

To serve as a center for fostering co-operation and exchange of ideas between the academic and research community on the one hand and industry on the other;
